10   Access dependent services and features

This section describes the features that will be dependent on the mode of radio access.

In general different access networks provide different capabilities with different QoS.

- Multicall, as specified in TS 22.135 [11], is supported only via UTRAN.

- Packet switched traffic using GPRS over GERAN will have a maximum rate in the order of 384kb/sec.

- Packet switched traffic using UTRAN will have a maximum rate in the order of 2Mb/sec.

- ASCI teleservices, TS 22.003 [3] are only available in GERAN.

- SoLSA feature is only available in GERAN.

- The accuracy of the determination of location may differ between the various access technologies.

- At GERAN reception of CBS messages for a UE is not supported if it is connected in the CS domain or in the PS domain when data is currently transmitted.

- ~~Facsimile (both~~ Transparent (T) ~~and Non- transparent (NT)~~ mode~~s~~ of facsimile ~~)~~, as specified in TS 22.003 [3], is only supported by GERAN.

- Non-transparent (NT) mode of facsimile, as specified in TS 22.003 [3], is only supported by UTRAN.

- There are some differences at data rates and interworking scenarios between GERAN and UTRAN support of circuit bearer services . For further details see TS 22.002 [2].
