Introduction

Attached is an updated version of the MBMS WID based on the approved version at the last plenary. The main changes are that the completion date has been moved to March 2003 (CN#23) and that the specific work in 29.061 has been identified.

Work Item Description

Title

Support of the Multimedia Broadcast Multicast Service (MBMS) in CN protocols.

1   3GPP Work Area

	Radio Access
X	Core Network
	Services

2   Linked work items

Multimedia Broadcast Multicast Service Architecture,32703
Introduction of MBMS in RAN, 2481
Support of MBMS in GERAN, 50085

3   Justification

The specification of MBMS stage 1 is complete and stage 2 is well advanced. The work should now be started in CN groups to support this functionality.

4   Objective

The objectives of this work item:-
- To define and develop the Radio layer 3 and CN signalling protocols to support MBMS to facilitate broadcast of multimedia services in a wireless network
- To allow handover between RNS's of terminals currently receiving an MBMS transmission.
- To ensure efficient use of network resources when sending multimedia information to multiple users.

5   Service Aspects

MBMS should allow users to select one of a number of broadcast/multicast information sources, and to share with other users the network resources used to deliver that information.

Service level aspects are agreed in TS 22.146.

Architectural aspects are covered in TS 23.246.

6   MMI-Aspects

None – out of scope of this work item.

7   Charging Aspects

The ability to charge for access to, and use of, MBMS services shall be supported.

8   Security Aspects

Any MBMS solution must provide a secure procedure to gain access to MBMS information.
