Work Item Description

Title

Specification of the Terminating Short Message Service Centre

1   3GPP Work Area

	Radio Access
X	Core Network
X	Services

2   Linked work items

Unique_ID: 32081. Support of SMS and MMS over generic 3GPP IP access, in SA2.

3   Justification

The opportunity to include a non-standardised Short Message Service Centre in the B-party's HPLMN already exists for operators, in effect setting up a relay that allows it to control the delivery of all short messages (rather than the B-party's VPLMN as in the currently standardised architecture).

The potential benefits include:
- Control of SMS Spam.
- Added flexibility for MT-SMS charging
- Addition of new value added capabilities such as SMS Forwarding
- Provision of an interception point for Spoof and Fake SMS.

3GPP should examine the desirability of producing a standardised solution for the termination of short messages in the HPLMN via a T-SMSC, in order to protect a number of existing 3GPP specified services from the negative effects of a multiplicity of non-standard solutions.

4   Objective

To produce a Technical Report which shall:

- Determine the most efficient solution for the implementation of the T-SMSC in the MT-SMS transfer procedure. Such a solution should not negatively affect existing 3GPP functionality.

- Determine the most appropriate way to specify such functionality in 3GPP documentation.

5   Service Aspects
Other services that make use of signalling designed for SMS may be affected.

6   MMI-Aspects

None

7   Charging Aspects

Provision of SMS-MT CDRs by the T-SMSC, and their format, shall both be considered.

8   Security Aspects

None.
