

The Standards People

ETSI Industry Specification Group Augmented Reality Framework (ISG ARF): activities overview and outlook

Presented by: **Ludovic Noblet**

For: **Immersive Media meets
5G Workshop**

15-16 April 2019

The context

- ✓ AR is a **growing and promising market** with high revenue forecast e.g. 120\$B by 2021
- ✓ **Clear and long-term RoI benefits** based on improvements and efficiency gains
- ✓ **Acquisition of AR solutions by large companies**
 - ✓ Risk of control of AR technologies by only a few large actors -> vertical siloes
- ✓ **A set of common key components:** Tracking, localization, pose estimation, 3D reconstruction, cloud storage and more
- ✓ **Lack of standards adoption:**
 - ✓ Adoption of standards bring interoperability
- ✓ **Creation of an Industry Specification Group at ETSI** - a European standards organisation with a global impact

Overall Objective of the ISG ARF

- ✔ Defining a framework for the interoperability of AR applications and services, in order to prevent market fragmentation and enable providers to offer part of an overall AR solution
 - ✔ To encourage an ecosystem with a diverse range of solution providers including smaller players, new entrants and academics
 - ✔ To define a modular architecture and achieve interoperability at the interface of building blocks
 - ✔ The focus is on interfaces, no standardisation of core technologies
 - ✔ The building blocks can be open source, proprietary or standardised technologies
- ✔ **Achieving Interoperability:**
 - ✔ Will give end-users confidence to invest in and use (future proof) AR solutions
 - ✔ Can prevent lock-in situation with a single vendor
 - ✔ Can ease technology swapping, e.g. to improve applications performance and services

Definition of AR

✓ Augmented Reality (AR) is the ability to mix in real-time spatially-registered digital content with the real world.

- ✓ Combines real and virtual
- ✓ Interactive in real-time
- ✓ Registered in 3D

What does an AR system require?

✔ Mix digital content with the real world : Rendering interfaces

✔ Vision

- ✔ Video see-through displays (smartphones, tablets, etc.)
- ✔ Optical see-through displays (AR glasses, AR windshield, etc.)
- ✔ Projection

✔ Spatialized Audio

✔ Haptics

✔ Spatially registered : Localisation Sensors & Computer Vision / AI algorithms

✔ Vision (RGB cameras, Depths sensors, etc.)

✔ Exteroceptive (GPS, Wifi, Lifi, cellular, etc.)

✔ Proprioceptive (IMU, odometer, etc.)

What does an AR system require?

✔ In real-time : Powerful processing units

- ✔ CPU, GPU, Vision Processing Unit, Tensor Unit

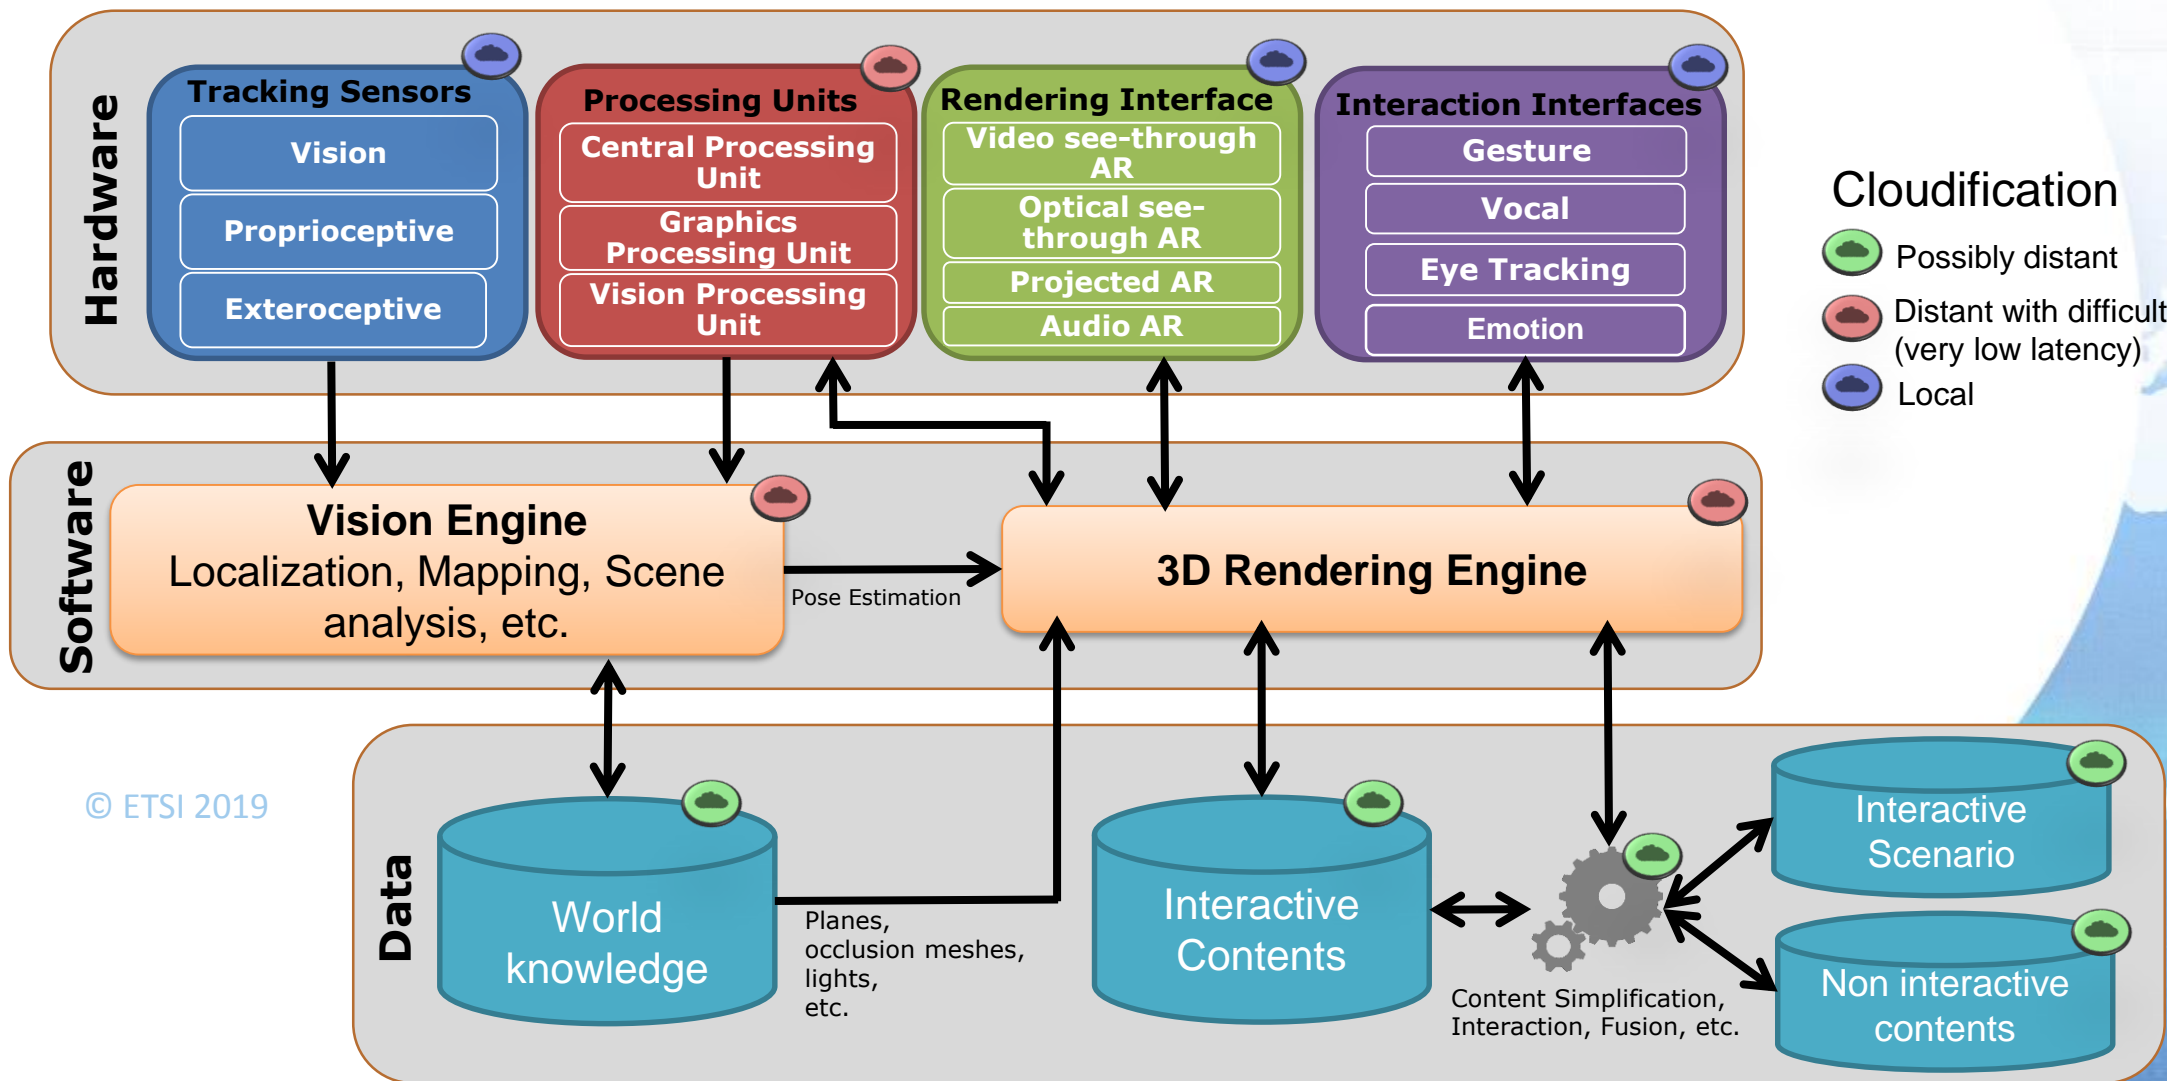

✔ Interactive content : Interaction devices

- ✔ Tactile
- ✔ 3D gestures
- ✔ Vocal
- ✔ Eye-tracking
- ✔ Cognition and Emotion analysis (Brain Computer Interfaces, etc.)
- ✔ Haptics

✔ Digital Content : 3D contents, scenarios, and a rendering engine

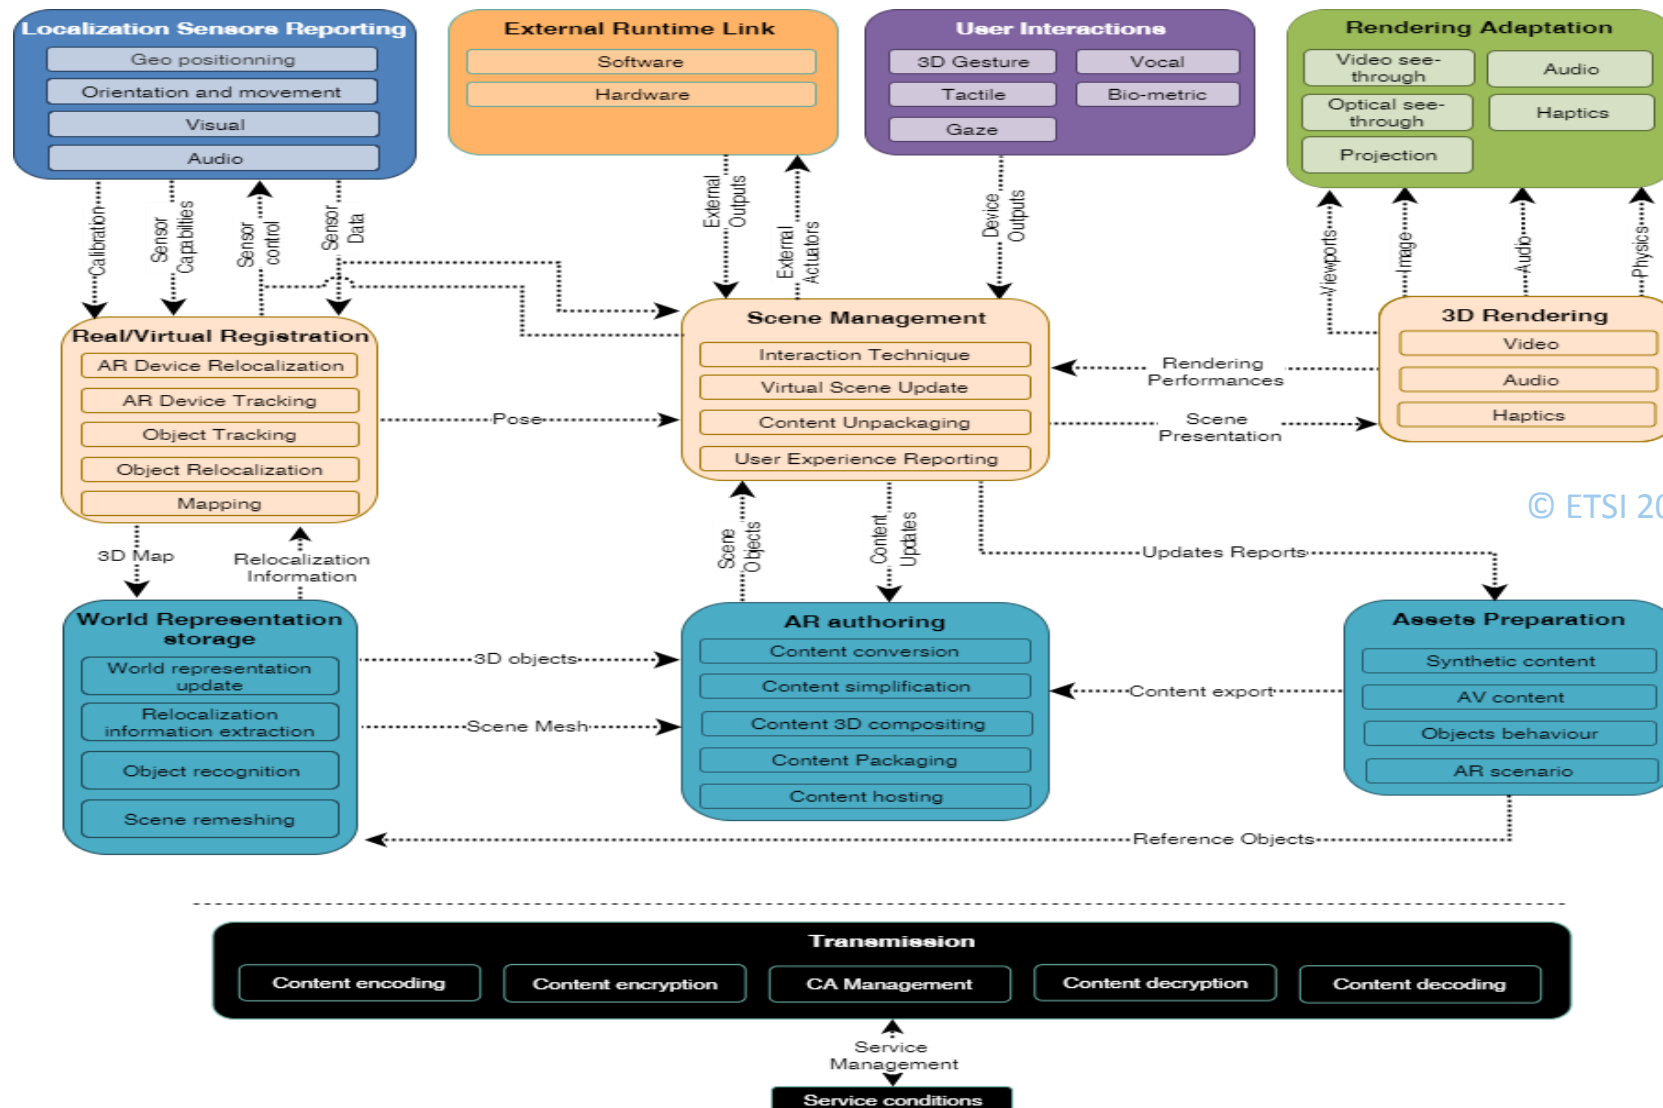

- ✔ 3D rendering engine (Unity, Unreal Engine, etc.)
- ✔ 3D Content (export from PLM, BIM, designed by computer graphics designers, scripts, etc.)

AR Framework architecture - Draft

Proposed functional architecture

ISG ARF Workplan

AR standards landscape

- ✔ A group report **identifying the role of existing standards relevant to augmented reality**
 - ✔ various standards setting organisations and fora reviewed: ISO/IEC, W3C, Khronos, IEEE, IETF, OGC, ...
- ✔ **Rapporteur** : Marius Preda, Institut Mines Telecom
- ✔ Standards under review are:
 - ✔ directly addressing AR as a whole,
 - ✔ or addressing key technological components that can be useful to increase interoperability of AR components and services.
- ✔ Report expected to be **published before the summer**

Industrial use cases for AR applications and services

- ✔ A group report **describing typical industrial use cases for AR applications and services**
- ✔ **Rapporteur:** Ralf Schäfer, Fraunhofer HHI
- ✔ A questionnaire was developed to collect information about typical AR use cases and the conditions under which AR is used.
- ✔ The survey, available in English, German and French, was online between 28/02/2018 and 01/05/2018.

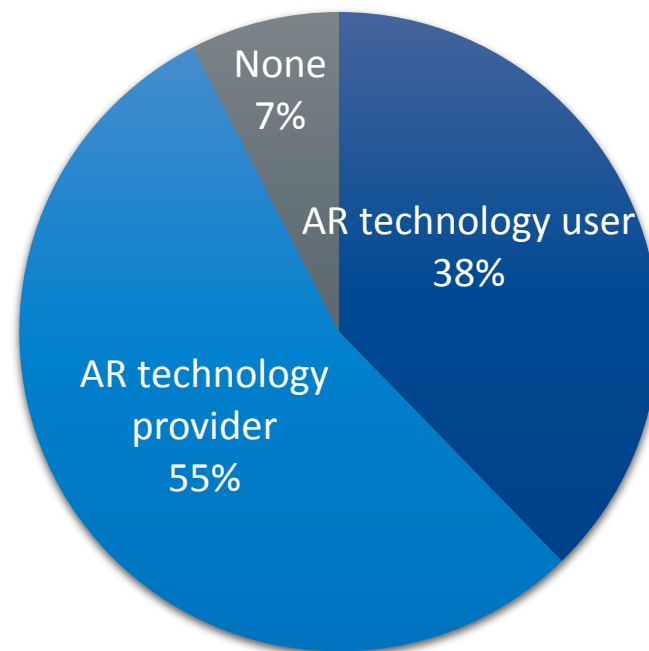

Structure of the Questionnaire

- ✓ Usage area
- ✓ Expectations of users on AR
- ✓ Level of experience with AR
- ✓ Use Case analysis
 - ✓ Benefits of AR
 - ✓ Usage conditions
 - ✓ Level of data protection
 - ✓ Sources of augmentation data
 - ✓ Technical usage conditions
 - ✓ Operating conditions
 - ✓ Feedback options
 - ✓ Level of experience in AR usage
- ✓ Experienced bottlenecks & limitations in AR usage
- ✓ General perception of the development of AR during the last 2 years

Participants profile

Without academics

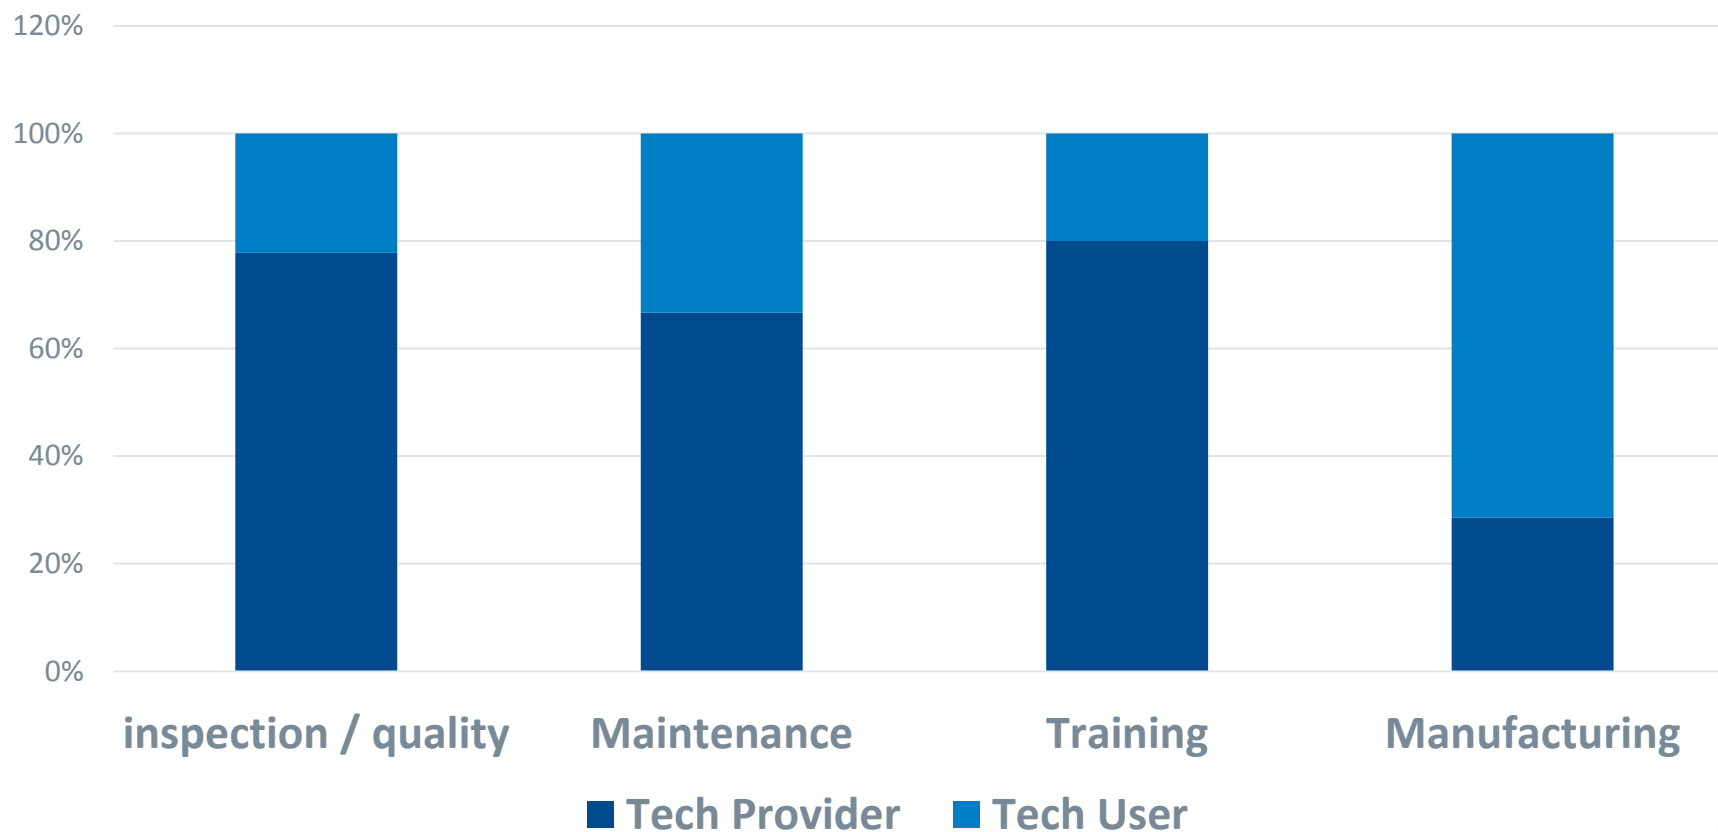

55% of the participants define themselves as Technology PROVIDERS over Technology USERS

■ AR technology user
 ■ AR technology provider
 ■ None

AR use-cases Profiles

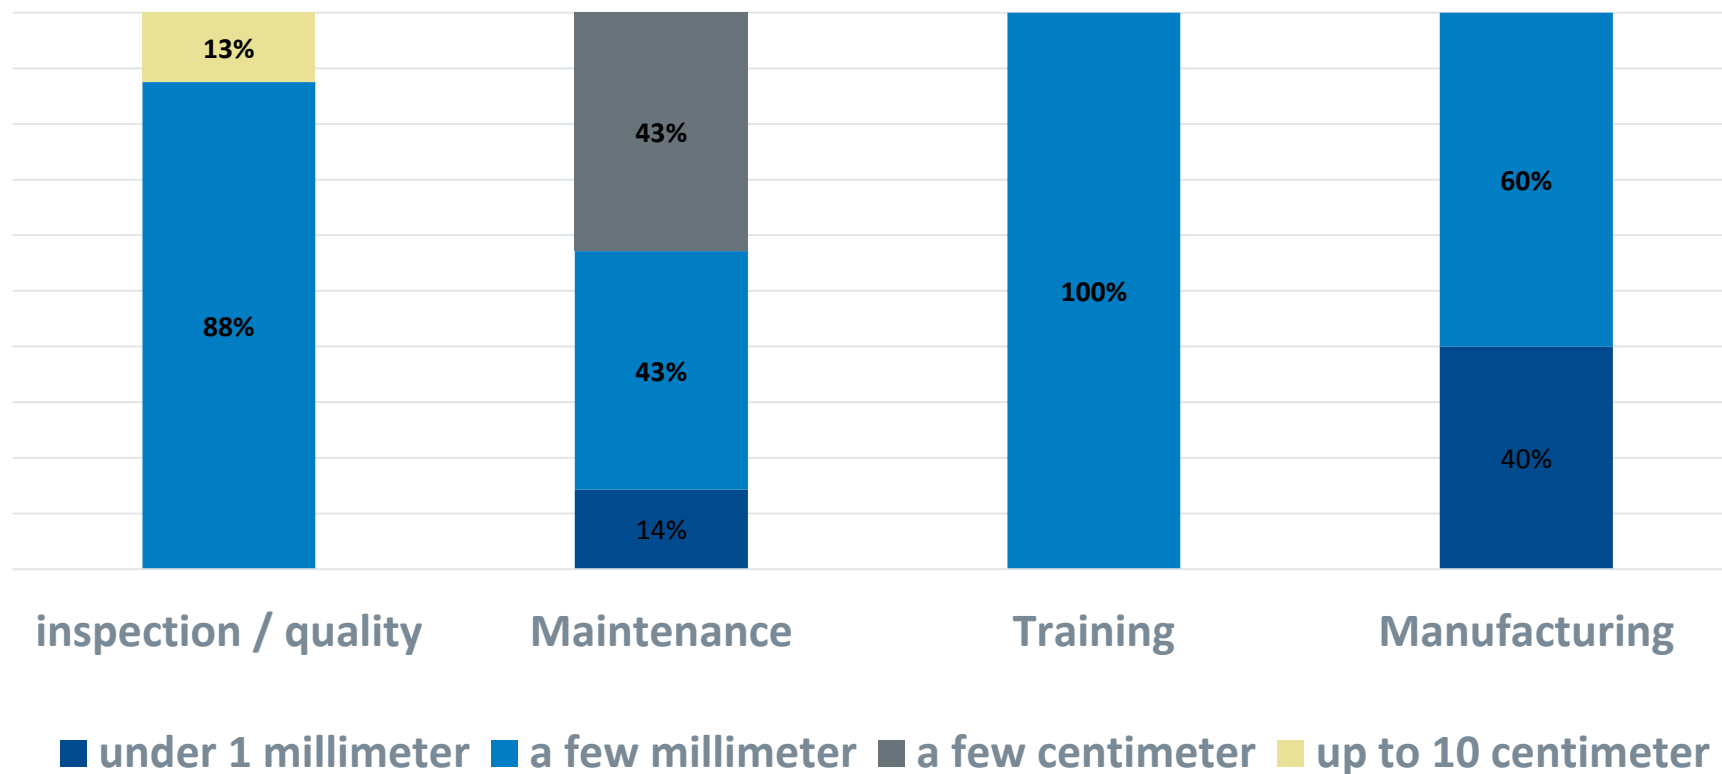

Without academics

AR use-cases - Accuracy

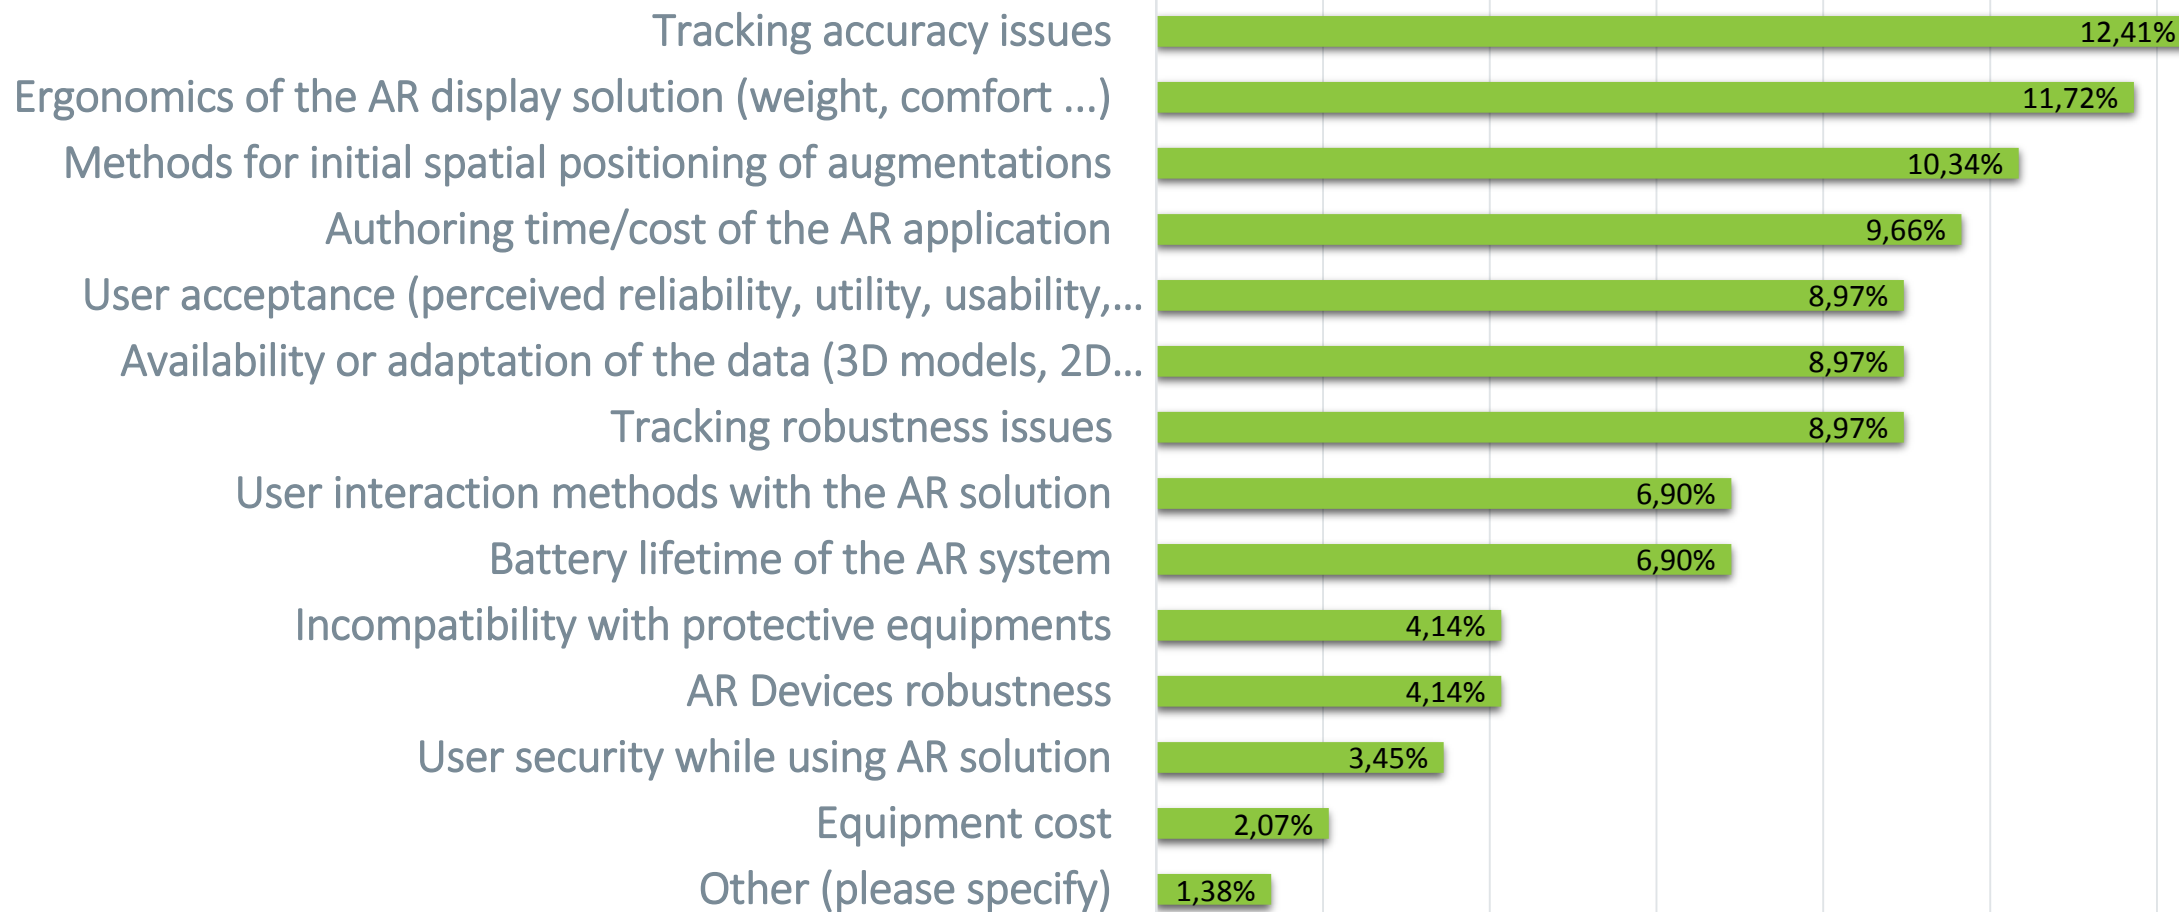

Without academics

Do the augmentations need to be precisely located relative to a real equipment or object ?

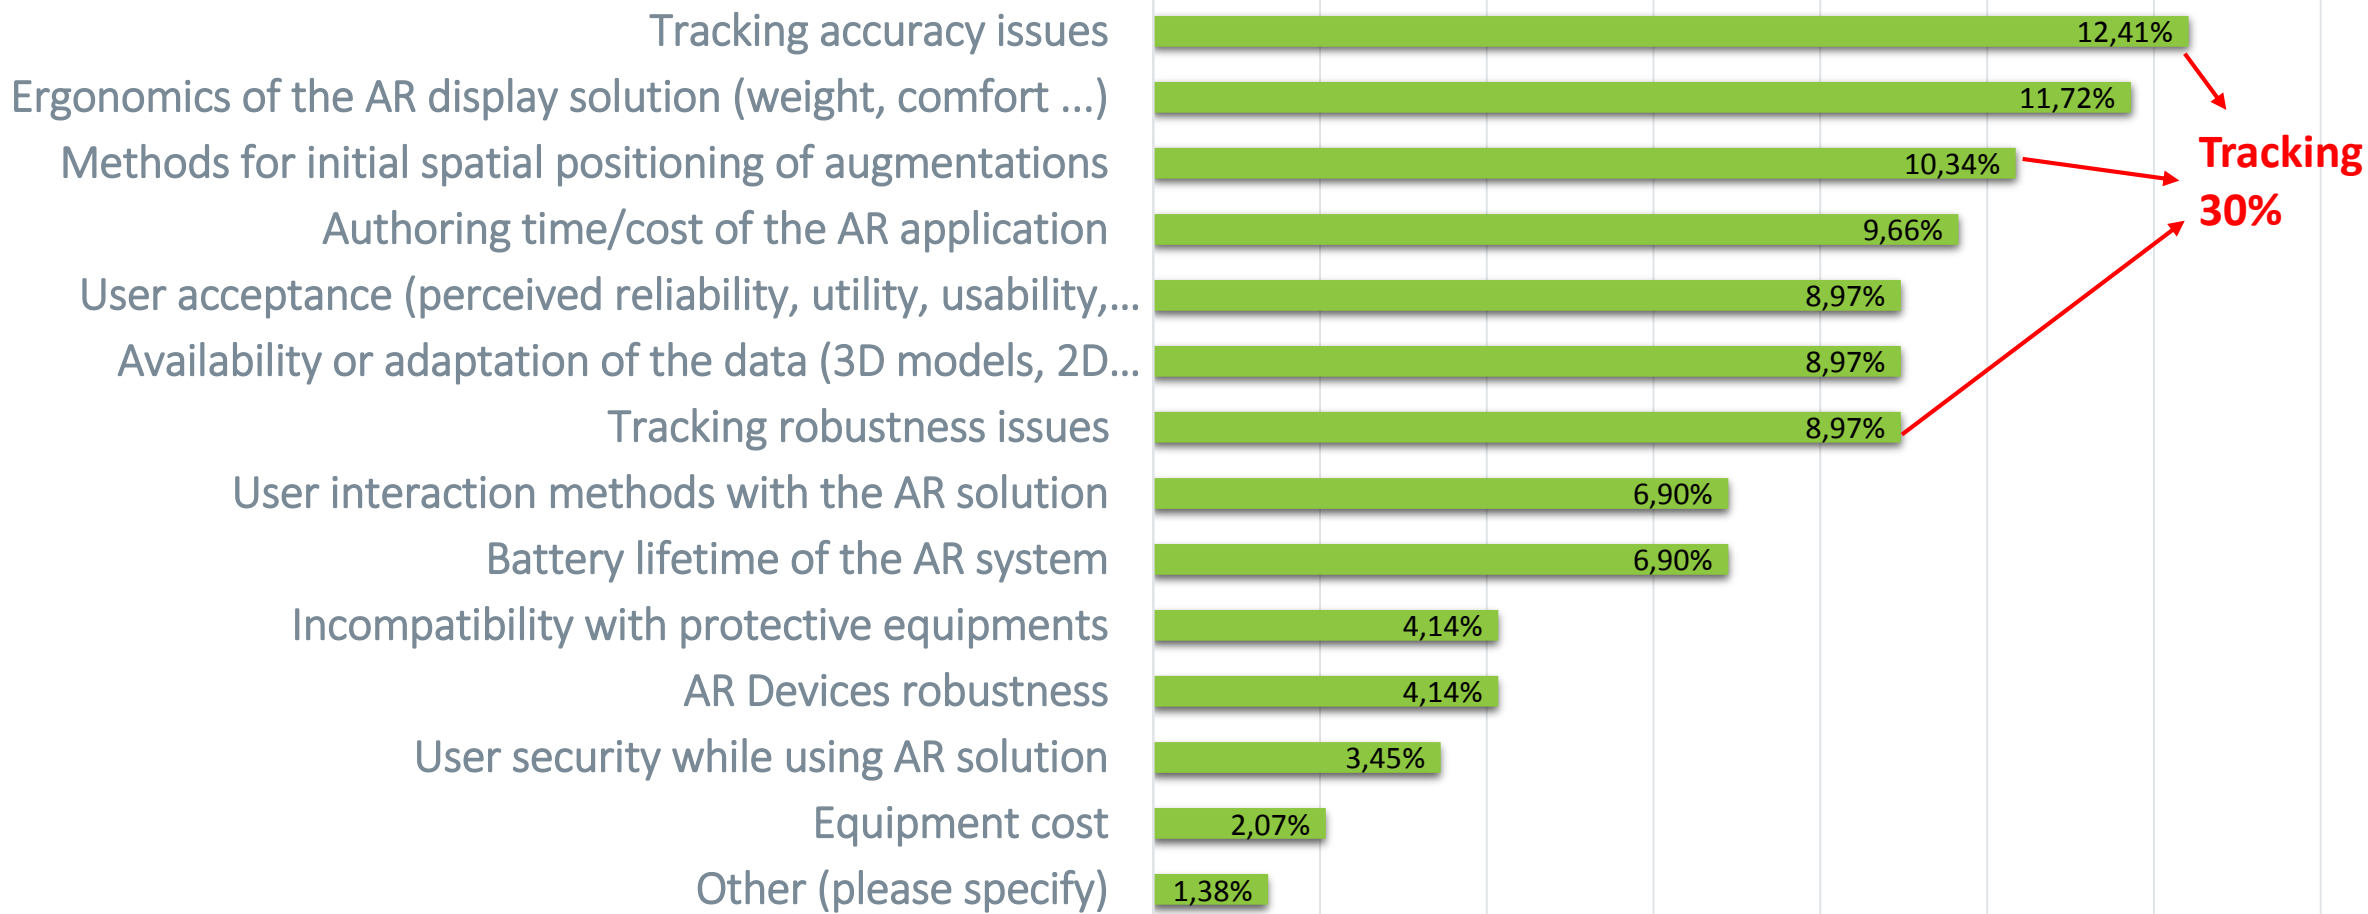

Mentioned challenges of AR

Interoperability Requirements for AR

- ✓ A group specification **specifying requirements for the interoperability of AR components, systems and services**
 - ✓ Will build on industrial use cases identified in previous group report
- ✓ **Rapporteur:** Eric Villain, Orange
- ✓ Work at an early stage

Benefits to the ecosystem and outlook

- ✔ A reference interoperability framework for AR components and **services** taking into account existing AR models and compliant with relevant AR specifications
- ✔ Availability of high performance AR components **portable** between different hardware vendors, different providers of software solutions and platforms
- ✔ AR services and platforms **simpler to design, deploy and operate**
- ✔ **Incremental migration of AR components to the edge** starting with storage in the cloud all the way to remote rendering of complex scenes and other functions e.g. relocalisation where latency is critical.

Why are we doing that ?

✔ No solution fits all requirements !

- ✔ Custom development is essential to meet the needs of industry 4.0 (and others)
- ✔ Being able to play Lego™ with AR components is crucial for AR deployment and adoption.

✔ Prevent lock-in situation with a single vendor

- ✔ Swap easily technologies, e.g. improve applications performance and services
- ✔ Improve confidence to invest in and use AR solutions
- ✔ encourage an ecosystem with a diverse range of solution providers including smaller players, new entrants and academics

If you share this vision, join the ISG ARF !

Do get involved!

- ✔ ToR : [Terms of Reference](#)
- ✔ If your company is an ETSI member, you can join the ISG ARF after signing the [ARF member agreement](#); no additional cost
- ✔ If your company is not an ETSI member, you can participate after signing the [ARF participant agreement](#)
 - ✔ Participation to online conference calls and subscription to mailing list are free
 - ✔ A fee of 200€ per day per physical meeting (F2F/online participation) per delegate; (capped to 700€)

ISG ARF Management Team

- ✔ **Chair:** Ms. Muriel Deschanel, muriel.deschanel@b-com.com
- ✔ **Vice-chair:** Dr. Ralf Schäfer, ralf.schaefer@hhi.fraunhofer.de
- ✔ **Secretary:** Nicole Leminous, nicole.leminous@orange.com
- ✔ **Technical Officer:** Sylwia Korycinska, Sylwia.korycinska@etsi.org
- ✔ **Rapporteurs for:**
 - ✔ AR standards landscape report: Marius Preda, marius.preda@it-sudparis.eu
 - ✔ Industrial use cases for AR applications and services report: Dr. Ralf Schäfer, ralf.schaefer@hhi.fraunhofer.de
 - ✔ AR framework architecture specification: Jérôme Royan, jerome.royan@b-com.com
 - ✔ AR interoperability requirements specification: Eric Villain, eric.villain@orange.com

THANK YOU!
