

**3GPP TSG CN Meeting #27**  
**9th - 11th March 2005. Tokyo, Japan.**

**NP-050072**

**Source:** TSG CN WG1  
**Title:** CR to Rel-6 WI "IMS2" for TS 24.147  
**Agenda item:** 9.1  
**Document for:** APPROVAL

---

This document contains a **CR on Rel-6 Work Item "IMS2"**, that has been agreed by TSG CN WG1 CN#37 meeting and forwarded to TSG CN Plenary meeting #27 for approval.

TDoc #	Tdoc Title	Spec	CR #	Rev	CAT	C_Version	WI	Rel
N1-050374	Deleting CPCP and BFCP from Rel-6 IMS Conferencing	24.147	22	2	C	6.1.0	IMS2	Rel-6

CR-Form-v7.1

## CHANGE REQUEST

⌘ **24.147 CR 22** ⌘ rev **2** ⌘ Current version: **6.1.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	⌘ Deleting CPCP and BFCP from Rel-6 IMS Conferencing		
<b>Source:</b>	⌘ Nokia		
<b>Work item code:</b>	⌘ IMS2	<b>Date:</b>	⌘ 03/02/2005
<b>Category:</b>	⌘ <b>C</b>	<b>Release:</b>	⌘ Rel-6
	Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification) Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		Use <u>one</u> of the following releases: Ph2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6) Rel-7 (Release 7)

<b>Reason for change:</b>	⌘ As agreed during last CN plenary, BFCP and CPCP will be removed due to these protocols are not being stabel in IETF.
<b>Summary of change:</b>	⌘ BFCP and CPCP and all related references are removed.
<b>Consequences if not approved:</b>	⌘ Instabilitily of Stage 3, CN1 specification not in-line with CN decision.

<b>Clauses affected:</b>	⌘ 1, 2, 3, 4, 5, 6, 7, 8, Annex A										
<b>Other specs affected:</b>	<table border="1" style="display: inline-table; border-collapse: collapse;"> <tr> <td style="text-align: center;">Y</td> <td style="text-align: center;">N</td> </tr> <tr> <td style="text-align: center;">X</td> <td style="text-align: center;"></td> </tr> <tr> <td style="text-align: center;"></td> <td style="text-align: center;">X</td> </tr> <tr> <td style="text-align: center;"></td> <td style="text-align: center;">X</td> </tr> </table> Other core specifications Test specifications O&M Specifications	Y	N	X			X		X	⌘ 24.247 CR 10r2

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be

downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

---

# 1 Scope

The present document provides the protocol details for conferencing within the IP Multimedia Core Network subsystem (IMS) based on the Session Initiation Protocol (SIP), SIP Events [and](#), the Session Description Protocol (SDP), ~~the Conference Policy Control Protocol (CPCP) and the Binary Floor Control Protocol (BFCP)~~.

[The functionalities for conference policy control and for floor control \(with respective standardised protocols\) are felt to be essential for a complete IMS conferencing service but are not specified in this version of IMS conferencing and are for further study.](#)

The present document does not cover the signalling between a MRFC and a MRFP.

Where possible the present document specifies the requirements for this protocol by reference to specifications produced by the IETF within the scope of SIP, SIP Events [and](#), ~~SDP, CPCP and BFCP~~, either directly, or as modified by 3GPP TS 24.229. Where this is not possible, extensions to SIP are defined within the present document. The document has therefore been structured in order to allow both forms of specification.

The present document is applicable to Application Servers (ASs), Multimedia Resource Function Controllers (MRFCs), Multimedia Resource Function Processors (MRFP), Media Gateway Control Functions (MGCFs) and to User Equipment (UE) providing conferencing capabilities.

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TS 21.905 [1], 3GPP TS 22.141 [2] and the following apply:

**Conferencing AS:** an Application Server that supports functionality specific to a SIP conference focus

The following terms and definitions given in 3GPP TS 23.228 [2] apply (unless otherwise specified):

**Public Service Identity**

**Three-way session**

For the purposes of the present document, the following terms and definitions given in 3GPP TS 23.228 [7] subclauses 4.3.3.1 and 4.6 apply:

**IP-Connectivity Access Network (IP-CAN)**

The following terms and definitions given in draft-ietf-sipping-conferencing-framework [8] apply (unless otherwise specified):

**Conference**

**Conference-Aware Participant**

**Conference notification service**

**Conference Policy**

**Conference Policy Control Protocol**

~~**Conference Policy Server (CPS)**~~

**Conference-Unaware Participant**

**Conference URI**

**Focus**

**Media Policy**

**Media policy server**

**Membership Policy**

**Mixer**

**Participant**

**Tightly Coupled Conference**

The following terms and definitions given in draft-ietf-sipping-cc-conferencing [9] apply (unless otherwise specified):

**Conference Factory URI**

For the purposes of the present document, the following terms and definitions given in draft-ietf-sip-callee-caps [19] apply:

**Feature parameter**

For the purposes of the present document, the following terms and definitions given in 3GPP TS 23.002 [2] subclauses 4.1.1.1 and 4a.7 apply:

**Call Session Control Function (CSCF)**  
**Home Subscriber Server (HSS)**  
**Media Gateway Control Function (MGCF)**  
**Multimedia Resource Function Controller (MRFC)**  
**Multimedia Resource Function Processor (MRFP)**

For the purposes of the present document, the following terms and definitions given in 3GPP TS 23.218 [5] subclause 3.1 apply:

**Filter criteria**  
**Initial filter criteria**  
**Initial request**  
**Subsequent request**

For the purposes of the present document, the following terms and definitions given in 3GPP TS 23.228 [7] subclauses 4.3.3.1 and 4.6 apply:

**Interrogating-CSCF (I-CSCF)**  
**Policy Decision Function (PDF)**  
**Proxy-CSCF (P-CSCF)**  
**Public user identity**  
**Serving-CSCF (S-CSCF)**

For the purposes of the present document, the following terms and definitions given in 3GPP TR 21.905 [1] apply:

**User Equipment (UE)**

~~For the purposes of the present document, the following terms and definitions given in draft-ietf-xeon-ecp-xcap [23] apply:~~

~~**Dial-Out List (DL)**  
**Refer List (RL)**  
**Privileged User**~~

For the purposes of the present document, the following terms and definitions given in 3GPP TS 33.141 [24] subclause 3.1 apply:

**Authentication Proxy**

~~For the purposes of the present document, the following terms and definitions given in draft-ietf-xeon-bfep [28] apply:~~

~~**Floor**  
**Floor-chair**  
**Floor-control-server**  
**Floor-participant**~~

## 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

AMR	Adaptive Multi-Rate
AS	Application Server
<del>BFCP</del>	<del>Binary Floor Control Protocol</del>
CN	Core Network
<del>CPCP</del>	<del>Conference Policy Control Protocol</del>
<del>CPS</del>	<del>Conference Policy Server</del>
CSCF	Call Session Control Function
<del>DL</del>	<del>Dial Out List</del>
FQDN	Fully Qualified Domain Name
HSS	Home Subscriber Server
<del>HTTP</del>	<del>HyperText Transfer Protocol</del>
I-CSCF	Interrogating CSCF
IM	IP Multimedia

IMS	IP Multimedia CN subsystem
IP	Internet Protocol
IP-CAN	IP-Connectivity Access Network
MGCF	Media Gateway Control Function
MRFC	Multimedia Resource Function Controller
MRFP	Multimedia Resource Function Processor
<del>PCL</del>	<del>Privilege Control List</del>
P-CSCF	Proxy CSCF
PSI	Public Service Identity
<del>RL</del>	<del>Refer List</del>
S-CSCF	Serving CSCF
<del>SDP</del>	<del>Session Description Protocol</del>
SDP	Session Description Protocol
SIP	Session Initiation Protocol
TLS	Transport Layer Security
UE	User Equipment
<del>XCAP</del>	<del>Extensible Markup Language (XML) Configuration Access Protocol</del>
<del>XML</del>	<del>eXtensible Markup Language</del>

## 4 Conferencing overview

The basic services for the IP Multimedia core network Subsystem (IMS), as defined in 3GPP TS 24.229 [5], allow a user to initiate, modify and terminate media sessions based on the Session Initiation Protocol, as defined in RFC 3261 [7]. Although these basic mechanisms already allow multi party calls, more sophisticated services for communication between multiple parties can be made available by the network.

The conferencing service provides the means for a user to create, manage, terminate, join and leave conferences. It also provides the network with the ability to give information about these conferences to the involved parties.

The network operator or the user may apply membership and media policies to a conference by using a conference policy control protocol. The functionality for conference policy control (with a respective standardised protocol) is felt to be essential for a complete IMS conferencing service but is not specified in this version of IMS conferencing and is for further study.

Conferencing applies to any kind of media stream by which users may want to communicate, this includes e.g. audio and video media streams as well as instant message based conferences or gaming. Floor control, as part of the conferencing service offers control of shared conference resources at the MRFP, ~~using BFCP~~. The functionality for floor control (with a respective standardised protocol) is felt to be essential for a complete IMS conferencing service but is not specified in this version of IMS conferencing and is for further study.

The framework for SIP conferences is specified in draft-ietf-sipping-conferencing-framework [8].

The architecture for the 3GPP conference service is specified in 3GPP TS 23.228 [6] and 3GPP TS 23.218 [3].

The present document specifies the usage of SIP ~~and~~, ~~SDP~~, ~~CPCP~~ and ~~BFCP~~ to realize 3GPP conference service based on the protocols specified by the IETF defined conference service as per RFCs ~~and Internet Drafts~~ listed in clause 2. However, since the IETF conference service has various scenarios and features as described in draft-ietf-sipping-conferencing-framework [8], 3GPP conference service is a subset of the above IETF defined conference service. ~~3GPP conference service has the following characteristics as shown below:~~

- ~~— Loosely coupled conferencing is outside the scope of this release of the IMS conferencing service.~~
- ~~— the focus, conference policy server and media policy server are collocated in a AS/MRFC in this release; and~~
- ~~— the mixer and floor control server are located in the MRFP.~~

~~The conference policy consists of several conference policy data elements, which are defined by an Extensible Markup Language (XML) Schema. CPCP is used to manipulate the conference policy. There also exists an XML Schema that enumerates the conference policy meta data that enables the conference creator to assign certain privileges to users. The XML Configuration Access Protocol (XCAP) application usages that are used to store and manipulate the conference policy and the conference policy privileges are defined in draft-ietf-xeon-epcp-xcap [30]. The XML Configuration~~

~~Access Protocol (XCAP), which is defined in draft-ietf-simple-xcap [22], is transported via the Hypertext Transfer Protocol (HTTP), which is defined in RFC 2616 [21].~~

---

## 5 Protocol using SIP and SIP events for conferencing

### 5.1 Introduction

Void

### 5.2 Functional entities

#### 5.2.1 User Equipment (UE)

For the purpose of SIP based conferences, the UE shall implement the role of a Conference participant as described in subclause 5.3.1.

#### 5.2.2 Media Resource Function Controller (MRFC)

As the function split between the MRFC and the conferencing AS is out of scope of the present document, the procedures for the MRFC are described together with those for the conferencing AS in subclause 5.2.2.

For the purpose of SIP based conferences, the MRFC shall regard the MRFP as a mixer, as described in draft-ietf-sipping-conferencing-framework [8] and draft-ietf-sipping-cc-conferencing [9].

#### 5.2.3 Conferencing Application Server (AS)

As the functional split between the conferencing AS and the MRFC is out of scope of the present document, the procedures are described for a combined conferencing AS and MRFC. The AS and MRFC may either be collocated, or interoperate using a proprietary protocol and a proprietary functional split.

For the purpose of SIP based conferences, the conferencing AS/MRFC shall implement the role of a conference focus, as described in subclause 5.3.2 and as a conference notification service, as described in subclause 5.3.3. The conferencing AS/MRFC may implement the role of a conference participant as described in subclause 5.3.1.

#### 5.2.4 Media Gateway Control Function (MGCF)

For the purpose of SIP based conference, the MGCF shall implement the role of Conference participant as described in subclause 5.3.1.

### 5.3 Role

#### 5.3.1 Conference Participant

##### 5.3.1.1 General

In addition to the procedures specified in subclause 5.3.1, the conference participant shall support the procedures specified in 3GPP TS 24.229 [5] appropriate to the functional entity in which the conference participant is implemented.

##### 5.3.1.2 Subscription for conference event package

The conference participant may subscribeto the conference event package, as described in draft-ietf-sipping-conference-package [11].

### 5.3.1.3 Conference creation

#### 5.3.1.3.1 General

A conference can be created:

~~1) by means of SIP, as described in subclause 5.3.1.3.2 or subclause 5.3.1.3.3; or~~

~~2) by means of CFCP, as described in subclause 7.3.2, draft-ietf-xcon-cpep [23] and draft-ietf-xcon-cpep-xcap [30].~~

NOTE: Additionally, creation of a conference can be provided by other means, ~~e.g. via a Web page.~~

The conference participant shall make use of the procedures for session establishment as described in subclauses 5.1.2A and 5.1.3 of 3GPP TS 24.229 [5] when creating conferences by means of SIP.

#### 5.3.1.3.2 Conference creation with a conference factory URI

Upon a request to create a conference with a conference factory URI, the conference participant shall:

- 1) generate an initial INVITE request in accordance with subclause 5.1.3.1 of 3GPP TS 24.229 [5]; and
- 2) set the request URI of the INVITE request to the conference factory URI.

On receiving a 200 (OK) response to the INVITE request with the "isfocus" feature parameter indicated in Contact header, the conference participant shall store the content of the received Contact header as the conference URI. In addition to this, the conference participant may subscribe to the conference event package as described in draft-ietf-sipping-conference-package [11] by using the stored conference URI.

NOTE 1: A conference participant can decide not to subscribe to the conference event package for conferences with a large number of attendees, due to, e.g. the signalling traffic caused by the notifications about users joining or leaving the conference.

NOTE 2: A conference can also be created with a conference URI. The procedures for this case at the conference participant are identical to those for joining a conference, as described in subclause 5.3.1.4.1. It is not assumed that the conference participant is aware that the conference gets created in this case.

NOTE 3: Discovery mechanisms for the conference factory URI are outside the scope of the present document.

#### 5.3.1.3.3 Three-way session creation

When a conference participant is participating in two or more SIP sessions and wants to join together two or more of these active sessions to a so-called three-way session, the conference participant shall perform the following steps.

- 1) create a conference at the conference focus by sending an INVITE request with the conference factory URI for the three-way session towards the conference focus, as described in subclause 5.3.1.3.2;
- 2) decide and perform for each of the active sessions, that are requested to be joined to the three-way session, how the remote user shall be invited to the three-way session, which can either be:
  - a) by performing the procedures for inviting a user to a conference by sending an REFER request to the user, as described in subclause 5.3.1.5.2; or
  - b) by performing the procedures for inviting a user to a conference by sending a REFER request to the conference focus, as described in subclause 5.3.1.5.3;
- 3) release the active session with a user, by applying the procedures for session release in accordance with RFC 3261 [7], after a NOTIFY request has been received from that user, indicating that the user has successfully joined the three-way session, i.e. including:
  - a) a body of content-type "message/sipfrag" that indicates a "200 OK" response; and,
  - b) a Subscription-State header set to the value "terminated"; and,
- 4) treat the created three-way session as a normal conference, i.e. the conference participant shall apply the applicable procedures of subclause 5.3.1 for it.

### 5.3.1.4 Joining a conference

#### 5.3.1.4.1 User joining a conference by using a conference URI

Upon generating an initial INVITE request to join a conference for which the conference URI is known to the conference participant, the conference participant shall:

- 1) set the request URI of the INVITE request to the conference URI; and
- 2) send the INVITE request towards the conferencing AS that is hosting the conference.

NOTE 1: The initial INVITE request is generated in accordance with 3GPP TS 24.229 [5].

NOTE 2: The mechanisms by which the conference participant / user gets aware of the conference URI are outside the scope of the present document.

On receiving a 200 (OK) response to the INVITE request with the "isfocus" feature parameter indicated in Contact header, the conference participant shall store the contents of the received Contact header as the conference URI. In addition to that the conference participant may subscribe to the conference event package as described in draft-ietf-sipping-conference-package [11] by using the stored conference URI.

NOTE 3: A conference participant can decide not to subscribe to the conference event package for conferences with a large number of attendees, due to the signalling traffic caused by the notifications about e.g. users joining or leaving the conference.

#### 5.3.1.4.2 User joining a conference after receipt of a REFER request

Upon receipt of a REFER request that includes a Refer-To header which includes the "method" uri parameter set to INVITE, the conference participant shall:

- 1) handle the REFER request in accordance with RFC 3515 [17];
- 2) perform the actions as described in subclause 5.3.1.4.1 for a user joining a conference; and
- 3) if the received REFER request included a Referred-By header, include the Referred-By header in accordance with RFC 3892 [20] in the INVITE request that is sent for joining the conference.

### 5.3.1.5 Inviting other users to a conference

#### 5.3.1.5.1 General

Upon inviting another user to a conference, the conference participant has to decide which of the following procedures has to be applied:

- 1) inviting an user to a conference by sending a REFER request to the user directly, as described in subclause 5.3.1.5.2; [or](#)
- 2) inviting a user to a conference by sending a REFER request to the conference focus, as described in subclause 5.3.1.5.3;
- ~~3) inviting a user to a conference by adding a new element to the dial-out list (DL) of the conference policy, as described in draft-ietf-xcon-cpep [23] and draft-ietf-xcon-cpep-xcap [30]; or~~
- ~~4) inviting a user to a conference by adding a new element to the refer list (RL) of the conference policy, as described in draft-ietf-xcon-cpep [23] and draft-ietf-xcon-cpep-xcap [30].~~

[NOTE: Additionally, users can be invited to a conference by other means.](#)

It is out of the scope of the present document, how the UE decides which of the above procedures shall be applied.

#### 5.3.1.5.2 User invites other user to a conference by sending a REFER request to the other user

Upon generating a REFER request that is destined to a user in order to invite that user to a specific conference, the conference participant shall:

- 1) set the request URI of the REFER request to the address of the user who is invited to the conference;
- 2) set the Refer-To header of the REFER request to the conference URI of the conference that the other user shall be invited to, including the "method" parameter set to "INVITE"; and

NOTE: Other headers of the REFER request will be set in accordance with 3GPP TS 24.229 [5].

- 3) send the REFER request towards the user who is invited to the conference.

The UE may additionally include the Referred-By header to the REFER request and set it to the URI of the conference participant that is sending the REFER request.

Afterwards the UE shall treat incoming NOTIFY requests that are related to the previously sent REFER request in accordance with RFC 3515 [17] and may indicate the received information to the user.

#### 5.3.1.5.3 User invites other user to a conference by sending a REFER request to the conference focus

Upon generating a REFER request that is destined to the conference focus in order to invite another user to a specific conference, the conference participant shall:

- 1) set the request URI of the REFER request to the conference URI to which the user is invited to;
- 2) set the Refer-To header of the REFER request to the SIP URI or tel URL of the user who is invited to the conference;
- 3) include the "method" parameter with the value "INVITE" in the Refer-To header; and

NOTE: Other headers of the REFER request will be set in accordance with 3GPP TS 24.229 [5].

- 4) send the REFER request towards the conference focus that is hosting the conference.

The UE may additionally include the Referred-By header to the REFER request and set it to the URI of the conference participant that is sending the REFER request.

Afterwards the UE shall treat incoming NOTIFY requests that are related to the previously sent REFER request in accordance with RFC 3515 [17].

### 5.3.1.6 Leaving a conference

#### 5.3.1.6.1 Conference participant leaving a conference

When leaving a conference, the conference participant shall:

- 1) generate a BYE request on the dialog that was established when joining or creating the conference, in accordance to the procedures described in 3GPP TS 24.229 [5] and RFC 3261 [7];
- 2) if the conference participant is subscribed to the conference state event information of that conference, the conference participant shall not renew this subscription and let the related subscription timer expire. When a related NOTIFY request is received which does not include a Subscription-State header set to the value "terminated", the conference participant shall:
  - a) wait for an implementation dependant time, if a related NOTIFY request with the Subscription-State header set to the value "terminated" is received; and
  - b) afterwards, if no such NOTIFY request is received, unsubscribe from the conference state event information by performing the procedures as described in RFC 3265 [10] and draft-ietf-sipping-conference-package [11].

NOTE 1: A conference participant leaving a conference will cause the conference notification service to send a NOTIFY request with updated conference state information to all conference participants, including the participant who just left. Therefore the time between sending the BYE request and receiving the next NOTIFY request is very short. The conference participant does not immediately unsubscribe from the conference event package in order to not cause unnecessary traffic on the air interface.

NOTE 2: After the conference participant leaves the conference it can receive NOTIFY requests that cross the BYE request sent by the conference participant. In this case, the NOTIFY request will not include a Subscription-State header with the value "terminated", as it was issued before the conference focus / conference notification service got aware of the conference participant leaving the conference. Due to this another NOTIFY request may be received within a short period of time (see NOTE 1), that carries the Subscription-State header set to "terminated".

#### 5.3.1.6.2 Conference focus removes conference participant from a conference

Upon receipt of a BYE request on the dialog that was established when joining or creating a conference, the conference participant shall:

- 1) respond to the BYE request as described in 3GPP TS 24.229 [5] and RFC 3261 [7]; and
- 2) if the conference participant is subscribed to the conference state event information of that conference, perform the actions for not renewing the subscription to the conference state event information as described for the conference participant leaving a conference in subclause 5.3.1.6.1.

#### 5.3.1.6.3 Removing a conference participant from a conference

~~In order to remove a conference participant from a conference, the removing conference participant shall apply one of the following procedures:~~

~~1) removing a conference participant from a conference by sending a REFER request to the conference focus, as described in this subclause; or~~

~~2) removing a conference participant from a conference by establishing a conference policy authorization rule, as described in draft-ietf-xeon-cpep [23] and draft-ietf-xeon-cpep-xcap [30].~~

~~It is out of the scope of the present document, how the UE decides which of the above mentioned procedures shall be applied.~~

Upon generating a REFER request to remove a conference participant from a conference, the removing conference participant shall:

- 1) set the request URI of the REFER request to the conference URI of the conference from which the conference participant shall be removed
- 2) set the Refer-To header of the REFER request:
  - a) to the address of the conference participant who should be removed from the conference, including the "method" parameter set to "BYE", if a single conference participant should be removed from the conference; or
  - b) to the conference URI and the "method" parameter to "BYE", if all conference participants shall be removed from the conference.

NOTE 1: Other headers of the REFER request will be set in accordance with 3GPP TS 24.229 [5].

NOTE 2: The removal of all conference participants from the conference will terminate the conference if the conference policy is set accordingly.

- 3) send the REFER request towards the conference focus that is hosting the conference.

Afterwards the removing conference participant shall treat incoming NOTIFY requests that are related to the previously sent REFER request in accordance with RFC 3515 [17] and may indicate the received information to the user.

NOTE: Additionally, a conference participant can be removed from a conference by other means.

## 5.3.2 Conference Focus

### 5.3.2.1 General

In addition to the procedures specified in subclause 5.3.2, the conference focus shall support the procedures specified in 3GPP TS 24.229 [5] appropriate to the functional entity in which the conference focus is implemented. When performing 3rd party call control the conference focus shall follow the procedures of subclause 5.7.5 of 3GPP TS 24.229 [5].

### 5.3.2.2 Generic procedures for all conference related methods at the conference focus

#### 5.3.2.2.1 Conference focus originating case

The conference focus shall follow the procedures of 3GPP TS 24.229 [5] subclause 5.7.3 when acting as an originating UA.

#### 5.3.2.2.2 Conference focus terminating case

Upon receipt of a conference related initial request the conference focus shall follow the procedures of 3GPP TS 24.229 [5] subclause 5.7.1.2 in relation to the contents of the P-Charging-Function-Addresses header and the P-Charging-Vector header.

When creating the first response for this initial request, the conference focus shall:

- 1) include the P-Charging-Vector header including:
  - a) the value of the icid parameter as received in the initial request;
  - b) the value of the orig-ioi parameter as received in the initial request; and
  - c) the term-ioi parameter, indicating the network of the conference focus; and
- 2) include the P-Charging-Function-Addresses header as received in the initial request or, if the P-Charging-Function-Addresses header was not received in the initial request, indicate the values applicable for the conference in the P-Charging-Function-Addresses header.

When creating responses for an initial INVITE request, the conference focus shall additionally send the 200 (OK) response to the initial INVITE request only after the resource reservation has been completed.

### 5.3.2.3 Conference creation

#### 5.3.2.3.1 Conference creation with a conference factory URI

Upon receipt of an INVITE request that includes a conference factory URI in the request URI, the conference focus shall:

- 1) check if the conference factory URI is allocated and reject the request in accordance with RFC 3261 [7] if it is not allocated. The following actions in this subclause shall only be performed if the conference factory URI is allocated;

**NOTE:** The mechanism by which the conference focus gets aware whether a URI is a conference factory URI is out of the scope of the present document. One possibility would be that an operator uses a specific user part (e.g. conference-factory@home1.net) or host part (e.g. conference-factory.home1.net) for identification of conference factory URIs.

- 2) verify the identity of the user as described in subclause 5.7.1.4 of 3GPP TS 24.229 [5] and authorize the request as described in subclause 5.7.1.5 of 3GPP TS 24.229 [5]. The following actions in this subclause shall only be performed if the request can be authorized;
- 3) allocate a conference URI and may allocate a temporary conference URI; and

- 4) if "preconditions" were indicated as required in the INVITE request, generate a first provisional response to the INVITE request, indicating the temporary conference URI in the Contact header if allocated, else the conference URI.

At the same time, resources will also be requested from the mixer.

If the conference focus generates any 1xx or 2xx response to the INVITE request, the conference focus shall include the "isfocus" feature parameter in accordance with the procedures of draft-ietf-sip-callee-caps [19].

Upon receipt of an indication from the mixer that conference resources have been through-connected, the conference focus shall generate a 200 (OK) response to the INVITE request, indicating the "isfocus" option tag as a parameter to the conference URI in the Contact header.

#### 5.3.2.3.2 Conference creation with a conference URI

Upon receipt of an INVITE request that includes a conference URI in the request URI and the conference has not been created yet, the conference focus shall:

- 1) check if the conference URI is allocated reject the request in accordance with RFC 3261 [7] if it is not allocated. The following actions in this subclause shall only be performed if the conference factory URI is allocated;
- 2) verify the identity of the user as described in subclause 5.7.1.4 of 3GPP TS 24.229 [5] and authorize the request as described in subclause 5.7.1.5 of 3GPP TS 24.229 [5]. The following actions in this subclause shall only be performed if the request can be authorized; and
- 3) if "preconditions" were indicated as required in the INVITE request, generate a first provisional response to the INVITE request, indicating the conference URI in the Contact header.

At the same time, resources will also be requested from the mixer.

If the conference focus generates any 1xx or 2xx response to the INVITE request, the conference focus shall include the "isfocus" feature parameter in accordance with the procedures of draft-ietf-sip-callee-caps [19].

Upon receipt of an indication from the conference mixer that conference resources have been through-connected, the conference focus shall generate a 200 (OK) response to the INVITE request, indicating the conference URI in the Contact header.

#### 5.3.2.4 User joining a conference

##### 5.3.2.4.1 User joining a conference by using a conference URI

Upon receipt of an INVITE request that includes a conference URI in the request URI, the conference focus shall:

- 1) check if the conference URI is allocated. If the conference URI is not allocated, the conference focus shall reject the request in accordance with RFC 3261 [7]. The following actions shall only be performed if the conference URI is allocated;
- 2) verify the identity of the user as described in subclause 5.7.1.4 of 3GPP TS 24.229 [5] and authorize the request as described in subclause 5.7.1.5 of 3GPP TS 24.229 [5]. The following actions in this subclause shall only be performed if the request can be authorized; and
- 3) generate a provisional response to the INVITE request, indicating the conference URI in the Contact header.

At the same time, resources will also be requested from the mixer.

If the conference focus generates any 1xx or 2xx response to the INVITE request, the conference focus shall include the "isfocus" feature parameter in accordance with the procedures of draft-ietf-sip-callee-caps [19].

Upon receipt of an indication from the mixer that conference resources have been through-connected, the conference focus shall generate a 200 (OK) response to the INVITE request, indicating the conference URI in the Contact header.

### 5.3.2.5 Invitation of users to a conference

#### 5.3.2.5.1 General

The conference focus can invite users to a conference by sending an INVITE request to the user, as described in subclause 5.3.2.5.3. This procedure will be triggered at the conference focus:

- ~~1) by the entries in the dial-out list (DL) of the conference policy for the conference at the moment the conference focus starts hosting the conference, as described in subclause 7.3.2 and draft-ietf-xeon-epcp [23];~~
- ~~2) by a privileged user adding another user to the DL of the conference policy of the conference, as described in draft-ietf-xeon-epcp [23] and draft-ietf-xeon-epcp-xcap [30]; or~~
- 3) by a REFER request received from authorized users, that request the conference focus to invite other users to the conference, as described in subclause 5.3.3.5.2.

NOTE: Additionally, invitation of users to a conference can be triggered by other means.

Additionally, the conference focus can invite users to a conference by sending a REFER request to the user, as described in subclause 5.3.2.5.4. How these procedures are triggered is outside the scope of this specification. This procedure will be triggered at the conference focus:

- ~~1) by the entries in the refer list (RL) of the conference policy for the conference at the moment the conference focus starts hosting the conference, as described in subclause 7.3.2 and draft-ietf-xeon-epcp [23]; or~~
- ~~2) by a privileged user adding another user to the RL of the conference policy of the conference, as described in draft-ietf-xeon-epcp [23] and draft-ietf-xeon-epcp-xcap [30].~~

#### 5.3.2.5.2 Request from a user to invite another user to a conference

Upon receipt of an REFER request that includes:

- a) a conference URI in the request URI; and
- b) a Refer-To header including:
  - a valid SIP URI or tel URL; and,
  - the "method" parameter set to "INVITE";

the conference focus shall:

- 1) check if the conference URI is allocated. If the conference URI is not allocated, the conference focus shall reject the request in accordance with RFC 3261 [7]. The following actions in this subclause shall only be performed if the conference URI is allocated;
- 2) verify the identity of the user as described in subclause 5.7.1.4 of 3GPP TS 24.229 [5] and authorize the request as described in subclause 5.7.1.5 of 3GPP TS 24.229 [5]. The following actions in this subclause shall only be performed if the request can be authorized;
- 3) generate a final response to the REFER request in accordance with RFC 3515 [17];
- 4) invite the user indicated in the Refer-To header by performing the procedures as described in subclause 5.3.2.5.3;
- 5) if the received REFER request included a Referred-By header, include the Referred-By header in accordance with RFC 3892 [20] in the INVITE request that is sent for joining the conference; and
- 6) based on the progress of this invitation, send NOTIFY messages in accordance with the procedures of RFC 3515 [17] towards the user who sent the REFER request.

#### 5.3.2.5.3 Inviting a user to a conference by sending an INVITE request

When generating an INVITE request in order to invite a user to a specific conference, the conference focus shall:

- 1) set the request URI of the INVITE request to the address of the user who is invited to the conference;
- 2) set the P-Asserted-Identity header of the INVITE request to the conference URI of the conference that the user shall be invited to;
- 3) set the Contact header of the INVITE request to the conference URI of the conference that the user shall be invited to, including the "isfocus" feature parameter;
- 4) if the INVITE request is generated due to a received REFER request from another conference participant and that received REFER request included a Referred-By header, include the Referred-By header in accordance with RFC 3892 [20] in the INVITE request;
- 5) request the resources required for the new user from the conference focus; and
- 6) send the INVITE request towards the user who is invited to the conference.

NOTE: Requests are generated in accordance with 3GPP TS 24.229 [5].

Afterwards the conference focus shall proceed the session establishment as described in 3GPP TS 24.229 [5].

#### 5.3.2.5.4 Inviting a user to a conference by sending a REFER request

When generating a REFER request in order to invite a user to a specific conference, the conference focus shall:

- 1) set the request URI of the REFER request to the address of the user who is invited to the conference;
- 2) set the P-Asserted-Identity header of the REFER request to the conference URI of the conference that the user shall be invited to;
- 3) set the Refer-To header of the REFER request to the conference URI of the conference that the other user shall be invited to, including the "method" uri parameter set to "INVITE"; and

NOTE 1: Other headers of the REFER request will be set in accordance with 3GPP TS 24.229 [5].

- 4) send the REFER request towards the user who is invited to the conference.

NOTE 2: Requests are generated in accordance with 3GPP TS 24.229 [5].

Afterwards the conference focus shall treat incoming NOTIFY requests that are related to the previously sent REFER request in accordance with RFC 3515 [17].

#### 5.3.2.6 Leaving a conference

##### 5.3.2.6.1 Conference participant leaving a conference

Upon receipt of a BYE message from a conference participant, the conference focus shall:

- 1) respond to the BYE request as described in 3GPP TS 24.229 [5] and RFC 3261 [7]; and
- 2) release the resources, related to the conference participant from the conference mixer.

##### 5.3.2.6.2 Removing a conference participant from a conference

###### 5.3.2.6.2.1 General

The conference focus can remove a conference participant from a conference by terminating the dialog with the conference participant. This is done by sending a BYE request to the participant, as described in subclause 5.3.2.6.2.3. The removal of a conference participant by the conference focus will be triggered:

~~1) by a privileged user expelling a conference participant from the conference by establishing a conference policy authorization rule, as described in draft-ietf-xcon-ecp [23] and draft-ietf-xcon-ecp-xcap [30];~~

1) by a REFER request received from authorized users, that request the conference focus to remove the conference participant from the conference, as described in subclause 5.3.2.6.2.2; or

~~23~~) by local administration procedures.

NOTE: Additionally, a conference participant may be removed from a conference by other means.

#### 5.3.2.6.2.2 Request from a conference participant to remove another conference participant from a conference

Upon receipt of a REFER request that includes:

- a) a conference URI in the request URI; and,
- b) a Refer-To header including:
  - 1) a valid SIP URI or tel URL; and
  - 2) the "method" parameter set to "BYE".

The conference focus shall:

- 1) check if the conference URI is allocated. If the conference URI is not allocated, the conference focus shall reject the request in accordance with RFC 3261 [7]. The following actions in this subclause shall only be performed if the conference URI is allocated;
- 2) check if the SIP URI or tel URL of the Refer-To header is identical to the conference URI or belongs to a user who is currently a participant of the referenced conference. If this verification fails, then reject the request in accordance with RFC 3261 [7];
- 3) verify the identity of the user as described in subclause 5.7.1.4 of 3GPP TS 24.229 [5] and authorize the request as described in subclause 5.7.1.5 of 3GPP TS 24.229 [5]. The following actions in this subclause shall only be performed if the request can be authorized;
- 4) generate a final response to the REFER request in accordance with RFC 3515 [17];
- 5) if a single conference participant is indicated in the Refer-To header, remove this conference participant from the conference according to subclause 5.3.2.6.2.3. If the Refer-To header includes the conference URI, remove all conference participants from the conference by performing the procedures described in subclause 5.3.2.6.2.3 for each conference participant individually; and
- 6) based on the progress of this removal, send NOTIFY messages in accordance with the procedures of RFC 3515 [17] towards the conference participant who sent the REFER request.

#### 5.3.2.6.2.3 Conference focus removes conference participant from a conference

When removing a conference participant from a conference, the conference focus shall:

- 1) generate a BYE request on the dialog that was established when the conference participant joined or created the conference, in accordance to the procedures described in 3GPP TS 24.229 [5] and RFC 3261 [7];
- 2) release the resources, related to the conference participant from the conference mixer.

#### 5.3.2.7 Conference termination

A conference shall be terminated by the conference focus:

- 1) when the conference policy dictates it; ~~or:~~
- ~~2) when the conference policy document has been deleted by means of CPCP, as described in draft-ietf-xcon-epcp-xcap [23]; or~~
- ~~23~~) when no dedicated rules for conference termination exist in the conference policy; and:
  - either the conference was created with a conference factory URI and the conference creator has left the conference; or
  - the last conference participant has left or has been removed from the conference.

NOTE: How the conference policy can be created or changed is out of the scope of this specification.

To terminate an existing conference, the conference focus shall:

- 1) remove all present conference participants from the conference by performing the procedures as described in subclause 5.3.2.6.2.3 for each participant individually; and
- ~~2) trigger the deletion of the conference policy at the CPS if the conference termination was not initiated by the removal of the conference policy document; and~~
- ~~2) deallocate the conference URI.~~

### 5.3.3 Conference Notification Service

#### 5.3.3.1 General

In addition to the procedures specified in subclause 5.3.3, the conference notification service shall support the procedures specified in 3GPP TS 24.229 [5] appropriate to the functional entity in which the conference notification service is implemented.

#### 5.3.3.2 Subscription to conference event package

Upon receipt of a SUBSCRIBE request that includes a conference URI in the request URI and the "conference" tag in the Event header, the conference notification service shall:

- 1) check if the conference URI is allocated and reject the request in accordance with RFC 3261 [7] if it is not allocated. The following actions in this subclause shall only be performed if the conference URI is allocated;
- 2) verify the identity of the user as described in subclause 5.7.1.4 of 3GPP TS 24.229 [5] and authorize the request as described in subclause 5.7.1.5 of 3GPP TS 24.229 [5]. The following actions shall only be performed if the request can be authorized; and
- 3) establish the subscription to the conference state event information as described in RFC 3265 [10] and draft-ietf-sipping-conference-package [11].

#### 5.3.3.3 Leaving a conference

When generating a NOTIFY request with conference state event information that is destined to a subscriber, that has either left the conference or was removed from it, the conference notification service shall, include in the NOTIFY request a Subscription-State header with the value "terminated" in accordance with RFC 3265 [10].

#### 5.3.3.4 Conference termination

The conference notification service shall terminate all subscriptions to the conference event package in accordance with draft-ietf-sipping-conference-package [11] when the conference is terminated, as described in subclause 5.3.2.7.

### ~~5.3.4 Subscriber to conference policy changes~~

#### ~~5.3.4.1 Subscription for conference policy XML document changes~~

~~In order to get notifications of changes to the conference policy XML document of the conference, the subscriber shall generate a SUBSCRIBE request in accordance with draft-ietf-simple-xcap-package [31] and draft-ietf-sipping-config-framework [32]. The subscriber shall set the request URI of this SUBSCRIBE request to the conference URI of the conference to which the conference policy document is associated.~~

## ~~5.3.5 Notifier of conference policy changes~~

### ~~5.3.5.1 Subscription acceptance to conference policy XML document changes and notification of state changes~~

~~Upon receipt of a SUBSCRIBE request that includes a conference URI in the request URI and the "sip-profile" tag in the Event header, the notifier shall:~~

- ~~1) check if the conference URI is allocated and reject the request in accordance with RFC 3261 [7] if it is not allocated. The following actions in this subclause shall only be performed if the conference URI is allocated;~~
- ~~2) verify the identity of the user as described in subclause 5.7.1.4 of 3GPP TS 24.229 [5] and authorize the request as described in subclause 5.7.1.5 of 3GPP TS 24.229 [5]. The authorization policy mentioned in subclause 5.7.1.5 of 3GPP TS 24.229 [5] is given in this case by the conference policy, as described in subclause 7.3.2. The following actions shall only be performed if the request can be authorized;~~
- ~~3) establish the subscription to the profile change event notification package as described in RFC 3265 [10], draft-ietf-simple-xcap-package [31] and draft-ietf-sipping-config-framework [32]; and~~
- ~~4) generate notifications in accordance with draft-ietf-simple-xcap-package [31] and draft-ietf-sipping-config-framework [32] that contain the conference policy information the subscriber is allowed to receive. The user privileges of the conference policy privileges XML document define which elements of the conference policy XML document can be read by a particular subscriber.~~

---

## 6 Protocol using SDP for conferencing

~~Editor's note: The usage of SDP for floor control is under study in IETF. If the mechanisms are defined and if they are suitable for IMS conferencing, then their usage needs to be described in this clause.~~

### 6.1 Introduction

Void

### 6.2 Functional entities

#### 6.2.1 User Equipment (UE)

For the purpose of SIP based conferences, the UE shall implement the role of a conference participant as described in subclause 6.3.1.

#### 6.2.2 Media Resource Function Controller (MRFC)

As the function split between the MRFC and the conferencing AS is out of scope of the present document, the procedures for the MRFC are described together with those for the conferencing AS in subclause 6.2.3.

#### 6.2.3 Conferencing Application Server (Conferencing AS)

As the function split between the conferencing AS and the MRFC is out of scope of the present document, only the procedures are described for a combined conferencing AS and MRFC. The AS and MRFC may either be collocated, or interoperate using a proprietary protocol and a proprietary functional split.

For the purpose of SIP-based conferences, the conferencing AS shall act as a conference focus, as described in subclause 6.3.2. The conferencing AS/MRFC may implement the role of a conference participant as described in subclause 6.3.1.

## 6.2.4 Media Gateway Control Function (MGCF)

The MGCF implements the role of Conference participant (see subclause 6.3.1).

## 6.3 Role

### 6.3.1 Conference Participant

The conference participant shall support the procedures specified in 3GPP TS 24.229 [5] appropriate to the functional entity in which the conference participant is implemented.

### 6.3.2 Conference Focus

In addition to the procedures specified in subclause 6.3.2, the conference focus shall support the procedures specified in 3GPP TS 24.229 [5] appropriate to the functional entity in which the conference focus is implemented.

When the conference focus receives any SIP request or response containing SDP, the conference focus shall examine the media parameters in the received SDP.

Provided that the INVITE request received by the conference focus contains an SDP offer including one or more "m=" media descriptions, the SDP answer shall:

- reflect the media capabilities and policies as available for the conference; and
- contain a request confirmation for the result of the resource reservation at the originating end point for every "m=" media line if preconditions were required by the originator.

During session establishment procedure for a conference, SIP messages shall only contain SDP payload if that is intended to modify the session description.

For "video" and "audio" media types that utilize the RTP/RTCP, the conference focus shall specify the proposed bandwidth for each media stream utilizing the "b=" media descriptor in the SDP. For other media streams the "b=" media descriptor may be included. The value or absence of the "b=" parameter will affect the assigned QoS which is defined in 3GPP TS 29.208 [15].

The conference focus shall include the DTMF media format at the end of the "m=" media descriptor in the SDP for audio media flows that support both audio codec and DTMF payloads in RTP packets as described in RFC 2833 [16].

Upon receipt of a SDP answer or sending a SDP answer that changes the resource requirements for the conference, the conference focus shall provide the corresponding changes of conference resources.

Upon receipt of a SDP offer during conference creation, that confirms that the conference participant has reserved the required resources, the conference focus shall through-connect the conference resources.

---

## 7 ~~Void Protocol for conference policy control at the Ut~~ ~~reference point~~

### ~~7.1 Introduction~~

~~void~~

## 7.2 ~~Functional entities~~

### 7.2.1 ~~User Equipment (UE)~~

~~For the purpose of SIP-based conferences, the UE may implement the role of a privileged user as described in subclause 7.3.1. If the UE implements the role of a privileged user then the UE shall also implement the role of a subscriber to conference policy changes as described in subclause 5.3.4.~~

~~The UE shall implement HTTP digest AKA (see RFC 3310 [27]) and it shall initiate a bootstrapping procedure with the bootstrapping server function located in the home network, as described in 3GPP TS 24.109 [25].~~

~~The UE shall acquire the subscriber's certificate from PKI portal by using a bootstrapping procedure, as described in 3GPP TS 24.109 [25].~~

~~The UE shall implement Transport Layer Security (TLS) (see RFC 2246 [26]). The UE shall be able to authenticate the authentication proxy based on the received certificate during TLS handshaking phase.~~

### 7.2.2 ~~Media Resource Function Controller (MRFC)~~

~~As the function split between the MRFC and the conferencing AS is out of scope of the present document, the procedures for the MRFC are described together with those for the conferencing AS in subclause 7.2.3.~~

### 7.2.3 ~~Conferencing Application Server (Conferencing AS)~~

~~As the function split between the conferencing AS and the MRFC is out of scope of the present document, only the procedures are described for a combined conferencing AS and MRFC. The AS and MRFC may either be collocated, or interoperate using a proprietary protocol and a proprietary functional split.~~

~~For the purpose of SIP-based conferences, the conferencing AS/MRFC shall act as a Conference Policy Server (CPS), as described in subclause 7.3.2.~~

~~The conferencing AS/MRFC shall act as a notifier of conference policy changes as described in subclause 5.3.5.~~

~~The conferencing AS/MRFC may implement the role of a privileged user as described in subclause 7.3.1.~~

~~If there is no authentication proxy in the network, then the conferencing AS/MRFC shall:~~

- ~~— implement the role of a network application function, as described in 3GPP TS 24.109 [25];~~
- ~~— support HTTP digest authentication and certificate authentication; and~~
- ~~— implement TLS (see RFC 2246 [26]).~~

~~Editor's Note: It needs to be clarified what physical entities can contain the Authentication Proxy and its relationship with the IMS architecture. Documentation for the case of a separate authentication proxy may need to be provided.~~

## 7.3 ~~Role~~

### 7.3.1 ~~Privileged user~~

~~Editors note: It needs to be specified which IP-CAN transport can be used by CPCP. This is for further study, based on information requested from SA2.~~

~~A privileged user shall support the manipulation of some or all of the conference policy data elements that are defined in draft-ietf-xeon-epcp [23]. The conference policy elements, which can be manipulated or read by a specific privileged user, are specified by the conference policy meta-data, which is defined in draft-ietf-xeon-conference-policy-privileges [29].~~

~~A privileged user shall support the XCAP usage for conference policy manipulation as described in draft-ietf-xeon-epcp-xcap [30]. The manipulation of the conference policy data elements may trigger the conference focus to perform~~

~~the procedures of subclause 5.3.2. Therefore, the privileged user can perform the actions associated with these conference policy data elements, as described in draft-ietf-xcon-epcp [23].~~

~~If the privileged user is the creator of the conference, then the privileged user may modify the conference policy privileges document as described in draft-ietf-xcon-epcp-xcap [30]. The privileges document contains the conference policy meta data for the conference, as defined in draft-ietf-xcon-conference-policy-privileges [29].~~

~~The privileged user who terminates the conference by deleting the conference policy document as described in draft-ietf-xcon-epcp [23] and draft-ietf-xcon-epcp-xcap [30] shall not delete the conference policy privileges document.~~

~~NOTE 1: The user who creates the conference becomes a privileged user as described in draft-ietf-xcon-epcp-conference-policy-privileges [29] when the conference is created. It is irrelevant by which means the user creates the conference, e.g. by using CPCP, SIP or a web interface.~~

~~NOTE 2: It is outside the scope of the present document how the user can discover the conference policy server (CPS).~~

### ~~7.3.2 Conference Policy Server (CPS)~~

~~The conference policy server shall support the XCAP usages for conference policy and conference policy privileges manipulation as defined in draft-ietf-xcon-epcp-xcap [30].~~

~~Upon conference creation, the CPS shall create a conference policy document for the conference as described in draft-ietf-xcon-epcp [23].~~

~~The conference policy data elements of the conference policy document shall be set due to local policy, if not otherwise indicated by the conference creator. If a conference is not created by means of CPCP, as described in draft-ietf-xcon-epcp [23] and draft-ietf-xcon-epcp-xcap [30], the CPS shall automatically create a conference policy document for the conference.~~

~~NOTE 1: Conference policy can be preconfigured completely, or standard details can be preconfigured and the conference created in accordance with clauses 5 and 6.~~

~~NOTE 2: Media policy control is not specified in this version of the document.~~

~~Upon creation of a conference policy document, the CPS shall also create a conference policy privileges document for the conference. The privilege document shall be created in accordance with draft-ietf-xcon-conference-policy-privileges [30] and the naming conventions of draft-ietf-xcon-epcp-xcap [30]. The conference policy meta data shall be set due to local policy, if not otherwise indicated by the conference creator.~~

~~The CPS shall reject requests to delete the privileges document in accordance with RFC 2616 [21] as long as the conference policy document exists.~~

~~The conference policy server shall be able to delete the conference policy document. The deletion of the conference policy document can be triggered by the conference focus or by a user with sufficient privileges, as described in draft-ietf-xcon-epcp [23] and draft-ietf-xcon-epcp-xcap [30]. The deletion of the conference policy document terminates the conference, as described in subclause 5.3.2.7. The CPS shall also delete the conference policy privileges document that is associated with the conference when the conference is terminated.~~

---

## 8 VoidProtocol for floor control for conferencing

~~Editor's Note: BFCP requires message integrity protection and authentication that is based on a shared secret between the floor participant / floor chair and the floor control server. The generation of such a shared secret needs to be described and a reference to the corresponding specification needs to be added to this clause.~~

### 8.1 Introduction

~~Support of floor control is optional for participants and MRFP.~~

## ~~8.2 Functional entities~~

### ~~8.2.1 User Equipment (UE)~~

~~A UE may support the floor participant (see subclause 8.3.1) or floor chair role (see subclause 8.3.2). A floor chair may, but needs not to be a floor participant.~~

### ~~8.2.2 Media Resource Function Processor (MRFP)~~

~~An MRFP may support the floor control server role (see subclause 8.3.3), the floor chair role (see subclause 8.3.2), or the floor participant role (see subclause 8.3.1).~~

## ~~8.3 Role~~

### ~~8.3.1 Floor participant~~

~~The floor participant shall support general client operations and floor participant operations as described in draft ietf-xeon-bfep [28].~~

~~BFCP messages shall be sent on any IP-CAN transport used for media in accordance with subclause 9.2.2 of 3GPP TS.24.229 [5].~~

### ~~8.3.2 Floor chair~~

~~The floor chair shall support client operations and floor chair operations as described in draft ietf-xeon-bfep [28].~~

~~BFCP messages shall be sent on any IP-CAN transport used for media in accordance with subclause 9.2.2 of 3GPP TS.24.229 [5].~~

### ~~8.3.3 Floor control server~~

~~The floor control server shall support floor control server operations as described in draft ietf-xeon-bfep [28].~~

~~NOTE: It is out of scope of this version of the document how the floor control server discovers the floor control policy of the conference, and how the floor control server manipulates the media policy of the conference due to changes in the status of any floor.~~

---

# Annex A (informative): Example signalling flows of conferencing operation

## A.1 Scope of signalling flows

This annex gives examples of signalling flows for conferencing within the IP Multimedia CN Subsystem (IMS) based on the Session Initiation Protocol (SIP), SIP Events, ~~and the Session Description Protocol (SDP), the Conference Policy Control Protocol (CPCP) and other protocols.~~

These signalling flows provide detailed signalling flows, which expand on the overview information flows provided in 3GPP TS 23.228 [6].

---

## A.2 Introduction

### A.2.1 General

This annex breaks down the signalling flows for establishing sessions into a number of individual procedures, following the same principles as 3GPP TS 23.228 [3] subclause 5.4.9.

For the purposes of the present document, a further breakdown has been necessary, and therefore a number of signalling flows have been given an (a) or (b) suffix, so that the signalling flows for establishing sessions where configuration independence is applied may be distinguished from those where it is not, e.g.:

- (MO#1a) Mobile origination, roaming, without I-CSCF providing configuration independence.
- (MO#1b) Mobile origination, roaming, with I-CSCF in home network providing configuration independence.

**Editor's note:** Information related to the Referred-By header needs to be included in related signalling flows. More specifically, the contents of the Referred-By header in the REFER request need to be transferred to the INVITE method indicated by the Refer-To header in the REFER.

### A.2.2 Key required to interpret signalling flows

The key to interpret signalling flows specified in 3GPP TS 24.228 [4] subclause 4.1 applies with the additions specified below.

**Editor's note:** Additional material yet to be specified.

As in 3GPP TS 24.228 [4], in order to differentiate between SIP methods and other protocol messages, the message name is preceded with the associated protocol for all non-SIP messages. ~~Where the XCAP is used to map an HTTP URI to an XML document, the protocol name "XCAP" is used for both the HTTP request and HTTP response.~~

~~Only the CPCP flow in A.3.6 shows security relevant procedures and headers in XCAP messages according to 3GPP TS 24.109 [25]. The shown security method is HTTP digest authentication with bootstrapped security association.~~

Each flow table contains descriptions for headers where the content of the header is new to that flow, as is already performed in 3GPP TS 24.228 [4].

However, 3GPP TS 24.228 [4] includes extensive descriptions for the contents of various headers following each of the tables representing the contents of the flows. Where the operation of the header is identical to that shown in 3GPP TS 24.228 [4], then such text is not reproduced in the present document.

Additional text may also be found on the contents of headers within 3GPP TS 24.228 [4] in addition to the material shown in the present document.

## A.2.3 Overview of signalling flows related to PSI routing

The flows in this annex reflect examples for some of the PSI specific routing scenarios. This subclause gives a list of the PSI scenarios and indicates which flows specifically cover them:

1) User originating a dialog towards a PSI.

a) PSI is hosted by the originating users home network.

i) S-CSCF of originating user can directly route towards the AS hosting the PSI.

This case is shown in subclauses A.3.2.1 and A.4.4.1.

ii) PSI is statically pre-configured, i.e. S-CSCF of the originating user routes towards the S-CSCF assigned to the PSI, which afterwards routes towards the AS hosting the PSI.

This case is not covered by the present document.

b) PSI is hosted by a network different from the originating users home network.

i) PSI can be resolved directly by the S-CSCF located in the originating users home network.

This case is shown in subclauses A.4.2.1.2 and A.5.2.1.

ii) S-CSCF in originating users home network can only resolve an I-CSCF of the network that is hosting the PSI.

- I-CSCF can directly route towards the AS hosting the PSI.

This case is shown in subclauses A.3.2.2 and A.4.2.1.1.

- PSI is statically pre-configured, i.e. I-CSCF routes first to S-CSCF in the network that hosts the PSI, the S-CSCF afterwards routes towards the AS hosting the PSI.

This case is not covered by the present document.

2) Dialog originates from a PSI.

a) AS routes directly to the I-CSCF of the terminating users home network.

This case is shown in subclause A.4.3.1.3.

b) AS routes first to a S-CSCF in the network hosting the PSI, which then routes to the I-CSCF of the terminating users home network.

This case is shown in subclause A.4.3.1.4.

3) Dialog originating from a PSI and terminating at a different PSI.

This case is not covered by the present document.

## A.3 Flows demonstrating the creation of a conference

### A.3.1 Introduction

Clause A.3 covers the flows that show how a user can create conferences at a MRFC/AS.

### A.3.2 User automatically creating a conference with a conference factory URI

#### A.3.2.1 MRFC/AS is located in user's home network

Figure A.3.2.1-1: User automatically creating a conference with a conference factory URI - MRFC/AS is located in user's home network

Figure A.3.2.1-1 shows an user creating a conference by using a conference-factory URI. The conference is created at a MRFC/AS of the users home network.

The details of the flows are as follows:

#### 1. INVITE request (UE to P-CSCF) - see example in table A.3.2.1-1

A UE wants to create a conference. For this purpose the UE is aware of a conference-factory URI that was obtained by means outside the present document (e.g. due to pre-configuration or via other protocols, such as http).

The UE determines the complete set of codecs that it is capable of supporting for this conference. It builds a SDP Offer containing bandwidth requirements and characteristics of each, and assigns local port numbers for each possible media flow. Multiple media flows may be offered, and for each media flow (m= line in SDP), there may be multiple codec choices offered.

For this example, it is assumed that UE#1 is willing to establish a multimedia session comprising a video stream and an audio stream. The video stream supports two codecs, either H.263 or MPEG-4 Visual. The audio stream supports the AMR codec. The UE sends the INVITE request to the P-CSCF.

**Table A.3.2.1-1: INVITE request (UE to P-CSCF)**

```

INVITE sip:conference-factory1@mrfc1.home1.net SIP/2.0

From:
To:
Call-ID:
CSeq:
Content-Length: 0
```

**8. Allocate conference URI**

The MRFC/AS allocates a conference URI, based on local information and information gained from the conference-factory URI, as well as information gained from other elements of the SIP signalling.

**9. H.248 interaction to create connection**

The MRFC initiates a H.248 interaction to create an IMS connection point for UE#1 in MRFP and to determine media capabilities of the MRFP.

**10. 183 (Session Progress) response (MRFC/AS to S-CSCF) - see example in table A.3.2.1-13 (related to table A.3.2.1-6)**

The MRFC determines the complete set of codecs that it is capable of supporting for this conference. It determines the intersection with those appearing in the SDP in the INVITE request.

The media stream capabilities of the destination are returned along the signalling path, in a 183 (Session Progress) provisional response (to 6).

**Table A.3.2.1-10: 183 (Session Progress) response (MRFC/AS to S-CSCF)**

**A.3.2.2 MRFC/AS is not located in user's home network**

Figure A.3.2.2-1 shows an user creating a conference by using a conference-factory URI. The conference is created at a MRFC/AS located in a different network than user's S-CSCF.

Figure A.3.2.2-1: User automatically creating a conference with a conference factory URI - MRFC/AS is not located in user's home network

The details of the flows are as follows:

### 1. INVITE request (UE to P-CSCF) - see example in table A.3.2.2-1

A UE wants to create a conference to a MRFC/AS in other network. For this purpose the UE is aware of a conference-factory URI that was obtained by means outside the present document (e.g. due to pre-configuration or via other protocols, such as http)

The UE determines the complete set of codecs that it is capable of supporting for this conference. It builds a SDP Offer containing bandwidth requirements and characteristics of each, and assigns local port numbers for each possible media flow. Multiple media flows may be offered, and for each media flow (m= line in SDP), there may be multiple codec choices offered.

For this example, it is assumed that UE#1 is willing to establish a multimedia session comprising a video stream and an audio stream. The video stream supports two codecs, either H.263 or MPEG-4 Visual. The audio stream supports the AMR codec. The UE sends the INVITE request to the P-CSCF.

**Table A.3.2.2-1: INVITE request (UE to P-CSCF)**

```

INVITE sip:conference-factory@home2.net SIP/2.0

#### 7. 100 (Trying) response (I-CSCF to S-CSCF) - see example in table A.3.2.2-7

The I-CSCF responds to the INVITE request (6) with a 100 (Trying) response provisional response.

**Table A.3.2.2-7: 100 (Trying) response (I-CSCF to S-CSCF)**

```

SIP/2.0 100 (Trying) response
Via: SIP/2.0/UDP scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP
    pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP
    [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7
From:
To:
Call-ID:
CSeq:
Content-Length: 0

```

**8. Public service identity (PSI) location query**

The I-CSCF resolves the conference-factory URI. In this example the I-CSCF queries HSS to resolve the MRFC/AS PSI to be contacted. The HSS responds with the address of the MRFC/AS.

For detailed message flows see 3GPP TS 29.228 [11].

Table A.3.2.2-8a provides the parameters in the SIP INVITE request, which are sent to the HSS.

**Table A.3.2.2-8a Cx: User location query procedure (I-CSCF to HSS)**

Message source and destination	Cx: Information element name	Information source in SIP INVITE	Description
I-CSCF to HSS	Public Service Identity (PSI)	Request-URI:	This information element indicates the public user identity

Table A.3.2.2-8b provides the parameters sent from the HSS that need to be mapped to SIP INVITE and sent to MRFC/AS.

**Table A.3.2.2-8b Cx: User location query procedure (HSS to I-CSCF)**

Message source and destination	Cx: Information element name	Mapping to SIP header in SIP INVITE	Description
HSS to I-CSCF	MRFC/AS address	IP packet destination address	This information element indicates the MRFC/AS address which serves the PSI.

### 9. INVITE request (I-CSCF to MRFC/AS) - see example in table A.3.2.2-9

I-CSCF forwards the INVITE request to the MRFC/AS. The I-CSCF does not add itself to the Record-Route header since it does not need to stay on the signalling path for subsequent requests.

**Table A.3.2.2-9: INVITE request (I-CSCF to MRFC/AS)**

```

INVITE sip:conference-factory@home2.net SIP/2.0
Via: SIP/2.0/UDP icscf1.home2.net;branch=z9hG4bK32f432.1, SIP/2.0/UDP
    scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP

Call-ID:
CSeq:
Content-Length: 0

```

## 11. Allocate conference URI

MRFC/AS allocates a conference URI, based on local information and information gained from the conference-factory URI, as well as information gained from other elements of the SIP signalling.

## 12. H.248 interaction to create connection

MRFC initiates a H.248 interaction to create an connection point for UE#1 in MRFP and to determine media capabilities of MRFP.

## 13. 183 (Session Progress) response (MRFC/AS to I-CSCF) - see example in table A.3.2.2-13 (related to table A.3.2.2-9)

The MRFC determines the complete set of codecs that it is capable of supporting for this conference. It determines the intersection with those appearing in the SDP in the INVITE request.

The media stream capabilities of the destination are returned along the signalling path, in a 183 (Session Progress) provisional response (to 8).

**Table A.3.2.2-13: 183 (Session Progress) response (MRFC/AS to I-CSCF)**

```
SIP/2.0 183 Session Progress

### Contact:

Contains the conference URI for the conference allocated at the MRFC/AS and the "isfocus" feature parameter.

**P-Charging-Vector:** The MRFC/AS inserts the originating IOI parameter received and populates the terminating IOI parameter with its own network.

**P-Charging-Function-Addresses:** The MRFC/AS inserts the P-Charging-Function-Addresses header field to be passed to the I-CSCF.

**14. 183 (Session Progress) response (I-CSCF to S-CSCF) - see example in table A.3.2.2-14**

The I-CSCF forwards the 183 (Session Progress) response to the P-CSCF.

**Table A.3.2.2-14: 183 (Session Progress) response (I-CSCF to S-CSCF)**

### 16. Authorize QoS Resources

The P-CSCF authorizes the resources necessary for this session. The approval of QoS commitment either happens at this stage or after 200 (OK) response of INVITE request (34) based on operator local policy.

### 18. PRACK request (UE to P-CSCF) - see example in table A.3.2.2-18

The UE determines which media flows should be used for this session, and which codecs should be used for each of those media flows. If there was any change in media flows, or if there was more than one choice of codec for a media flow, then UE includes a new SDP offer in the PRACK request sent to the MRFC/AS.

For this example, assume the UE chooses H.263 as the codec to use for the single video stream. Therefore, UE#1 sends a new SDP offer in the PRACK request.

**Table A.3.2.2-18: PRACK request (UE to P-CSCF)**

```

PRACK sip:conference1@mrfc1.home2.net SIP/2.0

## A.3.3 User automatically creating a conference with a conference URI

The call flows for a user automatically creating a conference with a conference URI look identical to the call flows for conference creation with a conference-factory URI (see subclause A.3.2), besides the URIs carried in the Request URI and Contact header fields.

### A.3.4 User creating a conference by manually dialling

The call flows for a user creating a conference by manually dialling into the IMS look identical to the call flows for conference creation with a conference-factory URI (see subclause A.3.2), besides the URIs carried in the Request URI and Contact header fields.

### A.3.5 User creating a conference from two existing connections (Three-way session), users in different networks

Subclause 5.3.1.3.3 of the present document shows that the creation of a Three-way session is a local issue at the UE which results in a combination of other procedures (conference creation, conference participant invitation to conference, session release).

### ~~A.3.6 Conference creation with CPCP~~

~~Figure A.3.6 shows an user creating a conference by CPCP. The conference is created at a MRFC/AS of the users home network. The flow assumes that the AS within the MRFC/AS implements a NAF role. The security is based on HTTP Digest Authentication with bootstrapped security association.~~

~~Figure A.3.6: User creating a conference with CPCP~~

~~The details of the flows are as follows:~~

~~1. XCAP PUT request (UE to MRFC/AS) – see example in table A.3.6-1~~

~~— A user wants to create a conference. For this purpose the UE creates a conference policy XML document by using CPCP. The UE includes all parameters, that the user has set for the conference in the XCAP document and sends it to the MRFC/AS in a XCAP PUT request.~~

**Table A.3.6-1: XCAP PUT request (UE to MRFC/AS)**

```

</conference>

```

## 2. ~~XCAP 401 (Unauthorized) response (MRF/AS to UE)~~

- Upon receiving an unauthorized XCAP PUT the MRF/AS implementing the NAF chooses to authenticate the UE using bootstrapped security association.

**Table A.3.6-2: 401 Unauthorized response (NAF to UE)**

```
HTTP/1.1 401 Unauthorized
Server: Apache/1.3.22 (Unix) mod_perl/1.27
Date: Thu, 08 Jan 2004 10:50:35 GMT
WWW-Authenticate: Digest realm="3GPP-bootstrapping@xcap.homel.net",
  nonce="6629fae49393a05397450978507e4ef1", algorithm=MD5, qop="auth,auth-int",
  opaque="5ccc069c403ebaf9f0171e9517f30e41"
```

~~WWW-Authenticate:~~ The NAF challenges the user. The header instructs the UE to use HTTP Digest Authentication with a bootstrapped security association.

## 3. ~~Generation of NAF specific keys at UE~~

- UE shall verify that the second part of the realm attribute does correspond to the server it is talking to UE derives the NAF specific key material  $K_s\_NAF$  as specified in 3GPP TS 33.220 [1].

~~NOTE:~~ If UE does not have a bootstrapped security association available, it will obtain one by running bootstrapping procedure over Ub interface.

## 4. ~~XCAP PUT request (UE to MRF/AS) – see example in table A.3.6-4~~

- UE generates the XCAP request by calculating the Authorization header values using the bootstrapping transaction identifier B-TID (base64 encoded) it received from the BSF as the username and the NAF specific key material  $K_s\_NAF$  (base64 encoded) as the password, and sends the request to NAF.

**Table A.3.6-4: XCAP PUT request (UE to MRF/AS)**

```
PUT /services/conference_policy/users/user1_public1/conference.xml HTTP/1.1
Host:xcap.homel.net

```

~~8. Authentication at UE~~

---

## A.4 Flows demonstrating a user joining a conference

### A.4.1 Introduction

Void

## A.4.2 User calling into a conference

### A.4.2.1 MRFC/AS is not located in user's home network

#### A.4.2.1.1 Conference URI resolved by the terminating home network

Figure A.4.2.1.1-1: User calling into a conference - network MRFC/AS is not located in user's home network - conference URI resolved by the terminating home network

Figure A.4.2.1.1-1 shows a user calling into a conference by using a conference URI. The focus of that conference is at a MRFC/AS which are located in another network. The conference URI in this example cannot be resolved by the originating home network.

The details of the flows are as follows:

#### 1. INVITE request (UE to P-CSCF) - see example in table A.4.2.1.1-1

A UE wants to join a conference. For this purpose the UE is aware of the related conference URI that was obtained by means outside the present document (e.g. via other protocols, such as http).

The UE determines the complete set of codecs that it is capable of supporting for this conference. It builds a SDP Offer containing bandwidth requirements and characteristics of each, and assigns local port numbers for each possible media flow. Multiple media flows may be offered, and for each media flow (m= line in SDP), there may be multiple codec choices offered.

For this example, it is assumed that UE#1 is willing to establish a multimedia session comprising a video stream and an audio stream. The video stream supports two codecs, either H.263 or MPEG-4 Visual. The audio stream supports the AMR codec capable of sending two simultaneous video streams, either H261 or The UE sends the INVITE request to the P-CSCF.

**Table A.4.2.1.1-1: INVITE request (UE to P-CSCF)**

```

```

#### 5. **Evaluation of initial filter criteria**

The S-CSCF validates the service profile of this subscriber and evaluates the initial filter criteria.

#### 6. **INVITE request (S-CSCF to I-CSCF) - see example in table A.4.2.1.1-6**

The S-CSCF performs an analysis of the destination address, and determines the network operator to whom the destination subscriber belongs. Since the originating operator does not desire to keep their internal configuration hidden, the S-CSCF forwards the INVITE request directly to the I-CSCF in the destination network.

As the S-CSCF does not know whether the I-CSCF at home2.net is a loose router or not, it does not introduce a Route header.

**Table A.4.2.1.1-6: INVITE request (S-CSCF to I-CSCF)**

```

INVITE sip:conferencel@home2.net SIP/2.0

```

## 8. Public service identity (PSI) location query

The I-CSCF sends a query to the HSS to find out the MRFC/AS at which the conference has been created. The HSS responds with the address of the MRFC/AS at which the conference is hosted. The HSS responds with the address of the MRFC/AS.

For detailed message flows see 3GPP TS 29.228 [11].

Table A.4.2.1.1-8a provides the parameters in the SIP INVITE request, which are sent to the HSS.

**Table A.4.2.1.1-8a Cx: User location query procedure (I-CSCF to HSS)**

Message source and destination	Cx: Information element name	Information source in SIP INVITE	Description
I-CSCF to HSS	Public Service Identity (PSI)	Request-URI:	This information element indicates the public user identity

Table A.4.2.1.1-8b provides the parameters sent from the HSS that need to be mapped to SIP INVITE and sent to MRFC/AS.

**Table A.4.2.1.1-8b Cx: User location query procedure (HSS to I-CSCF)**

Message source and destination	Cx: Information element name	Mapping to SIP header in SIP INVITE	Description
HSS to I-CSCF	MRFC/AS address	IP packet destination address	This information element indicates the MRFC/AS address which serves the PSI.

### 9. INVITE request (I-CSCF to MRFC/AS) - see example in table A.4.2.1.1-9

I-CSCF forwards the INVITE request to the MRFC/AS that was resolved during the PSI location query (8). The I-CSCF does not re-write the Request URI.

**Table A.4.2.1.1-9: INVITE request (I-CSCF to MRFC/AS)**

```

INVITE sip:conference1@home2.net SIP/2.0

```

**Contact:** Contains the conference URI for the conference allocated at the MRFC/AS and the "isfocus" feature parameter.

**P-Charging-Vector:** The MRFC/AS inserts this header and populates the icid parameters with an unique value and the terminating Inter Operator Identifier (IOI) for the home network of the MRFC/AS and puts back the originating IOI.

**P-Charging-Function-Addresses:** The MRFC/AS populates the P-Charging-Function-Addresses header field to be passed to the I-CSCF.

### 17. PRACK request (UE to P-CSCF) - see example in table A.4.2.1.1-17

The UE determines which media flows should be used for this session, and which codecs should be used for each of those media flows. If there was any change in media flows, or if there was more than one choice of codec for a media flow, then UE includes a new SDP offer in the PRACK request sent to the MRFC/AS.

For this example, assume the UE chooses H.263 as the codec to use for the single video stream. Therefore, UE#1 sends a new SDP offer in the PRACK request.

**Table A.4.2.1.1-17: PRACK request (UE to P-CSCF)**

```

PRACK sip:conference1@home2.net SIP/2.0
Via: SIP/2.0/UDP [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7

### 36. 200 (OK) response (MRFC/AS to I-CSCF) - see example in table A.4.2.1.1-36 (related to table A.4.2.1.1-9)

After the success modification of the session (32), the MRFC/AS sends a 200 (OK) response final response to the INVITE request (9) to the I-CSCF.

**Table A.4.2.1.1-36: 200 (OK) response (MRFC/AS to I-CSCF)**

```
SIP/2.0 200 OK
Via: SIP/2.0/UDP icscf2_s.home2.net;branch=z9hG4bK871y12.1, SIP/2.0/UDP
scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP
pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP
[5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7
Record-Route: <sip:scscf1.home1.net;lr>, <sip:pcscf1.visited1.net;lr>
From:
To:
Call-ID:
CSeq: 127 INVITE
Contact: <sip:conferencel@home2.net>;isfocus
Allow-Events: conference
Content-Length:0
```

**Contact:** contains the conference URI for the conference allocated at the MRFC/AS and the "isfocus" feature parameter.

**Allow-Events:** The MRFC/AS indicates support for the "conference" event package

**37. 200 (OK) response (I-CSCF to S-CSCF) - see example in table A.4.2.1.1-37**

The I-CSCF sends a 200 (OK) response final response along the signalling path back to the S-CSCF.

**Table A.4.2.1.1-37: 200 (OK) response (I-CSCF to S-CSCF)**

```
SIP/2.0 200 OK
Via: SIP/2.0/UDP scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP

### A.4.2.1.2 Conference URI can be resolved by the originating home network

Figure A.4.2.1.2-1: User calling into a conference - MRFC/AS is not located in user's home network - conference URI can be resolved by the originating home network

Figure A.4.2.1.2-1 shows a user calling into a conference by using a conference URI. The focus of that conference is at a MRFC/AS which are located in another network. The conference URI in this example can be resolved by the originating home network.

The details of the flows are as follows:

#### 1. INVITE request (UE to P-CSCF) - see example in table A.4.2.1.2-1

A UE wants to join a conference. For this purpose the UE is aware of the related conference URI that was obtained by means outside the present document.

The UE determines the complete set of codecs that it is capable of supporting for this conference. It builds a SDP Offer containing bandwidth requirements and characteristics of each, and assigns local port numbers for each possible media flow. Multiple media flows may be offered, and for each media flow (m= line in SDP), there may be multiple codec choices offered.

For this example, it is assumed that UE#1 is willing to establish a multimedia session comprising a video stream and an audio stream. The video stream supports two codecs, either H.263 or MPEG-4 Visual. The audio stream supports the AMR codec.

**Table A.4.2.1.2-1: INVITE request (UE to P-CSCF)**

```

INVITE sip:conference1@mrfc2.home2.net SIP/2.0

#### 5. Evaluation of initial filter criteria

The S-CSCF validates the service profile of this subscriber and evaluates the initial filter criteria.

#### 6. INVITE request (S-CSCF to MRFC/AS) - see example in table A.4.2.1.2-6

S-CSCF forwards the INVITE request to the MRFC/AS based on the Request URI of the INVITE request. The S-CSCF does not re-write the Request URI.

**Table A.4.2.1.2-6: INVITE request (S-CSCF to MRFC/AS)**

```
INVITE sip:conferencel@mrfc2.home2.net SIP/2.0

- Contact:** Contains the conference URI for the conference allocated at the MRFC/AS and the "isfocus" feature parameter.
- P-Charging-Vector:** The MRFC/AS inserts this header and populates the icid parameters with an unique value and the terminating Inter Operator Identifier (IOI) for the home network of the MRFC/AS and puts back the originating IOI.
- P-Charging-Function-Addresses:** The MRFC/AS populates the P-Charging-Function-Addresses header field to be passed to the S-CSCF.

### 13. PRACK request (UE to P-CSCF) - see example in table A.4.2.1.2-13

The UE determines which media flows should be used for this session, and which codecs should be used for each of those media flows. If there was any change in media flows, or if there was more than one choice of codec for a media flow, then UE includes a new SDP offer in the PRACK request sent to the MRFC/AS.

For this example, assume the UE chooses H.263 as the codec to use for the single video stream. Therefore, UE#1 sends a new SDP offer in the PRACK request.

**Table A.4.2.1.2-13: PRACK request (UE to P-CSCF)**

```

PRACK sip:conference1@mrfc2.home2.net SIP/2.0

## A.4.3 User getting invited to a conference

### A.4.3.1 MRFC/AS is not located in user's home network

#### A.4.3.1.1 Conference Participant referring another user to a conference

Figure A.4.3.1.1-1 shows how UE#1 refers UE#2 to a conference. UE#1 has created a conference by using the mechanisms described in subclause 6.2, and UE#1 has learned the conference URI that identifies this conference.

**Figure A.4.3.1.1-1: User inviting another user to a conference by sending a REFER request to the other user**

The details of the flows are as follows:

**1. UE#1 creates a conference**

UE#1 creates a conference as described in subclause 6.3.2. Once the conference creation is accomplished, UE#1 has learned the conference URI allocated for this conference.

## 2. REFER request (UE to P-CSCF) - see example in table A.4.3.1.1-2

A UE has created a conference and learned the conference URI. Now the UE wants to invite another UE to that conference.

**Table A.4.3.1.1-2: REFER request (UE to P-CSCF)**

```
REFER sip:user2_public1@home2.net SIP/2.0
Via: SIP/2.0/UDP [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7
Max-Forwards: 70

Contact: <sip:[5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp>
Content-Length: 0
```

**Request-URI:** contains the public user identity of UE#2.

**Via:** contains the IP address or FQDN of the originating UE.

**Refer-To:** contains the conference URI as learned during the conference establishment. Additionally the "method" uri parameter indicates that the other user is requested to send an INVITE request to this conference URI.

**Referred-By:** contains the public user identity of the referring user, as in this example the referring user has decided to indicate its own identity to the referred user.

## 3. REFER request (P-CSCF to S-CSCF) - see example in table A.4.3.1.1-3

The P-CSCF forwards the REFER request to the S-CSCF.

**Table A.4.3.1.1-3: REFER request (P-CSCF to S-CSCF)**

```
REFER sip:user2_public1@home2.net SIP/2.0

## 4. Evaluation of initial Filter Criteria

The S-CSCF validates the service profile of this subscriber and evaluates the initial filter criteria.

## 5. REFER request (S-CSCF to I-CSCF in UE#2 home network) - see example in table A.4.3.1.1-5

The S-CSCF performs an analysis of the destination address, and determines the network operator to whom the destination subscriber belongs. Since the originating operator does not desire to keep their internal configuration hidden, the S-CSCF forwards the REFER request directly to the destination network.

**Table A.4.3.1.1-5: REFER request (S-CSCF to I-CSCF)**

```
REFER sip:user2_public1@home2.net SIP/2.0
Via: SIP/2.0/UDP scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP

**6. REFER request (I-CSCF towards S-CSCF of UE#2) - see example in table A.4.3.1.1-6**

The I-CSCF performs a Cx location query to the HSS (not shown in this flow) to find out the S-CSCF of UE#2.

The I-CSCF then forwards the REFER request to that S-CSCF that will handle the session termination.

**Table A.4.3.1.1-6: REFER request (I-CSCF towards S-CSCF of UE#2)**

```
REFER sip:user2_public1@home2.net SIP/2.0

### 7. 202 (Accepted) response (S-CSCF of UE#2 to I-CSCF) - see example in table A.4.3.1.1-7

UE#2 home network indicates that it has received the REFER request by sending a 202 (Accepted) response. This means that UE#2 home network has begun to process the request. This does not mean, however, that the referred-to resource would have been contacted.

**Table A.4.3.1.1-7: 202 (Accepted) response (S-CSCF of UE#2 to I-CSCF)**

```

A.4.3.1.2 User getting referred to a conference by a conference participant

Figure A.4.3.1.2-1 shows how UE#2 gets referred to a conference by receiving a REFER request from a conference participant. The REFER request contains the conference URI where UE#2 should use when joining the conference.

**Figure A.4.3.1.2-1: User getting invited to a conference by receiving a REFER request.**

The details of the flows are as follows:

### 1. REFER request (S-CSCF of UE#1 to I-CSCF) - see example in table A.4.3.1.2-1

REFER request is sent by the S-CSCF of UE#1 to UE#2 home network. S-CSCF of UE#1 has resolved the address of I-CSCF as the entry point to UE#2 home network. See subclause 6.3.3.1.1 for originating side of the call flow.

**Table A.4.3.1.2-1: REFER request (S-CSCF of UE#1 to I-CSCF)**

```
REFER sip:user2_public1@home2.net SIP/2.0
Via: SIP/2.0/UDP scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP
    pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP
    [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7
Max-Forwards: 68
Record-Route: <sip:scscf1.home1.net;lr>, <sip:pcscf1.visited1.net;lr>
P-Asserted-Identity: "John Doe" <sip:user1_public1@home1.net>, <tel:+358-50-4821437>
P-Charging-Vector: icid-value="AyretyU0dm+602IrT5tAFrbHLso=123551024"; orig-ioi=home1.net
Privacy: none
From: <sip:user1_public1@home1.net>; tag=171828
To: <sip:user2_public1@home2.net>
Call-ID: cb03a0s09a2sdfg1kj490333
Cseq: 127 REFER
Refer-To: <sip:conference1@mrfc1.home1.net;method=INVITE>
Referred-By: <sip:user1_public1@home1.net>
Contact: <sip:[5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp>
Content-Length: 0
```

**Request-URI:** contains the public user identity of UE#2.

**Refer-To:** contains the conference URI as learned during the conference establishment. Additionally the "method" uri parameter indicates that the other user is requested to send an INVITE request to this conference URI.

**Referred-By:** contains the public user identity of the referring user, as in this example the referring user has decided to indicate its own identity to the referred user.

### 2. The I-CSCF performs HSS query

The I-CSCF performs HSS query to find out the S-CSCF serving UE#2.

### 3. REFER request (I-CSCF to S-CSCF) - see example in table A.4.3.1.2-3

After finding out the S-CSCF assigned to UE#2, the I-CSCF forwards the REFER request to that S-CSCF. The I-CSCF does not add itself to the Record-route since it does not have to remain on the signalling path for subsequent requests within the same dialog.

**Table A.4.3.1.2-3: REFER request (I-CSCF to S-CSCF)**

```

### 4. Evaluation of initial Filter Criteria

The S-CSCF validates the service profile of this subscriber, and evaluates the initial Filter Criteria.

### 5. REFER request (S-CSCF to P-CSCF) - see example in table A.4.3.1.2-5

The S-CSCF remembers (from registration procedures) the contact address of UE#2 and determines the P-CSCF assigned for UE#2 and routes the REFER request there.

**Table A.4.3.1.2-5: REFER request (S-CSCF to P-CSCF)**

```
REFER sip:[5555::eeee:ffff:aaaa:bbbb]:8805;comp=sigcomp SIP/2.0

**A.4.3.1.3 MRFC/AS invites a user to a conference**

**Editor's Note:** The values of the charging related headers in this call flow have to be revised.

Figure A.4.3.1.3-1 shows an MRFC/AS inviting a user to a conference. The invitation is sent as a result of user1@home1.net sending a REFER request to the MRFC/AS. The MRFC/AS is located in a different network than user's S-CSCF.

Figure A.4.3.1.3-1: MRFC/AS inviting a user to a conference - MRFC/AS routes directly to I-CSCF

The details of the flows are as follows:

### 1. INVITE request (MRFC/AS to I-CSCF) - see example in table A.4.3.1.3-1

In this example, the MRFC/AS is capable of resolving the terminating users I-CSCF address for this request. As a result of a DNS query, it has received the address of the I-CSCF as the next hop.

The MRFC/AS invites a user to a conference as it received a REFER request from another user.

The MRFC/AS determines the codecs that are applicable for this conference. It builds a SDP Offer containing bandwidth requirements and characteristics of each, and assigns local port numbers for each possible media flow. Multiple media flows may be offered, and for each media flow (m= line in SDP). In this example, there is only one codec per media offered.

For this example, it is assumed that MRFC/AS is willing to establish a multimedia session comprising a video stream and an audio stream. The video stream supports H.263. The audio stream supports the AMR codec.

**Table A.4.3.1.3-1: INVITE request (MRFC/AS to I-CSCF)**

```

INVITE sip:user2_public1@home2.net SIP/2.0

```

**Request-URI:** contains the public user identity of UE#2.

**P-Asserted-Identity:** contains the asserted identity as configured in the MRFC/AS.

**Contact:** contains the conference URI for the conference allocated at the MRFC/AS and the "isfocus" feature parameter.

**Allow-Events:** The MRFC/AS indicates support for the "conference" event package

**Referred-By:** contains the same value as received in the Referred-By in the REFER request that was received from the user that requested the MRFC/AS send the INVITE request.

2. **100 (Trying) response (I-CSCF to MRFC/AS) - see example in table A.4.3.1.3-2**

The I-CSCF responds to the INVITE request with a 100 (Trying) provisional response.

**Table A.4.3.1.3-2: 100 (Trying) response (I-CSCF to MRFC/AS)**

```
SIP/2.0 100 Trying

From:
To:
Call-ID:
CSeq:
Content-Length: 0
```

3. **Cx: User Location Query procedure**

The I-CSCF sends a query to the HSS to find out the S-CSCF of the called user. The HSS responds with the address of the current S-CSCF for the terminating subscriber.

For detailed message flows see 3GPP TS 29.228[11].

4. **INVITE request (I-CSCF to S-CSCF) - see example in table A.4.3.1.3-4**

The INVITE request is forwarded to the S-CSCF.

**Table A.4.3.1.3-4: INVITE request (I-CSCF to S-CSCF)**

```

INVITE sip:user2_public1@home2.net SIP/2.0

#### A.4.3.1.4 MRFC/AS refers a user to a conference

**Editor's Note:** The values of the charging related headers in this call flow have to be revised.

Figure A.4.3.1.4-1 shows how MRFC/AS refers UE#2 to a conference by sending a REFER request to UE#2. The MRFC/AS has created a conference and allocated a conference URI.

In this example, the MRFC/AS is not capable of resolving the Request-URI and therefore routes the request first to the S-CSCF in its own network.

Figure A.4.3.1.4-1: MRFC/AS inviting another user to a conference by sending a REFER request to UE#2

The details of the flows are as follows:

#### 1. REFER request (MRFC/AS to S-CSCF) - see example in table A.4.3.1.4-1

The MRFC/AS wants to invite another user to a conference by sending a REFER request to that user.

**Table A.4.3.1.4-1: REFER request (MRFC/AS to S-CSCF)**

```
REFER sip: user2_public1@home2.net SIP/2.0
Via: SIP/2.0/UDP mrfc1.home1.net;branch=z9hG4bK23273846
Max-Forwards: 70
Route: <sip:scscf1.home1.net;lr>
P-Asserted-Identity: <sip:conferencel@mrfc1.home1.net>
P-Charging-Vector: icid-value="AyretyU0dm+6O2IrT5tAFrbHLso=023551024"; orig-ioi=home1.net
Privacy: none
From: <sip:conferencel@mrfc1.home1.net>; tag=171828
To: <sip:user2_public1@home2.net>
Call-ID: cb03a0s09a2sdfg1kj490333
Cseq: 127 REFER
Refer-To: <conferencel@mrfc1.home1.net;method=INVITE>
Referred-By: <sip:user1_public1@home1.net>
Contact: <sip:conferencel@mrfc1.home1.net>;isfocus
Content-Length: 0
```

- Request-URI:** contains the public user identity of UE#2.
- P-Asserted-Identity:** contains the asserted identity as configured in the MRFC/AS.
- P-Charging-Vector:** the MRFC/AS inserts this header and populates the icid parameters with a globally unique value and includes the originating network identifier.
- Refer-To:** contains the conference URI. Additionally the method uri parameter indicates that the UE#2 shall send an INVITE request to this URI.
- Referred-By:** contains the public user identity of the user, on which behalf the MRFC/AS sends the REFER message.
- Contact:** contains the conference URI for the conference allocated at the MRFC/AS and the "isfocus" feature parameter.

#### 2. REFER request (S-CSCF to I-CSCF) - see example in table A.4.3.1.4-2

The REFER request is forwarded to the I-CSCF.

**Table A.4.3.1.4-2: REFER request (S-CSCF to I-CSCF)**

```
REFER sip:user2_public1@home2.net SIP/2.0
Via: SIP/2.0/UDP scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP

### 3. Cx: User Location Query procedure

The I-CSCF sends a query to the HSS to find out the S-CSCF of the called user. The HSS responds with the address of the current S-CSCF for the terminating subscriber.

For detailed message flows see 3GPP TS 29.228[11]

### 4. REFER request (I-CSCF to S-CSCF) - see example in table A.4.3.1.4-4

The I-CSCF forwards the REFER request to the address obtained during HSS query. The I-CSCF adds itself to the Via, but not to the Record-Route header as it will not need to stay on the signalling path for subsequent requests.

**Table A.4.3.1.4-4: REFER request (I-CSCF to S-CSCF)**

```
REFER sip:user2_public1@home2.net SIP/2.0

### 5. Evaluation of Initial Filter criteria

S-CSCF validates the service profile of this subscriber and evaluates the initial filter criteria.

### 6. REFER request (S-CSCF to P-CSCF) - see example in table A.4.3.1.4-6

The S-CSCF remembers (from registration procedures) the contact address of UE#2 and determines the P-CSCF assigned for UE#2 and routes the message there. The S-CSCF adds itself to the Via and Record-Route headers.

**Table A.4.3.1.4-6: REFER request (S-CSCF to P-CSCF)**

```
REFER sip:[5555::eee:fff:aaa:bbb]:8805;comp=sigcomp SIP/2.0

## A.4.4 User requesting IMS to join another user

### A.4.4.1 MRFC/AS is located in user's home network

Figure A.4.4.1-1 shows how UE#1 invites UE#2 to a conference by sending a REFER request to MRFC/AS. UE#1 has created a conference by using the mechanisms described in subclause 5.3.1.3, and UE#1 has learned the conference URI that identifies this conference.

**Editor's Note:** The values of the charging related headers in this call flow have to be revised.

**Figure A.4.4.1-1: User inviting another user to a conference by sending a REFER request to MRFC/AS**

The details of the flows are as follows:

**1. UE#1 creates a conference**

UE#1 creates a conference as described in subclause 5.3.1.3. Once the conference creation is accomplished, UE#1 has learned the conference URI allocated for this conference.

## 2. REFER request (UE to P-CSCF) - see example in table A.4.4.1-2

A UE has created a conference and learned the conference URI. Now the UE wants to join another UE to that conference.

**Table A.4.4.1-2: REFER request (UE to P-CSCF)**

```
REFER sip: conferencel@mrfc1.homel.net SIP/2.0
Via: SIP/2.0/UDP [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7

## 4. Evaluation of initial Filter Criteria

The S-CSCF validates the service profile of this subscriber and evaluates the initial filter criteria.

## 5. REFER request (S-CSCF to MRFC/AS) - see example in table A.4.4.1-5

The S-CSCF forwards the REFER request to the address obtained by a DNS query. The S-CSCF adds itself to the Record-Route header.

**Table A.4.4.1-5: REFER request (S-CSCF to MRFC/AS)**

```
REFER sip:user2_public1@home2.net SIP/2.0

## 6. 202 (Accepted) response (MRFC/AS to S-CSCF) - see example in table A.4.4.1-6

The MRFC/AS indicates that it has received the REFER request by sending a 202 (Accepted) response. This means that MRFC/AS has accepted the REFER request and has begun to process the request. This does not mean, however, that the referred-to resource would have been contacted.

**Table A.4.4.1-6: 202 (Accepted) response (MRFC/AS to S-CSCF)**

```
SIP/2.0 202 Accepted
Via: SIP/2.0/UDP scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP
    pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP
    [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7
Record-Route: <sip:scscf1.home1.net;lr>, <sip:pcscf1.visited1.net;lr>
P-Asserted-Identity: <conferencel@mrfc1.home1.net>
P-Charging-Vector: icid-value="AyretyU0dm+6O2IrT5tAFrbHLso=023551024"; orig-ioi=home1.net;
    term-ioi=home1.net
Privacy:none

To: <sip:conferencel@mrfc1.home1.net>;tag=151170
Call-ID: cb03a0s09a2sdfg1kj490333
CSeq: 127 REFER
Contact: <sip:conferencel@mrfc1.home1.net>;isfocus
Content-Length:0
```

**Contact:** contains the conference URI for the conference allocated at the MRFC/AS and the "isfocus" feature parameter.

## 7. INVITE request user to conference

The MRFC/AS invites the user, who is indicated in the Refer-To header of the received REFER request. It does apply the procedures as shown in subclause A.4.3.1.3.

### 8. 202 (Accepted) response (S-CSCF to P-CSCF) - see example in table A.4.4.1-8

The S-CSCF forwards the response to the P-CSCF.

**Table A.4.4.1-8: 202 (Accepted) response (S-CSCF to P-CSCF)**

```
SIP/2.0 202 Accepted
Via: SIP/2.0/UDP pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP
    [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7

### 10. NOTIFY request (MRFC/AS to S-CSCF) - see example in table A.4.4.1-10

The MRFC/AS sends a NOTIFY request to inform the S-CSCF about the progress of the REFER request processing. The body of the NOTIFY request contains a fragment of the response as received by the notifying UE for the request that was initiated due to the REFER request.

**Table A.4.4.1-10: NOTIFY request (from MRFC/AS to S-CSCF)**

```
NOTIFY sip:[5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp SIP/2.0

## A.4.5 User joins a private conversation to a conference

### A.4.5.1 User in a different network

Void

### ~~A.4.6 Adding a user to a conference with CPCP~~

#### ~~A.4.6.1 Allowing a user to join the conference with CPCP~~

~~Figure A.4.6.1 shows an user changing an <authorization rules> element so that an additional user is allowed to join the conference.~~

~~Figure A.4.6.1: User adding another user to the ACL of a conference with CPCP~~

The details of the flows are as follows:

**1. XCAP PUT request (UE to MRFC/AS) – see example in table A.4.6.1-1**

— A user wants to allow a new user to join a conference. For this purpose the UE creates a XCAP document for CPCP. The UE includes the id of the new allowed user in the conditions element of the XCAP document and sends it to the MRFC/AS in a XCAP PUT request. The flow assumes an conference policy document as created in subclause A.3.6 exists on the MRFC/AS.

**Table A.4.6.1-1: XCAP PUT request (UE to MRFC/AS)**

```
PUT http://xcap.home1.net/services/conference-policy/users/user1_public1/
conference.xml/~~/conference/authorization-rules/rule[id="1"]/conditions/identity-
HTTP/1.1
Content-Type:text/plain

<conditions>
  <identity>
    <domain>home1.net</domain>
    <id>sip:atle@home2.net</id>
  </identity>
</conditions>
```

**2. XCAP 200 (OK) response (MRFC/AS to UE)**

The MRFC/AS returns a XCAP 200 (OK) response to the UE, indicating that the received XCAP PUT request and its content have been successfully processed.

**A.4.6.2 Adding a user to the dial-out list with CPCP**

Figure A.4.6.2 shows an user adding an user to the dial-out list (DL) of a conference.

**Figure A.4.6.2: User adding another user to the DL of a conference with CPCP**

The details of the flows are as follows:

**1. XCAP PUT request (UE to MRFC/AS) – see example in table A.4.6.2-1**

— A user wants the MRFC/AS to send a SIP INVITE request to another user. For this purpose the UE creates a XCAP document for CPCP. The UE includes the additional input to the dialout list in the XCAP document and sends it to the MRFC/AS in a XCAP PUT request. The flow assumes an conference policy document as created in subclause A.3.6 exists on the MRFC/AS.

**Table A.4.6.2-1: XCAP PUT request (UE to MRFC/AS)**

```
PUT http://xcap.homel.net/services/conference-policy/users/user1_public1/
conference.xml/~~/conference/dialout-list/target-uri HTTP/1.1
Content-Type:text/plain

<dialout-list>
  <target-uri="sip:hannu@homel.net"/>
</dialout-list>
```

## ~~2. XCAP 200 (OK) response (MRFC/AS to UE)~~

~~The MRFC/AS returns a XCAP 200 (OK) response to the UE, indicating that the received XCAP PUT request and its content have been successfully processed.~~

## ~~A.4.7 Inviting a user to a conference with CPCP~~

~~The signalling flow for inviting a user to a conference by means of CPCP is basically identical to the signalling flow for adding a user to the DL, as described in subclause A.4.6.2. In this case, the inviting user will include the referred user in a <refer list> element instead of a <dialout list> element.~~

---

## A.5 Flows demonstrating a user subscribing to the conference event package

### A.5.1 Introduction

Void

## A.5.2 User subscribing to the conference event package

### A.5.2.1 MRFC/AS is not located in user's home network

**Figure A.5.2.1-1: User subscribing to conference event package - MRFC/AS is not located in user's home network**

Figure A.5.2.1-1 shows an user subscribing to the conference state event for a specific conference that is provided at a MRFC/AS located in another network. The conference URI, which is used for subscription to the conference event package, does include a FQDN in the host part in this example.

The details of the flows are as follows:

**1. SUBSCRIBE request (UE to P-CSCF) - see example in table A.5.2.1-1**

A UE wants to get informed about the state of a certain conference, the involved users and their related media states. The conference is identified by a conference URI. In order to initiate a subscription to the MRFC/AS, the UE generates a SUBSCRIBE request containing the 'conference' event, together with the length of time this periodic subscription should last.

**Table A.5.2.1-1: SUBSCRIBE request (UE to P-CSCF)**

```

SUBSCRIBE sip:conference1@mrfc2.home2.net SIP/2.0
Via: SIP/2.0/UDP [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7

## 3. Evaluation of initial filter criteria

The S-CSCF validates the service profile of this subscriber and evaluates the initial filter criteria.

#### 4. SUBSCRIBE request (S-CSCF to MRFC/AS) - see example in table A.5.2.1-4

S-CSCF forwards the SUBSCRIBE request to the MRFC/AS based on the Request URI of the SUBSCRIBE request. The S-CSCF does not re-write the Request URI.

**Table A.5.2.1-4: SUBSCRIBE request (S-CSCF to MRFC/AS)**

```
SUBSCRIBE sip:conferencel@mrfc2.home2.net SIP/2.0

```

#### 5. 200 (OK) response (MRFC/AS to S-CSCF) - see example in table A.5.2.1-5 (related to table A.5.2.1-4)

The MRFC/AS performs the necessary authorization checks on the originator to ensure that he/she is allowed to subscribe to this specific conference. In this example the conditions have been met, so the MRFC/AS acknowledges the SUBSCRIBE request (6) with a 200 (OK) response.

**Table A.5.2.1-5: 200 (OK) response (MRFC/AS to S-CSCF)**

```
SIP/2.0 200 OK
Via: SIP/2.0/UDP scscf1.home1.net;branch=z9hG4bK351g45.1, SIP/2.0/UDP
    pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP

## 8. NOTIFY request (MRFC/AS to S-CSCF) - see example in table A.5.2.1-8

The MRFC/AS generates a NOTIFY request that includes information about all participants that the subscribing user is allowed to see. The information about one participant includes:

- the SIP URI identifying the user;
- the dialog state associated for that users attachment to the conference; and
- the users status in terms of media in the conference.

**Table A.5.2.1-8: NOTIFY request (MRFC/AS to S-CSCF)**

```
NOTIFY sip:[5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp SIP/2.0

## A.6 Flows demonstrating a user leaving a conference

### A.6.1 Introduction

Void

### A.6.2 User leaving the conference

#### A.6.2.1 MRFC/AS is located in user's home network

Figure A.6.2.1-1 shows an user leaving a conference. The example shows the flow for the user, who created the conference with a conference-factory URI. For this example it is assume that the user is subscribed to the conference state event package at the MRFC/AS.

**Figure A.6.2.1-1: User leaving a conference**

The details of the flows are as follows.

**1. BYE (UE to P-CSCF) - see example in table A.6.2.1-1**

A UE wants to leave a conference. For this purpose the UE sends a BYE message to the P-CSCF with the Conference-URI as the Request-URI.

**Table A.6.2.1-1: BYE (UE to P-CSCF)**

```

BYE sip:conference1@mrfc1.home1.net SIP/2.0
Via: SIP/2.0/UDP [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7
Max-Forwards: 70
Route: <sip:pcscf1.visited1.net:7531;lr;comp=sigcomp>, <sip:orig@scscf1.home1.net;lr>
P-Access-Network-Info: 3GPP-UTRAN-TDD; utran-cell-id-3gpp=234151D0FCE11
From: <sip:user1_public1@home1.net>; tag=171828
To: <sip:conference-factory1@mrfc1.home1.net>; tag=314159
Call-ID: cb03a0s09a2sdfg1kj490333
Require: sec-agree
Proxy-Require: sec-agree
Security-Verify: ipsec-3gpp; q=0.1; alg=hmac-sha-1-96; spi-c=98765432; spi-s=87654321;
port-c=8642; port-s=7531
Cseq: 153 BYE
Content-Length: 0
    
```

**Request-URI:** contains the value of the Conference-URI as learned during conference creation.

**2. Remove resource reservation**

The P-CSCF removes the authorization for resources that had previously been issued for this endpoint for this session. This step will also result in a release indication to the GPRS subsystem to confirm that the IP bearers associated with the session have been deleted.

### 3. BYE (P-CSCF to S-CSCF) - see example in table A.6.2.1-3

The P-CSCF removes the Security-Verify header, and the "sec-agree" option tag from the Require and Proxy-Require headers. As the Require and Proxy-Require headers are empty, it removes these headers completely.

**Table A.6.2.1-3: BYE (P-CSCF to S-CSCF)**

```
BYE sip:conferencel@mrflc1.home1.net SIP/2.0
Via: SIP/2.0/UDP pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP
    [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7

Route: <sip:orig@scscf1.home1.net;lr>
P-Access-Network-Info:
From:
To:
Call-ID:
Cseq:
Content-Length: 0
```

### 4. BYE (S-CSCF to MRFC/AS) - see example in table A.6.2.1-4

The S-CSCF forwards the BYE to the MRFC/AS.

**Table A.6.2.1-4: BYE (S-CSCF to MRFC/AS)**

```
BYE sip:conferencel@mrflc1.home1.net SIP/2.0
Via: SIP/2.0/UDP scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP
    pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP
    [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7
P-Access-Network-Info:
Max-Forwards: 68
From:
To:
Call-ID:
Cseq:
Content-Length:
```

### 5. H.248 interaction to release resources

The MRFC/AS interacts with the MRFP to release the resources reserved for UE#1 in this conference.

### 6. 200 (OK) response (MRFC/AS to S-CSCF) - see example in table A.6.2.1-6

After successfully releasing the resources from the MRFP, the MRFC/AS sends a 200 (OK) response request to the S-CSCF.

**Table A.6.2.1-6: 200 (OK) response (MRFC/AS to S-CSCF)**

```
SIP/2.0 200 OK
Via: SIP/2.0/UDP scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP
    pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP
    [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7
From:
To:
Call-ID:
Cseq:
Content-Length: 0
```

### 7. 200 (OK) response (S-CSCF to P-CSCF) - see example in table A.6.2.1-7

S-CSCF forwards the 200 (OK) response to the P-CSCF.

**Table A.6.2.1-7: 200 (OK) response (S-CSCF to P-CSCF)**

```
SIP/2.0 200 OK
Via: SIP/2.0/UDP pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP
    [5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp;branch=z9hG4bKnashds7
From:
To:
Call-ID:
Cseq:
Content-Length: 0
```

**8. 200 (OK) response (P-CSCF to UE) - see example in table A.6.2.1-8**

P-CSCF forwards the message to the UE.

**Table A.6.2.1-8: 200 (OK) response (P-CSCF to UE)**

```
SIP/2.0 200 OK
Via: SIP/2.0/UDP mrfc1.home1.net;branch=z9hG4bK348923.1
From:
To:
Call-ID:
Cseq:
Content-Length: 0
```

**9. NOTIFY request (MRFC/AS to S-CSCF) - see example in table A.6.2.1-9**

The MRFC/AS generates a NOTIFY request to indicate that UE#1 has left the conference and automatically unsubscribe UE#1 from its subscription to the conference event package.

**Table A.6.2.1-9: NOTIFY request (MRFC/AS to S-CSCF)**

```
NOTIFY sip:[5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp SIP/2.0
Via: SIP/2.0/UDP mrfc1.home1.net;branch=z9hG4bK348923.1
Max-Forwards: 70
P-Charging-Vector: icid-value="AyretyU0dm+602IrT5tAFrbHLso=223551024"; orig-ioi=home1.net
Route: <sip:scscf1.home1.net;lr>, <sip:pcscf1.visited1.net;lr>
From: <sip:conferencel@mrfc1.home1.net>;tag=151170
To: <sip:user1_public1@home1.net>;tag=31415
Call-ID: b89rjhnedlrfjflslj40a222
CSeq: 42 NOTIFY
Subscription-State: terminated
Event: conference
Contact: <sip:conferencel@mrfc1.home1.net>
Content-Type: application/conference-info+xml
Content-Length: (...)

<?xml version="1.0" encoding="UTF-8"?>
<conference-info version="0"
    state="full"
    entity="conferencel@mrfc1.home1.net"

      <media-stream media-type="audio"/>
    </media-status>
  </user>
  <user uri="sip:user3_public1@home3.net" display-name="Simon Moon">
    <status>active</status>
  </user>
</conference-info>
```

**P-Charging-Vector:**

The MRFC/AS populates the icid parameter with a globally unique value and populates the identifier of its own network to the originating Inter Operator Identifier (IOI) parameter of this header.

**P-Charging-Function-Addresses:**

The MRFC/AS populates the P-Charging-Function-Addresses header field to be passed to the S-CSCF.

**Subscription-State:** Value of “terminated” indicates that the UE has been unsubscribed from the conference event package.

The message body in the NOTIFY request that carries the conference state information of the conference participants is formed as indicated in draft-ietf-sipping-conference-package-05 [11].

#### 10. Other conference participants are notified

MRFC/AS similarly notifies other conference participants that have subscribed to the conference event package that UE#1 has left the conference.

#### 11. NOTIFY request (S-CSCF to P-CSCF) - see example in table A.6.2.1-11

The S-CSCF forwards the NOTIFY request to the P-CSCF.

**Table A.6.2.1-11: NOTIFY request (S-CSCF to P-CSCF)**

```
NOTIFY sip:[5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp SIP/2.0

## A.6.3 User requesting to remove another user from conference

The call flows for a user requesting the removal of another user from a conference are basically identical to the call flows for a user requesting IMS to join another user (see subclause A.4.4). The call flows only differ in the Refer-To header of the REFER request, namely in the "method" parameter which is set to "BYE" instead of "INVITE" and the tasks performed by the MRFC/AS before sending the NOTIFY requests.

## A.6.4 MRFC/AS drops a user from a conference

### A.6.4.1 MRFC/AS is located in user's home network

Figure A.6.4.1-1 shows an MRFC/AS dropping a user from a conference.

**Figure A.6.4.1-1: MRFC/AS dropping a user from a conference**

The details of the flows are as follows.

**1. BYE (MRFC/AS to S-CSCF) - see example in table A.6.4.1-1**

MRFC/AS decides to drop a user from a conference. The decision may be based on a change in the conference policy, because the conference lifetime is exceeded, or some other reason.

The MRFC/AS issues a BYE request to the S-CSCF.

**Table A.6.4.1-1: BYE (MRFC/AS to S-CSCF)**

```

BYE sip:[5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp SIP/2.0
Via: SIP/2.0/UDP mrfc1.home1.net;branch=z9hG4bK348923.1
Max-Forwards: 70
Route: Route: <sip:scscf1.home1.net;lr>, <sip:pcscf1.visited1.net;lr>
From: <sip:conferencel@mrfc1.home1.net>; tag=314159
To: <sip:user1_public1@home1.net>; tag=171828
Call-ID: cb03a0s09a2sdfg1kj490333
Cseq: 73 BYE
Content-Length: 0
    
```

**Request-URI:** contains the Contact address of the dropped user.

**2. BYE (S-CSCF to P-CSCF) - see example in table A.6.4.1-2**

The S-CSCF forwards the BYE request to the P-CSCF.

**Table A.6.4.1-2: BYE (S-CSCF to P-CSCF)**

```

BYE sip:[5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp SIP/2.0
Via: SIP/2.0/UDP scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP
mrfc1.home1.net;branch=z9hG4bK348923.1
Max-Forwards: 69
Route: <sip:pcscf1.visited1.net;lr>
From:
To:
Call-ID:
Cseq:
Content-Length: 0
    
```

### 3. Remove resource reservation

The P-CSCF removes the authorization for resources that had previously been issued for this endpoint for this session. This step will also result in a release indication to the GPRS subsystem to confirm that the IP bearers associated with the session have been deleted.

### 4. BYE (P-CSCF to UE) - see example in table A.6.4.1-4

The P-CSCF forwards the BYE to the UE.

**Table A.6.4.1-4: BYE (P-CSCF to UE)**

```
BYE sip:[5555::aaa:bbb:ccc:ddd]:1357;comp=sigcomp SIP/2.0
Via: SIP/2.0/UDP pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP
    scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP
    mrfc1.home1.net;branch=z9hG4bK348923.1
Max-Forwards: 68
From:
To:
Call-ID:
Cseq:
Content-Length:
```

### 5. 200 (OK) response (UE to P-CSCF) - see example in table A.6.4.1-5

After successfully releasing the resources from the MRFP, the MRFC/AS sends a 200 (OK) response to the S-CSCF.

**Table A.6.4.1-5: 200 (OK) response (UE to P-CSCF)**

```
SIP/2.0 200 OK
Via: SIP/2.0/UDP pcscf1.visited1.net;branch=z9hG4bK240f34.1, SIP/2.0/UDP
    scscf1.home1.net;branch=z9hG4bK332b23.1, SIP/2.0/UDP
    mrfc1.home1.net;branch=z9hG4bK348923.1

```

7. **200 (OK) response (S-CSCF to MRFC/AS) - see example in table A.6.4.1-7**

S-CSCF forwards the 200 (OK) response to the MRFC/AS.

**Table A.6.4.1-7: 200 (OK) response (S-CSCF to MRFC/AS)**

```
SIP/2.0 200 OK
Via: SIP/2.0/UDP mrfc1.home1.net;branch=z9hG4bK348923.1
P-Access-Network-Info:
From:
To:
Call-ID:
Cseq:
Content-Length: 0
```

8. **H.248 interaction to release resources**

MRFC/AS interacts with the MRFP to release the resources reserved for UE#1 in this conference.

9. **Conference event package messages**

The MRFC/AS also terminates the user's subscription to the conference state event package. The message flow is identical to messages 6.5.2.1-9 to 6.5.2.1-15 in subclause 6.5.2.1. for an user leaving a conference.

~~A.6.5 Expelling a conference participant from a conference with CPCP~~

~~Figure A.6.5 shows an user expelling an conference participant from a conference.~~

~~Figure A.6.5: User expelling a conference user from a conference with CPCP~~

~~The details of the flows are as follows:~~

~~1. XCAP PUT request (UE to MRFC/AS) - see example in table A.6.5-1~~

~~A user wants to expel a conference participant from a conference. For this purpose the UE creates a XCAP document for CPCP. The UE includes an <except> element in the <conditions> element and sends it to the MRFC/AS in a HTTP XCAP request. The flow assumes a conference policy document as created in subclause A.3.6 exists on the MRFC/AS.~~

~~Table A.6.5-1: XCAP PUT request (UE to MRFC/AS)~~

```
PUT http://xcap.home1.net/services/conferences/users/user1_public1/
conference.xml/~/conference/authorization-rules/rule[id="1"]/conditions/identity-
HTTP/1.1
Content-Type: text/plain

<identity>
  <domain>home1.net</domain>
  <except>keith@home1.net</except>
</identity>
```

~~2. XCAP 200 (OK) response (MRFC/AS to UE)~~

- ~~— The MRFC/AS returns a XCAP 200 (OK) response to the UE, indicating that the received XCAP PUT request and its content have been successfully processed.~~
- ~~— Afterwards the MRFC/AS will drop the indicated conference participant. An example signalling flow for the MRFC/AS dropping a user from a conference can be found in subclause A.6.4.~~

## A.7 Flows demonstrating conference termination

### A.7.1 General

The SIP based flows for conference termination look identical to the call flows for a user leaving a conference (see subclause A.6.2) / a user being removed from a conference (see subclause A.6.4). The termination of the conference itself, after the last user has left / has been removed from the conference does not result in any exchange of SIP messages, ~~but can be done with CSCP as shown in subclause 7.2.~~

### ~~A.7.2 Conference termination with CSCP~~

~~Figure A.7.2 shows a user terminating a conference with CSCP.~~

~~Figure A.7.2: User terminating a conference with CSCP~~

The details of the flows are as follows:

~~1. XCAP DELETE request (UE to MRFC/AS) – see example in table A.7.2-1~~

- ~~— A user wants to terminate a conference. For this purpose the UE creates and sends to the MRFC/AS a XCAP DELETE request.~~

~~Table A.7.2-1: XCAP DELETE request (UE to MRFC/AS)~~

```
DELETE http://xcap.homel.net/services/conference_policy/users/user1_public1/
conference.xml HTTP/1.1
```

~~2. XCAP 200 (OK) response (MRFC/AS to UE)~~

- ~~— The MRFC/AS returns a XCAP 200 (OK) response to the UE, indicating that the received XCAP DELETE request and its content have been successfully processed.~~
- ~~— Afterwards the MRFC/AS will drop all conference participants from the conference and delete the conference. An example signalling flow for the MRFC/AS dropping a user from a conference can be found in subclause A.6.4.~~

---

## A.8 Flows demonstrating usage of hold and resume during conferences

The hold- and resume-service is already described in 3GPP TS 24.228 [4] and the related call flows can be readily applied for the IMS conferencing service. The handling of a conference put on hold by one user is a local matter at the MRFC.
