During the Study Group 4 meeting held 27 October - 7 November 2003, the status document of M.3100 was reviewed.

The status document contains the following level 3 items, i.e. amendments that are proposed but not agreed and where further contributions are required:

- Modelling of cables and connectors
- Optimization issues for the network model
- Topological link end capacity management
- Name binding refinements
- New status attributes to qualify operational state
- Maintenance of outstanding alarms

No contributions have been received for several meetings and the SWP has decided to remove these items at the next SG4 meeting (starting 26 April 2004) unless contributions are received or interest is expressed in the proposed amendments.
