

Technical Specification Group Services and System Aspects
Meeting #22, Hawaii, USA, 15-18 December 2003

TSGS#22(03)0725

Source: TSG SA Secretary (M. Pope, MCC)

Title: Proposed change to report of TSG SA meeting #21

Agenda Item: 3

Document for: Decision

The following proposal for change to the draft report was received by the Secretary after submission of the draft report to TSG SA for approval ([TD SP-030561](#)). T-mobile reported that this request had been sent to the Secretary mid-October 2003, but had not been received and included.

7.8 Other issues

...

[TD SP-030527](#): Inter-network accounting for BS30 based services such as Video telephony. This was introduced by T-Mobile on behalf of T-Mobile and Vodafone. TSG CN were asked to discuss this topic and to instruct CN WG3 to develop a suitable signalling solution for Rel-4, Rel-5 and Rel-6. The TSG CN Chairman reported their handling of this in his Report to TSG SA (no LS was sent).

TSG SA were asked to support this request and to instruct SA WG1 to draft Rel-4 and Rel-5 versions of the CR to TS 22.115 which has already been agreed in SA WG1. TSG SA were also asked to instruct SA WG5 to draft appropriate amendments to TS 32.205 (Rel-4 and Rel-5) and TS 32.250 (Rel-6).

It was noted that there was some support for [even](#) including this in Rel'[99-4](#) [since this change would address a pretty much isolated area](#). Such a change to Frozen releases should be reviewed when more information is available.

[It was commented that a solution should also cater for BS20.](#)

The proposal of the contribution were accepted in principle and WGs were asked to consider this and report back to TSG SA at the next meeting, where a decision on the practicality of introducing this can be made.
