

CR-Formv3

CHANGE REQUEST

✎
25.211 CR 092
✎
rev
1
✎
Current version:
3.5.0
✎

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ✎ symbols.

Proposed change affects: ✎ (U)SIM ME/UE Radio Access Network Core Network

Title:	✎ Clarification of the S-CCPCH frame carrying paging information		
Source:	✎ Panasonic		
Work item code:	✎	Date:	✎ 28, February, 2001
Category:	✎ F	Release:	✎ R99
	Use <u>one</u> of the following categories: F (essential correction) A (corresponds to a correction in an earlier release) B (Addition of feature), C (Functional modification of feature) D (Editorial modification)		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) REL-4 (Release 4) REL-5 (Release 5)
	Detailed explanations of the above categories can be found in 3GPP TR 21.900.		

Reason for change:	✎ It is not clear that S-CCPCH carries the paging information related the paging indicator in the PICH frame is one single frame.
Summary of change:	✎ To state clearly that S-CCPCH carries the paging information related the paging indicator in the PICH frame is one single frame.
Consequences if not approved:	✎ UE should receive S-CCPCH frames until higher layer recognize the end of the message. This increases the power consumption in the paging. Unnecessary function that IMSI allocation or something is required to avoid conflicting paging message.

Clauses affected:	✎ 7.2		
Other specs affected:	<input type="checkbox"/> Other core specifications <input type="checkbox"/> Test specifications <input type="checkbox"/> O&M Specifications	✎	
Other comments:	✎		

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ✎ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://www.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

7.2 PICH/S-CCPCH timing relation

Figure 30 illustrates the timing between a PICH frame and its associated **single S-CCPCH** frame, i.e. the S-CCPCH frame that carries the paging information related to the paging indicators in the PICH frame. A paging indicator set in a PICH frame means that the paging message is transmitted on the PCH in the S-CCPCH frame starting τ_{PICH} chips after the transmitted PICH frame. τ_{PICH} is defined in subclause 7.1.

Figure 30: Timing relation between PICH frame and associated S-CCPCH frame
