

## Presentation of Specification to TSG or WG

---

**Presentation to:** TSG RAN Meeting #7

**Document for presentation:** TR 25.926, Version 2.0.0

**Presented for:** Approval

---

### **Abstract of document:**

The scope of this technical report is to identify the parameters of the access stratum part of the UE radio access capabilities. Furthermore, the allowed combinations of these values are defined.

---

### **Changes since last presentation to TSG Meeting #6:**

- UE radio access capability parameters that need to be signalled have been defined, including value ranges.
  - Reference UE radio access capability combinations (“UE classes”) have been defined.
  - Example RAB mappings that can be covered by the reference UE radio access capability combinations have been included.
- 

### **Outstanding Issues:**

There is an empty section on mandatory UE radio access capabilities. The purpose of this section is to list (for information) mandatory UE features and requirements that do not need to be signalled by the UE. This information is to be collected from the specifications.

---

### **Contentious Issues:**

None.
