

27 February - 02 March, 2001

Gothenburg, Sweden

3GPP T3 Meeting #17
Berlin, Germany, 17th January, 2001

Tdoc T3-010115

Liaison Statement

From: T3
To: S1, S3
CC: TSG-T and T2
Subject: Introduction of Operator PLMN Name List for 3G Rel-4
attached: T3-010102 (draft CR to 31.102 "Introduction of the HPLMN Network Name feature from the Common PCN Handset Specification (CPHS)"
and
T3-010098 (draft CR to 31.102 "Introduction of the Operator PLMN List")

(Contact: Preet Ahluwalia ahluwalia@tri.sbc.com , Darren Thompson darren.Thompson@voicestream.com)

T3 has drafted the attached CR, Tdoc T3-010102, "Introduction of HPLMN Network Name feature from the Common PCN Handset Specification (CPHS)" as a part of the CPHS incorporation into 3G (Work Item UICC-CPHS) for the HPLMN name display.

Currently the PLMN name is read from the ME's own internal list (based upon GSMA PRD SE.13) and is displayed when the subscriber is registered on a PLMN. The attached CR, T3-010102, as part of the introduction of the CPHS features, introduces the ability for a network operator to define a USIM file that contains a name to be displayed when on the HPLMN. The benefit of having this information on the USIM is that it is provided by the network operator and its contents can therefore be modified as and when required.

During the T3 meeting, it was felt that the solution for the HPLMN network name could be made such that it would not restrict any future improvements for network display purposes i.e. by allowing the capability to contain multiple network names. This would be an additional feature.

This requirement for additional network names is required because of mergers, acquisitions and even commercial agreements in the present consolidating industry. As an example, there are situations today where a network operator can have multiple Mobile Network Codes (MNCs) within a single Mobile Country Code (MCC) or even within different MCCs. This is especially true in the USA.

S1 are invited to define the service requirements to allow an operator to present his network name on the ME when roaming onto other networks in which he has a commercial interest.

Tdoc T3-010098, proposes changes to the relevant specifications which would allow this but may require further study by T3 to address any security or commercial requirements raised by S1 or S3. Before proceeding, T3 are seeking guidance from S1. The next T3 meeting will take place on the 1 - 2 March, 2001

T3 thanks S1 for their cooperation in assisting with this matter.

CHANGE REQUEST

⌘ **31.102** CR **CR-Num** ⌘ rev **-** ⌘ Current version: **3.4.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Introduction of the HPLMN Network Name feature from the Common PCN Handset Specification (CPHS)		
Source:	⌘ T3		
Work item code:	⌘ UICC1-CPHS	Date:	⌘ 17 th January 2001
Category:	⌘ B	Release:	⌘ REL-4 (Release 4)
	<p>Use <u>one</u> of the following categories:</p> <p>F (essential correction)</p> <p>A (corresponds to a correction in an earlier release)</p> <p>B (Addition of feature),</p> <p>C (Functional modification of feature)</p> <p>D (Editorial modification)</p> <p>Detailed explanations of the above categories can be found in 3GPP TR 21.900.</p>		<p>Use <u>one</u> of the following releases:</p> <p>2 (GSM Phase 2)</p> <p>R96 (Release 1996)</p> <p>R97 (Release 1997)</p> <p>R98 (Release 1998)</p> <p>R99 (Release 1999)</p> <p>REL-4 (Release 4)</p> <p>REL-5 (Release 5)</p>

Reason for change:	⌘ To provide the USIM with CPHS functionality for mailbox numbers, operator name and indicator status.		
Summary of change:	⌘ The following changes are proposed:		
	File EF _{PNN} (PLMN Network Name) is added to reflect the CPHS file EF _{OpName} (PLMN Operator Name) File EF _{UST} is also updated to include the above files.		
Consequences if not approved:	⌘ Initial 3G customers will have a reduced level of service. Possibly causes disjointed operation of mail and messaging services. Prolongs the need to keep proprietary CPHS in handsets		

Clauses affected:	⌘ 4.2.8, 4.2.x, 4.7		
Other specs Affected:	⌘ <input type="checkbox"/> Other core specifications <input type="checkbox"/> Test specifications <input type="checkbox"/> O&M Specifications	⌘	
Other comments:	⌘		

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://www.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

4.2.8 EF_{UST} (USIM Service Table)

This EF indicates which services are available. If a service is not indicated as available in the USIM, the ME shall not select this service.

Identifier: '6F38'		Structure: transparent		Mandatory
SFI: '04'				
File size: X bytes, X >= 1		Update activity: low		
Access Conditions:				
READ		PIN		
UPDATE		ADM

2	Services n°9 to n°16	O	1 byte	
3	Services n°17 to n°24	O	1 byte	
4	Services n°25 to n°32	O	1 byte	
etc.				
X	Services n°(8X-7) to n°(8X)	O	1 byte	

-Services

Contents:	Service n°1 :	Local Phone Book
	Service n°2 :	Fixed Dialling Numbers (FDN)
	Service n°3 :	Extension 2
	Service n°4 :	Service Dialling Numbers (SDN)
	Service n°5 :	Extension3
	Service n°6 :	Barred Dialling Numbers (BDN)
	Service n°7 :	Extension4
	Service n°8 :	Outgoing Call Information (OCI and OCT)
	Service n°9 :	Incoming Call Information (ICI and ICT)
	Service n°10:	Short Message Storage (SMS)
	Service n°11:	Short Message Status Reports (SMSR)
	Service n°12:	Short Message Service Parameters (SMSP)
	Service n°13:	Advice of Charge (AoC)
	Service n°14:	Capability Configuration Parameters (CCP)
	Service n°15:	Cell Broadcast Message Identifier
	Service n°16:	Cell Broadcast Message Identifier Ranges
	Service n°17:	Group Identifier Level 1
	Service n°18:	Group Identifier Level 2
	Service n°19:	Service Provider Name
	Service n°20:	User controlled PLMN selector with Access Technology
	Service n°21:	MSISDN
	Service n°22:	Image (IMG)
	Service n°23:	Not used (reserved for SoLSA)
	Service n°24:	Enhanced Multi-Level Precedence and Pre-emption Service
	Service n°25:	Automatic Answer for Emlpp
	Service n°26:	RFU
	Service n°27:	GSM Access
	Service n°28:	Data download via SMS-PP
	Service n°29:	Data download via SMS-CB
	Service n°30:	Call Control by USIM
	Service n°31:	MO-SMS Control by USIM
	Service n°32:	RUN AT COMMAND command
	Service n°33:	Packet Switched Domain
	Service n°34:	Enabled Services Table
	Service n°35:	APN Control List (ACL)
	Service n°36:	Depersonalisation Control Keys
	Service n°37:	Co-operative Network List
	Service n°38:	GSM security context
	Service n°39:	CPBCCCH Information
	Service n°40:	Investigation Scan
	Service n°41:	MexE
	Service n°42:	Operator controlled PLMN selector with Access Technology
	Service n°43:	HPLMN selector with Access Technology
	<u>Service n°xx:</u>	<u>PLMN Network Name</u>

The EF shall contain at least one byte. Further bytes may be included, but if the EF includes an optional byte, then it is mandatory for the EF to also contain all bytes before that byte. Other services are possible in the future and will be coded on further bytes in the EF. The coding falls under the responsibility of the 3GPP.

Coding:

1 bit is used to code each service:

bit = 1: service available;

bit = 0: service not available.

- Service available means that the USIM has the capability to support the service and that the service is available for the user of the USIM unless the service is identified as "disabled" in EF_{EST}. Service not available means that the service shall not be used by the USIM user, even if the USIM has the capability to support the service.

First byte:

Second byte:

etc.

4.2.xx EF_{PNN} (PLMN Network Name)

This EF contains the full and short form versions of the network name for the registered PLMN. The ME shall use these versions in place of its own versions of the network name for the PLMN (stored in the ME's memory list), and also in place of the versions of the network name **received when registered to the PLMN**, as defined by 3G TS 24.008 [9].

The first record in this EF is used for the default network name when registered to the HPLMN. Subsequent records are RFU.

<u>Identifier: '6FXX'</u>		<u>Structure: linear fixed</u>		<u>Optional</u>	
<u>Record length: X+Y+Z bytes</u>			<u>Update activity: low</u>		
<u>Access Conditions:</u>					
<u>READ</u>		<u>ALWAYS</u>			
<u>UPDATE</u>		<u>ADM</u>			
<u>ACTIVATE</u>		<u>ADM</u>			
<u>DEACTIVATE</u>		<u>ADM</u>			
<u>Bytes</u>	<u>Description</u>	<u>M/O</u>	<u>Length</u>		
<u>1 to X</u>	<u>Full name for network information element</u>	<u>M</u>	<u>X bytes</u>		
<u>X+1 to X+Y</u>	<u>Short name for network information element</u>	<u>O</u>	<u>Y bytes</u>		
<u>X+Y+1 to X+Y+Z</u>	<u>RFU</u>	<u>O</u>	<u>Z bytes</u>		

Full name for network

For contents and coding use the Network Name information element, as defined in TS 24.008[9]. The length contained in the information element should be used to determine the value of X.

Short name for network

For contents and coding use the Network Name information element, as defined in TS 24.008 [9]. The length contained in the information element should be used to determine the value of Y.

4.7 Files of USIM

This subclause contains two figures depicting the file structure of the UICC and the ADF_{USIM} . ADF_{USIM} shall be selected using the AID and information in EF_{DIR} .

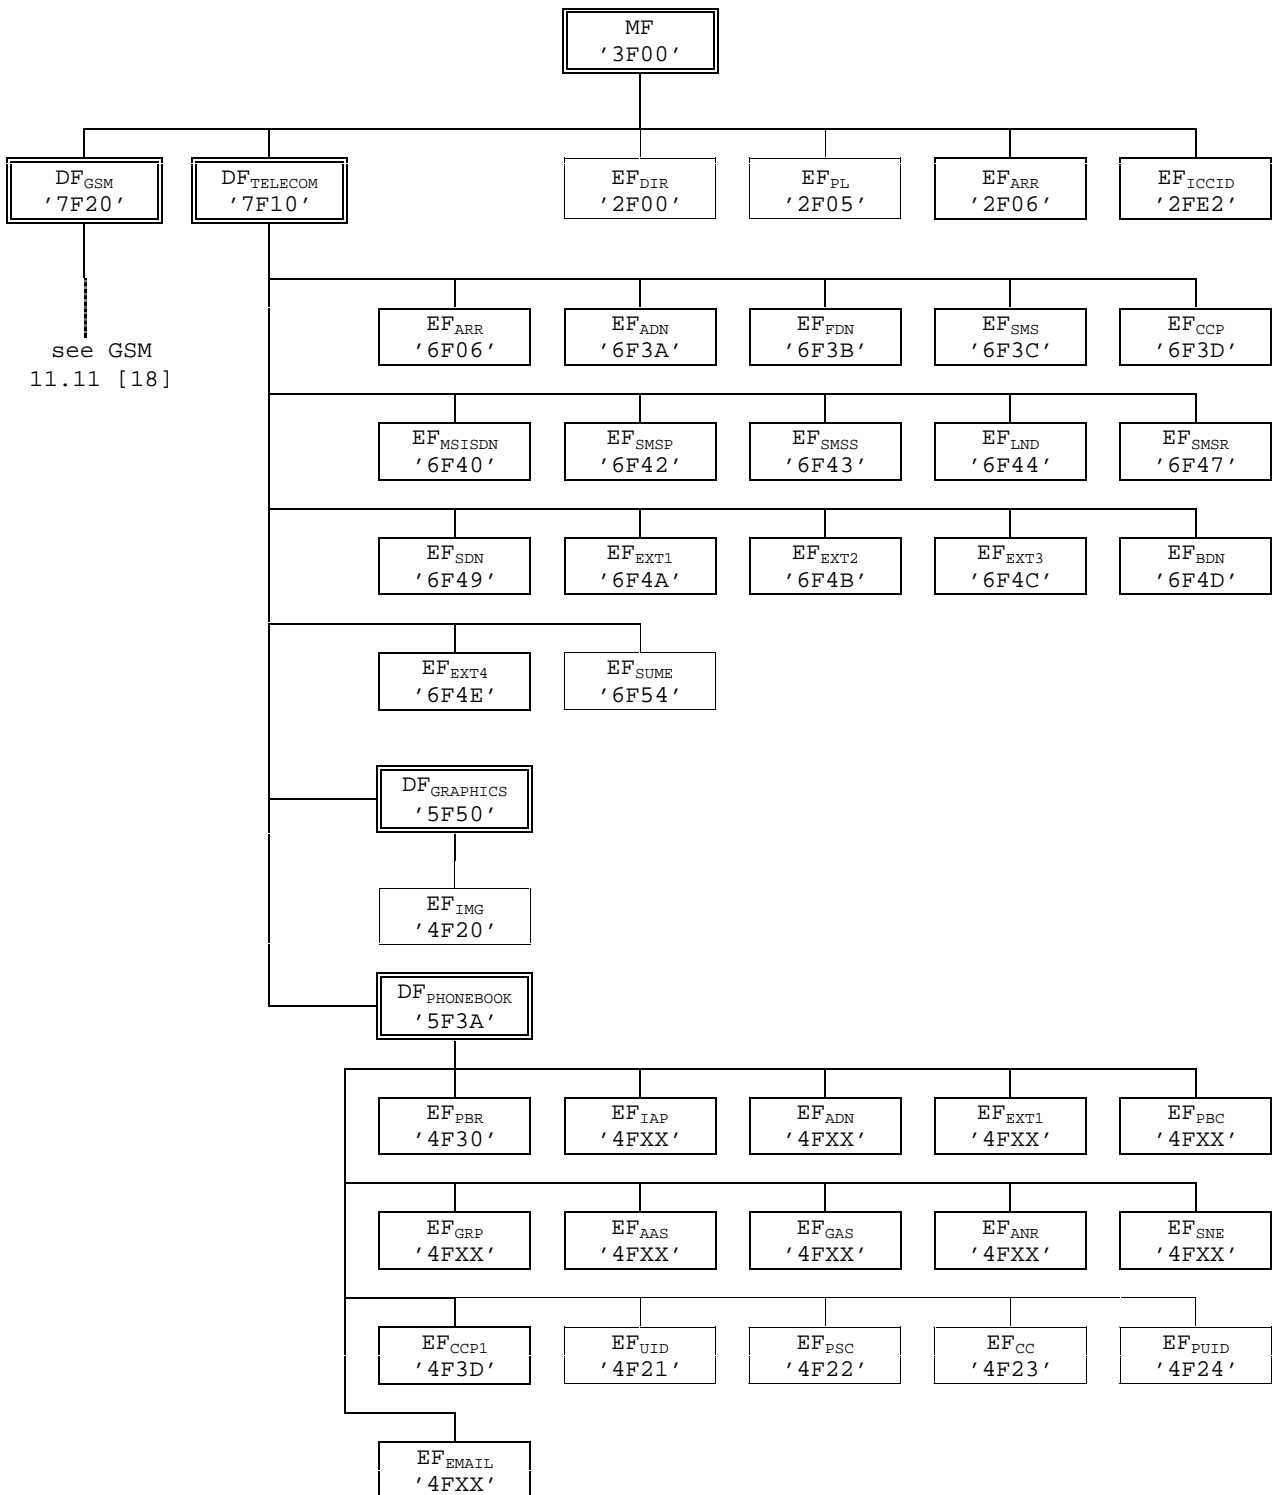

Figure 4.1: File identifiers and directory structures of UICC

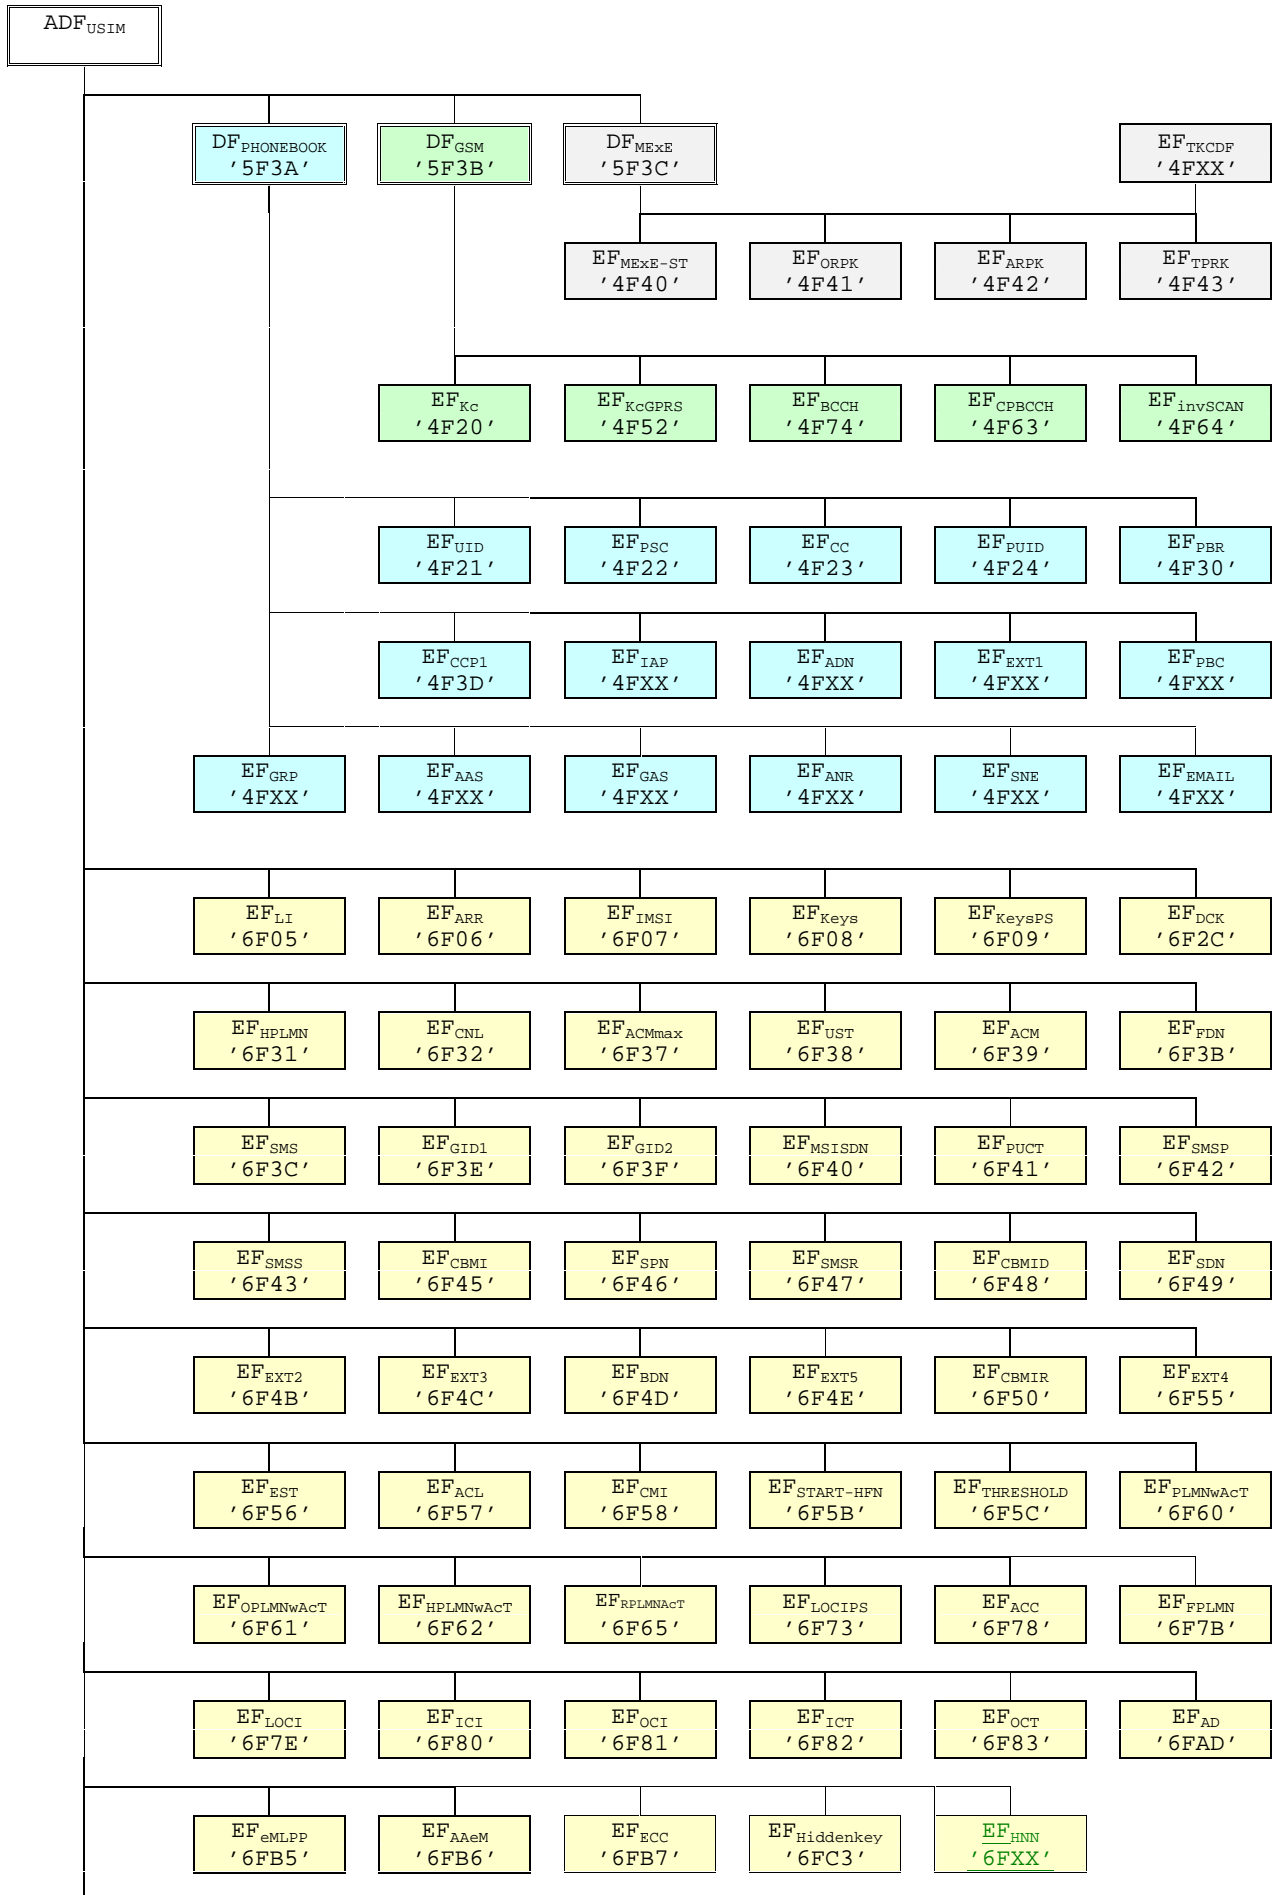

Figure 4.2: File identifiers and directory structures of USIM

DF 5F70 is reserved for SoLSA. EF 4F30 (EF_{SAL}) and EF 4F31 (EF_{SLL}) are reserved under DF 5F70 (SoLSA).

Second byte:

etc.

4.2.xx EF_{OPL} (Operator PLMN List)

This EF contains a list of Location Area Information (LAI) identities and other related parameters that are used to associate a specific operator name contained in EF_{PNN} for the LAI of the registered PLMN.-

Identifier: '6FXX'		Structure: linear fixed		Optional	
Record length:7 bytes			Update activity: low		
Access Conditions:					
READ		PIN			
UPDATE		ADM			
DEACTIVATE		ADM			
ACTIVATE		ADM			
Bytes	Description		M/O	Length	
1 to 5	Location Area Identity		M	5 bytes	
6	PLMN Network Name Record Identifier		M	1 byte	
7	RFU		O	1 byte	

- Location Area Identity

Contents:

-Location Area Information, this comprises of the MCC, MNC and LAC

Coding: according to 3G TS 24.008 [9]

A BCD value of 'D' in any of the MCC and/or MNC digits shall be used to indicate a "wild" value for that corresponding MCC/MNC digit

A value of 'FFFF' in the LAC shall be used to indicate a "wild" value for the LAC

- PLMN Network Name Record Identifier

Contents:

~~identifier of operator name to be displayed~~

Coding:

A value of '00' indicates that the name is to be taken from the ME based operator names list as per GSMA SE.13

A value in the range '01' to 'FF' indicates the record number in EF_{PNN} that shall be displayed as the registered PLMN name

4.7 Files of USIM

This subclause contains two figures depicting the file structure of the UICC and the ADF_{USIM}. ADF_{USIM} shall be selected using the AID and information in EF_{DIR}.

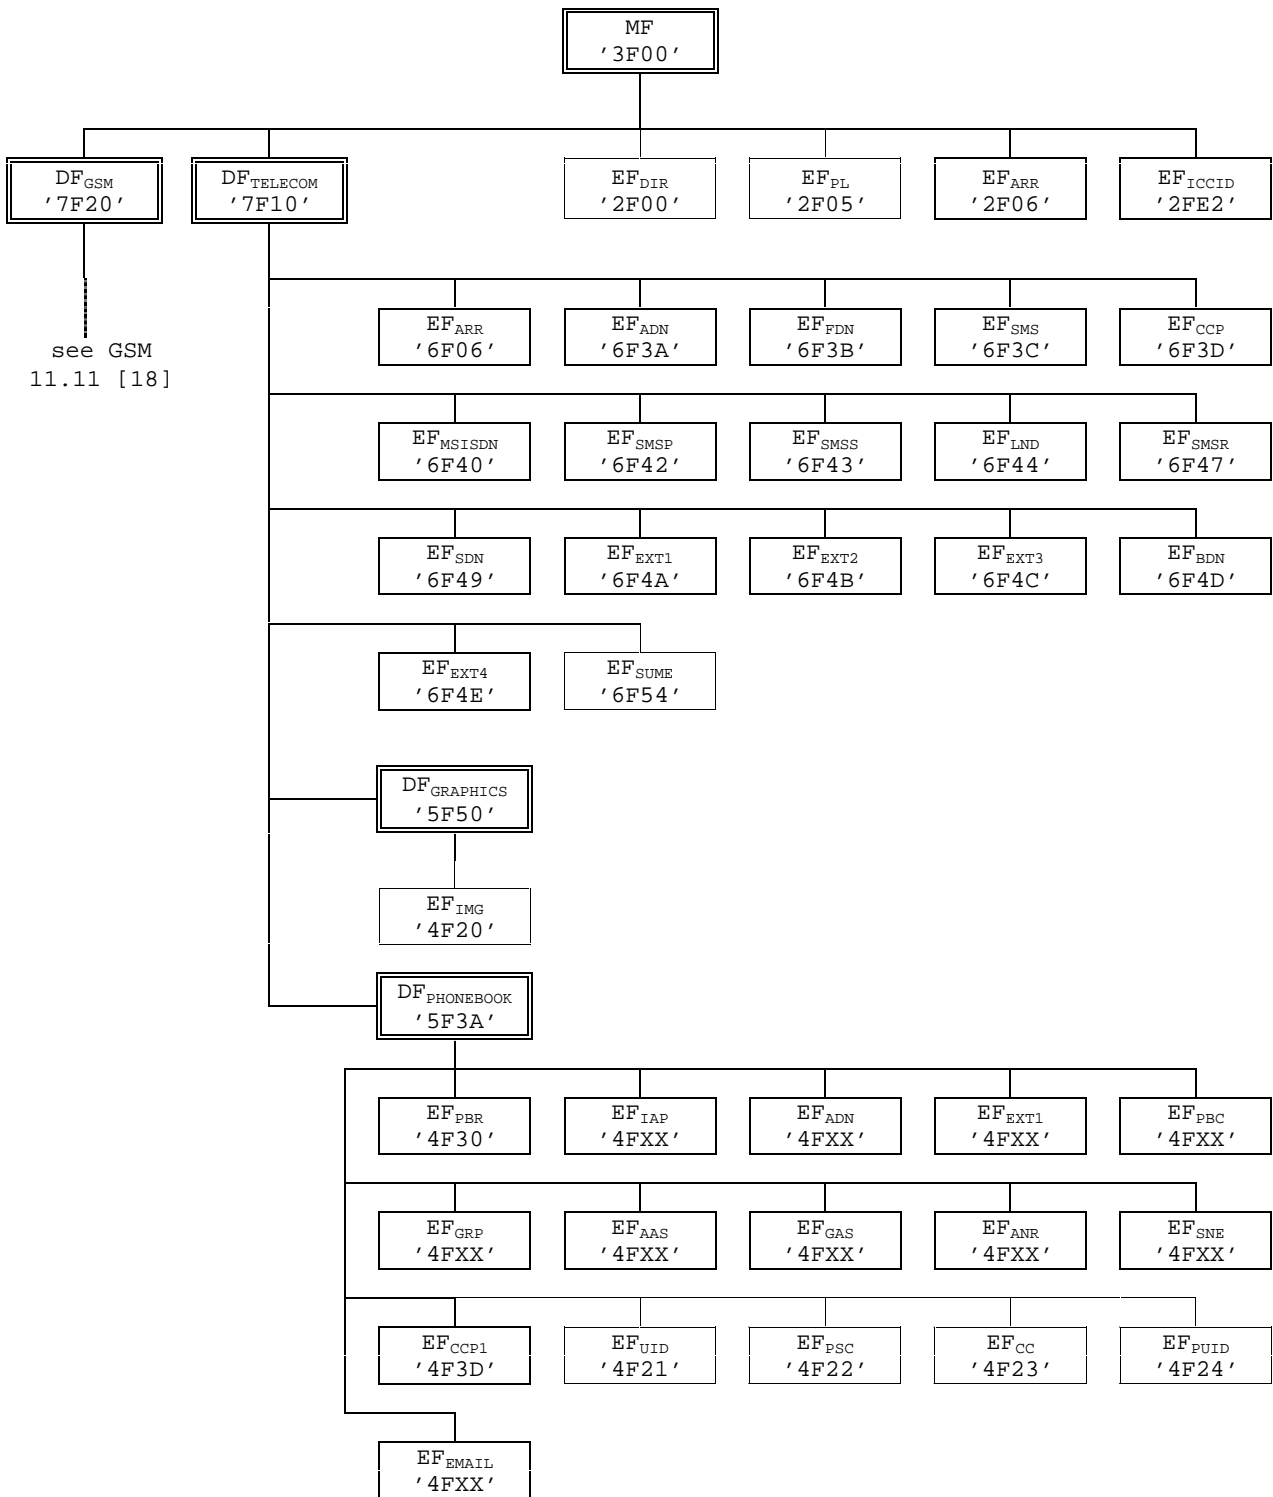

Figure 4.1: File identifiers and directory structures of UICC

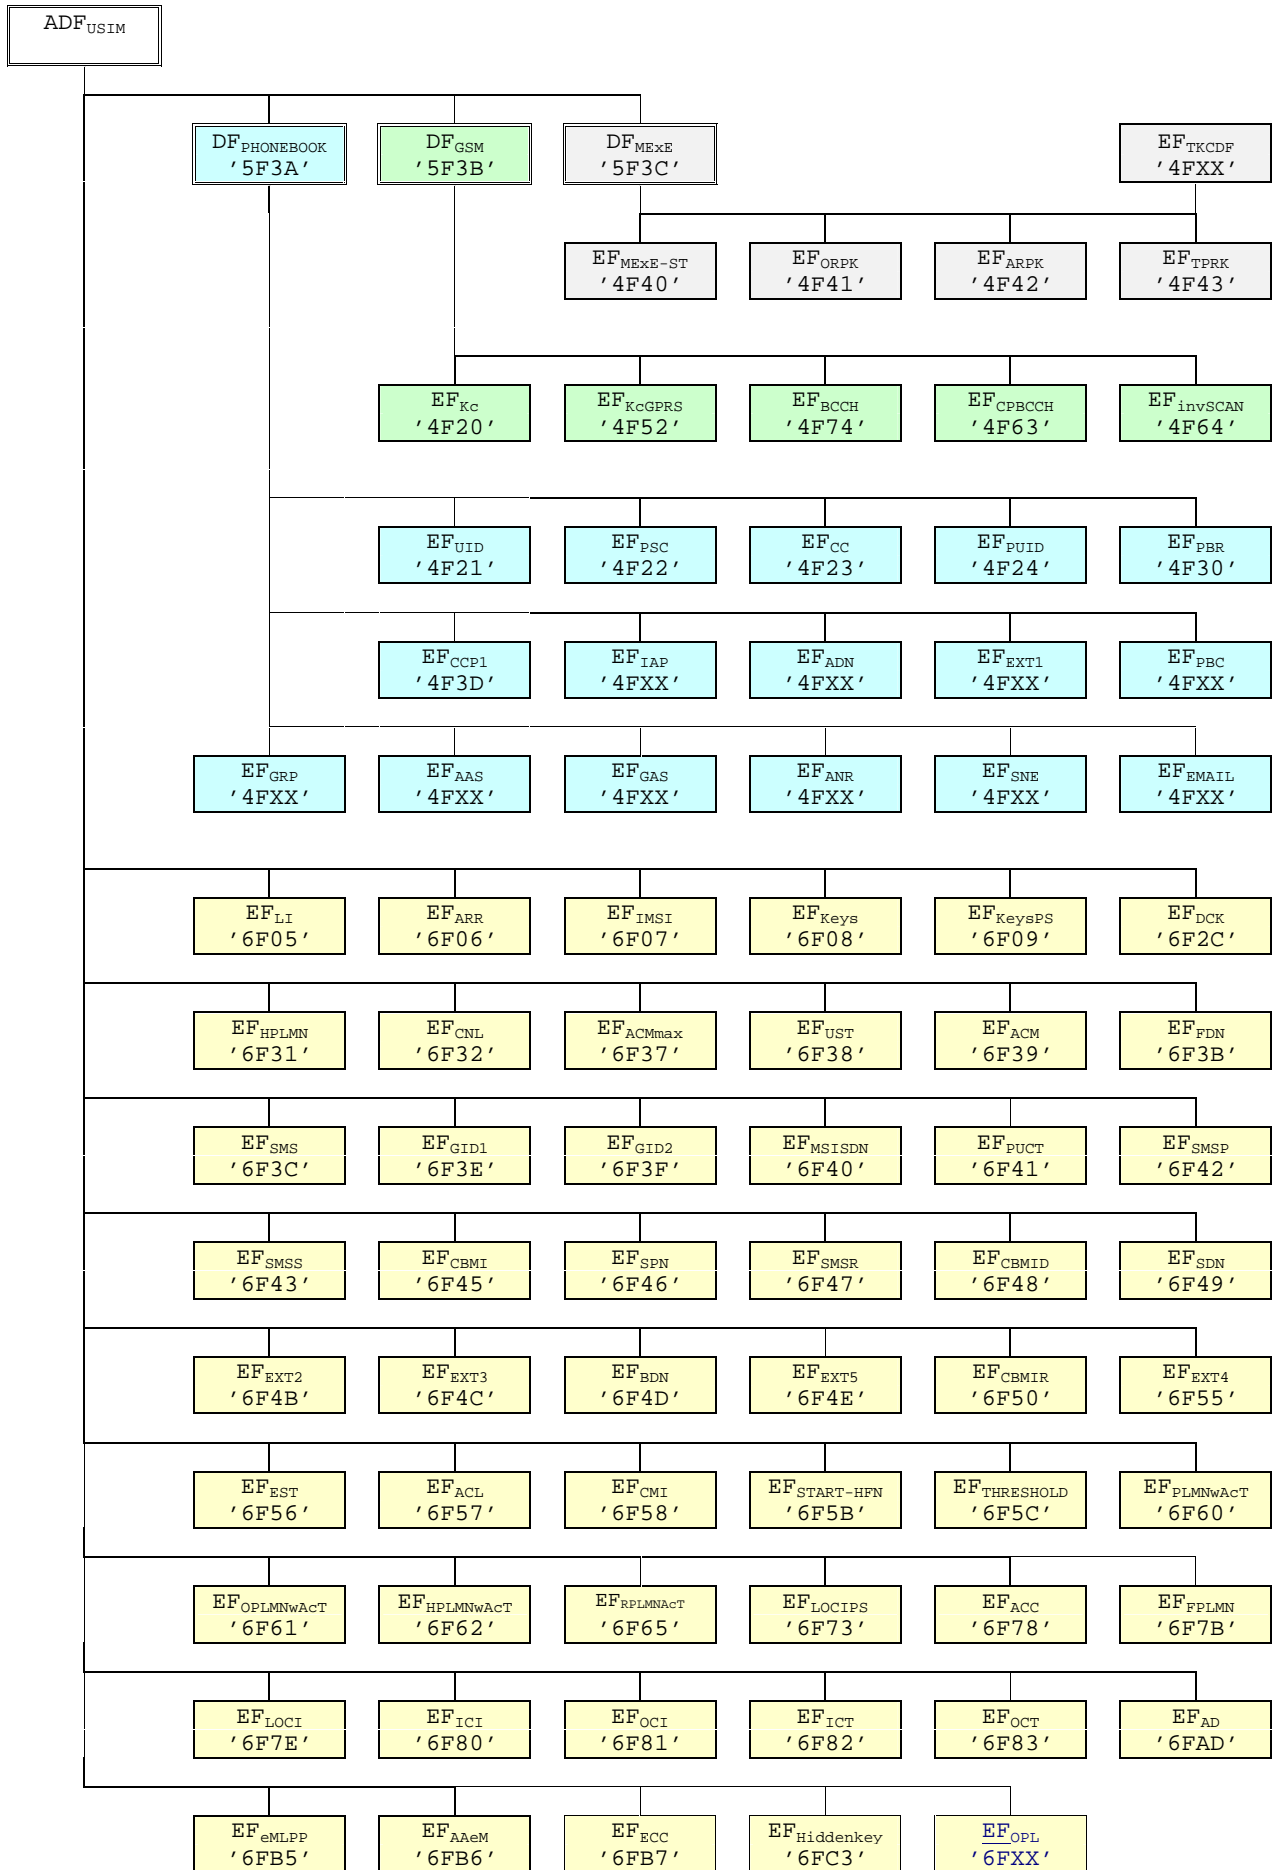

Figure 4.2: File identifiers and directory structures of USIM

DF 5F70 is reserved for SoLSA. EF 4F30 (EF_{SAL}) and EF 4F31 (EF_{SSL}) are reserved under DF 5F70 (SoLSA).
