CHANGE REQUEST

⌘ 25.433 CR 585 ⌘ rev 1 ⌘ Current version: 4.3.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Corrections to the Information Exchange Initiation procedure	
Source:	⌘ R-WG3	
Work item code:	⌘ LCS1-UEPos-lublur	Date: ⌘ February 2002
Category:	⌘ F	Release: ⌘ REL-4
Use <u>one</u> of the following categories: F (essential correction) A (corresponds to a correction in an earlier release) B (Addition of feature), C (Functional modification of feature) D (Editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900.		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) REL-4 (Release 4) REL-5 (Release 5)

Reason for change: ⌘ This Cr corrects following three errors mentioned below.

1) With the Information Exchange Initiation procedure CRNC can request information from the Node B either 'On Demand', 'Periodic' or 'On Modification'. If the *Information Report Characteristics* IE is set to 'On Modification' and the *Information Type* IE is set to 'GPS Information', the CRNC must include the Information Threshold IE to the Information Exchange Initiation message, although there is no trigger value for the GPS Information. The Information Threshold IE (9.2.1.36B) should be changed to the optional IE and it should be used only if the DGPS corrections are requested.

2) If the Node B was able to initiate the information provision requested by the CRNC it shall respond with the INFORMATION EXCHANGE INITIATION RESPONSE message. The message shall include the same Information Exchange ID that was included in the INFORMATION EXCHANGE REQUEST message. If the *Requested Data Value* IE is included in the INFORMATION EXCHANGE INITIATION RESPONSE message, it shall include at least one IE. As the *Requested Data Value* IE may not be reported in the *in INFORMATION EXCHANGE RESPONSE* when defining future report characteristics types, the *Information Exchange Object Type in INFORMATION EXCHANGE RESPONSE is defined as optional*

3) According to the 3GPP TS 25.331 SRNC must be able to send the UE positioning GPS almanac IE to the UE. The UE positioning GPS almanac IE contains a reduced-precision subset of the ephemeris and clock correction parameters. The Node B having the GPS reference receiver provides the ephemeris and clock correction parameters, which will be sent to the CRNC with the Information Exchange Initiation elementary procedure. The current GPS almanac IE (9.2.1.31F) includes all the required ephemeris and clock correction parameters which will be needed to the UE positioning GPS almanac IE except:
 - SV Global health (optional)

	<p>- DataID</p> <p>These IEs shall be included to the GPS Almanac IE (9.2.1.31F).</p> <p>The SV Global health IE enables GPS time recovery and possibly extended GPS correlation intervals. This information is composed of the sequence of all non-parity data bits contained in words 3-10 of page 25 of subframe 4 of the GPS navigation message followed by the sequence of all non-parity bits contained in words 3-10 of page 25 of subframe 5 of the GPS navigation message. The following GPS navigation message fields are excluded when constructing these sequences:"Data ID", "SV (Page) ID", and "t".</p> <p>DataID field contained in the indicated subframe, word 3, most significant 2 bits, as defined by ICD-GPS-200: "Navstar GPS Space Segment/Navigation User Interface".</p>
Summary of change:  Rev1	<p>Spelling mistake in Information Exchange Initiation procedure message corrected.</p> <p>Abnormal section 8.2.27.4 updated to handle the Node B behaviour, when the <i>Information Report Characteristics</i> IE is set to 'On Modification', and the <i>Information Type Item</i> IE is set to 'DGPS Corrections', but the <i>Information Threshold</i> IE is not received in the INFORMATION EXCHANGE INITIATION REQUEST message. Corrections are highlighted with yellow colour.</p>
<u>Rev 0</u>	<p>In principle agreed in R3#26 and implemented to correct version of specification</p> <p><u>Second version (no Cr number attached)</u></p> <ol style="list-style-type: none"> 1) The presence of <i>Information Exchange Object Type</i> IE in the INFORMATION EXCHANGE RESPONSE message kept as optional. In the procedural it is clarified that "When the <i>Report Characteristics</i> IE is set to "On-Demand", or "On Modification" or "Periodic", the INFORMATION EXCHANGE INITIATION RESPONSE message shall contain the requested data." With this definition we keep to door open for future extensions for report characteristics types. 2) The sentence " If the <i>Requested Data Value</i> IE is included in the INFORMATION EXCHANGE INITIATION RESPONSE message, it shall include at least one IE" removed from chapter 8.2.26.2 and this information is added for the IE description for <i>Requested Data Value</i> IE (9.2.1.51A). 3) IE type and reference for Data ID IE changed to INTEGER (0..3) 4) SV global heath IE in GPS Almanac defined as optional 5) The ASN.1 description for SV Global heath IE aligned with tabular <p><u>First version (no Cr number attached)</u></p> <ol style="list-style-type: none"> 1)The presence of Information Threshold IE (9.2.1.36B) changed to the optional 2) The presence of <i>Information Exchange Object Type</i> IE in the INFORMATION EXCHANGE RESPONSE message changed to the optional 3) Data ID and SV Global Helth added as mandatory IEs in Satelite information of GPS Almanac IE (9.2.1.31F).
Consequences if not approved:	<p> If this CR is not approved, identified three errors/ambiguities occurs there in the specification and the Information Exchange Initiation procedure is not properly specified (1 and 2) and it is not aligned with TS25.331 (3).</p> <p><u>Impact Analysis:</u></p> <p>Impact assessment towards the previous version of the specification (same release):</p>

This CR has isolated impact with the previous version of the specification because this CR corrects the specification for Information Exchange Initiation procedure for which the specification is ambiguous. It also aligns the specification with TS25.331.

This CR has an impact under protocol and functional point of view.

The impact can be considered isolated because the change affects one system function namely Information Exchange.

Clauses affected:  8.2.62.2, 9.1.70, 9.2.1.31F, 9.2.1.51A, 9.3.3 and 9.3.4

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked  contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://www.3gpp.org/specs/>. For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8.2.26 Information Exchange Initiation

8.2.26.1 General

This procedure is used by a CRNC to request the initiation of information provisioning from a Node B.

8.2.26.2 Successful Operation

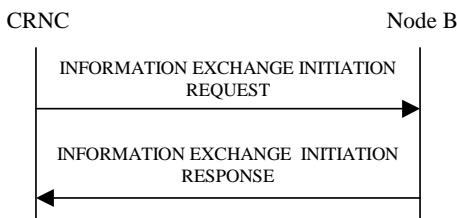

Figure 27L: Information Exchange Initiation procedure, Successful Operation

The procedure is initiated with the INFORMATION EXCHANGE INITIATION REQUEST message sent from the CRNC to the Node B using the Node B control port.

Upon reception, the Node B shall provide the requested information according to the *Information Type Item* IE. Unless specified below, the meaning of the parameters are given in other specifications.

Information Report Characteristics

The *Information Report Characteristics* IE indicates how the reporting of the information shall be performed.

If the *Information Report Characteristics* IE is set to 'On Demand', the Node B shall report the requested information immediately.

If the *Information Report Characteristics* IE is set to 'Periodic', the Node B shall periodically initiate the Information Reporting procedure for all the requested information, with the requested reporting frequency.

If the *Information Report Characteristics* IE is set to 'On Modification', the Node B shall immediately report the requested information and then shall initiate the Information Reporting procedure in accordance to the following conditions related to the *Information Type* IE:

- 1) If the *Information Type Item* IE is set to 'DGPS Corrections', the Node B shall initiate the Information Reporting procedure when either the PRC has drifted from the previously reported value more than the threshold indicated in the *PRC Deviation* IE or a change has occurred in the IODE.
- 2) If the *Information Type Item* IE is set to 'GPS Information' and the *GPS Information Item* IE includes 'GPS Navigation Model & Time Recovery', the Node B shall initiate the Information Reporting procedure for this specific GPS Information Item when a change has occurred regarding either the IODC or the list of visible satellites, identified by the *SatID* IEs.
- 3) If the *Information Type Item* IE is set to 'GPS Information' and the *GPS Information Item* IE includes 'GPS Ionospheric Model', the Node B shall initiate the Information Reporting procedure for this specific GPS Information Item when any change has occurred.
- 4) If the *Information Type Item* IE is set to 'GPS Information' and the *GPS Information Item* IE includes 'GPS UTC Model', the Node B shall initiate the Information Reporting procedure for this specific GPS Information Item when a change has occurred in the *t_ot* parameter.
- 5) If the *Information Type Item* IE is set to 'GPS Information' and the *GPS Information Item* IE includes 'GPS Almanac', the Node B shall initiate the Information Reporting procedure for this specific GPS Information Item when any change has occurred.

- 6) If the *Information Type Item* IE is set to ‘GPS Information’ and the *GPS Information Item* IE includes ‘GPS Real-Time Integrity’, the Node B shall initiate the Information Reporting procedure for this specific GPS Information Item when any change has occurred.

Response message

If the Node B was able to initiate the information provision requested by the CRNC it shall respond with the INFORMATION EXCHANGE INITIATION RESPONSE message sent over the Node B control port. The message shall include the same Information Exchange ID that was included in the INFORMATION EXCHANGE REQUEST message. When the *Report Characteristics* IE is set to "On-Demand" or "On Modification" or "Periodic", the INFORMATION EXCHANGE INITIATION RESPONSE message shall contain the requested data.

If the *Requested Data Value* IE is included in the INFORMATION EXCHANGE INITIATION RESPONSE message, it shall include at least one IE.

8.2.26.3 Unsuccessful Operation

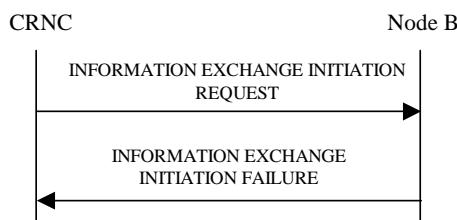

Figure 27M: Information Exchange Initiation procedure, Unsuccessful Operation

If the Information Type Item received in the *Information Type Item* IE indicates a type of information that cannot be provided, the Node B shall regard the Information Exchange Initiation procedure as failed.

If the requested information provision cannot be initiated, the Node B shall send the INFORMATION EXCHANGE INITIATION FAILURE message over the Node B control port. The message shall include the same Information Exchange ID that was used in the INFORMATION EXCHANGE INITIATION REQUEST message and the *Cause* IE set to an appropriate value.

Typical cause values are as follows:

Radio Network Layer Cause

Information temporarily not available.

Information Provision not supported for the object.

8.2.27.4 Abnormal Conditions

- If the *Information Report Characteristics* IE is set to ‘On Modification’, and the *Information Type Item* IE is set to ‘DGPS Corrections’, but the *Information Threshold* IE is not received in the INFORMATION EXCHANGE INITIATION REQUEST message, the Node B shall regard the Information Exchange Initiation procedure as failed.

9.1.70 INFORMATION EXCHANGE INITIATION RESPONSE

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
Message Discriminator	M		9.2.1.45		-

REL-5 (Release 5)																						

Reason for change: ⌘ The ranges defined for UE position measurement Deviation Limits and Change limits corresponding to distances in the order of ten kilometers for SFN-SFN otd and hundreds of kilometers for $T_{\text{UTRAN-GPS}}$ cannot be tolerated in UE positioning.

SFN-SFN Measurement Threshold Information:

The range of SFN-SFN Change Limit and SFN-SFN Deviation Limit is decreased to INTEGER(1..256) as this corresponds to a maximum range of about 1200 m with a resolution of 1/16 chip.

$T_{\text{Utran-GPS}}$ Measurement Threshold Information:

The range of $T_{\text{Utran-GPS}}$ Change Limit and $T_{\text{Utran-GPS}}$ Deviation Limit is decreased to INTEGER(1..256) as this corresponds to a maximum range of about 1200 m with a resolution of 1/16 chip.

Also the ranges defined for UE position measurement quality information (std) corresponding to distances in the order of ten kilometers for SFN-SFN otd and hundreds of kilometers for $T_{\text{UTRAN-GPS}}$ are not applicable for UE positioning

SFN-SFN Measurement Value Information

The range of SFN-SFN Quality is decreased to INTEGER(0..255) as with a resolution of 1/16 chip this corresponds to a maximum range of approx. 1200 m which for the purposes of UE positioning is enough.

$T_{\text{UTRAN-GPS}}$ Measurement Value Information:

The range of $T_{\text{UTRAN-GPS}}$ Quality is decreased to INTEGER(0..255) which corresponds to a maximum range of approx. 1200 m with a resolution of 1/16 chip. For UE positioning this is enough.

Summary of change:  [Rev 1](#)

Following modifications are made:

1. Otd (observed time difference) spelt out
2. Units used for SFN-SFN and $T_{Utran-GPS}$ change limit, predicted change limit, drift rate and quality added for ASN.1 description.

[Rev0](#)

IE Type and reference for *SFN-SFN Change Limit IE* and *Predicted SFN-SFN Deviation Limit IE* changed to INTEGER(1..256).

IE Type and reference for *SFN-SFN Quality IE* changed to INTEGER(0..255).

IE Type and reference for $T_{Utran-GPS}$ Change Limit IE and Predicted $T_{Utran-GPS}$ Deviation Limit IE changed to INTEGER(1..256).

IE Type and reference for $T_{Utran-GPS}$ Quality IE changed to INTEGER(0..255).

Consequences if not approved: [Impact Analysis:](#)

Impact assessment towards the previous version of the specification (same release):

This CR has isolated impact with the previous version of the specification because this CR corrects quality and threshold figures for UE position measurements.

This CR has an impact under protocol and functional point of view.

The impact can be considered isolated because the change affects one system function namely measurements on common resources.

Clauses affected:  9.2.1.53C, 9.2.1.53E, 9.2.1.64A, 9.2.1.64B and 9.3.4**Other specs affected:**  Other core specifications   TS 25.423 v. 4.3.0 CR 546r1
 Test specifications
 O&M Specifications**Other comments:** **How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked  contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://www.3gpp.org/specs/>. For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

9.2.1.53C SFN-SFN Measurement Threshold Information

The SFN-SFN Measurement Threshold Information defines the related thresholds SFN-SFN Observed Time Difference measurements which shall trigger the Event On Modification.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
SFN-SFN Change Limit	O		INTEGER(1. .256 .16384)	Change of SFN-SFN value compared to previously reported value, which shall trigger a new report. Unit in 1/16 chip.
Predicted SFN-SFN Deviation Limit	O		INTEGER(1. .256 .16384)	Deviation of the predicated SFN-SFN from the latest measurement result, which shall trigger a new report. Unit in 1/16 chip.

9.2.1.53D SFN-SFN Measurement Time Stamp

IE/Group Name	Presence	Range	IE type and reference	Semantics description
CHOICE Mode				
>FDD				
>>SFN	M		9.2.1.53A	Indicates the SFN of the reference cell at which the measurement has been performed.
>TDD				
>>SFN	M		9.2.1.53A	Indicates the SFN of the reference cell at which the measurement has been performed.
>>Time Slot	M		9.2.3.23	Indicates the Time Slot of the reference cell at which this measurement has been performed.

9.2.1.53E SFN-SFN Measurement Value Information

The SFN-SFN Measurement Value Information IE indicates the measurement result related to SFN-SFN Observed Time Difference measurements.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Successful Neighbouring cell SFN-SFN Observed Time Difference Measurement Information		1..<maxnoMeasN Cell>		
>UC-Id	M		9.2.1.65B	
>SFN-SFN Value	M		9.2.1.53F	
>SFN-SFN Quality	O		INTEGER(0..255) 16383	Indicates the standard deviation of the SFN-SFN <u>otd (observed time difference)</u> measurements in 1/16 chip.
>SFN-SFN Drift Rate	M		INTEGER(-100..+100)	Indicates the SFN-SFN drift rate in 1/256 chip per second. A positive value indicates that the Reference cell clock is running at a greater frequency than the measured neighbouring cell.
>SFN-SFN Drift Rate Quality	M		INTEGER(0..100)	Indicates the standard deviation of the SFN-SFN drift rate measurements in 1/256 chip per second.
>SFN-SFN Measurement Time Stamp	M		9.2.1.53D	
Unsuccessful Neighbouring cell SFN-SFN Observed Time Difference Measurement Information		0..<maxnoMeasN Cell-1>		
>UC-Id	M		9.2.1.65B	

Range bound	Explanation
<i>maxnoMeasNCell</i>	Maximum number of neighbouring cells that can be measured on.

9.2.1.64A T_{UTRAN-GPS} Measurement Value Information

The T_{UTRAN-GPS} *Measurement Value Information* IE indicates the measurement results related to the UTRAN GPS Timing of Cell Frame for LCS measurements.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
T _{UTRAN-GPS}	M		INTEGER(0..37158911999999)	Indicates the UTRAN GPS Timing of Cell Frame for LCS. According to mapping in [22].
T _{UTRAN-GPS} Quality	M		INTEGER(0..255^20-4)	Indicates the standard deviation of the T _{UTRAN-GPS} measurements in 1/16 chip .
T _{UTRAN-GPS} Drift Rate	M		INTEGER(-50..+50)	Indicates the T _{UTRAN-GPS} drift rate in 1/256 chip per second. A positive value indicates that the UTRAN clock is running at a lower frequency than GPS clock.
T _{UTRAN-GPS} Drift Rate Quality	M		INTEGER(0..50)	Indicates the standard deviation of the T _{UTRAN-GPS} drift rate measurements in 1/256 chip per second .

9.2.1.64B T_{UTRAN-GPS} Measurement Threshold Information

The T_{UTRAN-GPS} Measurement Threshold Information defines the related thresholds for UTRAN GPS Timing of Cell Frame for LCS measurements shall [shall](#) trigger the event On Modification.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
T _{UTRAN-GPS} Change Limit	O		INTEGER(1..256^20)	Change of T _{UTRAN-GPS} value compared to previously reported value, which shall trigger a new report. Unit in 1/16 chip.
Predicted T _{UTRAN-GPS} Deviation Limit	O		INTEGER(1..256^20)	Deviation of the predicated T _{UTRAN-GPS} from the latest measurement result, which shall trigger a new report. Unit in 1/16 chip.

CHANGE REQUEST

⌘ **25.433 CR 587** ⌘ rev **1** ⌘ Current version: **4.3.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title: ⌘ Correction to UE position measurements change and deviation limit formulas

Source: ⌘ R-WG3

Work item code: ⌘ LCS1-UEPos-lublur

Date: ⌘ February 2002

Category: ⌘ **F**

Release: ⌘ REL-4

Use one of the following categories:

F (essential correction)

A (corresponds to a correction in an earlier release)

B (Addition of feature),

C (Functional modification of feature)

D (Editorial modification)

Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:

2 (GSM Phase 2)

R96 (Release 1996)

R97 (Release 1997)

R98 (Release 1998)

R99 (Release 1999)

REL-4 (Release 4)

REL-5 (Release 5)

Reason for change: ⌘ Rev 1

Calculation of drift, based on the reported drift rate with unit chip/s (not converting to ppm) corrected

During the some meetings ago the reported drift rate a was defined to be reported as a resolution of 1/256 chip/s. This will result of calculating the drift for T_{Utran-GPS} and SFN-SFN otd (FDD) as **(a/16) * ((SFN_n – SFN_{n-1}) mod 4096)/100**, a/16 = 1/16 chip/s and the SFN need to be divided with 100 due the fact that there are 100 radio frames in one second. For SFN-SFN otd (TDD) the drift is calculated as **(a/16)*(15*(SFN_n – SFN_{n-1})mod 4096 + (TS_n – TS_{n-1}))/1500**, a = 1/16 chip/s and division 1500 comes from the fact that there are 1500 slots in one second

Rev 0

During the R3#26 meeting formulas for UE Position measurement change and deviation limits were discussed. Following correction proposals were noted:

- it shall be clarified that for the computation as described for the SFN-SFN measurement and T_{Utran-GPS} measurement works as an input with interface C (25.302)

- as the SFN-SFN otd measurement was changed to be measured to frame boundaries instead of slot boundaries, formulas for FDD mode operation need to be redefined. This will result two formulas (one for TDD and one for FDD) for calculating SFN-SFN change limit and Predicted SFN-SFN Deviation Limit

Additionally in this CR it is clarified that reported drift rate values in the predicted deviation limits formulas has to be expressed in ppms in the formula.

Also the calculation of value F_n=deviation of the last measurement result from the predicted value is made simpler in the predicted deviation limit formulas.

Summary of change:	⌘ Formulas for calculating change limits and predicted deviation limits for UE position measurements ($T_{\text{utran-GPS}}$ and SFN-SFN otd) are corrected.
Consequences if not approved:	<p>⌘ Impact Analysis: Impact assessment towards the previous version of the specification (same release): This CR has isolated impact with the previous version of the specification because this CR corrects the formulas to be used in reporting criteria evaluation phase for calculating whether the set change limit or deviation limit by Common Measurement Initiation procedure has been exceeded. This CR has an impact under protocol and functional point of view. The impact can be considered isolated because the change affects one system function namely measurements on common resources.</p>

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://www.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8.2.8 Common Measurement Initiation

8.2.8.1 General

This procedure is used by a CRNC to request the initiation of measurements on common resources in a Node B.

8.2.8.2 Successful Operation

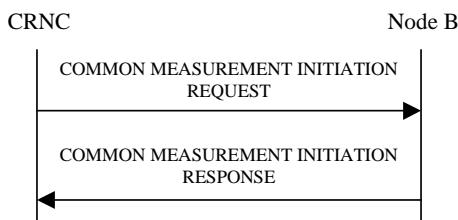

Figure 11: Common Measurement Initiation procedure, Successful Operation

The procedure is initiated with a COMMON MEASUREMENT INITIATION REQUEST message sent from the CRNC to the Node B using the Node B control port.

Upon reception, the Node B shall initiate the requested measurement according to the parameters given in the request. Unless specified below, the meaning of the parameters are given in other specifications.

[TDD - If the Time Slot Information is provided in the *Common Measurement Object Type IE*, the measurement request shall apply to the requested time slot individually.]

[FDD - If the Spreading Factor Information is provided in the *Common Measurement Object Type IE*, measurement request shall apply to the PCPCHs whose minimum allowed spreading factor (Min UL Channelisation Code Length) is equal to the value of Spreading Factor Information.]

If the *Common Measurement Type IE* is not set to 'SFN-SFN Observed Time Difference' and the *SFN Reporting Indicator IE* is set to "FN Reporting Required", the *SFN IE* shall be included in the measurement report or in the measurement response, the latter only in the case the *Report Characteristics IE* is set to 'On-Demand'. The reported SFN shall be the SFN at the time when the measurement value was reported by the layer 3 filter, referred to as point C in the measurement model [25]. If the *Common Measurement Type IE* is set to 'SFN-SFN Observed Time Difference' and the *SFN Reporting Indicator IE* is ignored.

If the *SFN IE* is provided, it indicates the frame for which the first measurement shall be provided. The provided measurement value shall be the one reported by the layer 3 filter, referred to as point C in the measurement model [25].

Common measurement type

If the *Common Measurement Type IE* is set to 'SFN-SFN Observed Time Difference', then the Node B shall initiate the SFN-SFN Observed Time Difference measurements between the reference cell identified by *C-ID IE* and the neighbouring cells identified by the *UTRAN Cell Identifier(UC-Id) IE*.

Report characteristics

The *Report Characteristics IE* indicates how the reporting of the measurement shall be performed. See also Annex B.

If the *Report Characteristics IE* is set to 'On-Demand', the Node B shall report the result of the requested measurement immediately.

If the *Report Characteristics IE* is set to 'Periodic', the Node B shall periodically initiate a Measurement Reporting procedure for this measurement, with the requested report frequency. If the *Common Measurement Type IE* is set to 'SFN-SFN Observed Time Difference', all the available measurement results shall be reported in the *Successful Neighbouring cell SFN-SFN Observed Time Difference Measurement Information IE* in the *SFN-SFN Measurement Value Information IE* and the Node B shall indicate in the *Unsuccessful Neighbouring cell SFN-SFN Observed Time Difference Measurement Information IE* all the remaining neighbouring cells with no measurement result available in the Common Measurement Reporting procedure.

If the *Report Characteristics* IE is set to 'Event A', the Node B shall initiate the Common Measurement Reporting procedure when the measured entity rises above the requested threshold and stays there for the requested hysteresis time. If no hysteresis time is given, the Node B shall use the value zero for the hysteresis time.

If the *Report Characteristics* IE is set to 'Event B', the Node B shall initiate the Common Measurement Reporting procedure when the measured entity falls below the requested threshold and stays there for the requested hysteresis time. If no hysteresis time is given, the Node B shall use the value zero for the hysteresis time.

If the *Report Characteristics* IE is set to 'Event C', the Node B shall initiate the Common Measurement Reporting procedure when the measured entity rises by an amount greater than the requested threshold within the requested time. After having reported this type of event, the next C event reporting for the same measurement cannot be initiated before the rising/falling time has elapsed since the previous event reporting.

If the *Report Characteristics* IE is set to 'Event D', the Node B shall initiate the Common Measurement Reporting procedure when the measured entity falls more than the requested threshold within the requested time. After having reported this type of event, the next D event reporting for the same measurement cannot be initiated before the rising/falling time has elapsed since the previous event reporting.

If the *Report Characteristics* IE is set to 'Event E', the Node B shall initiate the Common Measurement Reporting procedure when the measured entity rises above the 'Measurement Threshold 1' and stays there for the 'Measurement Hysteresis Time' (Report A). When the conditions for Report A are met and the *Report Periodicity* IE is provided, the Node B shall initiate the Common Measurement Reporting procedure periodically. If the conditions for Report A have been met and the measured entity falls below the 'Measurement Threshold 2' and stays there for the 'Measurement Hysteresis Time', the Node B shall initiate the Common Measurement Reporting procedure (Report B) as well as terminating any corresponding periodic reporting. If 'Measurement Threshold 2' is not present, the Node B shall use 'Measurement Threshold 1' instead. If no 'Measurement Hysteresis Time' is provided, the Node B shall use the value zero as hysteresis times for both Report A and Report B.

If the *Report Characteristics* IE is set to 'Event F', the Node B shall initiate the Common Measurement Reporting procedure when the measured entity falls below the 'Measurement Threshold 1' and stays there for the 'Measurement Hysteresis Time' (Report A). When the conditions for Report A are met and the *Report Periodicity* IE is provided the Node B shall also initiate the Common Measurement Reporting procedure periodically. If the conditions for Report A have been met and the measured entity rises above the 'Measurement Threshold 2' and stays there for the 'Measurement Hysteresis Time', the Node B shall initiate the Common Measurement Reporting procedure (Report B) as well as terminating any corresponding periodic reporting. If 'Measurement Threshold 2' is not present, the Node B shall use 'Measurement Threshold 1' instead. If no 'Measurement Hysteresis Time' is provided, the Node B shall use the value zero as hysteresis times for both Report A and Report B.

If the *Report Characteristics* IE is set to 'On Modification', the Node B shall report the result of the requested measurement immediately. Then the Node B shall initiate the Common Measurement Reporting procedure in accordance to the following conditions: 1. If the *Common Measurement Type* IE is set to 'UTRAN GPS Timing of Cell Frame for LCS':

If the $T_{UTRAN-GPS}$ Change Limit IE is included in the $T_{UTRAN-GPS}$ Measurement Threshold Information IE, the Node B shall each time a new measurement result is received [after point C in the measurement model \[25\]from the physical layer measurement](#), calculate the change of $T_{UTRAN-GPS}$ value (F_n). The Node B shall initiate the Common Measurement Reporting procedure and set n equal to zero when the absolute value of F_n rises above the threshold indicated by the $T_{UTRAN-GPS}$ Change Limit IE. The change of $T_{UTRAN-GPS}$ value (F_n) is calculated according to the following:

$$F_n = 0 \text{ for } n=0$$

$$F_n = (M_n - M_{n-1}) \bmod 37152912000000 - ((SFN_n - SFN_{n-1}) \bmod 4096) * 10^3.84 * 10^3 * 16 + F_{n-1}$$

$$\text{for } n > 0$$

F_n is the change of the $T_{UTRAN-GPS}$ value expressed in unit [1/16 chip] when n measurement results has been received after first Common Measurement Reporting at initiation or after the last event was triggered.

M_n is the latest measurement result received [after point C in the measurement model \[25\]from the physical layer measurements](#), measured at SFN_{n-1} .

M_{n-1} is the previous measurement result received [after point C in the measurement model \[25\]from the physical layer measurements](#), measured at

SFN_{n-1} .

M_1 is the first measurement result received [after point C in the measurement model \[25\]](#),~~from the physical layer measurements~~ after first Common Measurement Reporting at initiation or after the last event was triggered.

M_0 is equal to the value reported in the first Common Measurement Reporting at initiation or in the Common Measurement Reporting when the event was triggered.

If the *Predicted T_{UTRAN-GPS} Deviation Limit* IE is included in the *T_{UTRAN-GPS} Measurement Threshold Information* IE, the Node B shall each time a new measurement result is received [after point C in the measurement model \[25\]](#)~~from the physical layer measurement~~, update the P_n and F_n . The Node B shall initiate the Common Measurement Reporting procedure and set n equal to zero when F_n rises above the threshold indicated by the *Predicted T_{UTRAN-GPS} Deviation Limit* IE. The P_n and F_n are calculated according to the following:

$$P_n = b \text{ for } n=0$$

$$P_n = \frac{(-1+a/16) * ((SFN_n - SFN_{n-1}) \bmod 4096)}{100} + ((SFN_n - SFN_{n-1}) \bmod 4096) * 10 * 3.84 * 10^3 * 16 + P_{n-1} \bmod 37158912000000 \text{ for } n > 0$$

$$F_n = \min(\text{abs}(M_n - P_n), \text{abs}(M_n - P_n - 37158912000000), \text{abs}(M_n - P_n + 37158912000000)) \text{ for } n > 0 \\ F_n = \min((M_n - P_n) \bmod 37158912000000, (P_n - M_n) \bmod 37158912000000) \text{ for } n > 0$$

P_n is the predicted T_{UTRAN-GPS} value when n measurement results has been received after first Common Measurement Reporting at initiation or after the last event was triggered.

a is the last reported T_{UTRAN-GPS} Drift Rate value.

b is the last reported T_{UTRAN-GPS} value.

~~abs denotes the absolute value.~~

F_n is the deviation of the last measurement result from the predicted T_{UTRAN-GPS} value (P_n) when n measurements has been received after first Common Measurement Reporting at initiation or after the last event was triggered.

M_n is the latest measurement result received [after point C in the measurement model \[25\]](#)~~from the physical layer measurements~~, measured at SFN_n.

M_1 is the first measurement result received [after point C in the measurement model \[25\]](#),~~from the physical layer measurements~~ after first Common Measurement Reporting at initiation or after the last event was triggered.

The T_{UTRAN-GPS} Drift Rate is determined by the Node B in an implementation-dependent way after point B in the measurement model [26].

2. If the *Common Measurement Type* IE is set to ‘SFN-SFN Observed Time Difference’:

If the *SFN-SFN Change Limit* IE is included in the *SFN-SFN Measurement Threshold Information* IE, the Node B shall each time a new measurement result is received [after point C in the measurement model \[25\]](#)~~from the physical layer measurement~~, calculate the change of SFN-SFN value (F_n). The Node B shall initiate the Common Measurement Reporting procedure in order to report the particular SFN-SFN measurement which has triggered the event and set n equal to zero when F_n rises above the threshold indicated by the *SFN-SFN Change Limit* IE. The change of the SFN-SFN value is calculated according to the following:

$$F_n = 0 \text{ for } n=0$$

$$[FDD - F_n = (M_n - a) \bmod 614400 \text{ for } n > 0]$$

$$[TDD - F_n = (M_n - a) \bmod 40960 \text{ for } n > 0]$$

F_n is the change of the SFN-SFN

value expressed in unit [1/16 chip] when n measurement results has been received after first Common Measurement Reporting at initiation or after the last event was triggered.

a is the last reported SFN-SFN .

M_n is the latest measurement result received [after point C in the measurement model \[25\]](#) from the physical layer measurements, measured at SFN_{n-1}

M_1 is the first measurement result received [after point C in the measurement model \[25\]](#) from the physical layer measurements after first Common Measurement Reporting at initiation or after the last event was triggered.

If the *Predicted SFN-SFN Deviation Limit IE* is included in the *SFN-SFN Measurement Threshold Information IE*, the Node B shall each time a new measurement result is received [after point C in the measurement model \[25\]](#) from the physical layer measurement, update the P_n and F_n . The Node B shall initiate the Common Measurement Reporting procedure in order to report the particular SFN-SFN measurement which has triggered the event and set n equal to zero when the F_n rises above the threshold indicated by the *Predicted SFN-SFN Deviation Limit IE*. The P_n and F_n are calculated according to the following:

$$P_n = b \text{ for } n=0$$

$$[FDD - P_n = ((a/16) * ((SFN_n - SFN_{n-1}) \bmod 4096)/100 + P_{n-1}) \bmod 614400 \text{ for } n > 0]$$

$$F_n = \min((M_n - P_n) \bmod 614400, (P_n - M_n) \bmod 614400) \text{ for } n > 0]$$

$$\begin{aligned} TDD - P_n = & ((a/16) * (15 * (SFN_n - SFN_{n-1}) \bmod 4096 + (TS_n - TS_{n-1})/1500 + P_{n-1}) \bmod 40960 \text{ for } n > 0) \\ & * (15 * ((SFN_n - SFN_{n-1}) \bmod 4096) + (TS_n - TS_{n-1}) * 2560 * 16 + P_{n-1}) \bmod 40960 - 20480 \text{ for } n > 0 \end{aligned}$$

$$F_n = \min(\text{abs}(M_n - P_n), \text{abs}(M_n - P_n - 40960), \text{abs}(M_n - P_n + 40960)) \text{ for } n > 0 \quad F_n = \min((M_n - P_n) \bmod 40960, (P_n - M_n) \bmod 40960) \text{ for } n > 0]$$

P_n is the predicted SFN-SFN value when n measurement results has been received after first Common Measurement Reporting at initiation or after the last event was triggered.

a is the last reported SFN-SFN Drift Rate value.

b is the last reported SFN-SFN value.

abs denotes the absolute value.

F_n is the deviation of the last measurement result from the predicted SFN-SFN value (P_n) when n measurements has been received after first Common Measurement Reporting at initiation or after the last event was triggered.

M_n is the latest measurement result received [after point C in the measurement model \[25\]](#) from the physical layer measurements, measured at the [TDD - Time Slot TS_n] of the Frame SFN_n.

M_1 is the first measurement result received [after point C in the measurement model \[25\]](#) from the physical layer measurements after first Common Measurement Reporting at initiation or after the last event was triggered.

The [UTRAN-GPS SFN-SFN](#) Drift Rate is determined by the Node B in an implementation-dependent way after point B in the measurement model [26].

If the *Report Characteristics IE* is not set to 'On-Demand', the Node B is required to perform reporting for a common measurement object, in accordance with the conditions provided in the COMMON MEASUREMENT INITIATION REQUEST message, as long as the object exists. If no common measurement object(s) for which a measurement is defined exists any more the Node B shall terminate the measurement locally without reporting this to the CRNC.

If at the start of the measurement, the reporting criteria are fulfilled for any of Event A, Event B, Event E or Event F, the Node B shall initiate the Common Measurement Reporting procedure immediately, and then continue with the measurements as specified in the COMMON MEASUREMENT INITIATION REQUEST message.

Higher layer filtering

The *Measurement Filter Coefficient* IE indicates how filtering of the measurement values shall be performed before measurement event evaluation and reporting.

The averaging shall be performed according to the following formula.

$$F_n = (1 - a) \cdot F_{n-1} + a \cdot M_n$$

The variables in the formula are defined as follows:

F_n is the updated filtered measurement result

F_{n-1} is the old filtered measurement result

M_n is the latest received measurement result from physical layer measurements

$a = 1/2^{(k/2)}$, where k is the parameter received in the *Measurement Filter Coefficient* IE. If the *Measurement Filter Coefficient* IE is not present, a shall be set to 1 (no filtering)

In order to initialise the averaging filter, F_0 is set to M_1 when the first measurement result from the physical layer measurement is received.

Common measurement accuracy

If the *Common Measurement Type* IE is set to 'UTRAN GPS Timing of Cell Frame for LCS', then the Node B shall use the *UTRAN GPS Timing Measurement Accuracy Class* IE included in the *Common Measurement Accuracy* IE according to the following:

If the *UTRAN GPS Timing Measurement Accuracy Class* IE indicates 'Class A', then the Node B shall perform the measurement with highest supported accuracy within the accuracy classes A, B and C.

If the *UTRAN GPS Timing Measurement Accuracy Class* IE indicates 'Class B', then the Node B shall perform the measurement with highest supported accuracy within the accuracy classes B and C.

If the *UTRAN GPS Timing Measurement Accuracy Class* IE indicates 'Class C' then the Node B shall perform the measurements with the accuracy according to class C.

Response message

If the Node B was able to initiate the measurement requested by the CRNC it shall respond with the COMMON MEASUREMENT INITIATION RESPONSE message sent over the Node B control port. The message shall include the same Measurement ID that was used in the measurement request. Only in the case when the *Report Characteristics* IE is set to "On-Demand", or "On Modification", the COMMON MEASUREMENT INITIATION RESPONSE message shall contain the measurement result and also the *Common Measurement Achieved Accuracy* IE if the *Common Measurement Type* IE is set to 'UTRAN GPS Timing of Cell Frame for LCS'.

If the *Common Measurement Type* IE is set to 'SFN-SFN Observed Time Difference' and the *Report Characteristics* IE is set to 'On Demand' or "On Modification", all the available measurement results shall be reported in the *Successful Neighbouring cell SFN-SFN Observed Time Difference Measurement Information* IE in the *SFN-SFN Measurement Value Information* IE and the Node B shall indicate in the *Unsuccessful Neighbouring cell SFN-SFN Observed Time Difference Measurement Information* IE all the remaining neighbouring cells with no measurement result available in the COMMON MEASUREMENT INITIATION RESPONSE message.

CHANGE REQUEST

⌘ 25.433 CR 601 ⌘ ev 1 ⌘ Current version: 4.3.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Modification of the T_utran-gps length	
Source:	⌘ EricssonR-WG3	
Work item code:	⌘ TEI	Date: ⌘ January, 2002
Category:	⌘ F Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification)	Release: ⌘ REL-4 Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) REL-4 (Release 4) REL-5 (Release 5)
Reason for change: ⌘ It is generally acknowledged that long integers could cause problems with regards to e.g. hardware support in many commonly used tools. Regarding this issue, it was in the past decided to adopt the general principle of limiting integers length to 32 bits. As the T_utran-gps does not comply to this principle a correction is needed.		
Summary of change: ⌘ The length of the T_utran-gps IE is modified so that the 64-bit integer is coded by means of two 32-bit integers.		
Consequences if not approved:	⌘ The presence of a 64-bit integer could cause support problems in many commonly used tools. Impact Analysis: Impact assessment towards the previous version of the specification (same release): This CR has impact on the previous version of the specification (same release) under protocol point of view, because the coding of one IE was modified. The impact can be considered isolated as it concerns part of one system function, namely the UE Positioning (for A-GPS and OTDOA only). R1: the MS length was reduced because not necessary given the assumed values of the information element.

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked **⌘** contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

9.2.1.64A $T_{UTRAN-GPS}$ Measurement Value Information

The $T_{UTRAN-GPS}$ *Measurement Value Information* IE indicates the measurement results related to the UTRAN GPS Timing of Cell Frame for LCS measurements.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
$T_{UTRAN-GPS}$ $T_{UTRAN-GPS}$	M	1	INTEGER(0..3715891199999)	Indicates the UTRAN GPS Timing of Cell Frame for LCS. According to mapping in [22]. <u>Significant values range from 0 to 37158911999999</u>
<u>>MS</u>	<u>M</u>		<u>INTEGER(0..16383)</u>	<u>Most Significant Part</u>
<u>>LS</u>	<u>M</u>		<u>INTEGER(0..4294967295)</u>	<u>Least Significant Part</u>
$T_{UTRAN-GPS}$ Quality	M		INTEGER(0..2^20-1)	Indicates the standard deviation of the $T_{UTRAN-GPS}$ measurements.
$T_{UTRAN-GPS}$ Drift Rate	M		INTEGER(-50..50)	Indicates the $T_{UTRAN-GPS}$ drift rate in 1/256 chip per second. A positive value indicates that the UTRAN clock is running at a lower frequency than GPS clock.
$T_{UTRAN-GPS}$ Drift Rate Quality	M		INTEGER(0..50)	Indicates the standard deviation of the $T_{UTRAN-GPS}$ drift rate measurements.

CHANGE REQUEST

⌘ 25.433 CR 606 ⌘ rev - ⌘ Current version: 4.3.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title: ⌘ Amendment of the COMMON MEASUREMENT INITIATION REQUEST message

Source: ⌘ R-WG3

Work item code: ⌘ TEI

Date: ⌘ February 2002

Category: ⌘ F

Release: ⌘ REL-4

Use one of the following categories:

F (essential correction)

A (corresponds to a correction in an earlier release)

B (Addition of feature),

C (Functional modification of feature)

D (Editorial modification)

Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:

2 (GSM Phase 2)

R96 (Release 1996)

R97 (Release 1997)

R98 (Release 1998)

R99 (Release 1999)

REL-4 (Release 4)

REL-5 (Release 5)

Reason for change: ⌘ The tabular format and the ASN.1 are not aligned w.r.t. the “Neighbouring Cell Measurement Information” IE in the COMMON MEASUREMENT INITIATION REQUEST message.

Also the Time slot IE and Midamble shift and burst type IE in the “Neighbouring TDD Cell Measurement Information” IE should be made optional due to aligning with RNSAP and because there are situations where these IEs are not available, e.g. the neighbouring cell belongs to another RNS area.

Summary of change: ⌘ The tabular format is aligned with ASN.1, that means introducing a CHOICE Neighbouring Cell Measurement Information.

The Time slot IE and Midamble shift and burst type IE in the Neighbouring TDD Cell Measurement Information IE is made optional.

Impact Analysis:

Impact Assessment towards the previous version of the specification (same release):

This CR has isolated impact with the previous version of the specification (same release) because it affects the Common Measurement Initiation procedure only.

This CR has an impact under functional point of view.

The impact can be considered isolated because the change affects one function.

Consequences if not approved: ⌘ If this CR is not approved, misalignment between tabular format and ASN.1 is remaining.

Clauses affected: ⌘ 8.2.8.4, 9.1.18, 9.2.1.47D, 9.3.4

Other specs affected: ⌘ Other core specifications ⌘ 25.423 v4.3.0 CR567
 Test specifications

8.2.8 Common Measurement Initiation

/* partly omitted */

8.2.8.4 Abnormal Conditions

If the Common Measurement Type received in the *Common Measurement Type IE* is not defined in ref. [4] or [5] to be measured on the Common Measurement Object Type received in the *Common Measurement Object Type IE* in the COMMON MEASUREMENT INITIATION REQUEST message the Node B shall regard the Common Measurement Initiation procedure as failed.

[TDD - If the common measurement type requires the Time Slot Information but the [[3.84Mcps TDD - Time Slot IE](#)] [[1.28Mcps TDD - - Time SlotLCR IE](#)] is not provided in the *Common Measurement Object Type IE* in the COMMON MEASUREMENT INITIATION REQUEST message the Node B shall regard the Common Measurement Initiation procedure as failed.]

If the COMMON MEASUREMENT INITIATION REQUEST message contains the *SFN-SFN Measurement Threshold Information IE* (in the *Measurement Threshold IE* contained in the *Report Characteristics IE*) and it does not contain at least one IE, the Node B shall reject the procedure using the COMMON MEASUREMENT INITIATION FAILURE message.

If the COMMON MEASUREMENT INITIATION REQUEST message contains the *T_{UTRAN-GPS} Measurement Threshold Information IE* (in the *Measurement Threshold IE* contained in the *Report Characteristics IE*) and it does not contain at least one IE, the Node B shall reject the procedure using the COMMON MEASUREMENT INITIATION FAILURE message.

If the *Common Measurement Type IE* is set to 'SFN-SFN Observed Time Difference', but the *Neighbouring Cell Measurement Information IE* is not received in the COMMON MEASUREMENT INITIATION REQUEST message, the Node B shall regard the Common Measurement Initiation procedure as failed.

If the *Common Measurement Type IE* is set to 'UTRAN GPS Timing of Cell Frame for LCS', but the *T_{UTRAN-GPS} Measurement Accuracy Class IE* in the *Common Measurement Accuracy IE* is not received in the COMMON MEASUREMENT INITIATION REQUEST message, the Node B shall regard the Common Measurement Initiation procedure as failed.

The allowed combinations of the Common measurement type and Report characteristics type are shown in the table below marked with "X". For not allowed combinations, the Node B shall regard the Common Measurement Initiation procedure as failed.

Table 4: Allowed Common measurement type and Report characteristics type combinations

Common measurement type	Report characteristics type								
	On Demand	Periodic	Event A	Event B	Event C	Event D	Event E	Event F	On Modification

CHANGE REQUEST

⌘ **25.433 CR 609** ⌘ rev **1** ⌘ Current version: **4.3.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ ASN.1 and tabular amendments for LCR TDD														
Source:	⌘ R-WG3														
Work item code: ⌘ TEI	Date: ⌘ February 2002														
Category: ⌘ F	Release: ⌘ REL-4														
<p>Use <u>one</u> of the following categories:</p> <p>F (essential correction) A (corresponds to a correction in an earlier release) B (Addition of feature), C (Functional modification of feature) D (Editorial modification)</p> <p>Detailed explanations of the above categories can be found in 3GPP TR 21.900.</p>															
<p>Use <u>one</u> of the following releases:</p> <table> <tr> <td>2</td> <td>(GSM Phase 2)</td> </tr> <tr> <td>R96</td> <td>(Release 1996)</td> </tr> <tr> <td>R97</td> <td>(Release 1997)</td> </tr> <tr> <td>R98</td> <td>(Release 1998)</td> </tr> <tr> <td>R99</td> <td>(Release 1999)</td> </tr> <tr> <td>REL-4</td> <td>(Release 4)</td> </tr> <tr> <td>REL-5</td> <td>(Release 5)</td> </tr> </table>		2	(GSM Phase 2)	R96	(Release 1996)	R97	(Release 1997)	R98	(Release 1998)	R99	(Release 1999)	REL-4	(Release 4)	REL-5	(Release 5)
2	(GSM Phase 2)														
R96	(Release 1996)														
R97	(Release 1997)														
R98	(Release 1998)														
R99	(Release 1999)														
REL-4	(Release 4)														
REL-5	(Release 5)														

Reason for change: ⌘	The id-RL-InformationResponse-LCR-RL-AdditionRspTDD in ASN.1 of the COMMON MEASUREMENT INITIATION REQUEST TDD message must be optional because this id is used for 1.28Mcps TDD only and shall not be used for 3.84Mcps TDD. ASN.1 deviates from the tabular format. UARFCN is defined twice in the PDU Definition. The Definition of the DwPCH Power and the Max FPACH Power are incorrect because the power definitions should have the same range as the PCCPCH Power to cover the entire range. The Extension Container in the SynchronisationReportCharacteristics and in the intStdPhSyncInfo-CellSyncReprtTDD of the CELL SYNCHRONISATION REPORT [TDD] message in ASN.1 is missing and therefore it cannot be extended in future releases.
-----------------------------	--

Summary of change: ⌘	The id-RL-InformationResponse-LCR-RL-AdditionRspTDD in ASN.1 of the COMMON MEASUREMENT INITIATION REQUEST TDD message is changed to optional. UARFCN is removed once in the PDU Definition. DwPCH Power and MAX FPACH Power is corrected. Extension Container and Ellipsis are added in the SynchronisationReportCharacteristics and in the intStdPhSyncInfo-CellSyncReprtTDD of the CELL SYNCHRONISATION REPORT [TDD] message. Rev.1: IntStdPhCellSyncInfoList-CellSyncReprtTDD is corrected to IntStdPhCellSyncInfo-CellSyncReprtTDD in ASN.1 Removal of the PHYSICAL SHARED CHANNEL RECONFIGURATION REQUEST TDD in ASN.1, because it still unclear using ProtocolIE-Single-Container or not for adding new IES. Impact Analysis: Impact assessment towards the previous version of the specification (same
-----------------------------	---

	<p>release):</p> <p>This CR has non isolated impact with the previous version of the specification (same release) because it affects the RADIO LINK ADDITION procedure for TDD and the functions for DwPCH and MAX FPACH Power.</p> <p>This CR has an impact under protocol & functional point of view.</p> <p>The impact cannot be considered isolated because the changes affects more than one functions.</p> <p>If only NodeB or RNC implement this CR then the affected procedure will not work for 3.84Mcps TDD however all other procedures are not affected.</p>									
Consequences if not approved:	⌘ If this CR is not approved, the COMMON MEASUREMENT INITIATION REQUEST TDD message is not fully supported for HCR TDD. DwPCH Power, MAX FPACH Power definitions and ASN.1 remain incorrect.									
Clauses affected:	⌘ 9.2.3.5B, 9.2.3.5E, 9.3.3, 9.3.4

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at:

http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://www.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

9.2.3.5B DwPCH Power

DwPCH Power is the power that shall be used for transmitting the DwPCH in a cell.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
DwPCH Power			<u>INTEGER(-15..+40,...)</u> <u>Enumerated(-10..+5dB,...)</u>	<u>Unit dBm</u> <u>Granularity 0.1 dB Step 1dB</u>

/* partly omitted */

9.2.3.5E Max FPACH Power

Max FPACH Power is the maximum power that shall be used for transmitting the FPACH in a cell.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Max-FPACH Power			<u>INTEGER(-15..+40,...)</u> <u>Enumerated(-10..+5dB,...)</u>	<u>Unit dBm</u> <u>Granularity 0.1 dB Step 1dB</u>

CHANGE REQUEST

⌘ 25.433 CR 610 ⌘ rev - ⌘ Current version: 4.3.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Midamble shift LCR in the PHYSICAL SHARED CHANNEL RECONFIGURATION REQUEST [TDD] message																	
Source:	⌘ R-WG3																	
Work item code:	⌘ TEI	Date: ⌘ February 2002																
Category:	⌘ F	Release: ⌘ REL-4																
<p>Use one of the following categories:</p> <table> <tr> <td>F (essential correction)</td> <td>Use one of the following releases:</td> </tr> <tr> <td>A (corresponds to a correction in an earlier release)</td> <td>2 (GSM Phase 2)</td> </tr> <tr> <td>B (Addition of feature),</td> <td>R96 (Release 1996)</td> </tr> <tr> <td>C (Functional modification of feature)</td> <td>R97 (Release 1997)</td> </tr> <tr> <td>D (Editorial modification)</td> <td>R98 (Release 1998)</td> </tr> <tr> <td>Detailed explanations of the above categories can be found in 3GPP TR 21.900.</td> <td>R99 (Release 1999)</td> </tr> <tr> <td></td> <td>REL-4 (Release 4)</td> </tr> <tr> <td></td> <td>REL-5 (Release 5)</td> </tr> </table>			F (essential correction)	Use one of the following releases:	A (corresponds to a correction in an earlier release)	2 (GSM Phase 2)	B (Addition of feature),	R96 (Release 1996)	C (Functional modification of feature)	R97 (Release 1997)	D (Editorial modification)	R98 (Release 1998)	Detailed explanations of the above categories can be found in 3GPP TR 21.900.	R99 (Release 1999)		REL-4 (Release 4)		REL-5 (Release 5)
F (essential correction)	Use one of the following releases:																	
A (corresponds to a correction in an earlier release)	2 (GSM Phase 2)																	
B (Addition of feature),	R96 (Release 1996)																	
C (Functional modification of feature)	R97 (Release 1997)																	
D (Editorial modification)	R98 (Release 1998)																	
Detailed explanations of the above categories can be found in 3GPP TR 21.900.	R99 (Release 1999)																	
	REL-4 (Release 4)																	
	REL-5 (Release 5)																	

Reason for change:	⌘ 1) There is the "Midamble shift LCR" IE for 1.28Mcps TDD missing in the PHYSICAL SHARED CHANNEL RECONFIGURATION REQUEST [TDD] message in the "PDSCH to add Information LCR" IEgroup but the corresponding "Midamble Shift and Burst Type" IE for 3.84Mcps TDD is existing therefore the "Midamble shift LCR" IE shall be included. 2) The "Midamble shift LCR" IE for 1.28Mcps TDD in the PHYSICAL SHARED CHANNEL RECONFIGURATION REQUEST [TDD] message in the "PUSCH to modify Information LCR" IEgroup is defined MANDATORY but it shall be defined as OPTIONAL to be aligned with the corresponding 3.84Mcps TDD IE.
---------------------------	--

Summary of change:	⌘ "Midamble shift LCR" IE is introduced in the PHYSICAL SHARED CHANNEL RECONFIGURATION REQUEST [TDD] message in the "PDSCH to add Information LCR" IEgroup in the tabular format and ASN.1. "Midamble shift LCR" IE is made OPTIONAL in the PHYSICAL SHARED CHANNEL RECONFIGURATION REQUEST [TDD] message in the the "PUSCH to modify Information LCR" IEgroup. Impact Analysis: Impact assessment towards the previous version of the specification (same release): This CR has isolated impact with the previous version of the specification (same release) because the Midamble shift LCR is not correct supported in the PHYSICAL SHARED CHANNEL RECONFIGURATION REQUEST [TDD] message. This CR has an impact under protocol & functional point of view. The impact can be considered isolated because the change affects one protocol & function.
---------------------------	---

Consequences if not approved:  If this CR is not approved, Midamble shift LCR is missing and/or not correct defined for 1.28Mcps TDD in the PHYSICAL SHARED CHANNEL RECONFIGURATION REQUEST [TDD].

Clauses affected:  9.1.62, 9.3.3

Range bound	Explanation
<i>Maxnoof PDSCH Sets</i>	Maximum number of PDSCH Sets in a cell.
<i>Maxnoof PDSCH</i>	Maximum number of PDSCH in a cell for 3.84Mcps TDD only.
<i>MaxnofPDSCHLCR</i>	Maximum number of PDSCH in a cell for 1.28Mcps TDD only.
<i>Maxnoof PUSCH Sets</i>	Maximum number of PUSCH Sets in a cell.
<i>Maxnoof PUSCH</i>	Maximum number of PUSCH in a cell for 3.84Mcps TDD.
<i>Maxnof PUSCHLCR</i>	Maximum number of PUSCH in a cell for 1.28Mcps TDD.
<i>MaxnoofDLts</i>	Maximum number of Downlink time slots in a cell for 3.84Mcps TDD.
<i>MaxnoofULts</i>	Maximum number of Uplink time slots in a cell for 3.84Mcps TDD.
<i>MaxnofULtsLCR</i>	Maximum number of Uplink time slots in a cell for 1.28Mcps TDD

CHANGE REQUEST

⌘ 25.433 CR 617 ⌘ rev - ⌘ Current version: 4.3.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Rapporteur Corrections																	
Source:	⌘ Nortel Networks R-WG3																	
Work item code:	⌘ TEI-Rel4	Date: ⌘ February 2002																
Category:	⌘ F	Release: ⌘ REL-4																
<p>Use <u>one</u> of the following categories:</p> <table> <tr> <td>F (essential correction)</td> <td>Use <u>one</u> of the following releases:</td> </tr> <tr> <td>A (corresponds to a correction in an earlier release)</td> <td>2 (GSM Phase 2)</td> </tr> <tr> <td>B (Addition of feature),</td> <td>R96 (Release 1996)</td> </tr> <tr> <td>C (Functional modification of feature)</td> <td>R97 (Release 1997)</td> </tr> <tr> <td>D (Editorial modification)</td> <td>R98 (Release 1998)</td> </tr> <tr> <td>Detailed explanations of the above categories can be found in 3GPP TR 21.900.</td> <td>R99 (Release 1999)</td> </tr> <tr> <td></td> <td>REL-4 (Release 4)</td> </tr> <tr> <td></td> <td>REL-5 (Release 5)</td> </tr> </table>			F (essential correction)	Use <u>one</u> of the following releases:	A (corresponds to a correction in an earlier release)	2 (GSM Phase 2)	B (Addition of feature),	R96 (Release 1996)	C (Functional modification of feature)	R97 (Release 1997)	D (Editorial modification)	R98 (Release 1998)	Detailed explanations of the above categories can be found in 3GPP TR 21.900.	R99 (Release 1999)		REL-4 (Release 4)		REL-5 (Release 5)
F (essential correction)	Use <u>one</u> of the following releases:																	
A (corresponds to a correction in an earlier release)	2 (GSM Phase 2)																	
B (Addition of feature),	R96 (Release 1996)																	
C (Functional modification of feature)	R97 (Release 1997)																	
D (Editorial modification)	R98 (Release 1998)																	
Detailed explanations of the above categories can be found in 3GPP TR 21.900.	R99 (Release 1999)																	
	REL-4 (Release 4)																	
	REL-5 (Release 5)																	

Reason for change: ⌘ There are some conflicting Ids in the definition of the Procedure Codes and ProtocolIE-Ids in the ASN.1.

Summary of change: ⌘ The conflicts are resolved by changing the Ids.

Compatibility Analysis:

This correction does not have isolated impact on the previous version of the specification. There is no impact on the R99 version of the specifications as the Procedures and IEs for which the Ids have been changed have all been introduced in Rel-4.

Consequences if not approved: ⌘ If this CR is not approved, then the conflicts will remain in the ASN.1 resulting in interoperability issues.

Clauses affected:	⌘ 9.3.6
Other specs affected:	⌘ <input type="checkbox"/> Other core specifications <input type="checkbox"/> Test specifications <input type="checkbox"/> O&M Specifications
Other comments:	⌘

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be

downloaded from the 3GPP server under <ftp://www.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.
