Title: **Remove SoLSA stage 2 from UTRAN-only specification set**

Document for: **approval**

Agenda item: **8.6 / 8.8**

In early 2001, it was decided that SoLSA was applicable only to 3GPP systems using GERAN radio access and not also to systems using UTRAN radio access. The stage 1 specification was accordingly renumbered from 22.043 back to 02.43 for R99, and to 42.043 for Rel-4 onwards.

Unfortunately, no action was taken with respect to the stage 2 specification, which remains as 23.073. It is proposed:

- to renumber 23.073 R99 (version 3.0.1) to 03.73 (version 8.0.0); and
- to renumber 23.073 Rel-4 (version 4.0.0) to 43.073 (version 4.0.0); and
- to create 43.073 Rel-5 (version 5.0.0) technically identical to 43.073 version 4.0.0.

No technical changes will be introduced during this conversion, which will be restricted to a change of cover page, addition to change history annex, changes to page headers and any concomitant minor editorial changes.

The SoLSA stage 2 specification is formally under the control of TSG CN, WG4. However the CN4 chairman has indicated that he sees no problem with the above proposal, which is therefore being brought to SA as coordinating body for the technical aspects of the project.

SA is asked to agree to these proposals.

If this is agreed, the changes will be reflected in the updates to TSs 21.101, 21.102, 21.103, 01.01, 41.102 and 41.103 to be presented later in the agenda.
