7.3.2 Structure of the events

There are eight different events in which the information is sent to the DF2 if this is required. Details are described in the following section. The events for interception are configurable (if they are sent to DF2) in the 3G GSN or the HLR and can be suppressed in the DF2.

The following events are applicable to 3G SGSN:

- Mobile Station Attach;
- Mobile Station Detach:
- PDP context activation;
- Start of intercept with PDP context active;
- PDP context modification;
- PDP context deactivation;
- RA update;
- SMS.

NOTE: 3G GGSN interception is a national option. Location information may not be available in this case.

The following events are applicable to the 3G GGSN:

- PDP context activation;
- PDP context modification;
- PDP context deactivation;
- Start of interception with PDP context active.

The following events are applicable to the HLR:

- Roaming.

A set of fields as shown below is used to generate the events. The events transmit the information from 3G GSN or HLR to DF2. This set of fields as shown below can be extended in the 3G GSN or HLR, if this is necessary as a national option. DF2 can extend this information if this is necessary as a national option e.g. a unique number for each surveillance warrant.

The following events are applicable to the 3G GGSN:

- PDP context activation;
- PDP context deactivation;
- Start of interception with PDP context active.

The following events are applicable to the HLR:

Roaming.

A set of fields as shown below is used to generate the events. The events transmit the information from 3G GSN or HLR to DF2. This set of fields as shown below can be extended in the 3G GSN or HLR, if this is necessary as a national option. DF2 can extend this information if this is necessary as a national option e.g. a unique number for each surveillance warrant.

Table 2: Information Events for Packet Data Event Records

Observed MSISDN

MSISDN of the target subscriber (monitored subscriber)

Observed IMSI

IMSI of the target subscriber (monitored subscriber)

Observed IMEI

IMEI of the target subscriber (monitored subscriber), it shall be checked for each activation over the radio interface.

Event type

Description which type of event is delivered: MS attach, MS detach, PDP context activation, Start of intercept with

PDP context active, PDP context deactivation, SMS, Cell and/or RA update,

Event date

Date of the event generation in the 3G GSN or the HLR.

Event time

Time of the event generation in the 3G GSN or the HLR. Timestamp shall be generated relative to GSN or HLR internal clock.

PDP address

The PDP address of the target subscriber. Note that this address might be dynamic.

Access Point Name

The APN of the access point. (Typically the GGSN of the other party)

Location Information

Location Information is the service area identity (SAI), RAI and/or location area identity that is present at the GSN at the time of event record production.

PDP Type

The used PDP type.

Correlation Number

The correlation number is used to correlate CC and IRI.

SMS

The SMS content with header which is sent with the SMS-service. The header also includes the SMS-Centre address.

Network Element Identifier

Unique identifier for the element reporting the ICE.

Failed attach reason

Reason for failed attach of the target subscriber.

Failed context activation reason

Reason for failed context activation of the target subscriber.

IAs

The observed Interception Areas

Session initiator

The initiator of the PD context activation or modification request either the network or the 3G MS.

Initiator

SMS indicator whether the SMS is MO or MT

Deactivation/termination cause

The termination cause of the PDP context

QoS

This field indicated the Quality of Service associated with the PDP Context procedure.

Serving System Address

Information about the serving system (e.g., serving SGSN number or serving SGSN address).
