CHANGE REQUEST

⌘ 32.632 CR 012 ⌘ rev - ⌘ Current version: 6.0.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ UICC apps ⌘ ME ⌘ Radio Access Network ⌘ Core Network

Title:	⌘ Add new IMS Entities to Rel-6 Core Network NRM	
Source:	⌘ SA5 (mohanr@lucent.com)	
Work item code:	⌘ OAM-NIM	Date: ⌘ 19/11/2004
Category:	⌘ B	Release: ⌘ Rel-6
Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900 . Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)		

Reason for change: ⌘	Introduce 3GPP standards for modelling of network elements in the IP Multimedia Subsystem.
Summary of change: ⌘	Added definitions for ScscfFunction, PcsccfFunction, IcsccfFunction, MrfcFunction, MrfpFunction, AsFunction, SlfFunction, BgcfFunction, and MgcfFunction. Font and minor changes to align with TS 32.151 IS template
Consequences if not approved: ⌘	

Clauses affected: ⌘	6.2.1, 6.2.2, 6.5.1, New clauses in 6.3, table 6.5.1 has attribute additions plus an alphabetical sort.												
Other specs affected:	<table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td>Y</td> <td>N</td> </tr> <tr> <td>X</td> <td></td> </tr> </table> Other core specifications ⌘ <table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td>Y</td> <td>X</td> </tr> <tr> <td></td> <td></td> </tr> </table> Test specifications ⌘ <table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td>X</td> <td></td> </tr> <tr> <td></td> <td></td> </tr> </table> O&M Specifications ⌘ Rel-6 32.633, 32.634, 32.635	Y	N	X		Y	X			X

Y	X												
X													
Other comments: ⌘	Parent to Children CRs 32.633, 32.635 in S5-049007/8. Corresponding 32.634 CR will be submitted to a future SA meeting.												

Change in Clause 1

1 Scope

The present document is part of an Integration Reference Point (IRP) named "Core Network Resources IRP", through which an 'IRP Agent' (typically an Element Manager or Network Element) can communicate Configuration Management information to one or several 'IRP Managers' (typically Network Managers) concerning CN resources. This version of the IRP is mainly intended for "passive management" of high-level network configuration and status information as required by a Network Manager. The "Core Network Resources IRP" comprises a set of specifications defining Requirements, a protocol neutral Network Resource Model (NRM) and corresponding Solution Set(s).

The present document specifies the protocol neutral Core Network Resources IRP: Network Resource Model. It reuses relevant parts of the generic NRM in 3GPP TS 32.622 [16], either by direct reuse or sub-classing, and in addition to that defines CN specific Managed Object Classes. [Release 6 introduces support for management of IMS entities addressed in 3GPP TS 23.228 \[20\].](#)

The Configuration Management (CM) area is very large. The intention is to split the specification of the related interfaces in several IRPs - as described in the Introduction clause above. An important aspect of such a split is that the Network Resource Models (NRMs) defined in different IRPs containing NRMs are consistent, and that NRMs supported by an IRP Agent implementation can be accessed as one coherent model through one IRP Information Service (IS).

To summarize, the present document has the following main purpose: to define the applied CN specific Network Resource Model, based on the generic NRM in 3GPP TS 32.622 [16].

Finally, in order to access the information defined by this NRM, an IRP Information Service (IS) is needed, such as the Basic CM IRP: IS 3GPP TS 32.602 [17]. However, which Information Service that is applicable is outside the scope of the present document.

End of Change in Clause 1

Change in Clause 2

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

Change in Clause 3.2

3.2 Abbreviations

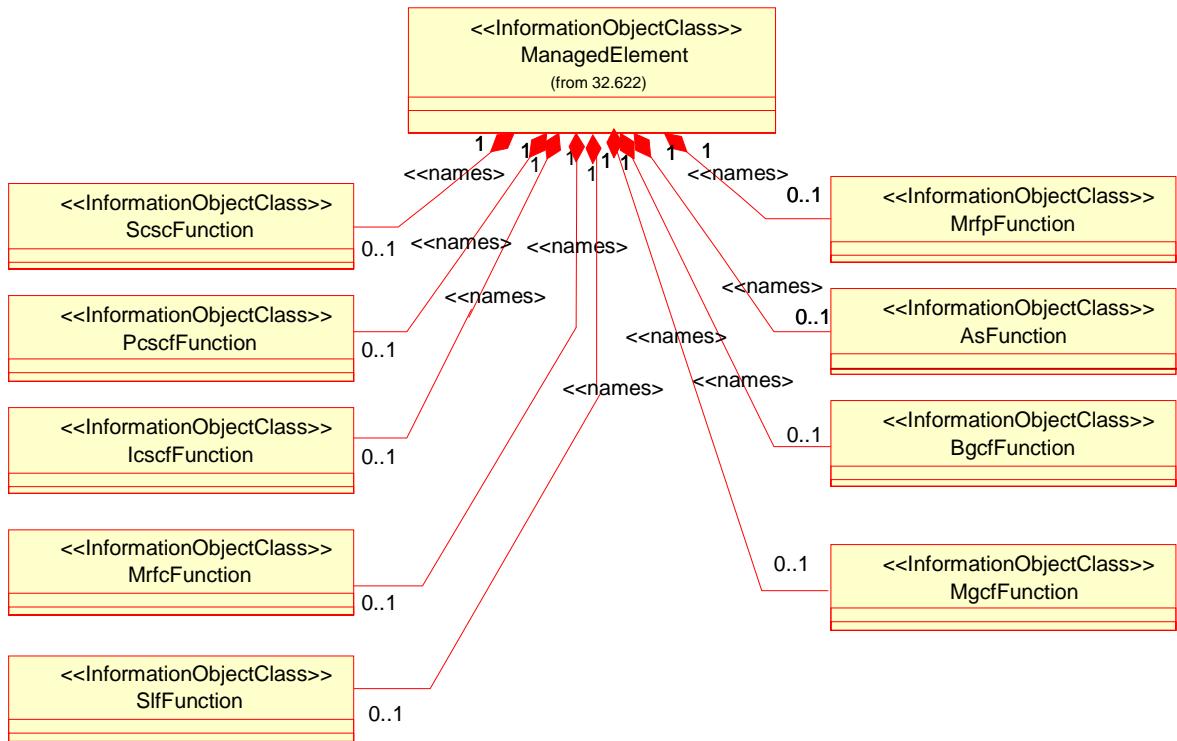

For the purposes of the present document, the following abbreviations apply:

AUC	AUthentication Centre
<u>AS</u>	<u>Application Server</u>
BG	Border Gateway
<u>BGCF</u>	<u>Breakout Gateway Control Function</u>
BS	Billing System
CBC	Cell Broadcast Center
CGF	Charging Gateway Functionality
CN	Core Network
DN	Distinguished Name (see 3GPP TS 32.300 [13])
EIR	Equipment Identity Register
EM	Element Manager
FM	Fault Management
FNR	Flexible Number Register
GDMO	Guidelines for the Definition of Managed Objects
GGSN	Gateway GPRS Support Node
GMLC	Gateway Mobile Location Center
GMSC Server	Gateway MSC Server
GMSC	Gateway MSC
GPRS	General Packet Radio System

HLR	Home Location Register
<u>ICSCF</u>	<u>Interrogating Call Session Control Function</u>
IDL	Interface Definition Language
<u>IMS</u>	<u>IP Multimedia Subsystem</u>
<u>IMSMGW</u>	<u>IMS Media Gateway</u>
IOC	Information Object Class
IRP	Integration Reference Point
ISO	International Standards Organization
IWF	InterWorking Function
ME	Managed Element
<u>MGCF</u>	<u>Media Gateway Control Function</u>
MGW	Media GateWay
MIM	Management Information Model
MNP-SRF	Mobile Number Portability-Signalling Relay Function
MO	Managed Object
MOI	Managed Object Instance
<u>MRFC</u>	<u>Multimedia Resource Function Controller</u>
<u>MRFP</u>	<u>Call Session Control Function Processor</u>
MSC Server	Mobile Services Switching Centre Server
MSC	Mobile Services Switching Centre
NE	Network Element
NM	Network Manager
NPDB	Number Portability DataBase
NR	Network Resource
NRM	Network Resource Model
OSI	Open Systems Interconnection
<u>PCSCF</u>	<u>Proxy Call Session Control Function</u>
PM	Performance Management
RDN	Relative Distinguished Name (see 3GPP TS 32.300 [13])
SCF	Service Control Function
<u>SCSCF</u>	<u>Serving Call Session Control Function</u>
SGSN	Serving GPRS Support Node
SGW	Signalling GateWay
<u>SLF</u>	<u>Subscription Locator Function</u>
SMLC	Serving Mobile Location Center
SMS	Short Message Service
SMS-GMSC	SMS Gateway MSC
SMS-IWMSC	SMS InterWorking MSC
SRF	Specialized Resource Function
SSF	Service Switching Function
TMN	Telecommunications Management Network
UML	Unified Modelling Language
UMTS	Universal Mobile Telecommunications System
UTRAN	Universal Terrestrial Radio Access Network
VLR	Visitor Location Register

New Figure 6.2.1.3

[Figure 6.2.1.3: CN NRM Containment/Naming and Association](#)

Change caption fig 6.2.1.3 (becomes 6.2.1.4 plus new note)

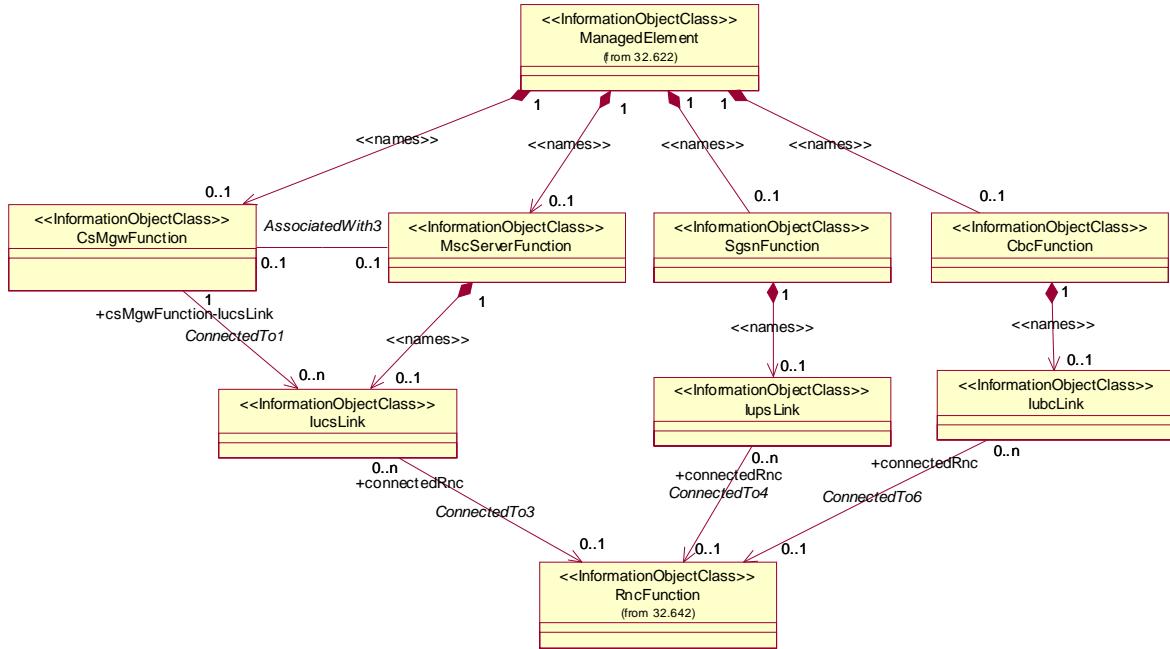

Figure 6.2.1.34: CN UTRAN NRM Containment/Naming and Association

NOTE 1: The association between MscServer and GsmCell, and SgsnFunction and GsmCell is optional. It may be valid if both the MscServer and GsmCell, or SgsnFunction and GsmCell are managed by the same management node.

NOTE 2: The association between MscServer and CsMgwFunction is optional and is only mandatory when they belong to different ManagedElements.

NOTE 3: [IMS Entities \(containing combinations of functions\) like MGW, CSCF and MRF are not modelled. Instead, functionally specific entities like CS-MGW, IMS-MGW, P-CSCF, S-CSCF, I-CSCF, MRFC and MRFP have been modelled.](#)

End change caption Fig 6.2.1.3 (becomes 6.2.1.4 plus new note)

Change caption Fig 6.2.1.4, becomes 6.2.1.5

Figure 6.2.1.54: CN GERAN NRM Containment/Naming and Association

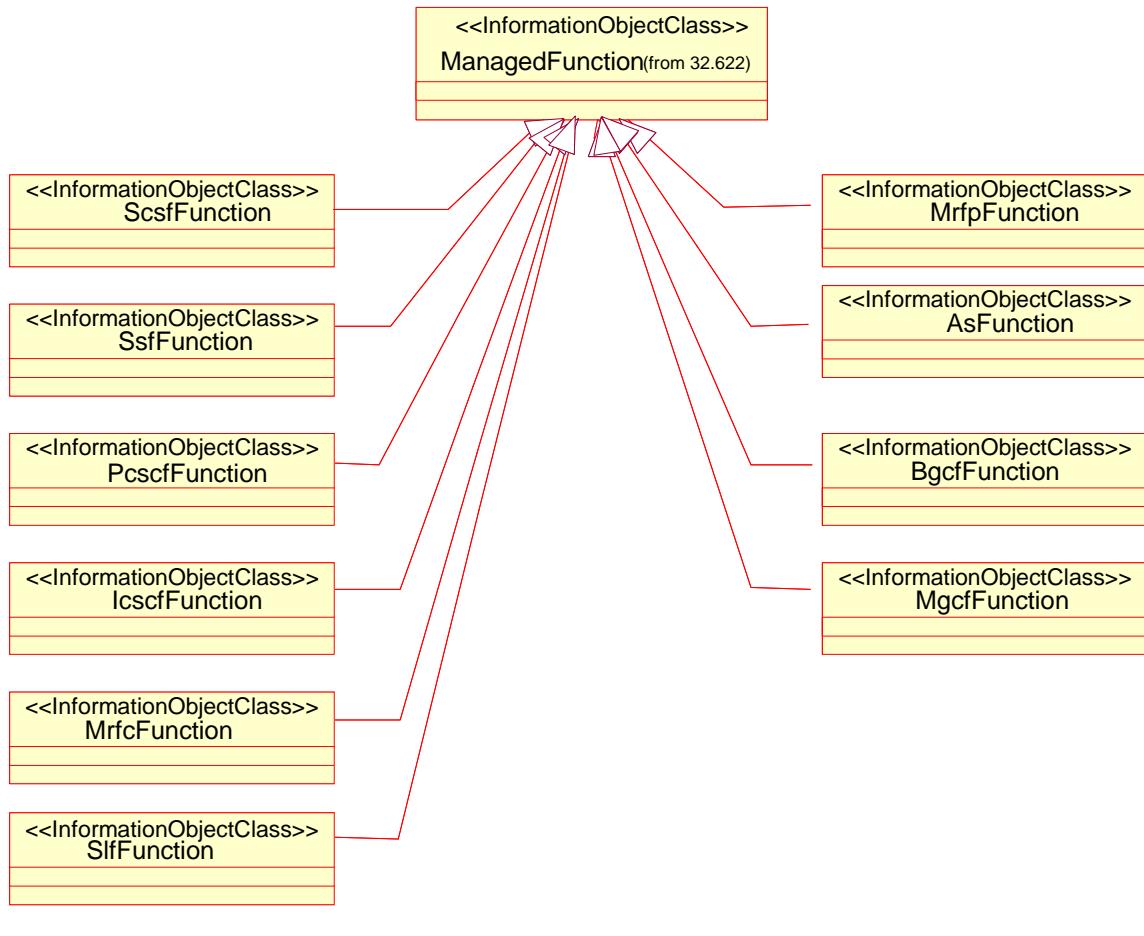

End Change of caption Fig 6.2.1.4, becoming 6.2.1.5

Change in Clause 6.2.2 & new figure

6.2.2 Inheritance

This clause depicts the inheritance relationships that exist between IOCs.

Figures [6.2.2.1](#) and [6.2.2.2](#) below show the inheritance hierarchy for the CN NRM.

New Clauses in Sec 6.3

6.3.32 scscfFunction

6.3.32.1 Definitions

This IOC represents S-CSCF functionality. For more information about the S-CSCF, see 3GPP TS 23.002 [15].

6.3.32.2 Attributes

Table 6.3.32.1: Attributes of scscfFunction

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
scscfFunctionId	+	M	M	-
userLabel	±	M	M	M

6.3.32.3 Notifications

This subclause presents the list of notifications that can be emitted across the If-N, with "object class" and "object instance" parameters of the notification header of these notifications identifying an instance of the IOC ScscfFunction.

Table 6.3.32.2: Notifications of scscfFunction

Name	Qualifier	Notes
notifyAckStateChanged	See Alarm IRP (3GPP TS 32.111-2 [11])	
notifyAttributeValueChange	O	
notifyChangedAlarm	See Alarm IRP (3GPP TS 32.111-2 [11])	
notifyClearedAlarm	See Alarm IRP (3GPP TS 32.111-2 [11])	
notifyNewAlarm	See Alarm IRP (3GPP TS 32.111-2 [11])	
notifyObjectCreation	O	
notifyObjectDeletion	O	
notifyComments	See Alarm IRP (3GPP TS 32.111-2 [11])	
notifyAlarmListRebuilt	See Alarm IRP (3GPP TS 32.111-2 [11])	
notifyPotentialFaultyAlarmList	See Alarm IRP (3GPP TS 32.111-2 [11])	

6.3.33 PcsclfFunction

6.3.33.1 Definitions

This IOC represents P-CSCF functionality. For more information about the P-CSCF, see 3GPP TS 23.002 [15].

6.3.33.2 Attributes

Table 6.3.33.1: Attributes of PcsclfFunction

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
pcscfFunctionId	+	M	M	-
userLabel	±	M	M	M

6.3.33.3 Notifications

This subclause presents the list of notifications that can be emitted across the If-N, with "object class" and "object instance" parameters of the notification header of these notifications identifying an instance of the IOC [PcscfFunction](#).

Table 6.3.33.2: Notifications of [PcscfFunction](#)

Name	Qualifier	Notes

End of New Clauses in Sec 6.3

Change in Clause 6.5.1

6.5.1 Definition and legal values

Table 6.5.1 defines the attributes that are present in several information object classes of the present document.

Table 6.5.1: Attributes

<u>iublinkId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>iucslinkId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>iupslinkId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>lacList</u>	List of Location Area Codes covered by MSC (Ref. 3GPP TS 23.003 [19]).	
<u>mccList</u>	List of Mobile Country Codes, MCC (part of the PLMN Id, Ref. 3GPP TS 23.003 [19]).	
<u>mgcfFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
<u>mgwFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>mncList</u>	List of Mobile Network Codes, MNC (part of the PLMN Id, Ref. 3GPP TS 23.003 [19]).	
<u>mnpSrfFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>mrfcFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
<u>mrfpFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
<u>mscId</u>	Unique MSC ID (Ref. 3GPP TS 23.002 [15]).	
<u>mscServerFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>npdbFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>pcscfFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
<u>sacList</u>	List of Service Area Codes covered by MSC (Ref. 3GPP TS 23.003 [19]).	
<u>scfFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>scscfFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
<u>sqsnFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>sgsnId</u>	Unique SGSN ID (Ref. 3GPP TS 23.002 [15]).	
<u>sqwFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>slfFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
<u>smlcFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>smsGmscFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>smsIwmscFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	

<u>srfFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>ssfFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>userLabel</u>	A user-friendly (and user assigned) name of the associated object. Inherited from ManagedFunction.	
<u>vlrFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
Attribute Name	Definition	Legal Values
<u>lacList</u>	List of Location Area Codes covered by MSC (Ref. 3GPP TS 23.003 [19]).	
<u>sacList</u>	List of Service Area Codes covered by MSC (Ref. 3GPP TS 23.003 [19]).	
<u>geaList</u>	List of Group Call Area (Ref. 3GPP TS 23.003 [19]).	
<u>mscId</u>	Unique MSC ID (Ref. 3GPP TS 23.002 [15]).	
<u>mccList</u>	List of Mobile Country Codes, MCC (part of the PLMN Id, Ref. 3GPP TS 23.003 [19]).	
<u>mncList</u>	List of Mobile Network Codes, MNC (part of the PLMN Id, Ref. 3GPP TS 23.003 [19]).	
<u>mscServerFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>hlrFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>vlrFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>aucFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>eirFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>smsIwmseFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>smsGmseFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>gmseFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>sgsnFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>sgsnId</u>	Unique SGSN ID (Ref. 3GPP TS 23.002 [15]).	
<u>ggsnFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>bgFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>smleFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>gmleFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>scfFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
<u>srfFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	

<u>slffFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
<u>bgefFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
<u>mrfcFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
<u>mrfpFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
<u>asFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
<u>mgcfFunctionId</u>	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	

End of Change in Clause 6.5.1

CHANGE REQUEST

⌘ 32.632 CR 013 ⌘ rev - ⌘ Current version: 6.0.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ UICC apps ⌘ ME ⌘ Radio Access Network ⌘ Core Network

Title:	⌘ Add restart notification to GSN objects using “proceduralStatus” attribute and notifyStateChange notification	
Source:	⌘ SA5 (llrui@bupt.edu.cn , liyewen@chinamobile.com)	
Work item code:	⌘ OAM-NIM	Date: ⌘ 19/11/2004
Category:	⌘ B	Release: ⌘ Rel-6 Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900 .
		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)

Reason for change:	⌘ The network services may be greatly affected when some equipments shut down and restart frequently. A notification which indicates the restart of an equipment would be helpful for an IRPManager to analysis and solve the potential problem and to reduce the potential effect on network services.
---------------------------	---

Summary of change:	⌘ Add restart notification to GSN objects using “proceduralStatus” attribute and notifyStateChange notification.

Change in Clause 6.5.1

6.5.1 Definition and legal values

Table 6.5.1 defines the attributes that are present in several information object classes of the present document.

Table 6.5.1: Attributes

Attribute Name	Definition	Legal Values
lacList	List of Location Area Codes covered by MSC (Ref. 3GPP TS 23.003 [19]).	
sacList	List of Service Area Codes covered by MSC (Ref. 3GPP TS 23.003 [19]).	
gcaList	List of Group Call Area (Ref. 3GPP TS 23.003 [19]).	
mscId	Unique MSC ID (Ref. 3GPP TS 23.002 [15]).	
mccList	List of Mobile Country Codes, MCC (part of the PLMN Id, Ref. 3GPP TS 23.003 [19]).	
mncList	List of Mobile Network Codes, MNC (part of the PLMN Id, Ref. 3GPP TS 23.003 [19]).	
mscServerFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
hlrFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
vlrFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
aucFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
eirFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
smsIwmscFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
smsGmscFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
gmscFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
sgsnFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
sgsnId	Unique SGSN ID (Ref. 3GPP TS 23.002 [15]).	
ggsnFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
bgFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
smlcFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
gmlcFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
scfFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
srfFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
cbcFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
cfgFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
mgwFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	

gmscServerFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
mnpSrfFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
npdbFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
sgwFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
ssfFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
bsFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
iucslinkId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
iupslinkId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
iubalinkId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
aLinkId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
gbLinkId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
csmgwFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
hlrFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
hlrFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
hlrFunctionId	An attribute whose 'name+value' can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
userLabel	A user-friendly (and user assigned) name of the associated object. Inherited from ManagedFunction.	
proceduralStatus	<p>It indicates the procedural status of the object instance. This attribute provides a subset of capabilities of procedural status defined in [20]. There are two cases resulting in a status change to be reported:</p> <ul style="list-style-type: none"> • Case 1: A notification may be generated to indicate that restart procedure is about to begin or has just begun but has not finished. - the value for this attribute indicates original state == "notInitialized" and new state == "initializing". • Case 2: A notification shall be generated to indicate that restart procedure has completed successfully - the value for this attribute indicates original state == "initializing" to new state == "" (empty set). 	<p>Subset of definitions from [20]: "notInitialized", "initializing", "" (empty set)</p>

Change:- section 1

1 Scope

The purpose of this *Core Network Resources IRP: CORBA Solution Set* is to define the mapping of the IRP information model (see TS 32.632 [3]) to the protocol specific details necessary for implementation of this IRP in a CORBA/IDL environment.

This Solution Set specification is related to 3GPP TS 32.632 V6.01.X.

End change:- section 1

1 Scope

The purpose of this *Core Network Resources IRP: CORBA Solution Set* is to define the mapping of the IRP information model (see TS 32.632 [3]) to the protocol specific details necessary for implementation of this IRP in a CORBA/IDL environment.

This Solution Set specification is related to 3GPP TS 32.632 V6.01.X.

Change in Clause 5.2.8

5.2.8 MOC SgsnFunction

Table 8: Mapping from NRM MOC SgsnFunction attributes to SS equivalent MOC SgsnFunction attributes

Change in Clause 1

1 Scope

The present document provides the NRM-specific part related to the Core Network Resources IRP NRM [1] of the XML file format definition for the Bulk Configuration Management IRP IS [2].

The main part of this XML file format definition is provided by 3GPP TS 32.615 [3].

Bulk CM XML file formats are based on XML [4], XML Schema [5] [6] [7] and XML Namespace [8] standards.

This File Format Definition specification is related to 3GPP TS 32.632 (V6.~~03~~.X).

End of Change in Clause 1

Change in Annex A

Annex A (normative): Configuration data file NRM-specific XML schema (file name "coreNrm.xsd")

The following XML schema coreNrm.xsd is the NRM-specific schema for the Core Network Resources IRP NRM defined in 3GPP TS 32.632 [1]:

```
<?xml version="1.0" encoding="UTF-8"?>

<!--
  3GPP TS 32.635 Core Network Resources IRP
  Bulk CM Configuration data file NRM-specific XML schema
  coreNrm.xsd
-->

<schema
  targetNamespace=
    "http://www.3gpp.org/ftp/specs/archive/32_series/32.635#coreNrm"
  elementFormDefault="qualified"
