Title: **Add Immediate Service Termination (IST) to the UTRAN specification set**

Document for: **information**

Agenda item: **8.6 / 8.8**

Following discussions in SA3 and CN4, it has been decided that the Immediate Service Termination (IST) service is applicable not only to 3GPP systems using GERAN radio access but also to systems using UTRAN radio access. The specifications concerned are the 02.32 family (stage 1) and the 03.35 family (stage 2).

Accordingly, it is proposed:

- to renumber 02.32 R99 (version 8.0.1) to 22.032 (version 3.0.0);

- to renumber 42.032 Rel-4 (version 4.0.0) to 22.032 (version 4.0.0);

- to create 22.032 Rel-5 (version 5.0.0) technically identical to 22.032 version 4.0.0;

- to renumber 03.35 R99 (version 8.1.0) to 23.035 (version 3.0.0);

- to renumber 43.035 Rel-4 (version 4.1.0) to 23.035 (version 4.0.0); and

- to create 23.035 Rel-5 (version 5.0.0) technically identical to 23.035 version 4.0.0.

No technical changes will be introduced during this conversion, which will be restricted to a change of cover page, addition to change history annex, changes to page headers and any concomitant minor editorial changes.

SA has, with the approval of the SA3 report, tacitly approved this conversion.

The changes will be reflected in the updates to TSs 21.101, 21.102, 21.103, 01.01, 41.102 and 41.103 to be presented later in the agenda.
