

# FS\_CIoT\_5G: Way forward for key issue 15 (CN steering)

Qualcomm Incorporated

# Background and proposed way forward

## Background

- Key issue 15 has two aspects
  - CN selection (concluded during SA2#129)
  - CN steering (open)
    - Solutions 42, 43 and 51 have been proposed
- **CN steering - observations**
  - **Solutions 43 and 51 impact EPC**
  - **Changes to EPC are however not in scope of FS\_CIoT\_5G**
    - „*This study is not going to study enhancements to EPC.*“  
[FS\_CIoT\_5G SID objectives]
  - **Need for CN steering is not CloT specific but is generic;**  
proposed solutions are also applicable to other types of UEs
    - *“How the potential solutions for Core Network selection can be generalized and applied also to other than CloT UEs.”*  
[quote from Key issue 15]
  - **We need to close FS\_CIoT\_5G at SA2#129bis**

## Proposal: Way forward for CN steering

- **Select solution 42 as the way forward**
- **In case no conclusion can be reached at this meeting**
  - Transfer CN steering work into a separate (short!) study which aims at a generic CN steering solution (not specific to CloT)
    - No need to create key issues; discussion to focus on solutions
    - CN steering solutions documented in TR 23.724 could be taken as a starting point
