1. Action/Decision Requested

TISPAN WG1 is seeking to better understand the state of service definition and service creation in 3GPP. To that end we would like to ask 3GPP for a (possibly brief) status overview of the 3GPP IMS service set and the status of 3GPP service creation standardization.

2. Discussion

ETSI has created a new technical body TISPAN which is to deal with next generation (fixed) networks. As part of our work TISPAN WG1 is to describe the service sets applicable to the NGN. We have chosen to align our architecture with that of 3GPP IMS. We are seeking to extend the IMS service offering, our provisional service list contains services such as (Video conferencing, E-commerce and Instant Messaging).

With some interest we have read document 3GPP TS 22.057 V5.4.0 on the Mobile Execution environment yet have not found any follow-up in the 3GPP deliverables.

TISPAN WG1 is seeking to better understand the state of service definition and service creation in 3GPP. To that end we would like to ask 3GPP for a (brief) status overview (and future plans) of the 3GPP IMS service set and the status of 3GPP service creation standardization.
