1. Overall Description:

T2 SWG 2 would like to thank SA2 for their LS response on usage of GUP reference points. T2 SWG2 group has reviewed the answers and sees one possible conflict between one of the answers and requirements from TS22.240 V6.0.0:

The statement from SA2 in the above mentioned LS response concerning question D is quoted below:

"Changing the role of a non-master component to a master role is not possible, since after the change an Application would turn into a GUP Data Repository, and that is not allowed by the Rg and Rp reference points."

TS22.240 V6.0.0 says in section 4.4:

"During the lifetime of a component, the role of master instance may be played by different component instances (e.g. in the case of failure)."

2. Actions:

To SA1 and SA2 groups:
T2 asks SA1 and SA2 groups to kindly consider whether this is a possible conflict, and to clarify the situation.

To SA3, SA5, CN4 groups:
None.

3. Date of next T2 Meetings:

T2#23	17-21 Nov 2003	US
