Subject: IETF status report

1. Executive Summary

All critical release 5 drafts expected to be completed in Dec 2002 except for diameter drafts. Diameter base expected to complete in January.

Compromise reached with IETF on use of diameter. 3GPP will be allocated permanent command codes for Release 5 for use in Cx/Dx and Sh. For release 6, 3GPP should work with IETF to develop a full multimedia AAA application.

2. Statistics

Drafts being tracked:

Release 4: 2

Release 5: 45

Release 6: 21

Drafts not yet approved by IESG (technical stability)

Release 4: 0

Release 5: 9

Release 6: 20

Drafts not yet published as RFCs (formally available)

Release 4: 0

Release 5: 29

Release 6: 21

Drafts approved by IESG since TSG#17: 8

Drafts published as RFCs since TSG#17: 7

3. Significant Developments

All Release 5 dependencies (except diameter base and nasreq) are expected to be approved by the IESG before the end of the year. This includes all the expected SIP and security drafts. Diameter base should be approved in January. No date known for nasreq, but dependency is minor.

IANA will be instructed to allocate a set of permanent command codes to 3GPP for use with Diameter in Release 5. The intention is to replace this with an IETF standardized application in Release 6. This work is now chartered in AAA.

The credit control draft work has not progressed far enough in the IETF to be useful to 3gpp. The current draft will be copied into 33.225 and work will continue in the IETF. This item is now chartered.

IETF dependencies for Release 6 now starting to crystallize. Conference calls to progress this work anticipated to begin in January.

IETF now provides a tracking tool to allow the tracking of internet drafts (<https://datatracker.ietf.org/public/pidtracker.cgi>).

RFC editor production is improving after difficulties due to manpower and workflow.

Please see attached dependency table for latest status on individual drafts.

3GPP IETF Dependencies and Priorities

Notes:

- a. This dependency and priority is based on the information available as of December 2, 2002
- b. The 3GPP Requirement is that these IDs be stable and RFC numbers be available to allow 3GPP to reference them.
- c. Where individual IDs are listed, there is a desire that an ID providing similar requirements or functionality be progressed within the working group.
- d. The “Definite” column indicates how firm the 3GPP requirement for this ID is. Those listed as Possible are still under discussion (or in some cases not yet discussed in 3GPP).
- e. The “3GPP Priority” column indicates whether this functionality is deemed essential for the functioning of IMS or some planned 3GPP feature. Desirable indicates that major functionality will be sacrificed if this ID is not ready.
- f. The UID (Unique ID) refers to the ID in the 3GPP workplan.
- g. Items with a high risk of not being complete in time are marked in yellow. Completed items are in green.
- h. Dependency information compiled by Stephen Hayes, 3GPP TSG-CN Chair (stephen.hayes@ericsson.com, +1 469 360 8500)
