1. Overall Description:

SA2 thanks SA1 for their LS on the issue of possible overlap between ongoing 3GPP Release 6 work and OMA work items.
SA2 work related to Presence, IMS Messaging and Group management are based on 3GPP SA1 requirements that are part of Release 6 work in 3GPP.

SA2 believes that the Release 6 work for these features shall be completed in 3GPP. The IMS enhancements for Presence, messaging and group management are integral parts of the IMS architecture (e.g. the Ut reference point), and many of the architectural requirements are motivated by the restrictions imposed by the use of a cellular network.
SA2 understanding is that specifications 23.228 and 23.141 will remain within 3GPP. From a technical perspective, there seems to be very limited overlap with OMA work so far.

SA2 believes that these specifications should be taken into account as building blocks for IMS service enablers' development as well as any development of additional enablers of Presence, IMS Messaging and Group Management work in OMA.

2. Actions

SA1, SA, CN:

To take into account the above input and keep SA2 involved in further discussions on the work split with OMA.

3. Date of Next SA2 Meetings:

SA2_39	19th – 23rd April 2004	Shenzen, China
SA2_40	17th – 21st May 2004	Sophia Antipolis, France
