Title: **Promotion of specs to Rel-5**

Document for: **approval**

Agenda Item: **8.6**

Table 1 shows the current list of specifications which have versions in Release 4 and / or Release 5. The list is ordered by Working Group responsibility, and shows the latest available version in each of those Releases. A blank in a Release column indicates that although it is envisaged that the specification will exist in that Release, as yet there is no available draft.

The letter Y in the Rel-4 and Rel-5 columns indicates that the spec exists in that Release.

The letter w in the Rel-4 and Rel-5 columns indicates that the spec has been withdrawn / stopped in that Release.

The TSG / WG Officials are requested to examine this table carefully, and to feed back any additional promotions to Rel-5, together with the (projected) freeze date (see 3GPP TR 21.900).

Chairmen are reminded that, under the current regime, **to be valid for a given Release, a specification must exist in the corresponding version**. That is, to be valid for Release 5, a version 5.y.z of the spec must exist, even if that version is technically identical to the version 4 pertaining to the previous Release.

Attention is drawn to the introduction to the References clause in the 3GPP TS (and TR) skeleton document, which contains the following text:

- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

Any specs which are not promoted are therefore not valid in the new Release, and **references to them from all other specs in Release 5 must be removed**; beware that this is seldom a simple editorial exercise, and will generally require CRs to referencing specs.

Note: This table is correct as at 2002-03-13 00:53 GMT. It does not reflect the (anticipated) decisions of WGs SA2 or SA3. Neither does it reflect the decisions of TSG GERAN, which are anticipated for meeting no. 9.

Table 1: Current status of specs in Releases 4 and 5.
