End of change for new Clause 6.5.1

New Clause Annex B

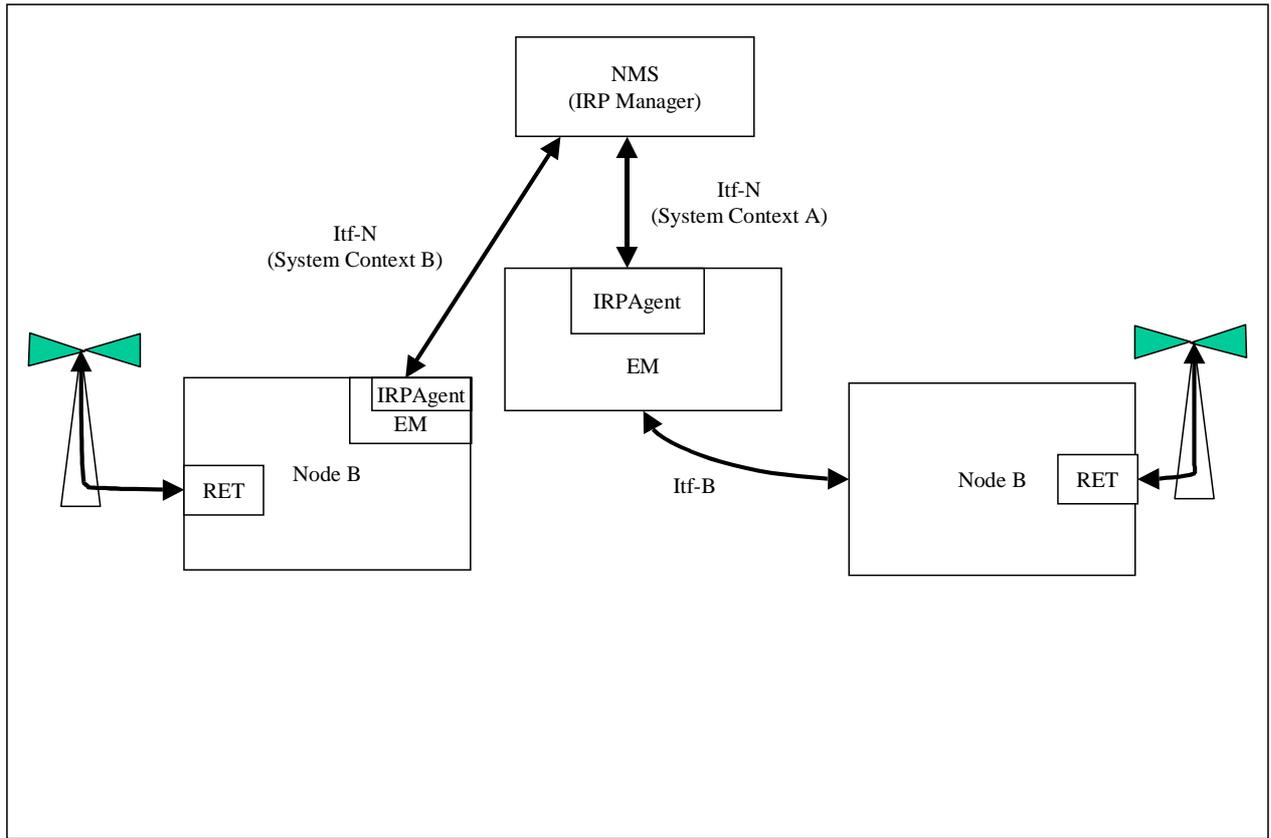

Annex B (Informative) RET Control Architecture

The Itf-N provides an abstraction of resources to allow the monitor and control of physical resource from the network level management systems. For RET, the antenna tilt is controlled via a control unit which is located within the NodeB (from a management perspective). The control unit sends commands to actuators located at the tower top, in order to read, and to adjust antenna tilt values.

The AntennaFunction class will report failures and malfunctions of either the control unit, or the tilt . The full set of notifications is as defined in table 6.1.5.

There are several configurations of antennae. Some support the transmission of several frequencies from a single radome while others are deployed as an array in order to provide effective coverage.

Hence in the UTRAN model there is an N:M relationship between UtranCell's and the AntennaFunction class, permitting the model to support all possibilities. The figure B.1 below illustrates the RET architecture .

Title: Add support for the state change notification
Source: SA5 (olaf.pollakowski@siemens.com)
Work item code: OAM-NIM Date: 02/07/2004
Category: B Release: Rel-6
Use one of the following categories: F (correction), A (corresponds to a correction in an earlier release), B (addition of feature), C (functional modification of feature), D (editorial modification)
Detailed explanations of the above categories can be found in 3GPP TR 21.900.
Use one of the following releases: 2 (GSM Phase 2), R96 (Release 1996), R97 (Release 1997), R98 (Release 1998), R99 (Release 1999), Rel-4 (Release 4), Rel-5 (Release 5), Rel-6 (Release 6)

Reason for change: The Kernel CM IRP supports the state change notification. Support for this notification has to be added to the IOCs supporting a state attribute.

Summary of change: Support for the notifyStateChange notification is added to the IOC UtranCell

Consequences if not approved: State changes cannot be reported via the notifyStateChangeNotification.

Clauses affected: 6.3.3

CHANGE REQUEST

32.644 CR 015 rev - Current version: 5.6.0

For HELP on using this form, see bottom of this page or look at the pop-up text over the symbols.

Proposed change affects: UICC apps ME Radio Access Network X Core Network

Title: Add support for the TDD mode, the state change notification and ATM management - Align with 32.642
Source: SA5 (olaf.pollakowski@siemens.com)
Work item code: OAM-NIM Date: 19/11/2004
Category: B Release: Rel-6
Use one of the following categories: F (correction), A (corresponds to a correction in an earlier release), B (addition of feature), C (functional modification of feature), D (editorial modification)
Detailed explanations of the above categories can be found in 3GPP TR 21.900.
Use one of the following releases: 2 (GSM Phase 2), R96 (Release 1996), R97 (Release 1997), R98 (Release 1998), R99 (Release 1999), Rel-4 (Release 4), Rel-5 (Release 5), Rel-6 (Release 6)

Reason for change: The Utran Network Resources IRP: NRM supports the TDD mode and the state change notification. This functionality has to be mapped into the CMIP SS.
Summary of change: Support for the TDD mode and the state change notification is added.
Consequences if not approved: The CMIP SS of the Utran Network Resources IRP is not aligned with the corresponding NRM.

Change in Clause 1

1 Scope

The present document specifies the Common Management Information Protocol (CMIP) Solution Set (SS) for the UTRAN Network Resource Integration Reference Point (IRP): Network Resource Model defined in 3GPP TS 32.642 [4]. In detail:

- Clause 4 contains an introduction to some concepts that are the base for some specific aspects of the CMIP interfaces.
- Clause 5 contains the GDMO definitions for the Alarm Management over the CMIP interfaces
- Clause 6 contains the ASN.1 definitions supporting the GDMO definitions provided in clause 5.

This Solution Set specification is related to 3GPP TS 32.642 V~~6.2.5~~.x.

End of Change in Clause 3.2

Change in clauses 4, 5, 6, Annex A

4 Basic aspects

4.1 Architectural aspects

A technology independent UTRAN network resource model is defined in 3GPP TS 32.642 [4] for 3G networks. This document provides an implementation of this UTRAN network resource model by using CMIP technology.

4.2 Mapping

The semantic of the UTRAN Network Resource Model is defined in 3GPP TS 32.642 [4]. The specification of the information object classes defined there is independent of any implementation technology and protocol. This clause maps these technology and protocol independent definitions onto the equivalencies of the CMIP Solution Set of the UTRAN Network Resource IRP.

4.2.1 Mapping of Information Object Classes

Table 1 maps the information object classes defined in the UTRAN Network Resource Model onto the equivalent MOCs of the CMIP Solution Set.

4.2.2 Mapping of Information Object Class Attributes
