Title: REPORT - IETF Status
Agenda item: 8.1.1
Document for: INFORMATION

1. Executive Summary

Good progress in several areas:

- Diameter Credit Control has completed WGLC
- Drafts exist for all protocol needs
- EAP and IPSEC drafts needed for WLAN are progressing

Most protocol requirements documents fairly stable and protocol work proceeding. Total Release 6 dependencies now at 86 (decrease of 3 since last report, drafts added, but several expiring protocol requirements drafts were removed. Two drafts moved to Rel 7).

Highest risk areas are:

- AAA (Diameter Multimedia Application)
- SIMPLE/SIP/SIPPING/XCON (IM, Filtering, Conference Control, Presence Publication, Whispering)

Most IETF drafts on target for August/September 2004 timeline.

IETF still investigating changes to their working procedures to improve efficiency.

IANA allocations likely to be a problem in the future. RFC publication also likely to be slow.

2. Statistics

Drafts being tracked:

Release 4: 2

Release 5: 45

Release 6: 86

Drafts not yet approved by IESG (technical stability)

Release 4: 0

Release 5: 2

Release 6: 65

Drafts not yet published as RFCs (formally available)

Release 4: 0

Release 5: 2

Release 6: 83

Drafts approved by IESG since TSG#23: 7

Drafts published as RFCs since TSG#23: 2

3. Significant Developments

3GPP mime types draft approved by IESG.

AAA Diameter Credit Control ready to go to IESG. Close interaction between document authors and SA5 SWGB.

Network discovery and selection draft split into separate drafts on network discovery and NAI decoration (needed for selection). Drafts progressing.

Interim SIP/SIPPING/SIMPLE/XCON meeting held to progress work on dependencies for presence, IM, conferencing.

Draft for floor control protocol and also conference sidebars created.

Please see attached dependency table for latest status on individual drafts.

3GPP IETF Dependencies and Priorities

Notes:

- a. This dependency and priority is based on the information available as of May 26, 2004
- b. The 3GPP Requirement is that these IDs be stable and RFC numbers be available to allow 3GPP to reference them.
- c. Where individual IDs are listed, there is a desire that an ID providing similar requirements or functionality be progressed within the working group.
- d. The “Definite” column indicates how firm the 3GPP requirement for this ID is. Those listed as Possible are still under discussion (or in some cases not yet discussed in 3GPP).
- e. The “3GPP Priority” column indicates whether this functionality is deemed essential for the functioning of the 3GPP feature. Desirable indicates that major functionality will be sacrificed if this ID is not ready.
- f. Items with a high risk of not being complete in time are marked in yellow. Completed items are in green.
- g. Dependency information compiled by Stephen Hayes, 3GPP TSG-CN Chair (stephen.hayes@ericsson.com, +1 469 360 8500)
