## LIAISON STATEMENT

**From:** TSG-T3 (USIM)

**To:** TSG-T

**Subject** GSM specification availability in 3GPP

The third TSG-T3 meeting discussed an issue of GSM specification availability in 3GPP. It is expected that a 3GPP specification from T3 refers to, or is even one of, the existing GSM specifications with or without modifications.

TSG-T3 would like to ask TSG-T if:

- 1) 3GPP specifications can directly refer to GSM specifications, and
- 2) is it possible for non-ETSI 3GPP Individual Members to access the GSM specifications for the 3GPP work in the eventuality that assumption in 1) is correct ?
