Title: Draft Liaison statement on the inclusion of IPDL in the layer 1 specifications.

To: TSG RAN WG2

_____

TSG RAN WG1 has approved a change request to include the IPDL concept into the layer 1 specifications. In the process of doing this some changes were made to the IPDL parameter list and to the exact use of the parameters. In particular the changes are:

The 'Max_dev' parameter was removed as it can be derived from the other parameters and is redundant.

A 'IP_offset' parameter was added to allow all the sectors of the one node B to have synchronised idle periods.

The formula for calculating the idle period position was also modified to reflect these parameter changes.

WG1 requests that WG2 review the changes made to the WG1 specifications and to update the WG2 documentation to realign the parameter list and to remove any duplication of information.
