## ***Excerpts from N1 Status Report (NP-000256)***

### ***4.5.7 Out-of-Band Transcoder Control (OoBTC)***

TSGN1 could not complete its part of the work on Out-of-Band Transcoder Control in the original scope defined for the R99 WI N1-000260. The main decision in TSGN #7 was that AMR codec being the only codec for R99 is default value and the transcoder control would be left for R00.

After the TSGN #7 some concern of future compatibility was raised, particularly regarding the indication of the selected codec. A joint meeting between TSGN1-TSGR2-TSGR3 was organised during TSGN1 #12 with the outcome that TSGR2 and TSGR3 need to cover the issue in their specifications for R99 while the TSGN1 part on active codec set negotiation and notification will be specified in R00.

No CRs for plenary approval but the work item status sheet is in tdoc NP-000260.
