Title: Establishment of an AdHoc for RRM test
Document for: Discussion and Decision
Contact person: YONEKURA,Kunitoshi (yonekura@jp.fujitsu.com)

In this LS, T1 asks RAN4 and RAN2 to consider founding and joining an adhoc group, which focuses on the needs for developing Radio Resource Management (RRM) conformance tests.

T1(RF SWG) has been developing UE test specifications for FDD and TDD, referring their core specifications developed by RAN4. It is about to complete R99 UE conformance specifications (TS34.121 and TS34.122) except RRM section.

The major reason of the delay in RRM section is lack of RRM experts in the group and we can not expect any further substantial progress without having well understanding of RRM.

In order to break this deadlock and to have RRM test requirements with adequate quality in right timing, T1 recognizes it is necessary to establish a small adhoc group between related WGs. The adhoc should have its members from RAN2, RAN4 and T1. And its objectives will be:

- to share common understanding on RRM core requirements, which were developed by RAN4 and RAN2.
- to review test requirements, which will be developed by T1.

Details of the adhoc have to be specified properly prior to the establishment, but T1 is quite open to discuss with other WGs on this issue.

T1 would like to hold first meeting of the adhoc as early as possible, and it is advisable to give their feedback by 28 May.

Proposed dates for the adhoc:

- At least one day during Jul 09-13 (Berlin)
- Any two days during Jul 31-Aug 2 (Munich)
- Any two days during Jun 18-29 (location: open)
