Title: **Rel-4 CR 32.613 (Bulk configuration management IRP CORBA SS)
: Add missing CORBA exceptions and descriptions of CORBA
exception usage**

Document for: **Approval**

Agenda Item: **7.5.3**

Doc-1 st -Level	Spec	CR	R	Phase	Subject	Cat	Ver Cur	Ver New	Doc-2 nd -Level	Workite m
SP-020297	32.613	003	-	Rel-4	Add missing CORBA exceptions and descriptions of CORBA exception usage	F	4.1.0	4.2.0	S5-026074	OAM-CM

CHANGE REQUEST

⌘ 32.613 CR 003 ⌘ rev - ⌘ Current version: 4.1.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Add missing CORBA exceptions and descriptions of CORBA exception usage	
Source:	⌘ SA5	
Work item code: ⌘ OAM-CM	Date: ⌘ 05/04/2002	
Category: ⌘ F	Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification)	Release: ⌘ REL-4 Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) REL-4 (Release 4) REL-5 (Release 5)

Detailed explanations of the above categories can be found in 3GPP [TR 21.900](#).

Reason for change: ⌘	There are missing CORBA exceptions and descriptions of CORBA exception usage.
Summary of change: ⌘	<ul style="list-style-type: none"> For each CORBA method, add missing CORBA exception "<operation-name>Exception", or align name of existing CORBA exception. Add missing CORBA exception "NotValidInCurrentStateException" on CORBA methods "upload", "download", "activate", "fallback", "end_session" and "abort_session_operation" and remove superseded CORBA exceptions "TransitionStateException" and "NoActiveOperationException". Add missing CORBA exception "MaxSessionReachedException" on CORBA methods "start_session", "upload" and "download". In the IDL, for each existing CORBA exception, add missing commentary describing CORBA exception usage. Correct erroneous CORBA exception in operation "upload" mapping table. Correct erroneous CORBA method in operation and notification mapping table. Editorial modifications.
Consequences if not approved:	It would be impossible to implement the Bulk CM IRP in a fully interoperable manner (see "Other comments").
Clauses affected:	⌘ 4.2, 4.3, Annex B
Other specs affected:	<input type="checkbox"/> Other core specifications <input type="checkbox"/> Test specifications <input type="checkbox"/> O&M Specifications
Other comments:	Without the added exceptions described below, a Bulk CM IRP Agent would have no mean to inform an IRP Manager of the error cases corresponding to those exceptions. .../...

.../...

Each method generically requires an exception "<operation-name>Exception" for the cases where the request failed because of unspecified reasons (e.g. memory overflow, disk full, software error).

Methods "upload", "download", "activate", "fallback", "end_session" and "abort_session_operation" further require the new exception "NotValidInCurrentStateException" for the cases where the request cannot be processed because the request is not valid in the current state of the configuration session.

E.g.:

- Method "upload" called as current state is "upload completed".
- Method "download" called as current state is "upload in progress".
- Method "abort_session_operation" called as current state is "idle".

The new exception "NotValidInCurrentStateException" supersedes exceptions "TransitionStateException" and "NoActiveOperationException" as:

- For methods "upload", "download", "activate", "fallback" and "end_session", exception "TransitionStateException" covers the cases where the request cannot be processed because current state of the configuration session is "xxx in progress" state and the request is not valid in such a state.
- For method "abort_session_operation", exception "NoActiveOperationException" covers the cases where the request cannot be processed because current state of the configuration session is not "xxx in progress" state and the request is not valid in such a state.

Methods "start_session", "upload" and "download" also require the new exception "MaxSessionReachedException" for the cases where the request cannot be processed because the maximum number of simultaneously running configuration sessions, for upload or download/activate activity, or globally, has been reached.

4.2 Operation and Notification mapping

•••

Table 1: Mapping from IM Notification/Operation to SS equivalents

IS Operation/ notification	SS Method	Qualifier
•••		
getBulkCmIRPVersion	get_bulk_cm_IRP_version get_bulk_CM_IRP_versions	M
