Title: 3GPP R99 plans for SIM Application Toolkit

Document for: Agreement

Agenda Item: 9

According to information circulating in the 3GPP community, BT understands that there will not be a specification for a SIM Application Toolkit (SAT) included within the 3GPP Release 99 deliverables. BT understands that it may be possible to use a 2G (phase 2+) deliverable, GSM 11.14 v8.0.1, in the absence of a 3GPP SAT specification.

BT requests that the above understanding be either confirmed or corrected.

BT considers the lack of a SAT specification within the 3GPP Release 99 deliverables to be a significant shortcoming and that to rely upon a 2G deliverable without reference is ambiguous and will cause confusion.

In order to remove any confusion, BT requests that a statement be produced urgently as a 3GPP R99 deliverable referencing GSM 11.14 v.8.0.1 as the 3GPP R99 SAT specification.
