

TSG-S4 Release 1999 Specification Submission form

Specification:	TS 26.132	Title:	Terminal Acoustic Characteristics for Telephony; Tests Specification		
Last version available:	-				
Work Area / Item:	3G Audio-Visual Terminal Characteristics				
Affects:	UE/MS:X	CN:X	UTRAN:X	Compatibility Issues:	Yes: No: X
Expected Completion Date:	June 2000				
Services impacted:	None				
Tasks within work which are not complete:	Agreement on test methods				
Consequences if not included in Release 1999:	The requirement specification (TS 26.131) is presented for approval as part of Release 99. It is highly desirable to include the Test specification in Release 99 as well.				

Abstract of document:

The specification defines the test methodologies and procedure to check the Acoustic performances of Terminal supporting the Narrowband [or Wideband] speech Telephony service. It is a complement to the Requirement specification TS 26.131

Contentious Issues:

Agreement must be reached on the best test procedures in the scope of 3GPP, using the recent work in ITU and ETSI STQ. The specification will also rely on the corresponding sections of the existing GSM specifications (03.50 and 03.58).
