MLB 1 PP11
Martlesham Heath
IPSWICH
IP5 3RE
UK

Tel: +44 171 519 9028
Email: kevin.holley@bt.com

Current Position: Mobile Systems Design Manager

Experience:

Kevin Holley is Mobile Systems Design Manager in BT. He is responsible for helping to develop the standards for UMTS and GSM, and manages a project which involves primarily designing new services for Cellnet.

He has been active in the SMG community for 11 years, helping with the development of signalling for a short time before focusing on the data services, in particular RLP (layer 2 retransmission protocol), and the Short Message Service. Prior to working on GSM standards he was involved with the analogue mobile system in the UK (TACS), in particular developing an off-air signalling monitor.

In 1991 he was appointed chairman of the SMS group in SMG4 and the group successfully introduced a number of significant developments to the short message service under his guidance and leadership. In 1997 he was appointed chairman of SMG4 as a whole, since when he has been very active in the SMG committees and has been a key team member, helping to focus a number of issues to quick resolution and consensus, through conflict which was sometimes heated.

He has a degree in Physics from Bristol University.
