Title: TSG_CN Maintenance for GSM Specifications

Agenda item: [7.3SA 6.1.2](#)

Document for: Information/ Consideration

With document NP-99251 MCC proposes a new/modified mechanism for approval of Change-Requests to be submitted towards the SMG/GSM community.

So far 3GPP TSG_CN accepted only the maintenance task for specifications of common interest, ie. common specifications (common for GSM and UMTS) and older versions of these common specifications applicable to earlier releases (eg. 24.008 and 04.08 R'98/R'97/...).

The MCC proposal is that TSG_CN accepts also maintenance responsibility for such specifications which are of GSM interest only eg. (GSM 09.14)

Beside the formal endorsement/approval of the above mentioned procedure by the SMG community 3GPP TSG_CN has to express is willingness to take responsibility for maintenance of these older specification.

Therefore TSG_CN is asked to approve the following proposal:

Proposal1:

TSG_CN is willing to take the maintenance responsibility for GSM specifications which are in the domain of ETSI SMG/SMG3 and which are not common specifications.

- [The Terms of Reference for TSG_CN have to be adapted according to this decision.](#)
- [Treatment of such specifications resp. related documents needs clear indication in the agenda/meeting schedule.](#)

As soon as SMG endorses the overall mechanism the respective specifications will be transferred to TSG_CN.

A list of the relevant specifications is given in Td 360 ([revision in SP-99463](#)).
