|--------------------------------------|--|
| Reason for change: | ⌘ The BLER performance depends on channelization code, scrambling code and basic midamble code number used for DPCH and DPCH ₀ . However, these parameters are specified only for 3.84 Mcps TDD and not specified for 1.28 Mcps TDD in current specification. |
| Summary of change: | ⌘ Channelization code, scrambling code and basic midamble code number used for DPCH and DPCH ₀ are added to parameters for performance requirements of 1.28 Mcps TDD. Table 8.2A, Table 8.4A, Table 8.6A and Table 8.8A are changed. |
| Consequences if not approved: | ⌘ Parameters of BLER performance test for 1.28 Mcps TDD are ambiguous. Isolated Impact Analysis: Correction to a function where the specification was: missing parameter in the specification. Would affect implementations that do not follow it. How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked * contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8.2 Demodulation in static propagation conditions

8.2.1 Demodulation of DCH

The performance requirement of DCH in static propagation conditions is determined by the maximum Block Error Ratio (BLER). The BLER is specified for each individual data rate of the DCH. DCH is mapped into the Dedicated Physical Channel (DPCH).

8.2.1.1 Minimum requirement

8.2.1.1.1 3.84 Mcps TDD Option

For the parameters specified in Table 8.2 the BLER should not exceed the piece-wise linear BLER curve specified in Table 8.3. These requirements are applicable for TFCS size 16.
