Title: **CR's to TS 34.123-1 v3.1.0 for approval**

Agenda item: **6.1**

Document for: **Approval**

This document contains 14 CRs to TS 34.123-1 v3.1.0. These CRs have been agreed by T1 and are put forward to TSG T for approval.

CRs requiring special attention:

Spec	CR	Rev	Phase	Subject	Cat	Version-Current	Version-New	Doc-2nd-Level
34.123-1	034		R99	Application of integrity mode protection to signalling message by default	F	3.1.0	3.2.0	T1-000297
34.123-1	035		R99	New teset cases for CS intersystem handover	B	3.1.0	3.2.0	T1-000300
34.123-1	036		R99	CR to 34.123-1, Annex B, Mapping of test cases to core specification versions	D	3.1.0	3.2.0	T1-000319

CRs with routine updates:

Spec	CR	Rev	Phase	Subject	Cat	Version-Current	Version-New	Doc-2nd-Level
34.123-1	037		R99	Application of ciphering during conformance testing and changes to integrity mode protection related messages	C	3.1.0	3.2.0	T1-000286
34.123-1	038		R99	Idle Mode test cases in chapter 6	F	3.1.0	3.2.0	T1-000288
34.123-1	039		R99	Update to RLC test cases	F	3.1.0	3.2.0	T1-000301
34.123-1	040		R99	Technical Corrections to RRC test cases in clause 8	F	3.1.0	3.2.0	T1-000292
34.123-1	041		R99	Updates to clause 8 and Annex A due to RAN2 core specifications modifications	C	3.1.0	3.2.0	T1-000293
34.123-1	042		R99	Editorial modification for CC test cases (Clause 10)	D	3.1.0	3.2.0	T1-000289
34.123-1	043		R99	Update of radio bearer test cases	F	3.1.0	3.2.0	T1-000290
34.123-1	044		R99	Update of Session Management test cases	B	3.1.0	3.2.0	T1-000298
34.123-1	045		R99	Modification to the “Authentication rejected by the UE” test case	F	3.1.0	3.2.0	T1-000308
34.123-1	046		R99	Update to 16. SMS test specification	F	3.1.0	3.2.0	T1-000309
34.123-1	047		R99	Correction to MM tests	D	3.1.0	3.2.0	T1-000310

Proposed change affects: *(at least one should be marked with an X)*	(U)SIM		ME	X	UTRAN / Radio		Core Network	

Source: Matsushita Communication Industry Co.,Ltd **Date:** 18/10/2000

Subject: Application of ciphering during conformance testing and changes to integrity mode protection related messages

Work item:

Category: *(only one category shall be marked with an X)*			**Release:**	
F	Correction		Phase 2	
A	Corresponds to a correction in an earlier release		Release 96	
B	Addition of feature		Release 97	
C	Functional modification of feature	X	Release 98	
D	Editorial modification		Release 99	X
			Release 00	

Reason for change:

- ~~Following the comments from T1SIG #11 meeting, ciphering mechanism is activated for RRC test cases. Messages in Annex A are modified to enable ciphering during RRC radio bearer control and RRC connection re-establishment procedures.~~

- For section 8.1.7, the following modifications were made:

1. Corrections of message names: SECURITY MODE CONTROL COMMAND, SECURITY MODE CONTROL COMPLETE.
2. "Radio bearer downlink ciphering activation time info" IE should be found in SECURITY MODE COMMAND message, while "Radio bearer uplink ciphering activation time info" IE is present in SECURITY MODE COMPLETE message.
3. SECURITY MODE COMMAND message was updated to reflect approved changes in CR-311r2 ("Security Capability" IE) for TS 25.331 v3.2.0.
4. Some editorial changes.

- For the case of integrity mode protection, clause 8.2.1.1 needs to be revised with respect to CR-311r2 ("Security Capability" IE) for TS 25.331 v3.2.0 as well:

1. Value of "Integrity protection algorithm" IE in RADIO BEARER SETUP message is updated.
2. "Hyper Frame Number" IE in RADIO BEARER SETUP COMPLETE message was found to be missing. This IE is added to the message.

Changes made in revision 1 of this CR:

- During TSG T1#8 Plenary meeting held in Naantali, Finland, the issue of applying ciphering by default was discussed. It was decided that the activation of ciphering during conformance test is optional depending on the implementation conformance statement provided by UE manufacturers. Revision 1 of this CR provides the

	updates in accordance to this agreement. Messages updated include: RADIO BEARER SETUP (all types), RRC CONNECTION RE-ESTABLISHMENT (all types) and RRC CONNECTION RE-ESTABLISHMENT COMPLETE.
Clauses affected:	8.1.7, 8.2.1.1, Annex A

8.1.7 Security mode control

8.1.7.1 Definition

8.1.7.2 Conformance requirement

1. This procedure is used to trigger the start of ciphering or to commands the a change of the cipher key, both for the signalling link and for a user plane connection. The ciphering is configured in both directions.

2. The SRNC transmits a SECURITY MODE CONTROL COMMAND message to the UE, which indicates the uplink downlink Aactivation Ttime when the ciphering shall start to be applied in uplink. The UE shall apply the old ciphering configuration before the stated downlink activation time. It shall SRNC starts to decipher using the new ciphering configuration at the uplink downlink Aactivation Ttime.

3. When After the UE receives transmit the SECURITY MODE CONTROL COMPLETEMAND message, it starts to ciphering transmission in the uplink using the new configuration at the uplink Aactivation Ttime. It shall transmits a SECURITY MODE CONTROL COMPLETE message, which includes a downuplink Aactivation Ttime, and starts configure the downlink reception to receives in theusing new ciphering configuration at that the beginning of downlink Aactivation Ttime. When the SRNC receives the SECURITY MODE CONTROL COMPLETE, it starts ciphering transmission in the new configuration at the downlink Activation Time.

Reference

3GPP TS 25.331 clause 8.1.912

8.1.7.3 Test purpose

To confirm that the UE correctly communicates to the SS UTRAN using eachand activates the new ciphering functions configuration after the stated each Aactivation Time time. To confirm that when after the UE receives a SECURITY MODE CONTROL COMMAND message, which includes the uplink Activation Time anditransmits a SECURITY MODE CONTROL COMPLETE message to the UTRAN using the old ciphering configurationwhich includes the downlink Activation Time.

8.1.7.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the RRC connected state on the DCCELL_DCH. The SS transmits a SECURITY MODE COMMAND message in which ciphering is requested to be activated, but the IE"Ciphering algorithm" is set to an unknown value. The UE shall not trigger any ciphering algorithm and it shall respond by sending SECURITY MODE FAILURE message on the DCCH. Next, The SS transmits a valid SECURITY MODE CONTROL COMMAND message which includes the uplink downlink Aactivation Ttime for RB 23 and RB 34. Then the UE shall start to configure ciphering in updownlink after the Activation Time and transmits a SECURITY MODE CONTROL COMPLETE message which includes contains the downlink uplink Aactivation Ttime for RB 23 and RB 34. The UE starts to cipher in downlink after the Activation Time. Finally the UE correctly communicates using each ciphering functions. The UE shall be able to communicate with the SS in the downlink direction after the downlink activation time has passed. Moreover, it shall apply the ciphering algorithm in the uplink direction.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				RRC connected state on DCCH
2		←	SECURITY MODE ~~CONTROL~~ COMMAND	IE "Ciphering Algorithm" is set to an ~~spare~~ invalid value
3		→	SECURITY MODE FAILURE	IE "Failure Cause" should be set to "Protocol Error" and IE "Protocol Error Information" should be set to "Information element value not comprehended".
4		←	SECURITY MODE ~~CONTROL~~ COMMAND	See specific message contents. ~~For uplink transmissions, new ciphering configuration should be active after 255 frames from current CFN. SS checks to see~~
5		→	SECURITY MODE ~~CONTROL~~ COMPLETE	~~After the downlink Activation Time the downlink ciphering function is active.. SS starts to~~ verifies that this message is sent unciphered.
~~4~~6				~~Both Ciphering functions is active so the communication is done correctly..~~In uplink direction, SS checks that all data from RB ~~2~~3 and RB ~~3~~4 are ciphered. In the downlink direction, SS verifies that data are ciphered only after the RLC sequence numbers indicated in step 4 have elapsed.

Specific Message Contents

SECURITY MODE COMMAND (Step 2)

Information Element	Value/remark
Ciphering mode info	
Ciphering mode command	Start
~~Ciphering algorithm~~Security capability	1 of the 15 spare values
Activation time for DPCH	Not Present
Activation Time	
Radio bearer downlink ciphering activation time info	
Radio bearer activation time	2 RBs
RB identity$_1$	3
RLC sequence number$_1$	Current RLC SN + 2
RB identity$_2$	4
RLC sequence number$_2$	Current RLC SN + 2

SECURITY MODE COMMAND (Step 4)

Information Element	Value/remark
Ciphering mode command	Start
~~Ciphering algorithm~~Security capability	~~Standard UMTS Encryption Algorithm UEA1~~
Ciphering algorithm capability	0000000000000001B(UEA1)
Integrity protection algorithm capability	0000000000000001B(UEA1)
Activation time for DPCH	Not present~~Current CFN [current CFN mod 8 + 8]~~
Activation time	
Radio bearer downlink ciphering activation time info	
Radio bearer activation time	2 RBs
RB identity$_1$	~~2~~3
RLC sequence number$_1$	Current RLC SN+2~~Current downlink RLC Sequence Number for RB3~~
RB identity$_2$	~~3~~4
RLC sequence number$_2$	Current RLC SN+2~~Current downlink RLC Sequence Number for RB4~~

8.1.7.5 Test requirement

After step 2 the UE shall -transmit a SECURITY MODE FAILURE message to report protocol error detected in the earlier SECURITY MODE ~~CONTROL~~ COMMAND message. The UE shall be able to communicate normally with the SS, with all ~~user or~~ control data unciphered.

After step 4 the UE shall RLC-acknowledge the receipt of the SECRUITY MODE ~~CONTROL~~ COMMAND message using unciphered mode. SS checks that ~~T~~the SECURITY MODE ~~CONTROL~~ COMPLETE message is received unciphered.

After step 5 SS verifies that downlink control data from RB ~~2~~3 and RB ~~3~~4 are ciphered using UEA1 algorithm, after the RLC sequence numbers as a downlink activation time stated in step 4 have elapsed. In the uplink direction, the UE shall start to cipher on the uplink after the RLC sequence number as an uplink activation time stated in step 5 has elapsed.

8.2.1.1 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success(Data integrity protection algorithm is not applied)

8.2.1.1.1 Definition

8.2.1.1.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message and communicate with the UTRAN for its implementation.

(This is the case where data integrity protection algorithm is not applied.)

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.1.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message received from the SS.

8.2.1.1.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state, after the test operator is prompted to make an out-going call. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE after it sets up L1 including the start of tx/rx. This message requests the establishment of RABs for carrying the traffic of the speech call. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER SETUP	This message do not contain IE "integrity check info" and "integrity protection mode info"
2	→		RADIO BEARER SETUP COMPLETE	This message do not contain "integrity check info" and "Uplink integrity activation info
3				To confirm the communication.

Specific Message Contents

For RADIO BEARER SETUP in step 1, using the message sub-type indicated as "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" found in default message content clause.

8.2.1.1.5 Test requirement

After step2 the UE shall communicate with the SS on the radio bearer for its implementation.

8.2.1.2 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success(Effected Data integrity protection algorithm)

8.2.1.2.1 Definition

.

8.2.1.2.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message, which applies data integrity function, and then communicate with the UTRAN for its implementation.

Reference

3GPP TS 25.331 clause 8.2.1, 8.5.11.

8.2.1.2.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message which contains IE"Integrity check info" and IE"Integrity protection mode info" received from the SS.

8.2.1.2.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH and data integrity algorithm is not applied

Test Procedure

The UE is in the CELL_DCH state, after the test operator is prompted to make an out-going data call. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message which is including IE"integrity check info" and "integrity protection mode info" to the UE after it sets up L1 including the start of tx/rx. This message requests the establishment of RABs for carrying the traffic of the call. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message which is including IE"integrity check info" using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER SETUP	This message contain IE "integrity check info" and "integrity protection mode info"
2	→		RADIO BEARER SETUP COMPLETE	This message contain "integrity check info"
3				To confirm the communication.

Specific Message Contents

For RADIO BEARER SETUP in step 1, using the message sub-types indicated as "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in default message content clause.

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to identical message sub-type found in TS 34.108 Clause 8, with the following exceptions:

Information Element	Value/remark
Integrity check info	
- Message authentication code	Bit string (32) MAC-I See TS33.102
- RRC Message sequence number	0
Integrity protection mode info	Present
- Integrity protection mode command	"Start"
- Downlink integrity protection activation info	Not present (It is needed only when the IE"Integrity protection mode command" has the value "modify" .)
- integrity protection algorithm	~~UMTS Integrity Algorithm UIA1~~"0001_2":UIA1, Kasumi
- integrity protection initialisation number	Bit string (32) FRESH See TS33.102

RADIO BEARER SETUP COMPLETE

Information Element	Value/remark
Integrity check info	
- Message authentication code	Not checked(MAC-I See TS33.102)
- RRC Message sequence number	Not checked
Uplink Integrity protection activation info	Not checked
Hyper Frame Number	Not checked

8.2.1.2.5 Test requirement

After step2 the UE shall communicate with the SS on the radio bearer for its implementation. This can be verified by the correct reproduction of the u-plane data transmitted and received between the test operator and SS.

Annex A. Default RRC Message Contents

This clause contains the default values of RRC messages, other than those specified in TS 34.108 clauses 6 and 9. Unless indicated otherwise in specific test cases, they shall be transmitted by the system simulator in RRC messages, and which are required to be received from the UE under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type “GSM-MAP”), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.

Contents of RRC CONNECTION RE-ESTABLISHMENT message: UM (Packet to CELL_DCH from CELL_FACH in PS)

Information Element	Value/remark
Message Type	
U-RNTI	Not Present
Integrity check info	Not Present
- message authentication code	
- RRC message sequence number	
Integrity protection mode info	Not Present
- Integrity protection mode command	
- Downlink integrity protection activation info	
- RRC message sequence number	
- RRC message sequence number	
- Integrity protection algorithm	
- Integrity protection initialisation number	
Ciphering mode info	This presence of this IE is dependent on IXIT statements in TS 34.123-2. If ciphering is indicated to be active, this IE present with the values of the sub IEs as stated below. Else, this IE is omitted.~~Not Present(If ciphering is applied, this IE is needed)~~
- Ciphering mode command	start~~op~~
- Ciphering algorithm	Use one of the supported ciphering algorithms~~Not Present(Standard UMTS Encryption Algorithm UEA1)~~
- Activation time for DPCH	Not Present~~(Used RLC-TM)~~
- Radio bearer downlink ciphering activation time info	~~Not Present(Used RLC-AM or RLC-UM)~~
- Radio bearer identity	0
- RLC sequence number	Current RLC SN+2
- Radio bearer identity	1
- RLC sequence number	Current RLC SN+2
- Radio bearer identity	2
- RLC sequence number	Current RLC SN+2
- Radio bearer identity	3
- RLC sequence number	Current RLC SN+2
- Radio bearer identity	4
- RLC sequence number	Current RLC SN+2
Activation time	(256+CFN-(CFN MOD 8 + 8))MOD 256
New U-RNTI	Not Present
New C-RNTI	Not Present
DRX indicator	noDRX
UTRAN DRX cycle length coefficient	Not Present
RLC reset indicator (for C-plane)	FALSE
RLC reset indicator (for U-plane)	FALSE
CN information info	Not Present
- PLMN identity	
- CN common GSM-MAP NAS system information	
- CN domain identity	
- CN domain specific GSM-MAP NAS system information

Contents of RRC CONNECTION RE-ESTABLISHMENT COMPLETE message: AM

Information Element	Value/remark
Message Type	
Integrity check info	Not checked
Uplink integrity protection activation info	Not checked
Hyper frame number	Not checked
Radio bearer uplink ciphering activation time info	If ciphering is not activated in RRC CONNECTION RE-ESTABLISHMENT message, this IE must be absent. Else, SS checks this IE for the presence of activation times of all ciphered uplink RLC-UM and RLC-AM RBs ~~Value should not be present unless otherwise stated.~~
RB with PDCP information list - RB with PDCP information	Not checked

Contents of RRC CONNECTION RE-ESTABLISHMENT REQUEST message: TM

Information Element	Semantics description
Message Type	
U-RNTI	Value is checked to see if it is equal to the previously assigned U-RNTI
Integrity check info	Not checked
AM_RLC error indication(for C-plane)	Not checked
AM_RLC error indication(for U-plane)	Not checked
Protocol error indicator	Value is checked to see if it is set to FALSE.
Measured results on RACH	Not checked.
Protocol error information	Should be absent as “Protocol error indicator” = FALSE

Contents of RRC CONNECTION REJECT message: UM

Information Element	Value/remark
Message Type	
Initial UE identity	Set to the UE's IMSI (GSM-MAP) or TMSI.
Rejection cause	Unspecified
Wait Time	0
Redirection info	Not Present

Contents of RRC CONNECTION SETUP message: UM (Transition to CELL_FACH)

Information Element	Value/remark
Message Type	
Initial UE identity	Reference to TS34.108 clause 6.10 Parameter Set
Activation time	(256+CFN-(CFN MOD 8 + 8))MOD 256
New U-RNTI	
- SRNC identity	0000 0000 0001B

RB with PDCP information	Not Present
UL Transport channel information for all transport channels	
- TFC subset	(This IE is repeated for TFC number.)
- Allowed Transport Format combination	0 to MaxTFCValue-1 (MaxTFCValue is refer to TS34.108 clause 6.10 Parameter Set.)
- UL DCH TFCS	(This IE is repeated for TFC number.)
- Normal	
- TFCI Field 1 information(Explicit TFCS Configuration)	
- Addition	
- TFCS addition information(Reconfiguration/Addtion information)	
- CTFC information	
- CTFC	0 to MaxTFCValue-1 (MaxTFCValue is refer to TS34.108 clause 6.10 Parameter Set.)
- Gain factor information	
- Gain factor •c	0
- Gain factor •d	0
- Power offset Pp-m	0dB
Added or Reconfigured UL TrCH information	
- Transport channel identity	1
- TFS	
- Dynamic Transport format information	(This IE is repeated for TFI number)
- Number of Transport blocks	Reference to TS34.108 clause 6.10 Parameter Set
- Bit mode RLC size info	
- Transport block size	Reference to TS34.108 clause 6.10 Parameter Set
- Semi-static Transport Format information	
- Transmission time interval	Reference to TS34.108 clause 6.10 Parameter Set
- Type of channel coding	Reference to TS34.108 clause 6.10 Parameter Set
- Coding Rate	Reference to TS34.108 clause 6.10 Parameter Set
- Rate matching attribute	Reference to TS34.108 clause 6.10 Parameter Set
- CRC size	Reference to TS34.108 clause 6.10 Parameter Set
DRAC static information	Not Present
- Transmission Time Validity	
- Time duration before retry	
- DRAC Class identity	
DL Transport channel information common for all transport channel	

- SCCPCH TFCS	Not Present
- Normal	
- TFCI Field 1 information(Explicit TFCS Configuration)	
- Addition	
- TFCS addition information(Reconfiguration/Addtion information)	
- CTFC information	
- CTFC	
- Gain factor information	
- Gain factor •c	
- Gain factor •d	
- DL DCH TFCS	(This IE is repeated for TFC number.)
- Normal	
- TFCI Field 1 information(Explicit TFCS Configuration)	
- Addition	
- TFCS addition information(Reconfiguration/Addtion information)	
- CTFC information	
- CTFC	0 to MaxTFCValue-1 (MaxTFCValue is refer to TS34.108 clause 6.10 Parameter Set.)
- Gain factor information	
- Gain factor •c	0
- Gain factor •d	0
- Power offset Pp-m	0dB
Added or Reconfigured DL TrCH information	
- Transport channel identity	1
- TFS	
- Dynamic Transport format information	(This IE is repeated for TFI number)
- Number of Transport blocks	Reference to TS34.108 clause 6.10 Parameter Set
- Bit mode RLC size info	
- Transport block size	Reference to TS34.108 clause 6.10 Parameter Set
- Semi-static Transport Format information	
- Transmission time interval	Reference to TS34.108 clause 6.10 Parameter Set
- Type of channel coding	Reference to TS34.108 clause 6.10 Parameter Set
- Coding Rate	Reference to TS34.108 clause 6.10 Parameter Set
- Rate matching attribute	Reference to TS34.108 clause 6.10 Parameter Set
- CRC size	Reference to TS34.108 clause 6.10 Parameter Set
- DCH quality target	
- BLER Quality value	0.00
- Transparent mode signalling info	Not Present
Frequency info	
- UARFCN uplink(Nu)	Reference to TS34.108 clause 6.10 Parameter Set
- UARFCN downlink(Nd)	Reference to TS34.108 clause 6.10 Parameter Set
Maximum allowed UL TX power	33dBm
Uplink DPCH info	
-Uplink DPCH power control info	
- DPCCH power offset	-6dB
- PC Preamble	8slot
- Power Control Algorithm	Algorithm1
- TPC step size	1dB
- Scrambling code type	Long
- Scrambling code number	0 (0 to 16777215)
- Number of DPDCH	Not Present(1)
- spreading factor	SF is reference to TS34.108 clause 6.10 Parameter Set
- TFCI existence	TRUE
- Number of FBI bit	Not Present(0)
- Puncturing Limit	Reference to TS34.108 clause 6.10 Parameter Set
Downlink information common for all radio links	
- Downlink DPCH info common for all RL	
- Downlink DPCH power control information	
- DPC mode	0 (single)
- Spreading factor	Reference to TS34.108 clause 6.10 Parameter Set
- Fixed or Flexible Position	Flexible
- TFCI existence	TRUE
- Number of bits for Pilot bits(SF=128,256)	Not Present
- Downlink DPCH Offset Value	0
- DPCH compressed mode info	

-TGPSI	1
-TGPS Status Flg	inactive
- TGMP	FDD Measurement
- TGPRC	62
- TGCFN	(Current CFN + (256 – TTI/10msec)) mod 256

3GPP TSG T1 Meeting #9
Redondo Beach, Ca, USA, 16-17 November 2000
3GPP TSG-T1/SIG Meeting #14
Redondo Beach, CA, USA, 13-15 Nov. 2000

Document T1-000288
e.g. for 3GPP use the format TP-99xxx
or for SMG, use the format P-99-xxx

Tdoc T1S000239

CR-Form-v3

CHANGE REQUEST

⌘ **34.123-1** **CR** **038** ⌘ rev **-** ⌘ Current version: **3.1.0** ⌘

*For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.*

Proposed change affects: ⌘ (U)SIM ☐ ME/UE ☒ Radio Access Network ☐ Core Network ☐

Title:	⌘	Idle Mode test cases in chapter 6
Source:	⌘	Ericsson
Work item code:	⌘	***Date:*** ⌘ 2000-11-11
Category:	⌘	**F** ***Release:*** ⌘ R99

Use one of the following categories:
F *(essential correction)*
A *(corresponds to a correction in an earlier release)*
B *(Addition of feature),*
C *(Functional modification of feature)*
D *(Editorial modification)*
Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:
2 (GSM Phase 2)
R96 (Release 1996)
R97 (Release 1997)
R98 (Release 1998)
R99 (Release 1999)
REL-4 (Release 4)
REL-5 (Release 5)

Reason for change: ⌘
- Editoral changes: “SIM” has been changed to “USIM” and “MS” has been changed to “UE” except in Conformance requirements which shall remain a copy of core specifications.
- “6.1.2 Radio access mode selection and reselection” is removed, as no tests for TDD have yet been planned
- Split of 6.1.1.1 (Manual PLMN selection) into 6.1.1.1 (RPLMN, HPLMN, UPLMN and OPLMN) and 6.1.1.2 (“Other PLMN / access technology combinations”)
- Split of 6.1.1.3 (Automatic PLMN selection) into 6.1.1.4 (RPLMN, HPLMN, UPLMN and OPLMN) and 6.1.1.5 (“Other PLMN / access technology combinations”)
- New test cases in Cell selection/reselection: 6.1.2.5 and 6.1.2.6
- New test cases in UTRAN/GSM PLMN selection: 6.2.1.1-6.2.1.10

Summary of change: ⌘ New test cases added and editoral changes

Consequences if not approved: ⌘

Clauses affected: ⌘ 6.1.1, 6.1.2, 6.2.1

Other specs affected: ⌘
☐ Other core specifications ⌘
☐ Test specifications
☐ O&M Specifications

Other comments: ⌘

~~**Table 6.1.3.2: Downlink Physical Channels**~~

~~Physical Channel~~	~~Power~~	~~NOTE~~

~~*Propagation Condition*~~		~~Static~~

It is a UE option whether to indicate access technologies to the user (TS 23.122, 4.4.3.1.2). Therefore, for combined UTRAN/GSM tests, it is indicated in parentheses which access technology shall be indicated to the user if the UE has this capability.

6.1 In a pure 3GPP environment

6.1.1 PLMN selection and reselection

6.1.1.1 PLMN selection of RPLMN, HPLMN, UPLMN and OPLMN; Manual mode

6.1.1.1.1 Definition

Test to verify that the UE can present the available PLMNs in priority order to the user when asked to do so in manual mode and that the displayed PLMNs can be selected / reselected by the user. Forbidden PLMNs shall also by displayed in the list. If available, the RPLMN shall be selected at switch-on, otherwise the displayed list shall include in priority order HPLMN, User-PLMN and Operator-PLMN. The last priority in the list is “Other PLMN/access technology combinations” which is not included in this test.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

6.1.1.1.2 Conformance requirement

1. At switch on, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and attempts to perform a Location Registration. The MS shall start its search using the access technology type stored in the RPLMN Last Used Access Technology data field on the SIM. If the RPLMN Last Used Access Technology is not available then an MS capable of GSM access technology shall start its search using GSM access technology.

   On recovery from lack of coverage, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and, if necessary attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Manual Network Selection Mode Procedure:

The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes "Forbidden PLMNs" and PLMNs which only offer services not supported by the MS.

If displayed, PLMNs meeting the criteria above are presented in the following order:

2.1 HPLMN;

2.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.4 Other PLMN/access technology combinations with received high quality signal in random order;

2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the forbidden LAI and PLMN lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

NOTE: TS 31.102 defines the USIM fields

6.1.1.1.3 Test purpose

1. To verify that if available, the RPLMN is selected at switch-on.

2. To verify that in Manual Network Selection Mode Procedure, the UE presents the HPLMN, UPLMN and OPLMN in a prioritized order.

3. To verify that forbidden PLMNs are also displayed in the list.

6.1.1.1.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

All Radio Access Technology USIM fields and cells are UTRAN.

Parameters changed from the default values in table 6.1.3.1.

Cell	PLMN
Cell 1	PLMN 1
Cell 2	PLMN 2
Cell 3	PLMN 3
Cell 4	PLMN 4
Cell 5	PLMN 5
Cell 6	PLMN 6

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN
EF_{LOCI}		PLMN 1
$EF_{HPLMNwAcT}$	1st	PLMN 2
$EF_{PLMNwACT}$	1st	PLMN 3
	2nd	PLMN 4
$EF_{OPLMNwACT}$	1st	PLMN 5
	2nd	PLMN 6
EF_{FPLMN}	PLMN 3	

NOTE: PLMN 3 is forbidden.

Test procedure

a) The SS activates cells 1-6 and monitors the cells for random access requests from the UE

b) The UE is switched on

c) The SS waits for random access requests from the UE

d) Cell 1 is switched off

e) PLMN 4 shall be selected when the PLMN list is presented

f) The SS waits for random access requests from the UE

g) Cell 4 is switched off

h) PLMN 3 shall be selected when the PLMN list is presented. The SS shall reject the Registration Request from the UE.

i) PLMN 5 shall be selected (the list is already available)

j) The SS waits for random access requests from the UE

k) Cell 5 is switched off

l) PLMN 2 shall be selected when the PLMN list is presented

m) The SS waits for random access requests from the UE

n) Cell 2 is switched off

o) PLMN 6 shall be selected when the PLMN list is presented

p) The SS waits for random access requests from the UE

q) Cell 6 is switched off

6.1.1.1.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 1 within [FFS seconds].

2) In step e), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN 2, PLMN 3, PLMN 4, PLMN 5, PLMN 6.

3) In step f), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN 4 within [FFS seconds].

4) In step h), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN 2, PLMN 3, PLMN 5, PLMN 6. After PLMN 3 has been selected, the list shall appear again as the UE cannot perform registration.

6) In step j), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN 5 within [FFS seconds].

7) In step l), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN 2, PLMN 3, PLMN 6.

8) In step m), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN 2 within [FFS seconds].

9) In step o), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN 3, PLMN 6.

10) In step p), the response from the UE shall be on Cell 6. The displayed PLMN shall be PLMN 6 within [FFS seconds].

11) After step q), the UE shall inform within [FFS seconds] that only limited service is possible.

6.1.1.2 PLMN selection of “Other PLMN / access technology combinations”; Manual mode

6.1.1.2.1 Definition

Test to verify that the UE can present the available PLMNs in priority order to the user when asked to do so in manual mode and that the displayed PLMNs can be selected / reselected by the user. Forbidden PLMNs shall also by displayed in the list. In this test are only considered “Other PLMN/access technology combinations” in the priority list.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

6.1.1.2.2 Conformance requirement

1. At switch on, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and attempts to perform a Location Registration. The MS shall start its search using the access technology type stored in the RPLMN Last Used Access Technology data field on the SIM. If the RPLMN Last Used Access Technology is not available then an MS capable of GSM access technology shall start its search using GSM access technology.

   On recovery from lack of coverage, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and, if necessary attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Manual Network Selection Mode Procedure:

The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes "Forbidden PLMNs" and PLMNs which only offer services not supported by the MS.

If displayed, PLMNs meeting the criteria above are presented in the following order:

2.1 HPLMN;

2.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.4 Other PLMN/access technology combinations with received high quality signal in random order;

2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the forbidden LAI and PLMN lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

NOTE: TS 31.102 defines the USIM fields

6.1.1.2.3 Test purpose

1. To verify that in Manual Network Selection Mode Procedure, the UE presents “Other PLMN/access technology combinations” in a prioritized order according to conformance requirement 2.4 and 2.5.
2. To verify that forbidden PLMNs are also displayed in the list.

6.1.1.2.4 Method of test

Initial conditions

The UE is in automatic mode.

All Radio Access Technology USIM fields and cells are UTRAN.

Parameters changed from the default values in table 6.1.3.1.

Cell	*CPICH_Ec/Io [dB]*	PLMN
Cell 1	-15	PLMN 6
Cell 2	-15	PLMN 7
Cell 3	-15	PLMN 8
Cell 4	-16	PLMN 9
Cell 5	-17	PLMN 10
Cell 6	-18	PLMN 11

NOTE: Cell 1 is OPLMN 2nd priority. HQ signal [FFS] is on Cell 2-3 but not on Cell 4-6.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN
EF_{LOCI}		PLMN 1
$EF_{HPLMNwAcT}$	1st	PLMN 2
$EF_{PLMNwACT}$	1st	PLMN 3
	2nd	PLMN 4
$EF_{OPLMNwACT}$	1st	PLMN 5
	2nd	PLMN 6
EF_{FPLMN}	PLMN 10	

NOTE: PLMN 10 is forbidden.

Test procedure

a) The SS activates cells 1-6 and monitors the cells for random access requests from the UE

b) The UE is switched on

c) PLMN 9 shall be selected when the PLMN list is presented

d) The SS waits for random access requests from the UE

e) Cell 4 is switched off

f) PLMN 7 shall be selected when the PLMN list is presented

g) The SS waits for random access requests from the UE

h) Cell 2 is switched off

i) PLMN 6 shall be selected when the PLMN list is presented

j) The SS waits for random access requests from the UE

k) Cell 1 is switched off

l) PLMN 11 shall be selected when the PLMN list is presented

m) The SS waits for random access requests from the UE

n) Cell 6 is switched off

o) PLMN 10 shall be selected when the PLMN list is presented. The SS shall reject the Registration Request from the UE.

p) Cell 5 is switched off

q) PLMN 8 shall be selected (the list is already available)

r) The SS waits for random access requests from the UE

s) Cell 3 is switched off

6.1.1.2.5 Test Requirements

1) In step c), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN 6 followed by PLMN 7, PLMN 8 in random order, followed by PLMN 9, PLMN 10, PLMN 11.

2) In step d), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN 9 within [FFS seconds].

3) In step f), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN 6 followed by PLMN 7, PLMN 8 in random order, followed by PLMN 10, PLMN 11.

4) In step g), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN 7 within [FFS seconds].

5) In step i), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN 6, PLMN 8, PLMN 10, PLMN 11.

6) In step j), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 6 within [FFS seconds].

7) In step l), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN 8, PLMN 10, PLMN 11.

8) In step m), the response from the UE shall be on Cell 6. The displayed PLMN shall be PLMN 11 within [FFS seconds].

9) In step o), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN 8, PLMN 10. After PLMN 10 has been selected, the list shall appear again as the UE cannot perform registration.

10) In step q), the list shall be presented within [FFS seconds] and shall only contain PLMN 8.

11) In step r), the UE shall respond on Cell 3. The displayed PLMN shall be PLMN 8 within [FFS seconds].

12) After step s), the UE shall inform within [FFS seconds] that no network is available.

~~6.1.1.1 Manual mode PLMN selection / re-selection and UE indication of available PLMNs~~

~~6.1.1.1.1 Definition~~

~~Test to verify that the UE can present the available PLMNs to the user when asked to do so in manual mode and that the displayed PLMNs can be selected. If a "PLMN not allowed" or a PLMN with "LA not allowed" is selected, the UE shall enter limited service.~~

~~6.1.1.1.2 Conformance requirement~~

~~1. At switch on, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and attempts to perform a Location Registration. The MS shall start its search using the access technology type stored in the RPLMN Last Used Access Technology data field on the SIM. If the RPLMN Last Used Access Technology is not available then an MS capable of GSM access technology shall start its search using GSM access technology.~~

~~On recovery from lack of coverage, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and, if necessary attempts to perform a Location Registration.~~

~~If successful registration is achieved, the MS indicates the selected PLMN.~~

~~If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.~~

2. Manual mode - Here the MS indicates to the user which PLMNs are available. Only when the user makes a manual selection does the MS try to obtain normal service on the VPLMN.

3. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes "Forbidden PLMNs" and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   3.1 HPLMN;

   3.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   3.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   3.4 Other PLMN/access technology combinations with received high quality signal in random order;

   3.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the forbidden LAI and PLMN lists.

   If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

4. To prevent repeated attempts to have roaming service on a not allowed LA, when the MS is informed that an LA is forbidden, the LA is added to a list of "forbidden LAs for roaming" which is stored in the MS. This list is deleted when the MS is switched off or when the SIM is removed. Such area restrictions are always valid for complete location areas independent of possible subdivision into GPRS routing areas.

   If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

NOTE: TS 31.102 defines the USIM fields

6.1.1.1.3 Test purpose

1. To verify that if no RPLMN exists at power on, the UE shall camp on any acceptable cell and enter the limited service state.

2. To verify that in Manual Network Selection Mode Procedure the UE presents PLMNs in a prioritized order.

3. To verify that if a PLMN with LA rejection “LA not allowed” or “PLMN not allowed” is selected, the UE enters limited service.

6.1.1.1.4 Method of test

Initial conditions

The UE is in manual mode.

The SIM fields $EF_{UPLMNsel}$ (UPLMN selector), $EF_{OPLMNsel}$ (OPLMN selector) and $EF_{PHPLMNAT}$ (Preferred HPLMN Access Technology) shall only contain UTRAN as the Access Technology Identifier.

The SIM fields $EF_{UPLMNsel}$ and $EF_{OPLMNsel}$ shall only contain one PLMN as indicated in the table.

PLMN 1 is the HPLMN (i.e. IMSI). There is no RPLMN stored in the SIM (i.e. field EF_{BCCH}).

The UE is equipped with a SIM containing default values except for those values listed in table [FFS].

Parameters changed from the default values in table 6.1.3.1 and table [FFS].

Parameter	**Unit**	**Cell 1**	**Cell 2**	**Cell 3**	**Cell 4**	**Cell 5**
$\hat{I}_{or}/I_{oc}$	dB	2.5	4.5	7.5		
CPICH_Ec/Io	dB	-18	-16	-13	[FFS: High Q signal]	[FFS: Not high Q signal]
CPICH RSCP	dBm	-78	-76	-73		
Qqualmin	dB	-20	-20	-20		
Qrxlevmin	dBm	-100	-100	-100		
Squal	dB	2	4	7		
Srxlev	dBm	22	24	27		
PLMN		PLMN 1	PLMN 2	PLMN 3	PLMN 4	PLMN 5
SIM field for storing PLMN		EF_{IMSI} (IMSI)	$EF_{UPLMNsel}$ (UPLMN selector)	$EF_{OPLMNsel}$ (OPLMN selector)	Other PLMN than on the SIM	Other PLMN than on the SIM

Test procedure

a) The SS activates cells 1-4

b) The UE is switched on

c) The SS waits until UE says "Emergency calls only"

d) The UE is requested to display the PLMN list. PLMN 1 is selected manually

e) The SS sends SYSTEM INFORMATION to the UE to inform it that PLMN 1 belongs to a "LA not allowed"

f) The SS waits until UE says "Emergency calls only"

g) Step d-g) is repeated except that in d), PLMN 2 is selected and in e), the UE is informed that PLMN 2 belongs to a "PLMN not allowed"

h) Step d-g) is repeated except that in d), PLMN 3 is selected and in e), the UE is informed that PLMN 3 belongs to a "LA not allowed"

i) Step d-g) is repeated except that in d), PLMN 4 is selected and in e), the UE is informed that PLMN 4 belongs to a "LA not allowed"

j) Step d-g) is repeated except that in d), PLMN 5 is selected and in e), the UE is informed that PLMN 5 belongs to a "LA not allowed"

6.1.1.1.5 Test Requirements

1) In step d), the selected PLMN shall be displayed as PLMN 1 within 2 min.

~~[Editor's note: The 2 min. must be confirmed]~~

~~2) In step g), the selected PLMN shall be displayed as PLMN 2 within 2 min.~~

~~3) In step h), the selected PLMN shall be displayed as PLMN 3 within 2 min.~~

~~4) In step i), the selected PLMN shall be displayed as PLMN 4 within 2 min.~~

~~5) In step i), the selected PLMN shall be displayed as PLMN 5 within 2 min.~~

~~[Editor's note: The time 2 min is taken from the GSM 11.10-1, test case 26.3.4]~~

~~[Editor's note: It is assumed that the displayed PLMN reflects the cell camped on and that it is not necesary to test that the UE actually camps on that cell]~~

6.1.1.32 ~~Manual mode~~ PLMN selection / reselection; independence of RF level and preferred PLMN; Manual mode

6.1.1.32.1 Definition

Test to verify that in Manual Network Selection Mode, the UE is able to obtain normal service on a PLMN which is neither the better nor a preferred PLMN and that it tries to obtain service on a VPLMN if and only if the user selects it manually.

6.1.1.32.2 Conformance requirement

1. At switch on, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and attempts to perform a Location Registration. The MS shall start its search using the access technology type stored in the RPLMN Last Used Access Technology data field on the SIM. If the RPLMN Last Used Access Technology is not available then an MS capable of GSM access technology shall start its search using GSM access technology.

   On recovery from lack of coverage, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and, if necessary attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Manual mode - Here the MS indicates to the user which PLMNs are available. Only when the user makes a manual selection does the MS try to obtain normal service on the VPLMN.3. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes "Forbidden PLMNs" and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   1.1 HPLMN;

   1.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.4 Other PLMN/access technology combinations with received high quality signal in random order;

   1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the forbidden LAI and PLMN lists.

3. TS 23.122, 4.4.3.1.2

NOTE: TS 31.102 defines the USIM fields

6.1.1.32.3 Test purpose

1. To verify that the selected PLMN at switch-on is the HPLMN
2. To verify that in Manual Network Selection Mode Procedure the UE tries to obtain service on a VPLMN if and only if the user selects it manually
3. To verify that the UE is able to obtain normal service on a PLMN which is neither the better nor a prefered PLMN.

6.1.1.32.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

PLMN 1 is the HPLMN (i.e. IMSI). There is no RPLMN stored in the USIM (i.e. field EF_{BCCH}).

PLMN 2 is not contained in any preferred PLMN list on the USIM.

PLMN 3 is contained in the UPLMN selector list on the USIM and has a different MCC-MNC from PLMN 1.

The UE is equipped with a USIM containing default values except for those values listed in table [FFS].

Parameters changed from the default values in table 6.1.3.1 and table [FFS].

Parameter	Unit	Cell 1			Cell 2
		T1	T2	T3	
UTRA RF Channel Number		UARFCN 1			UARFCN 2
$\hat{I}_{or}/I_{oc}$	dB	-4.74	-	0.02	-7.25
CPICH_Ec/Io	dB	-16	OFF	-13	-18
CPICH RSCP	dBm	-85	-	-80	-87
Qqualmin	dB	-20	-	-20	-20
Qrxlevmin	dBm	-100	-	-100	-100
Squal	dB	4	-	7	2
Srxlev	dBm	15	-	20	13
PLMN		PLMN 1	-	PLMN 3	PLMN 2

Test procedure

a) The SS activates cells 1 and 2 with T1 defined parameters.

b) The UE is switched on.

c) PLMN 1 is selected

d) The SS waits for RRC CONNECTION REQUEST from the UE. A complete Location Update is done.

e) Cell 1 is switched off as described for T2.

f) The SS waits to see if there is any RRC CONNECTION REQUEST from the UE

g) Cell 1 is switched on and set according to T3

h) The SS waits to see if there is any RRC CONNECTION REQUEST from the UE

i) PLMN 2 is selected manually

j) The SS waits for RRC CONNECTION REQUEST from the UE. A complete Location Update is done.

k) Cell 2 is switched off

l) The SS waits to see if there is any RRC CONNECTION REQUEST from the UE

6.1.1.~~3~~2.5 Test Requirements

1) In step d), there shall be a response on Cell 1 within 2 min. The selected PLMN shall be PLMN 1.

2) In step f), there shall be no response from the UE within 2 min.

3) In step h), there shall be no response from the UE within 2 min.

4) In step j), there shall be a response on Cell 2 within 2 min. The selected PLMN shall be PLMN 2.

5) In step l), there shall be no response from the UE within 2 min.

[Editor's note: The time 2 min is taken from the GSM 11.10-1, test case 26.3.4]

6.1.1.4 PLMN selection of RPLMN, HPLMN, UPLMN and OPLMN; Automatic mode

6.1.1.4.1 Definition

Test to verify that in Automatic Network Selection Mode, the UE selects PLMNs in a prioritized order. Forbidden PLMNs shall not be selected. If available, the RPLMN shall be selected at switch-on, otherwise the list shall include in priority order HPLMN, User-PLMN and Operator-PLMN. The last priority in the list is "Other PLMN/access technology combinations" which is not included in this test.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

6.1.1.4.2 Conformance requirement

1. At switch on, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and attempts to perform a Location Registration. The MS shall start its search using the access technology type stored in the RPLMN Last Used Access Technology data field on the SIM. If the RPLMN Last Used Access Technology is not available then an MS capable of GSM access technology shall start its search using GSM access technology.

   On recovery from lack of coverage, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and, if necessary attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Automatic Network Selection Mode Procedure:

The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

2.1 HPLMN (if not previously selected);

2.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

2.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

2.4 Other PLMN/access technology combinations with received high quality signal in random order

2.5 Other PLMN/access technology combinations in order of decreasing signal quality

If successful registration is achieved, the MS indicates the selected PLMN.

If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in a forbidden LAI list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

6.1.1.4.3 Test purpose

1. To verify that if available, the RPLMN is selected at switch-on.
2. To verify that in Automatic Network Selection Mode Procedure, the UE selects the RPLMN, HPLMN, UPLMN and OPLMN in a prioritized order.
3. To verify that forbidden PLMNs are not selected.

6.1.1.4.4 Method of test

Initial conditions

The UE is in automatic mode.

MCC of HPLMN shall be different from other PLMNs in the network to avoid periodic search for HPLMN.

All Radio Access Technology USIM fields and cells are UTRAN.

Parameters changed from the default values in table 6.1.3.1.

Cell	PLMN
Cell 1	PLMN 1
Cell 2	PLMN 2
Cell 3	PLMN 3
Cell 4	PLMN 4
Cell 5	PLMN 5
Cell 6	PLMN 6

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN
EF_{LOCI}		PLMN 1
$EF_{HPLMNwAcT}$	1st	PLMN 2
$EF_{PLMNwACT}$	1st	PLMN 3
	2nd	PLMN 4
$EF_{OPLMNwACT}$	1st	PLMN 5
	2nd	PLMN 6
EF_{FPLMN}	PLMN 3	

NOTE: PLMN 3 is forbidden.

Test procedure

a) The SS activates cells 1-6 and monitors the cells for random access requests from the UE

b) The UE is switched on

c) The SS waits for random access requests from the UE

d) Cell 1 is switched off

e) The SS waits for random access requests from the UE

f) Cell 2 is switched off

g) The SS waits for random access requests from the UE

i) Cell 4 is switched off

j) The SS waits for random access requests from the UE

k) Cell 5 is switched off

l) The SS waits for random access requests from the UE

m) Cell 6 is switched off

6.1.1.4.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 1 within [FFS seconds].

2) In step e), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN 2 within [FFS seconds].

3) In step g), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN 4 within [FFS seconds].

4) In step j), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN 5 within [FFS seconds].

5) In step l), the response from the UE shall be on Cell 6. The displayed PLMN shall be PLMN 6 within [FFS seconds].

6) After step m), the UE shall inform within [FFS seconds] that only limited service is possible

6.1.1.5 PLMN selection of “Other PLMN / access technology combinations”; Automatic mode

6.1.1.5.1 Definition

Test to verify that in Automatic Network Selection Mode, the UE selects PLMNs in a prioritized order. Forbidden PLMNs shall not be selected. In this test are only considered “Other PLMN/access technology combinations” in the priority list.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

6.1.1.5.2 Conformance requirement

1. At switch on, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and attempts to perform a Location Registration. The MS shall start its search using the access technology type stored in the RPLMN Last Used Access Technology data field on the SIM. If the RPLMN Last Used Access Technology is not available then an MS capable of GSM access technology shall start its search using GSM access technology.

   On recovery from lack of coverage, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and, if necessary attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

   2.1 HPLMN (if not previously selected);

   2.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

   2.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

   2.4 Other PLMN/access technology combinations with received high quality signal in random order

   2.5 Other PLMN/access technology combinations in order of decreasing signal quality

   If successful registration is achieved, the MS indicates the selected PLMN.

   If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

   If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in a forbidden LAI list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

NOTE: TS 31.102 defines the USIM fields

6.1.1.5.3 Test purpose

1. To verify that in Automatic Network Selection Mode Procedure, the UE selects "Other PLMN/access technology combinations" in a prioritized order according to conformance requirement 2.4 and 2.5.
2. To verify that forbidden PLMNs are not selected.

6.1.1.5.4 Method of test

Initial conditions

The UE is in automatic mode.

MCC of HPLMN shall be different from other PLMNs in the network to avoid periodic search for HPLMN.

All Radio Access Technology USIM fields and cells are UTRAN.

Parameters changed from the default values in table 6.1.3.1.

Cell	*CPICH_Ec/Io [dB]*	PLMN
Cell 1	-15	PLMN 6
Cell 2	-15	PLMN 7
Cell 3	-15	PLMN 8
Cell 4	-16	PLMN 9
Cell 5	-17	PLMN 10
Cell 6	-18	PLMN 11

NOTE: Cell 1 is OPLMN 2nd priority. HQ signal [FFS] is on Cell 2-3 but not on Cell 4-6.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN
EF_{LOCI}		PLMN 1
$EF_{HPLMNwAcT}$	1st	PLMN 2
$EF_{PLMNwACT}$	1st	PLMN 3
	2nd	PLMN 4
$EF_{OPLMNwACT}$	1st	PLMN 5
	2nd	PLMN 6
EF_{FPLMN}	PLMN 10	

NOTE: PLMN 10 is forbidden.

Test procedure

a) The SS activates cells 1-6 and monitors the cells for random access requests from the UE

b) The UE is switched on

c) The SS waits for random access requests from the UE

d) Cell 1 is switched off

e) The SS waits for random access requests from the UE

f) The cell associated to the currently shown PLMN shall be switched off

g) The SS waits for random access requests from the UE

h) The cell associated to the currently shown PLMN shall be switched off

i) The SS waits for random access requests from the UE

j) Cell 4 is switched off

k) The SS waits for random access requests from the UE

l) Cell 6 is switched off

6.1.1.5.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be be PLMN 6 within [FFS seconds].

2) In step e), the response from the UE shall be on either Cell 2 or 3. The displayed PLMN shall be the one associated with the cell on which the response was received and shall be shown within [FFS seconds].

3) In step g), the response from the UE shall be on either Cell 2 or 3 (excluding the cell in step 2). The displayed PLMN shall be the one associated with the cell on which the response was received and shall be shown within [FFS seconds].

4) In step i), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN 9 within [FFS seconds].

5) In step k), the response from the UE shall be on Cell 6. The displayed PLMN shall be PLMN 11 within [FFS seconds].

6) After step l), the UE shall inform within [FFS seconds] that only limited service is possible

6.1.1.3 Automatic mode PLMN selection

6.1.1.3.1 Definition

Test to verify that in Automatic Network Selection Mode, the UE selects PLMNs in a prioritized order and that a "PLMN not allowed" or a PLMN with "LA not allowed" is not selected.

6.1.1.3.2 Conformance requirement

1. At switch on, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and attempts to perform a Location Registration. The MS shall start its search using the access technology type stored in the RPLMN Last Used Access Technology data field on the SIM. If the RPLMN Last Used Access Technology is not available then an MS capable of GSM access technology shall start its search using GSM access technology.

   On recovery from lack of coverage, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and, if necessary attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN. If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

   1.1 HPLMN (if not previously selected);

1.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

1.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

1.4 Other PLMN/access technology combinations with received high quality signal in random order

1.5 Other PLMN/access technology combinations in order of decreasing signal quality

If successful registration is achieved, the MS indicates the selected PLMN.

If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in a forbidden LAI list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

3. To prevent repeated attempts to have roaming service on a not allowed LA, when the MS is informed that an LA is forbidden, the LA is added to a list of "forbidden LAs for roaming" which is stored in the MS. This list is deleted when the MS is switched off or when the SIM is removed. Such area restrictions are always valid for complete location areas independent of possible subdivision into GPRS routing areas.

   If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

3. TS 23.122, 3.1

NOTE: TS 31.102 defines the USIM fields

6.1.1.3.3 Test purpose

1. To verify that the selected PLMN at switch-on is the HPLMN if no RPLMN exists

2. To verify that in Automatic Network Selection Mode Procedure the UE selects PLMNs in a prioritized order.

3. To verify that a PLMN with LA rejection “LA not allowed” or “PLMN not allowed” is not selected6.1.1.3.4 Method of test

Initial conditions

The UE is in automatic mode.The SIM fields $EF_{UPLMNsel}$ (UPLMN selector), $EF_{OPLMNsel}$ (OPLMN selector) and $EF_{PHPLMNAT}$ (Preferred HPLMN Access Technology) shall only contain UTRAN as the Access Technology Identifier.

The SIM fields $EF_{UPLMNsel}$ and $EF_{OPLMNsel}$ shall only contain one PLMN as indicated in the table.

PLMN 1 is the HPLMN (i.e. IMSI). There is no RPLMN stored in the SIM (i.e. field EF_{BCCH}).

The UE is equipped with a SIM containing default values except for those values listed in table [FFS].

Parameters changed from the default values in table 6.1.3.1 and table [FFS]. **Parameter**	**Unit**	**Cell 1**	**Cell 2**	**Cell 3**	**Cell 4**	**Cell 5**
$\hat{I}_{or}/I_{oc}$	dB	2.5	4.5	7.5		
CPICH_Ec/Io	dB	-18	-16	-13	[FFS: High Q signal]	[FFS: Not high Q signal]
CPICH RSCP	dBm	-78	-76	-73		
Qqualmin	dB	-20	-20	-20		
Qrxlevmin	dBm	-100	-100	-100		
Squal	dB	2	4	7		
Srxlev	dBm	22	24	27		
PLMN		PLMN 1	PLMN 2	PLMN 3	PLMN 4	PLMN 5
SIM field for storing PLMN		EF_{IMSI} (IMSI)	$EF_{UPLMNsel}$ (UPLMN selector)	$EF_{OPLMNsel}$ (OPLMN selector)	Other PLMN than on the SIM	Other PLMN than on the SIM

Test procedure

a) The SS activates cells 1-4

b) The UE is switched on.

c) The SS waits until the selected PLMN is displayed

d) The SS sends SYSTEM INFORMATION to the UE to inform it that PLMN 1 belongs to a "LA not allowed"

e) Step c-d) is repeated except that in d) the UE is informed that PLMN 2 belongs to a "PLMN not allowed"

f) Step c-d) is repeated except that in d) the UE is informed that PLMN 3 belongs to a "LA not allowed"

g) Step c-d) is repeated except that in d) the UE is informed that PLMN 4 belongs to a "LA not allowed"

h) Step c-d) is repeated except that in d) the UE is informed that PLMN 5 belongs to a "LA not allowed"

i) The SS waits until "Emergency calls only" is shown

6.1.1.3.5 Test Requirements

1) In step c), the selected PLMN shall be displayed as PLMN 1 within 2 min.

2) In step e), the selected PLMN shall be displayed as PLMN 2 within 2 min.

3) In step f), the selected PLMN shall be displayed as PLMN 3 within 2 min.

4) In step g), the selected PLMN shall be displayed as PLMN 4 within 2 min.

5) In step h), the selected PLMN shall be displayed as PLMN 5 within 2 min.

6) In step i), the UE shall say "Emergency calls only" within 2 min.

[Editor's note: The time 2 min is taken from the GSM 11.10-1, test case 26.3.4][Editor's note: It is assumed that the displayed PLMN reflects the cell camped on and that it is not necesary to test that the UE actually camps on that cell]

6.1.1.64 UE will transmit only if PLMN available

6.1.1.64.1 Definition

Test to verify that the UE will not produce any RF transmission if no PLMN is available.

6.1.1.64.2 Conformance requirement

The UE shall monitor the DPCCH quality in order to detect a loss of the signal on Layer 1, as specified in TS 25.214. The thresholds Q_{out} and Q_{in} specify at what DPCCH quality levels the UE shall shut its power off and when it may turn its transmitter on respectively. The thresholds are not defined explicitly, but are defined by the conditions under which the UE shall shut its transmitter off and turn it on.

References

1. TS 25.101, 6.4.4 and TS 25.214, 4

6.1.1.64.3 Test purpose

1. To verify that the UE does not give any “Service indication” when no PLMN is available
2. To verify that the UE will not produce any RF transmission when no PLMN is available

6.1.1.64.4 Method of test

Initial conditions

Parameters changed from the default values in table 6.1.3.1 and table [FFS].

Parameter	Unit	Cell 1	Cell 2	Cell 3
$\hat{I}_{or}/I_{oc}$	dB	7.5	4.5	2.5
CPICH_Ec/Io	dB	-13	-16	-18
CPICH RSCP	dBm	-73	-76	-78
Qqualmin	dB	-20	-20	-20
Qrxlevmin	dBm	-100	-100	-100
Squal	dB	7	4	2
Srxlev	dBm	27	24	22

Test procedure

a) The SS activates the cells 1-3 and monitors them for random access requests from the UE

b) The UE is switched on.

c) The SS waits for random access request from the UE

d) Cells 1-3 are switched off

e) The SS shall wait 20 sec. to allow the UE to detect the loss of cells

[Editor’s note: 20 sec. is taken from the equiv. GSM test case and must be confirmed]

f) By MMI, an attempt to originate a call is made

g) By MMI, an attempt to originate an emergency call is made (only if UE supports speech)

6.1.1.64.5 Test Requirements

1) In step c), there shall be a response on cell 1 within 2 min.

2) In step f) and g), the UE shall not produce any RF output, neither give any “service indication”.

[Editor’s note: 2 min. is taken from the equiv. GSM test case and must be confirmed]

~~6.1.2 Radio access mode selection and reselection~~

~~6.1.2.1 UE selects radio access mode (FDD/TDD) on request by the servicing network~~

~~Tests to verify that the UE selects the radio access mode requested by the servicing network.~~

~~FFS~~

6.1.2~~3~~ Cell selection and reselection

6.1.2~~3~~.1 Cell selection

6.1.2~~3~~.1.1 Definition

Test to verify that the UE is capable of selecting a cell that fulfils the “suitable” cell criteria. The test covers both Initial and Stored cell selection.

6.1.2~~3~~.1.2 Conformance requirement

1. Cell selection procedure to find a suitable cell to camp on:

   1.1 Create a candidate list of potential cells to camp on, using:

   1.1.1 Initial Cell Selection procedure; or

   1.1.2 Stored Information Cell Selection procedure

   1.2 For each cell on the candidate list, measure the quality value, $Q_{meas,LEV}$

   1.3 For each cell on the candidate list calculate the cell selection value, Squal and Srxlev

   1.4 Rank the cells and select the best cell

   1.5 Select the cell that fulfils the criteria $Q_{map,n} > Q_{map,s} + Q_{offsets,n}$ best. Check if the selected cell fulfils all requirements for a suitable cell. If so, choose this cell to camp on. If this cell does not fulfil all requirements for a suitable cell, this cell and all cells on the same frequency shall be removed as candidates for cell selection in case the barred cell does not accept intra-frequency cell selection and re-selection. On the other hand, in case the barred cell accepts intra-frequency cell selection and re-selection, only the barred cell shall be removed as candidate for cell selection, and step 1.4 shall be repeated for the remaining cells.

2. A suitable cell must fulfil all the following requirements.

   2.1 The cell is part of the selected PLMN.

   2.2 The cell is not barred [details are FFS].

   2.3 The cell is not part of a forbidden registration area [details are FFS].

   2.4 The cell selection criteria are fulfilled (Squal>0 and Srxlev>0)

   2.5 The SoLSA criteria are fulfilled [FFS].

   2.6 The cell is not an operator-only cell, unless the UE has those access rights.

3. The UE shall be able to calculate correctly the cell selection criteria, Squal and Srxlev

References

1. TS 25.304, 5.2.2.1.1
2. TS 25.304, 4.3
3. TS 25.304, 5.2.2.1.2

6.1.23.1.3 Test purpose

Test to verify that the UE selects the correct cell according to the requirements for cell selection:

1. To verify that the UE selects suitable cells in descending order of received signal strength Q_{meas} according to conformance requirement 1.
2. To verify that:

   1.1 The UE does not select a cell of a PLMN, which is not the selected PLMN.

   1.2 The UE does not select a cell, which is barred.

   1.3 The UE does not select a cell with S<0.

   The conformance requirement 2.3 (forbidden registration area), 2.5 (SolSA) and 2.6 (operator-only cell) is not covered by the test.

6.1.23.1.4 Method of test

Initial conditions

The relative RF signal to total interference ratio at the UE (*CPICH_Ec/Io*) between the cells shall be:

Cell 1 (barred) > Cell 2 (S<0) > Cell 3 > Cell 4

Cell 1 must be on a different frequency than the other cells because it is barred (conformance requirement 1.4).

Parameters changed from the default values in table 6.1.3.1.

Parameter	Unit	Cell 1	Cell 2	Cell 3	Cell 4
UTRA RF Channel Number		UARFCN 1	UARFCN 2	UARFCN 2	UARFCN 2
$\hat{I}_{or}/I_{oc}$	dB	5.9	7.5	4.5	2.5
CPICH_Ec/Io	dB	-11	-13	-16	-18
CPICH RSCP	dBm	-74	-73	-76	-78
Qqualmin	dB	-20	-5	-20	-20
Qrxlevmin	dBm	-100	-100	-100	-100
Squal	dB	9	-8	4	2
Srxlev	dBm	26	27	24	22
CellBarred		1	0	0	0

Test procedure

a) The SS activates the cells 1-4 and monitors cell 2, 3 and 4 for random access requests from the UE

b) The UE is switched on.

c) The SS waits for random access request from the UE

d) The UE is switched off.

e) The SS monitors cell 1, 2 and 3 for random access requests from the UE.

f) The UE is switched on.

g) The SS waits to see if there is any random access requests from the UE.

h) The stored information cell selection list in the UE is deleted and the UE is switched off.

i) Step a-g) is repeated except that Cell 1 is set to belong to a different PLMN instead of being barred.

j) Step a-g) is repeated except that Qrxlevmin is set to -70 instead of being barred. Srxlev will be negative.

6.1.23.1.5 Test requirements

1) In step c), the first response from the UE shall be on cell 3 within 33 seconds There shall be no response from the UE on cell 2 (Initial cell selection)

[Editor's note: The 33 seconds is taken from GSM as there is no requirement in UMTS to the initial cell selection time. UMTS should not have worse performance than GSM]

2) In step g), there shall be no response from the UE on cell 1 or 2 within 33 seconds (Stored cell selection)

[Editor's note: The 33 seconds is taken from GSM as there is no requirement in UMTS to the stored cell selection time. UMTS should not have worse performance than GSM]

3) In i) the responses shall be as in previous test requirements 1) and 2).

4) In j) the responses shall be as in previous test requirements 1) and 2).

6.1.23.2 Cell selection on release of DCCH and DTCH

FFS.

6.1.23.3 Cell reselection

6.1.23.3.1 Definition

Test to verify that the UE performs the cell reselection correctly for intra/inter-frequency cells if the serving cell becomes barred or S<0.

6.1.23.3.2 Conformance requirement

1. While camped on a cell of the selected PLMN ("camped normally"), the UE may need to select a different cell ("normal cell reselection" state). The following events trigger a cell reselection:

   1.1 Time for cell re-selection evaluation

   1.2 Cell selection criterion S is not fulfilled

   1.3 Cell has become barred or forbidden

   In case 1.2 and 1.3, the parameters Qhyst and Treselection shall not be considered in the criteria.

2. The UE shall perform a cell reselection if a non-serving cell is evaluated to be better than the serving cell. The best cell is the cell with the highest cell-ranking criterion R and (Squal>0, Srxlev>0). The UE shall reselect the new cell, if the cell reselection criteria are fulfilled during a time interval Treselection.

3. Non-suitable cells (Squal>0 or Srxlev>0): If the best cell according to cell reselection criteria, does not fulfil all requirements for a suitable cell, that cell, together with all cells on that frequency shall be removed as candidate for cell re-selection.

4. Cell re-selection is correct if within Nt [FFS] seconds the UE re-reselects a new cell, which fulfils the cell re-selection criteria and stays steady on that cell until the channel conditions are changed again.

6.1.2~~3~~.3.3 Test purpose

1. To verify that the UE meets conformance requirement 1.2 and 1.3
2. To verify that the UE meets conformance requirement 2
3. To verify that the UE meets conformance requirement 3

NOTE: Interfrequency cell reselection caused by a better cell being found (conformance requirement 1.1 and 4) is tested in TS 34.121, 8.2.3.2 Cell re-selection multi carrier multi cell case. Conformance requirement 4 applies also to the cell reselection criteria S<0.

6.1.2~~3~~.3.4 Method of test

Initial conditions

Treselection, Qhyst, Qoffset, TEMP_OFFSET and PENALTY_TIME are not used, so the cell-ranking criterion R equals Q.

The relative RF signal to total interference ratio at the UE (*CPICH_Ec/Io*) between the cells shall be:

Cell 1 > Cell 2 > Cell 3 > Cell 4

Cells 1 and 2 are on a different frequency than the other cells (Cell 1 will become barred and therefore both cells 1 and 2 removed from the candidate list)

Parameters changed from the default values in table 6.1.3.1.

Parameter	Unit	Cell 1	Cell 2	Cell 3	Cell 4
UTRA RF Channel Number		UARFCN 1	UARFCN 1	UARFCN 2	UARFCN 2
$\hat{I}_{or}/I_{oc}$	dBm	4.4	2.4	-5.3	-7.3
CPICH_Ec/Io	dB	-13	-15	-17	-19
CPICH RSCP	dBm	-76	-78	-85	-87
Qqualmin	dB	-20	-20	-20	-20
Qrxlevmin	dBm	-100	-100	-100	-100
Squal	dB	7	5	3	1
Srxlev	dBm	24	22	15	13

Test procedure

a) The SS activates cells 1, 2, 3 and 4. The SS monitors cells 1, 2 and 3 for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access request from the UE

d) The SS sets Cell 1 to be barred

e) The SS waits for random access request from the UE

f) The stored information cell selection list in the UE is deleted and the UE is switched off.

g) Step a-e) is repeated except that in step d), Qqualmin is increased to -10 dB, so S will become negative instead of the cell being barred while maintaining the same RF level.

f) The stored information cell selection list in the UE is deleted and the UE is switched off.

h) Step a-e) is repeated except that in step d), Cell 1 shall be on another PLMN while maintaining the same RF level.

6.1.23.3.5 Test requirements

1) In step c), the UE shall respond on Cell 1 within 33 seconds

[Editor's note: The 33 seconds is taken from GSM as there is no requirement in UMTS to the initial cell selection time. UMTS should not have worse performance than GSM]

2) In step e), the UE shall respond on Cell 3 within 12 seconds

NOTE 1: 1280 msec. for DRX cycle + 1280 msec. for system info scheduling + 5 sec. actual reselection time + 1280 msec. for reading neighbour BCCH + 25%. Allow 12 sec.

3) The responses in step g) shall first be a response on Cell 1 and then a response on Cell 2.

4) The responses in step h) shall first be a response on Cell 1 and then a response on Cell 3.

6.1.23.4 Cell reselection using reselection timing parameters

6.1.23.4.1 Definition

Test to verify that the UE performs the cell reselection correctly if system information parameters Qoffset, Qhyst, TEMP_OFFSET, PENALTY_TIME and Treselection are applied for non-hierarchical cell structures.

6.1.23.4.2 Conformance requirement

1. While camped on a cell of the selected PLMN ("camped normally"), the UE may need to select a different cell ("normal cell reselection" state). The following events trigger a cell reselection:

   1.1 Time for cell re-selection evaluation

   1.2 Cell selection criterion S is not fulfilled

   1.3 Cell has become barred or forbidden

   In case 1.2 and 1.3, the parameters Qhyst and Treselection shall not be considered in the criteria.

2. The UE shall perform a cell reselection if a non-serving cell is evaluated to be better than the serving cell. The best cell is the cell with the highest cell-ranking criterion R and (Squal>0, Srxlev>0). The UE shall reselect the new cell, if the cell reselection criteria are fulfilled during a time interval Treselection.

3. The cell-ranking criterion R is calculated using the Qoffset, Qhyst, TEMP_OFFSET, PENALTY_TIME and Treselection parameters.

4. Cell re-selection is correct if within Nt [FFS] seconds the UE re-reselects a new cell, which fulfils the cell re-selection criteria and stays steady on that cell until the channel conditions are changed again.

2. TS 25.304, 5.2.2.4.5
3. TS 25.304, 5.2.2.4.5
4. TS 25.133, 4.3.2.1.2

6.1.2~~3~~.4.3 Test purpose

1. To verify conformance requirement 1.1
2. To verify conformance requirement 2
3. To verify conformance requirement 3

NOTE: Interfrequency cell reselection caused by a better cell being found (conformance requirement 1.1 and 4) is tested in TS 34.121, 8.2.3.2 Cell re-selection multi carrier multi cell case. Conformance requirement 4 applies also to the cell reselection criteria S<0.

6.1.2~~3~~.4.4 Method of test

Initial conditions

Serving cell: T1: Cell 1, T2: Cell 2, T3: Cell 3

Parameters changed from the default values in table 6.1.3.1.

Parameter	Unit	Cell 1		Cell 2		Cell 3	Cell 4
		T1	T2	T1	T2	T3	T3
UTRA RF Channel Number	dB	UARFCN 1		UARFCN 1		UARFCN 2	UARFCN 2
$\hat{I}_{or}/I_{oc}$	dB	-3.71	0.06	-5.71	3.06	5.87	5.87
CPICH_Ec/Io	dB	-16		-18	-13	-11	-11
CPICH RSCP	dBm	-84	-80	-86	-77	-74	-74
Qqualmin	dB	-20		-20		-20	-20
Qrxlevmin	dBm	-100		-100		-100	-100
Squal	dB	4		2	7	9	9
Srxlev	dBm	16	20	14	13	26	26
$Qhyst_s$	dB	4			0		
$Treselection_s$	sec	10			10		
$PENALTY\_TIME_n$	sec	-			-	40	60
$TEMP\_OFFSET_n$	dB	-			-	5	5
$Qoffset_{s,n}$	dB	n=1,2,3,4: 0			n=3,4: 1		
R_s	dB	-12			-13		
R_n	dB	n=2: -18	n=2: -13		n=3,4: -17 to -12		

Note 1: The initial cell selection, after the UE has been switched on, is based on a comparison of the active cells' Q value, not R.

Test procedure

a) The SS activates cells 1 and 2 with T1 defined parameters. The UE is not paged on Cell 1. The SS monitors Cell 2 for random access requests from the UE.

b) The UE is switched on.

c) The SS waits to see if there is any random access request from the UE

d) The SS increases the level of Cell 2 to –13 dB as described for T2.

e) The SS waits for random access request from the UE

f) The SS sets Qhyst to 2 dB so R_s will be –14 dB

g) The SS waits for random access request from the UE

h) When the SS receives a response on Cell 2, the SS stops paging in that cell. The SS activates cells 3 and 4 as described for T3 and continuously pages the UE on these cells. The SS monitors cells 3 and 4 for random access requests from the ~~MS~~UE.

i) The SS waits for random access request from the UE

6.1.2~~3~~.4.5 Test Requirements

1) In step c), there shall be no response from the UE on Cell 2 within 50 seconds

[Editor's note: The 50 seconds is taken from GSM as there is no requirement in UMTS to the initial cell selection time. UMTS should not have worse performance than GSM]

2) In step e), there shall be no response from the UE on Cell 2 within 50 seconds

3) In step g), the UE shall respond on Cell 2 within 20 seconds

NOTE 1: Actual reselection time of 5 sec. (due to changed RF conditions, conformance req. 4) + Treselection time of 10 sec. + 25%. Allow 20 sec.

4) In step i), there shall be no response from the UE on Cell 3 within 48 seconds of activating the cells but the UE shall respond on Cell 3 within 75 seconds The response on Cell 3 shall be before any response on Cell 4.

NOTE 2: Minimum time of 48 sec. set by PENALTY_TIME (cell 3) + Treselection time - 2 sec. tolerance. Maximum time of 75 sec. set by PENALTY_TIME (cell 3) + Treselection time + 1280 msec. for DRX cycle + 1280 msec. for system info scheduling + 5 sec. actual reselection time + 1280 msec. for reading neighbour BCCH + 25%.

6.1.2~~3~~.5 HCS Cell reselection ~~Cell reselection if HCS is used~~

6.1.2.5.1 Definition

Test to verify that the UE performs the cell reselection correctly for hierarchical cell structures. This shall be done according to the HCS priority, the received signal quality value Q and the quality level threshold criterion H.

6.1.2.5.2 Conformance requirement

1. The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is calculated from the Q, Qhcs, TEMP_OFFSET and PENALTY_TIME parameters.

2. The UE shall perform a cell re-selection if a non-serving cell is evaluated to be better than the serving cell. The best cell is the cell with the highest R value and (Squal > 0, Srxlev > 0) among those cells that have the highest

HCS_PRIO among those cells that fulfil the criterion H >= 0. Note that this rule is not valid when UE high-mobility is detected.

The UE shall reselect the new cell, if the cell reselection criteria are fulfilled during a time interval Treselection.

References

1,2. TS 25.304, 5.2.2.4.5

6.1.2.5.3 Test purpose

1. Verify that the UE ranks cells based on their HCS priority and Q value
2. Verify that the UE ignores cells with H<0 for reselection

6.1.2.5.4 Method of test

Initial conditions

Parameters changed from the default values in table 6.1.3.1.

Parameter	Unit	Cell 1	Cell 2		Cell 3	
		T1-3	T1-2	T3	T1	T2-3
$\hat{I}_{or}/I_{oc}$	dBm	7.5	4.5		2.5	
CPICH Ec/Io	dB	-13	-16		-18	
CPICH RSCP	dBm	-73	-76		-78	
Qqualmin	dB	-20	-20		-20	
Qrxlevmin	dBm	-100	-100		-100	
Squal	dB	7	4		2	
Srxlev	dBm	27	24		22	
HCS priority		6	7		7	
Qhcs	dB	-30	-10	-30	-10	-30
H	dB	17	-6	14	-8	12

NOTE: Squal, Srxlev and H are calculated internally in the UE and are just for information.

Test procedure

a) The SS activates the cells 1-3 according to T1 and monitors the cells for random access requests from the UE

b) The UE is switched on.

c) The SS waits for random access request from the UE

d) The parameters are changed as described for T2

e) The SS waits for random access request from the UE

f) The parameters are changed as described for T3

g) The SS waits for random access request from the UE

6.1.2.5.5 Test requirements

1) In step c), the UE shall respond on cell 1 within [FFS: 33 seconds].

2) In step e), the UE shall respond on cell 3 within [FFS: 33 seconds]. There shall be no response from the UE on cell 2

3) In step g), the UE shall respond on cell 2 within [FFS: 33 seconds]. There shall be no response from the UE on cell 1.

6.1.2.6 HCS Cell reselection using reselection timing parameters

6.1.2.6.1 Definition

Test to verify that the UE performs the cell reselection correctly for hierarchical cell structures using TEMP_OFFSET and PENALTY_TIME.

6.1.2.6.2 Conformance requirement

1. The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is calculated from the Q, Qhcs, TEMP_OFFSET and PENALTY_TIME parameters.

2. TEMP_OFFSET shall only be used in the calculation of H if the cells have different HCS priorities. The timer that runs for a period of PENALTY_TIME, is started when $Q_{map,n} > Qhcs_n$. In case of identical HCS priorities, TEMP_OFFSET is not used.

3. The UE shall perform a cell re-selection if a non-serving cell is evaluated to be better than the serving cell. The best cell is the cell with the highest R value and (Squal > 0, Srxlev > 0) among those cells that have the highest HCS_PRIO among those cells that fulfil the criterion H >= 0. Note that this rule is not valid when UE high-mobility is detected.

   The UE shall reselect the new cell, if the cell reselection criteria are fulfilled during a time interval Treselection.

References

1,2,3. TS 25.304, 5.2.2.4.5

6.1.2.6.3 Test purpose

1. Verify that the UE ignores cells with H<0 for reselection

2. Verify that the timer runs for a period of PENALTY_TIME and is started when $Q_{map,n} > Qhcs_n$ if serving and neighbour cell have different HCS priorities.

3. Verify that the UE reselects a new cell only if the cell reselection criteria are fulfilled during a time interval Treselection.

6.1.2.6.4 Method of test

Initial conditions

Parameters changed from the default values in table 6.1.3.1.

Parameter	Unit	Cell 1	Cell 2		Cell 3	
		T1-2	T1	T2	T1	T2
$\hat{I}_{or}/I_{oc}$	dB	7.5	4.5		2.5	
CPICH_Ec/Io	dB	-13	-16		-18	
CPICH RSCP	dBm	-73	-76		-78	
Qqualmin	dB	-20	-20		-20	
Qrxlevmin	dBm	-100	-100		-100	
Squal	dB	7	4		2	
Srxlev	dBm	27	24		22	
HCS priority		2	4		7	
Qhcs		-20	-10	-20	-10	-20
TEMP_OFFSET		0	10		10	
H		7	-6	-6 -> 4	-8	-8 -> 2
PENALTY_TIME	sec		40		60	
Treselection	sec	10				

NOTE: Squal, Srxlev and H are calculated internally in the UE and are just for information.

Test procedure

a) The SS activates the cells 1-3 according to T1 and monitors cell 1, 2 and 3 for random access requests from the UE

b) The UE is switched on.

c) The SS waits for random access request from the UE

d) The parameters are changed as described for T2

e) The SS waits for random access request from the UE

6.1.2.6.5 Test requirements

1) In step c), the UE shall respond on cell 1 within [FFS: 33 seconds]. There shall be no response from the UE on cell 2 or 3.

2) In step e), there shall be no response from the UE on Cell 2 within 48 seconds of changing the parameters but the UE shall respond on Cell 2 within 75 seconds. The response on Cell 2 shall be before any response on Cell 3.

NOTE: Minimum time of 48 sec. set by PENALTY_TIME (cell 3) + Treselection time - 2 sec. tolerance. Maximum time of 75 sec. set by PENALTY_TIME (cell 3) + Treselection time + 1280 msec. for DRX cycle + 1280 msec. for system info scheduling + 5 sec. actual reselection time + 1280 msec. for reading neighbour BCCH + 25%.

6.1.2.73.6 Cell reselection due to UE rejection “LA not allowed”

6.1.2.7.13.6.1 Definition

Test to verify that a UE camping on a cell which has a “Regionally restricted service” will select a different cell in order to fullfill the normal service state. This ensures that the UE is camped on a cell from which it can reliably decode downlink data and with which it has a high probability of communications on the uplink.

6.1.2.7.23.6.2 Conformance requirement

1. In response to a registration attempt, when receiving an LU reject with cause value "LA not allowed", the UE stores this LAI in a list of "forbidden LAIs for regional provision of service", to prevent repeated attempts to

access a cell of the forbidden LA. This list is deleted when the MS is switched off or the SIM is removed. If the MS cannot find a suitable cell, the MS performs the PLMN selection procedure.

2. When the MS is camped on a cell, the LA of which belongs to the list of forbidden LA for regional provision of service, the MS is not allowed to initiate establishment of a CM connection except for an emergency call; it may respond to paging.

3. There are a number of situations in which the MS is unable to obtain normal service from a PLMN. These include:

   3.1 Failure to find a suitable cell of the selected PLMN;

   3.2 No SIM in the MS;

   3.3 A "PLMN not allowed" response to an LR;

   3.4 An "illegal MS", "illegal ME" or "IMSI unknown in HLR" response to an LR; (Any SIM in the ME is then considered "invalid".)

   Under any of these conditions, the MS attempts to camp on an acceptable cell, irrespective of its PLMN identity, so that emergency calls can be made if necessary. No LR requests are made until a valid SIM is present and either a suitable cell is found or a manual network reselection is performed.

4. The cell reselection procedure shall be triggered in the following cases:

   4.1 Time for cell re-selection evaluation;

   4.2 Cell selection criterion S is not fulfilled;

   4.3 Cell has become barred or forbidden.

   In case 4.2 and 4.3, the parameters Qhyst and Treselection shall not be considered in the criteria.

5. Non-suitable cells (Squal > 0 or Srxlev > 0)): If the best cell according to cell reselection criteria, does not fulfil all requirements for a suitable cell, that cell, together with all cells on that frequency shall be removed as candidate for cell re-selection.

6. A new LU attempt shall only be performed when a new LA (or new PLMN) is entered according to the cell reselection procedure.

References

1. TS 23.122, 3.2
2. TS 23.122, 3.4.2
3. TS 23.122, 3.5
4. TS 25.304, 5.2.2.4.1
5. TS 25.304, 5.2.2.4.4
6. TS 23.122, Table 2

6.1.2.7.3~~3.6.3~~ Test purpose

1. To verify that if an LU is rejected with cause "LA not allowed" that the LAI of that cell is written into a forbidden list which prevents the UE from performing LU onto another cell in that LA. This is verified indirectly in test purposes 2, 3 and 4.

2. To verify that cell reselection is triggered when the UE receives an LU reject with cause value "LA not allowed"

3. To verify that if no suitable cells exist, the UE will not reject a cell for camping on because that cell is part of a LA in the list of "forbidden LAIs for regional provision of service". This is verified indirectly by making the UE

attempt an emergency call and checking that the RRC CONNECTION REQUEST is transmitted on the correct cell.

4. To verify that a new LU attempt will be performed when a new LA (or new PLMN) is entered.

6.1.2.7.4~~3.6.4~~ Method of test

Initial conditions

Treselection, Qhyst, TEMP_OFFSET and PENALTY_TIME are not used.

The relative RF signal to total interference ratio at the UE (*CPICH_Ec/Io*) between the cells shall be:

Cell 1 > Cell 2 > Cell 3

Parameters changed from the default values in table 6.1.3.1 and table [FFS].

Parameter	Unit	Cell 1	Cell 2	Cell 3
$\hat{I}_{or}/I_{oc}$	dB	7.5	4.5	2.5
CPICH_Ec/Io	dB	-13	-16	-18
CPICH RSCP	dBm	-73	-76	-78
Qqualmin	dB	-20	-20	-20
Qrxlevmin	dBm	-100	-100	-100
Squal	dB	7	4	2
Srxlev	dBm	27	24	22
$Qoffset_{s,n}$	dB		4	
$R_n = Q_n - Qoffset_{s,n}$	dB		-20	
LAC		H1111	H2222	H1111
ATT		1	1	1

Test procedure

a) The SS activates cells 1 and 3. The SS monitors cells 1 and 3 for random access requests from the UE until step g) has been completed. Only idle-paging is sent on all channels.

[Editor's note: Idle paging in this case ?. The UE shall not be paged in any cell]

b) The UE is switched on.

c) The SS waits for random access request from the UE

d) When the UE performs an IMSI attach onto Cell 1 by sending a LOCATION UPDATING REQUEST, the SS shall reject it with cause "LA not allowed".

e) 30 seconds after the UE has returned to idle mode (RRC CONNECTION RELEASE after LU reject), the UE is manually commanded to set up an emergency call.

[Editor's note: The 30 seconds is taken from GSM as there is no requirement in UMTS. UMTS should not have worse performance than GSM]

f) The SS waits for RRC CONNECTION REQUEST from the UE

g) The SS rejects the CM service request from the UE, with a CM service reject message with cause value #17 (Network Failure).

NOTE: Cause values #4 (IMSI unknown in VLR) or #6 (Illegal ME) lead to unwanted behaviour of the mobile.

h) 10 seconds after the UE has returned to idle mode (channel release after CM service reject), the SS sets $Qoffset_{s,n}$ of Cell 2 to 0 so R_n becomes –16.

[Editor's note: The 10 seconds is taken from GSM as there is no requirement in UMTS. UMTS should not have worse performance than GSM]

i) The SS shall accept any LU on Cell 2.

6.1.2.7.5~~3.6.5~~ Test requirements

1) In step c), the UE shall respond on Cell 1 within 33 sec. of switch-on.

[Editor's note: The 33 seconds is taken from GSM as there is no requirement in UMTS to the initial cell selection time. UMTS should not have worse performance than GSM]

2) In step f), the UE shall access on Cell 3 within 15 seconds of being commanded to set up the emergency call.

[Editor's note: The 15 seconds is taken from GSM as there is no requirement in UMTS. UMTS should not have worse performance than GSM]

3) In step i), the UE shall reselect and access onto Cell 2 requesting an LU within 30 seconds after having activated Cell 2.

[Editor's note: The 30 seconds is taken from GSM as there is no requirement in UMTS. UMTS should not have worse performance than GSM]

6.1.2.8~~3.7~~ Cell reselection due to UE rejection "Roaming not allowed in this LA"

6.1.2.8.1~~3.7.1~~ Definition

Test to verify that a UE camping on a cell and receiving a "Roaming not allowed in this LA" will select a different cell in order to fullfill the normal service state. This ensures that the UE is camped on a cell from which it can reliably decode downlink data and with which it has a high probability of communications on the uplink.

6.1.2.8.2~~3.7.2~~ Conformance requirement

1. To prevent repeated attempts to have roaming service on a not allowed LA, when the UE is informed that an LA is forbidden, the LA is added to a list of "forbidden LAs for roaming" which is stored in the UE.
2. If the LR response "Roaming not allowed in this LA" is received, the PLMN Automatic or Manual Mode Selection Procedure is followed, depending on whether the UE is in automatic or manual mode.
3. Cell selection procedure to find a suitable cell to camp on:

   3.1 Create a candidate list of potential cells to camp on, using:

   3.1.1 Initial Cell Selection procedure; or

   3.1.2 Stored Information Cell Selection procedure

   3.2 For each cell on the candidate list, measure the quality value, $Q_{meas,LEV}$

   3.3 For each cell on the candidate list calculate the cell selection value, Squal and Srxlev

   3.4 Rank the cells and select the best cell

   3.5 Select the cell that fulfils the criteria $Q_{map,n} > Q_{map,s} + Q_{offsets,n}$ best. Check if the selected cell fulfils all requirements for a suitable cell. If so, choose this cell to camp on. If this cell does not fulfil all requirements for a suitable cell, this cell and all cells on the same frequency shall be removed as candidates for cell selection in case the barred cell does not accept intra-frequency cell selection and re-selection. On the other hand, in case the barred cell accepts intra-frequency cell selection and re-selection, only the barred cell shall be removed as candidate for cell selection, and step 3.4 shall be repeated for the remaining cells.
4. A suitable cell must fulfil certain requirements, among those:

- the cell is not part of a forbidden registration area [details are FFS].

5. A new LU attempt shall only be performed when a new LA (or new PLMN) is entered according to the cell reselection procedure.

References

1. TS 23.122, 3.1
2. TS 23.122, 4.4.5 and 4.3.3 L3
3. TS 25.304, 5.2.2.1.1
4. TS 25.304, 4.3
5. TS 23.122, Table 2

6.1.2.8.3~~3.7.3~~ Test purpose

1. To verify that if an LU is rejected with cause "Roaming not allowed in this LA" that the LAI of that cell is written into a forbidden list which prevents the UE from camping onto any cell in that LA.
2. To verify that if the UE has received the cause "Roaming not allowed in this LA", in response to a LU attempt, the Network Selection Procedure is initiated. This is verified indirectly by test purpose 3, in that the new LA is accessed as part of cell selection.
3. To verify that if an LU is rejected, when attempting LU in a LA with LAI = LAI1, with cause "Roaming not allowed in this LA" and only cells of the selected PLMN are available, the UE will only camp and attempt LU in any LA with LAI <> LAI1.
4. To verify that a new LU attempt will be performed when a new LA (or new PLMN) is entered.

6.1.2.8.4~~3.7.4~~ Method of test

Initial conditions

The relative RF signal to total interference ratio at the UE (*CPICH_Ec/Io*) between the cells shall be:

Cell 1 > Cell 2

[Editor's note: Do we need different carrier freq. for Cell 1 and 2 ? In the cell selection procedure, all cells on the same freq. as the non-suitable/rejected cell are removed. But in this case, the two cells belong to different LA, so is it still needed to have diff. freq. ?]

[Editor's note: Do both cells belong to the same PLMN ?]

Parameters changed from the default values in table 6.1.3.1 and table [FFS].

Parameter	Unit	Cell 1	Cell 2
$\hat{I}_{or}/I_{oc}$	dB	3.06	0.06
CPICH_Ec/Io	dB	-13	-16
CPICH_RSCP	dBm	-77	-80
Qqualmin	dB	-20	-20
Qrxlevmin	dBm	-100	-100
Squal	dB	7	4
Srxlevmin	dB	23	20
MNC		MNC <> HPLMN	MNC <> HPLMN
MCC		MCC of HPLMN	MCC of HPLMN
LAC		H1111	H2222
ATT		1	1

Test procedure

a) The SS activates cells 1 and 2 and monitors both cells for random access requests from the UE. Only Idle paging is sent on all channels.

[Editor's note: Idle paging in this case ? The UE shall not be paged in any cell]

b) The UE is switched on.

c) The SS waits for random access request from the UE

d) When the UE performs an IMSI attach onto Cell 1 by sending a LOCATION UPDATING REQUEST, the SS shall reject it with cause "Roaming not allowed in this LA".

e) The SS waits for random access request from the UE

f) The SS shall accept any LU on Cell 2.

g) The SS waits to see if there is any random access requests from the UE

6.1.2.8.5~~3.7.5~~ Test requirements

1) In step c), the UE shall respond on Cell 1 within 33 sec. of switch-on.

[Editor's note: The 33 seconds is taken from GSM as there is no requirement in UMTS to the initial cell selection time. UMTS should not have worse performance than GSM]

2) In step e), the UE shall initiate the Network Selection Procedure and access onto Cell 2 as part of cell selection within 33 sec. from returning to idle mode after the LU reject.

[Editor's note: The 33 seconds is taken from GSM as there is no requirement in UMTS. UMTS should not have worse performance than GSM]

3) In step g), there shall be no response from the UE within [TBD] sec.

6.1.2.9~~3.8~~ Emergency calls

6.1.2.9.1~~3.8.1~~ Definition

Test to verify that the UE shall be able to initiate emergency calls when no suitable cells of the selected PLMN are available, but at least one acceptable cell is available.

6.1.2.9.2~~3.8.2~~ Conformance requirement

1. When in a limited service state, the UE shall be able to initiate emergency calls.

2. Select the cell that fulfils the $Q_{map,n} > Q_{map,s} + Q_{offsets,n}$ best. Check if the selected cell fulfils all requirements for a suitable cell. If so, choose this cell to camp on. If this cell does not fulfil all requirements for a suitable cell, this cell and all cells on the same frequency shall be removed as candidates for cell selection in case the barred cell does not accept intra-frequency cell selection and re-selection. On the other hand, in case the barred cell accepts intra-frequency cell selection and re-selection, only the barred cell shall be removed as candidate for cell selection, and the procedure shall be repeated for the remaining cells. The same applies in cell reselection.

3. If the UE is unable to find any suitable cell of selected PLMN using the Initial cell selection procedure, it shall attempt to camp on highest ranked acceptable cell and enter the Camped on any cell state, where it can only obtain limited service.

4. The UE shall perform a cell reselection if a non-serving cell is evaluated to be better than the serving cell. The best cell is the cell with the highest cell-ranking criterion R and (Squal>0, Srxlev>0). The UE shall reselect the new cell, if the cell reselection criteria are fulfilled during a time interval Treselection.

5. If no suitable cell is found, the UE shall attempt to find an acceptable cell of any PLMN, state *Any cell selection*. This state is also entered if a non-access stratum registration procedure is rejected, or if there is no USIM in the UE. If an acceptable cell is found, the UE shall camp on this cell and obtain limited service, state *Camped on any cell*. In this state, the UE shall behave as specified for state *Camped normally*, but typically with a different PLMN. Additionally, the UE shall regularly attempt to find a suitable cell using stored information, trying all radio access technologies that are supported by the UE. If a suitable cell is found, the PLMN is reselected.

   When a cell reselection is triggered, the UE shall evaluate the cell reselection criteria based on radio measurements, and if a better cell is found that cell is selected, procedure *Any cell reselection*. The change of cell may imply a change of radio access technology.

6.1.2.9.3~~3.8.3~~ Test purpose

1. To verify that the UE shall be able to initiate emergency calls when no suitable cells of the selected PLMN are available, but at least one acceptable cell is available.

2. To verify that the UE selects a cell with S>0 (acceptable cell) and CellBarred = 0 when no suitable cells of the selected PLMN are available.

3. To verify that the UE ranks the cells according to the cell-ranking criterion R which in this test case equals Q as Qhyst, Qoffset, TEMP_OFFSET and PENALTY_TIME parameters are not used. Treselection is not used either.

6.1.2.9.4~~3.8.4~~ Method of test

Initial conditions

The relative RF signal to total interference ratio at the UE (*CPICH_Ec/Io*) between the cells shall be:

Cell 2 (S<0) > Cell 1 (barred) > Cell 3

Parameters changed from Default values table 6.1.3.1.

Parameter	Unit	Cell 1	Cell 2	Cell 3
$\hat{I}_{or}/I_{oc}$	dB	4.5	7.5	2.5
CPICH_Ec/Io	dB	-16	-13	-18
CPICH_RSCP	dBm	-76	-73	-78
Qqualmin	dB	-20	-10	-20
Qrxlevmin	dBm	-100	-100	-100
Squal	dB	4	-3	2
Srxlev	dBm	24	27	22
CellBarred		1	0	0
PLMN		forbidden	forbidden	forbidden

NOTE: All the BCCH cells belong to the same PLMN, which is not the UE's home PLMN and is in the USIM's forbidden PLMN's list.

[Editor's note: PLMN must be replaced with MNC, MCC values]

Test procedure

a) The SS activates the cells. The SS monitors for RA attempts from the UE on cells 1, 2 and 3 for the duration of the test.

b) The UE is switched on.

c) 50 seconds after switch on, an emergency call is initiated on the UE.

d) The SS waits for random access request from the UE.

e) The SS changes the CellBarred of Cell 1 to 0.

f) After 12 seconds an emergency call is initiated on the UE.

NOTE: 1280 msec. for DRX cycle + 1280 msec. for system info scheduling + 5 sec. actual reselection time + 1280 msec. for reading neighbour BCCH + 25%. Allow 12 sec.

g) The SS waits for random access request from the UE.

6.1.2.9.5~~3.8.5~~ Test requirements

1) In step d), the first access from the UE shall be on Cell 3.

2) In step g), the first access from the UE shall be on Cell 1.

6.1.2.10~~3.9~~ Immediate cell evaluation

6.1.2.10.1~~3.9.1~~ Definition

Test to verify that the UE performs the Immediate cell evaluation procedure correctly and selects the best cell among the cells on the same frequency.

6.1.2.10.2~~3.9.2~~ Conformance requirement

1. When UE leaves idle mode, state *Camped normally*, in order to enter connected mode, state *Connected mode*, the UE shall use the *Immediate cell evaluation* procedure (UTRA only) in order to select the best cell on the current frequency for the access attempt. This procedure allows the UE to reduce power consumption spent on radio measurements, still enabling the UE to select the best cell for access, thus minimising the interference in the system. If no suitable cell is found, the UE shall use the *Cell reselection* procedure.

2. The immediate cell evaluation shall be triggered prior to RACH transmission.

3. The transition to the UTRAN Connected Mode from the Idle Mode can only be initiated by the UE by transmitting a request for an RRC Connection. The event is triggered either by a paging request from the network or by a request from upper layers in the UE. When the UE receives a message from the network that confirms the RRC connection establishment, the UE enters the CELL_FACH or CELL_DCH state of UTRAN Connected Mode.

4. The following steps shall be carried out when an immediate cell evaluation has been triggered:

   4.1 The candidate list of potential cells to camp on consists of the cells in the current registration area listed for intra-frequency measurements in system information of the serving cell.

   4.2 For each cell on the candidate list, measure the quality value, $Q_{meas,LEV}$

   4.3 For each cell on the candidate list calculate the cell selection values, Squal and Srxlev

   4.4 Rank the cells and select the best cell

   4.5 Select the neighbouring cell that fulfils the $Q_{map,n} > Q_{map,s} + Qoffset_{s,n}$ criteria best.
   If the best cell does not fulfil all other requirements for a suitable cell, UE shall trigger cell re-selection

5. If more than one neighbouring cell fulfils the criteria, the UE shall choose the cell where the difference between $Q_{map,n}$ and ($Q_{map,s}$ + Qoffset) is highest. If no neighbouring cell fulfils the criteria, the UE shall keep the serving cell.

6.1.2.10.3~~3.9.3~~ Test purpose

To verify that

1. The UE meets conformance requirement 1.
2. The UE meets conformance requirement 4
3. The UE meets conformance requirement 5

6.1.2.10.4~~3.9.4~~ Method of test

Initial conditions

The Q_s + $Qoffset_{s,n}$ difference between the cells shall be:

T1: Cell 4 (other freq.) > Cell 1 > Cell 2 > Cell 3

T2: Cell 4 (other freq.) > Cell 2 > Cell 1 > Cell 3

Offset parameters are applied to the cell-ranking criterion R to ensure normal cell reselection is not triggered but instead cell evaluation.

Parameters changed from the default values in table 6.1.3.1.

Parameter	Unit	Cell 1	Cell 2		Cell 3		Cell 4
			T1	T2	T1	T2	
UTRA RF Channel Number		UARFCN 1	UARFCN 1		UARFCN 1		UARFCN 2
$\hat{I}_{or}/I_{oc}$	dBm	7.5	4.5		2.5		5.87
CPICH_Ec/Io	dB	-13	-16		-18		-11
CPICH_RSCP	dBm	-73	-76		-78		-74
Qqualmin	dB	-20	-20		-20		-20
Qrxlevmin	dBm	-100	-100		-100		-100
Squal	dB	7	4		2		9
Srxlev	dBm	27	24		22		26
$Qhyst_s$	dB	20	20		20		20
$Treselection_s$	sec	-	-		-		-
$PENALTY\_TIME_n$	sec	-	-		-		-
$TEMP\_OFFSET_n$	dB	20	20		20		20
CellBarred		0	0		0		0
n		n=2,3:	n=1,3:		n=1,2:		n=1,2,3:
$Qoffset_{s,n}$	dB	0	0	4	0	4	0
$Q_s + Qoffset_{s,n}$	dB	-13	-16	-12	-18	-14	-11

Test procedure

a) The SS activates cell 1-4 according to T1. The SS monitors cells 1, 2 and 3 for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access request from the UE

d) The parameters are changed as described for T2

e) A call is initiated on the UE

f) The UE transmits an RRC CONNECTION REQ and the SS sends a RRC CONNECTION CNF.

g) The SS waits for random access request from the UE

[Editor's note: How do we ensure that the cell is found is Immediate Cell Evaluation and not during Connected Mode ?]

6.1.2.10.5~~3.9.5~~ Test Requirements

1) In step c), the UE shall respond on Cell 1 within 33 seconds (Initial cell selection in Idle mode)

[Editor's note: The 33 seconds is taken from GSM as there is no requirement in UMTS to the initial cell selection time. UMTS should not have worse performance than GSM]

2) In step g), the UE shall respond on Cell 2 within [TBD] seconds (Immediate Cell Evaluation)

~~6.1.3.10 Reading SIB prior to RACH transmission~~

~~FFS.~~

~~6.1.4 Location registration~~

~~UE location registration capabilities are tested under clause 9.4 ,.~~

6.2 Multi-mode environment (2G/3G case)

6.2.1 PLMN and RAT selection and reselection

6.2.1.1 Selection of the correct combination of PLMN and associated RAT

6.2.1.1.1 Definition

Test to verify that the UE selects the correct combination of PLMN and associated access technology according to the fields on the USIM.

6.2.1.1.2 Conformance requirement

1. At switch on, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and attempts to perform a Location Registration. The MS shall start its search using the access technology type stored in the RPLMN Last Used Access Technology data field on the SIM. If the RPLMN Last Used Access Technology is not available then an MS capable of GSM access technology shall start its search using GSM access technology.

   On recovery from lack of coverage, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and, if necessary attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

NOTE: TS 31.102 defines the USIM fields

6.2.1.1.3 Test purpose

1. To verify that the UE selects the correct combination of PLMN and associated access technology according to the fields on the USIM.

6.2.1.1.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Parameters changed from the default values in table 6.1.3.1.

Cell	PLMN	Radio Access Technology
Cell 1	PLMN 1	GSM
Cell 2	PLMN 1	UTRAN
Cell 3	PLMN 2	UTRAN
Cell 4	PLMN 2	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM A

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 1	GSM
$EF_{HPLMNwAcT}$	1st	PLMN 1	UTRAN
	2nd		

USIM B

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 2	UTRAN
$EF_{HPLMNwAcT}$	1st	PLMN 2	GSM
	2nd		

Test procedure

a) The SS activates cells 1-4 and monitors the cells for random access requests from the UE. The UE shall have a USIM with settings according to USIM A.

b) The UE is switched on

c) The SS waits for random access requests from the UE

d) The UE is switched off and a USIM with settings according to USIM B is inserted

e) The UE is switched on

f) The SS waits for random access requests from the UE

6.2.1.1.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN1 (GSM) within [FFS seconds].

2) In step f), the response from the UE shall be on Cell 3. The displayed PLMN shall be PLMN2 (UTRAN) within [FFS seconds].

6.2.1.2 Selection of RAT for RPLMN

6.2.1.2.1 Definition

Test to verify that the UE selects the correct access technology for the registered PLMN at switch-on if a cell with the Last Used Access Technology is not available.

6.2.1.2.2 Conformance requirement

1. At switch on, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and attempts to perform a Location Registration. The MS shall start its search using the access technology type stored in the RPLMN Last Used Access Technology data field on the SIM. If the RPLMN Last Used Access Technology is not available then an MS capable of GSM access technology shall start its search using GSM access technology.

   On recovery from lack of coverage, the MS selects the registered PLMN (if it is available) using all access technologies that the MS is capable of and, if necessary attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

References

1. TS 23.122, 4.4.3.1

NOTE: TS 31.102 defines the USIM fields

6.2.1.2.3 Test purpose

1. To verify that at switch-on, if a cell with the RPLMN Last Used Access Technology is not available, the UE tries to obtain registration on the same PLMN using other UE-supported RATs.

6.2.1.2.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Parameters changed from the default values in table 6.1.3.1.

Cell	PLMN	Radio Access Technology
Cell 1	PLMN 1	UTRAN
Cell 2	PLMN 2	UTRAN
Cell 3	PLMN 2	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 1	GSM
$EF_{HPLMNwAcT}$	1st	PLMN 2	UTRAN
	2nd		

Test procedure

a) The SS activates cells 1-3 and monitors the cells for random access requests from the UE

b) The UE is switched on

c) The SS waits for random access requests from the UE

6.2.1.2.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN1 (UTRAN) within [FFS seconds]. (The preferred PLMN1 network is not available on GSM so registration is attempted using other UE-supported RATs)

6.2.1.3 Selection of RAT for HPLMN; Manual mode

6.2.1.3.1 Definition

Test to verify that the UE selects the HPLMN RAT according to the HPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall try to obtain registration on the same PLMN using other UE-supported RATs.

6.2.1.3.2 Conformance requirement

1. To allow provision for multiple HPLMN codes, the HPLMN access technologies are stored on the SIM using the same format as the User Controlled PLMN Selector with Access Technology and Operator Controlled PLMN Selector with Access Technology data fields. It is assumed in this version of the specification that this HPLMN Selector with Access Technology data field should contain only one PLMN code identical to the HPLMN code included in the IMSI. Although this single code may be duplicated in the list if multiple access technologies with priority is defined.

2. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes "Forbidden PLMNs" and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   2.1 HPLMN;

   2.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   2.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   2.4 Other PLMN/access technology combinations with received high quality signal in random order;

   2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the forbidden LAI and PLMN lists.

   If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

2. TS 23.122, 4.4.3.1.2

NOTE: TS 31.102 defines the USIM fields

6.2.1.3.3 Test purpose

1. To verify that,

   1.1 the UE searches for a HPLMN RAT according to the HPLMN Selector with Access Technology data field on the USIM in priority order

   1.2 If no RAT on the priority list is available, the UE tries to obtain registration on the same PLMN using other UE-supported RATs.

6.2.1.3.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Parameters changed from the default values in table 6.1.3.1.

Cell	PLMN	Radio Access Technology
Cell 1	PLMN 2	UTRAN
Cell 2	PLMN 2	GSM
Cell 3	PLMN 3	UTRAN
Cell 4	PLMN 3	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM A

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 1	GSM
$EF_{HPLMNwAcT}$	1st	PLMN 2	UTRAN
	2nd		GSM

USIM B

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 1	GSM
$EF_{HPLMNwAcT}$	1st	PLMN 2	UTRAN
	2nd		

Test procedure

a) The SS activates cells 1-4 and monitors the cells for random access requests from the UE. The UE shall have a USIM with settings according to USIM A.

b) The UE is switched on

c) PLMN2 (UTRAN) shall be selected when the PLMN list is presented

d) The SS waits for random access requests from the UE

e) Cell 1 is switched off

f) PLMN2 (GSM) shall be selected when the PLMN list is presented

g) The SS waits for random access requests from the UE

h) The UE is switched off and a USIM with settings according to USIM B is inserted. All cells except Cell 1 are active.

i) The UE is switched on

j) PLMN2 (GSM) shall be selected when the PLMN list is presented

k) The SS waits for random access requests from the UE

6.2.1.3.5 Test Requirements

1) In step c), the list shall be presented within [FFS seconds]. It shall contain PLMN2 (UTRAN as number 1 on the list and GSM as number 2).

2) In step d), the response from the UE shall be on Cell 1 (1st priority RAT for $EF_{HPLMNwAcT}$). The displayed PLMN shall be PLMN2 (UTRAN) within [FFS seconds].

3) In step f), the list shall be presented within [FFS seconds]. It shall contain PLMN2 (GSM) as number 1.

4) In step g), the response from the UE shall be on Cell 2 (2nd priority RAT for $EF_{HPLMNwAcT}$). The displayed PLMN shall be PLMN2 (GSM) within [FFS seconds].

5) In step j), the list shall be presented within [FFS seconds]. It shall contain PLMN2 (GSM) as number 1.

6) In step k), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN2 (GSM) within [FFS seconds]. (PLMN2 is not available on UTRAN so registration on the same PLMN is attempted using other UE-supported RATs).

6.2.1.4 Selection of RAT for UPLMN; Manual mode

6.2.1.4.1 Definition

Test to verify that the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall not try to obtain registration on the same PLMN(s) with other RAT(s) but instead search for PLMNs in the OPLMN list.

6.2.1.4.2 Conformance requirement

1. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes "Forbidden PLMNs" and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   1.1 HPLMN;

   1.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.4 Other PLMN/access technology combinations with received high quality signal in random order;

   1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the forbidden LAI and PLMN lists.

   If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

NOTE: TS 31.102 defines the USIM fields

6.2.1.4.3 Test purpose

1. To verify that,

   1.1 the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM.

   1.2 If no RAT on the list is available, the UE does not try to obtain registration on the same PLMN with another RAT but instead searches for PLMNs in the OPLMN list.

6.2.1.4.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Parameters changed from the default values in table 6.1.3.1.

Cell	PLMN	Radio Access Technology
Cell 1	PLMN 3	UTRAN
Cell 2	PLMN 3	GSM
Cell 3	PLMN 4	UTRAN
Cell 4	PLMN 4	GSM
Cell 5	PLMN 5	UTRAN

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 1	GSM
$EF_{HPLMNwAcT}$	1st	PLMN 2	UTRAN
	2nd		GSM
$EF_{PLMNwACT}$	1st	PLMN 3	UTRAN
	2nd	PLMN 4	GSM
$EF_{OPLMNwACT}$	1st	PLMN 5	UTRAN
	2nd	PLMN 6	GSM

Test procedure

a) The SS activates cells 1-5 and monitors the cells for random access requests from the UE

b) The UE is switched on

c) PLMN3 (UTRAN) shall be selected when the PLMN list is presented

d) The SS waits for random access requests from the UE

e) Cell 1 is switched off

f) PLMN4 (GSM) shall be selected when the PLMN list is presented

g) The SS waits for random access requests from the UE

h) Cell 4 is switched off

i) PLMN5 (UTRAN) shall be selected when the PLMN list is presented

j) The SS waits for random access requests from the UE

6.2.1.4.5 Test Requirements

1) In step c), the list shall be presented within [FFS seconds]. It shall contain PLMN3 (UTRAN) as number 1 and PLMN4 (GSM) as number 2.

2) In step d), the response from the UE shall be on Cell 1 (1st priority RAT for $EF_{PLMNwACT}$). The displayed PLMN shall be PLMN3 (UTRAN) within [FFS seconds].

3) In step f), the list shall be presented within [FFS seconds]. It shall contain PLMN4 (GSM) as number 1 and PLMN5 (UTRAN) as number 2.

4) In step g), the response from the UE shall be on Cell 4 (2nd priority RAT for $EF_{PLMNwACT}$). The displayed PLMN shall be PLMN4 (GSM) within [FFS seconds].

5) In step i), the list shall be presented within [FFS seconds]. It shall contain PLMN5 (UTRAN) as number 1.

6) In step j), the response from the UE shall be on Cell 5 (1st priority RAT for $EF_{OPLMNwACT}$). The displayed PLMN shall be PLMN5 (UTRAN) within [FFS seconds].

6.2.1.5 Selection of RAT for OPLMN; Manual mode

6.2.1.5.1 Definition

Test to verify that the UE selects the OPLMN RAT according to the OPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall not try to obtain registration on the same PLMN(s) with other RAT(s) but instead search for other PLMN/access technology combinations with received high quality signal in random order.

6.2.1.5.2 Conformance requirement

1. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes "Forbidden PLMNs" and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   1.1 HPLMN;

   1.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.4 Other PLMN/access technology combinations with received high quality signal in random order;

   1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the

presentation of PLMNs). For such a registration, the MS shall ignore the contents of the forbidden LAI and PLMN lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

NOTE: TS 31.102 defines the USIM fields

6.2.1.5.3 Test purpose

1. To verify that,

1.1 the UE selects the OPLMN RAT according to the OPLMN RAT priority list on the USIM.

1.2 If no RAT on the list is available, the UE does not try to obtain registration on the same PLMN(s) with other RAT(s) but instead searches for “other PLMN/access technology combinations with received high quality signal in random order”.

6.2.1.5.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Parameters changed from the default values in table 6.1.3.1.

Cell	“High Quality signal”	PLMN	Radio Access Technology
Cell 1		PLMN 5	UTRAN
Cell 2	No	PLMN 5	GSM
Cell 3	No	PLMN 6	UTRAN
Cell 4		PLMN 6	GSM
Cell 5	Yes	PLMN 7	UTRAN

NOTE: “High Quality signal” has not yet been defined in 3GPP.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 1	GSM
$EF_{HPLMNwAcT}$	1st	PLMN 2	UTRAN
	2nd		GSM
$EF_{PLMNwACT}$	1st	PLMN 3	UTRAN
	2nd	PLMN 4	GSM
$EF_{OPLMNwACT}$	1st	PLMN 5	UTRAN
	2nd	PLMN 6	GSM

Test procedure

a) The SS activates cells 1-5 and monitors the cells for random access requests from the UE

b) The UE is switched on

c) PLMN5 (UTRAN) shall be selected when the PLMN list is presented

d) The SS waits for random access requests from the UE

e) Cell 1 is switched off

f) PLMN6 (GSM) shall be selected when the PLMN list is presented

g) The SS waits for random access requests from the UE

h) Cell 4 is switched off

i) PLMN7 (UTRAN) shall be selected when the PLMN list is presented

j) The SS waits for random access requests from the UE

6.2.1.5.5 Test Requirements

1) In step c), the list shall be presented within [FFS seconds]. It shall contain PLMN5 (UTRAN) as number 1 and PLMN6 (GSM) as number 2.

2) In step d), the response from the UE shall be on Cell 1 (1st priority RAT for $EF_{OPLMNwACT}$). The displayed PLMN shall be PLMN5 (UTRAN) within [FFS seconds].

3) In step f), the list shall be presented within [FFS seconds]. It shall contain PLMN6 (GSM) as number 1 and PLMN7 (UTRAN) as number 2.

4) In step g), the response from the UE shall be on Cell 4 (2nd priority RAT for $EF_{OPLMNwACT}$). The displayed PLMN shall be PLMN6 (GSM) within [FFS seconds].

5) In step i), the list shall be presented within [FFS seconds]. It shall contain PLMN7 (UTRAN) as number 1.

6) In step j), the response from the UE shall be on Cell 5 (other PLMN/access technology combination). The displayed PLMN shall be PLMN7 (UTRAN) within [FFS seconds].

6.2.1.6 Selection of “Other PLMN / access technology combinations”; Manual mode

6.2.1.6.1 Definition

Test to verify that if neither RPLMN, HPLMN, UPLMN nor OPLMN is available, the UE first tries to obtain registration on “Other PLMN/access technology combinations with received high quality signal in random order” and secondly on “Other PLMN/access technology combinations in order of decreasing signal quality”.

6.2.1.6.2 Conformance requirement

1. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes "Forbidden PLMNs" and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   1.1 HPLMN;

   1.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

1.4 Other PLMN/access technology combinations with received high quality signal in random order;

1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the forbidden LAI and PLMN lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

NOTE: TS 31.102 defines the USIM fields

6.2.1.6.3 Test purpose

1. To verify that,

   1.1 If neither RPLMN, HPLMN, UPLMN nor OPLMN is available, the UE tries to obtain registration on “Other PLMN/access technology combinations with received high quality signal in random order”

   1.2 If no PLMN is available in test purpose 1.1, the UE tries to obtain registration on “Other PLMN/access technology combinations in order of decreasing signal quality”

2. The “random order” in test purpose 1.1 is not verified

6.2.1.6.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Parameters changed from the default values in table 6.1.3.1.

Cell	Signal level [dBm]	“High Quality signal”	PLMN	Radio Access Technology
Cell 1	-80	Yes	PLMN 7	UTRAN
Cell 2	-80	Yes	PLMN 8	GSM
Cell 3	-85	No	PLMN 9	UTRAN
Cell 4	-90	No	PLMN 10	GSM
Cell 5	-95	No	PLMN 11	UTRAN
Cell 6	-100	No	PLMN 12	GSM

NOTE: “High Quality signal” has not yet been defined in 3GPP.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 1	GSM
$EF_{HPLMNwAcT}$	1st	PLMN 2	UTRAN
	2nd		GSM
$EF_{PLMNwACT}$	1st	PLMN 3	UTRAN
	2nd	PLMN 4	GSM
$EF_{OPLMNwACT}$	1st	PLMN 5	UTRAN
	2nd	PLMN 6	GSM
EF_{FPLMN}	PLMN 7		
	PLMN 12		

NOTE: PLMN 7 and PLMN 12 are forbidden.

Test procedure

a) The SS activates cells 1-6 and monitors the cells for random access requests from the UE

b) The UE is switched on

c) PLMN11 shall be selected when the PLMN list is presented

d) The SS waits for random access requests from the UE

e) Cell 5 is switched off

f) PLMN8 shall be selected when the PLMN list is presented

g) The SS waits for random access requests from the UE

h) Cell 2 is switched off

i) PLMN10 shall be selected when the PLMN list is presented

j) The SS waits for random access requests from the UE

k) Cell 4 is switched off

l) PLMN7 shall be selected when the PLMN list is presented. The SS shall reject the Registration Request from the UE.

m) Cell 1 is switched off

n) PLMN9 shall be selected when the PLMN list is presented

o) The SS waits for random access requests from the UE

p) Cell 3 is switched off

q) PLMN12 shall be selected when the PLMN list is presented. The SS shall reject the Registration Request from the UE.

r) Cell 6 is switched off

6.2.1.6.5 Test Requirements

1) In step c), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN7, PLMN8 in random order, followed by PLMN9, PLMN10, PLMN11, PLMN12.

2) In step d), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN11 within [FFS seconds].

3) In step f), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN7, PLMN8 in random order, followed by PLMN9, PLMN10, PLMN12.

4) In step g), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN8 within [FFS seconds].

5) In step i), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN7, PLMN9, PLMN10, PLMN12.

6) In step j), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN10 within [FFS seconds].

7) In step l), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN7, PLMN9, PLMN12. After the PLMN has been selected, the list shall appear again as the UE cannot perform registration.

9) In step n), the list shall be presented within [FFS seconds]. The priority shall be as follows: PLMN9, PLMN12.

10) In step o), the response from the UE shall be on Cell 3. The displayed PLMN shall be PLMN9 within [FFS seconds].

11) In step q), the list shall be presented within [FFS seconds] and shall only contain PLMN12. After the PLMN has been selected, the list shall appear again as the UE cannot perform registration.

13) After step r), the UE shall inform within [FFS seconds] that no network is available

6.2.1.7 Selection of RAT for HPLMN; Automatic mode

6.2.1.7.1 Definition

Test to verify that the UE selects the HPLMN RAT according to the HPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall try to obtain registration on the same PLMN using other UE-supported RATs.

6.2.1.7.2 Conformance requirement

1. To allow provision for multiple HPLMN codes, the HPLMN access technologies are stored on the SIM using the same format as the User Controlled PLMN Selector with Access Technology and Operator Controlled PLMN Selector with Access Technology data fields. It is assumed in this version of the specification that this HPLMN Selector with Access Technology data field should contain only one PLMN code identical to the HPLMN code included in the IMSI. Although this single code may be duplicated in the list if multiple access technologies with priority is defined.

NOTE: In selecting a HPLMN, the MS shall search for all access technologies it is capable of. The MS shall start its search using the access technologies stored in the HPLMN Selector with Access Technology data field on the SIM in priority order.

2. Automatic Network Selection Mode Procedure:

The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

2.1 HPLMN (if not previously selected);

2.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

2.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

2.4 Other PLMN/access technology combinations with received high quality signal in random order

2.5 Other PLMN/access technology combinations in order of decreasing signal quality

If successful registration is achieved, the MS indicates the selected PLMN.

If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in a forbidden LAI list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

2. TS 23.122, 4.4.3.1.1

NOTE: TS 31.102 defines the USIM fields

6.2.1.7.3 Test purpose

1. To verify that,

1.1 the UE searches for a HPLMN RAT according to the HPLMN Selector with Access Technology data field on the USIM in priority order

1.2 If no RAT on the priority list is available, the UE tries to obtain registration on the same PLMN using other UE-supported RATs.

6.2.1.7.4 Method of test

Initial conditions

The UE is in automatic mode PLMN selection.

MCC of HPLMN shall be different from other PLMNs in the network to avoid periodic search for HPLMN.

Parameters changed from the default values in table 6.1.3.1.

Cell	PLMN	Radio Access Technology
Cell 1	PLMN 2	UTRAN
Cell 2	PLMN 2	GSM
Cell 3	PLMN 3	UTRAN
Cell 4	PLMN 3	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM A

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 1	GSM
$EF_{HPLMNwAcT}$	1st	PLMN 2	UTRAN
	2nd		GSM

USIM B

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 1	GSM
$EF_{HPLMNwAcT}$	1st	PLMN 2	UTRAN
	2nd		

Test procedure

a) The SS activates cells 1-4 and monitors the cells for random access requests from the UE. The UE shall have a USIM with settings according to USIM A.

b) The UE is switched on

c) The SS waits for random access requests from the UE

d) The UE is switched off and a USIM with settings according to USIM A is again inserted. All cells except Cell 1 are active.

e) The SS waits for random access requests from the UE

f) The UE is switched off and a USIM with settings according to USIM B is inserted. All cells except Cell 1 are active.

g) The UE is switched on

h) The SS waits for random access requests from the UE

6.2.1.7.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1 (1st priority RAT for $EF_{HPLMNwAcT}$). The displayed PLMN shall be PLMN2 (UTRAN) within [FFS seconds].

2) In step e), the response from the UE shall be on Cell 2 (2nd priority RAT for $EF_{HPLMNwAcT}$). The displayed PLMN shall be PLMN2 (GSM) within [FFS seconds].

3) In step h), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN2 (GSM) within [FFS seconds]. (PLMN2 is not available on UTRAN so registration on the same PLMN is attempted using other UE-supported RATs).

6.2.1.8 Selection of RAT for UPLMN; Automatic mode

6.2.1.8.1 Definition

Test to verify that the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall not try to obtain registration on the same PLMN(s) with other RAT(s) but instead search for PLMNs in the OPLMN list.

6.2.1.8.2 Conformance requirement

1. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

   1.1 HPLMN (if not previously selected);

   1.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

   1.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

   1.4 Other PLMN/access technology combinations with received high quality signal in random order

   1.5 Other PLMN/access technology combinations in order of decreasing signal quality

   If successful registration is achieved, the MS indicates the selected PLMN.

If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in a forbidden LAI list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

NOTE: TS 31.102 defines the USIM fields

6.2.1.8.3 Test purpose

1. To verify that,

1.1 the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM.

1.2 If no RAT on the list is available, the UE does not try to obtain registration on the same PLMN with another RAT but instead searches for PLMNs in the OPLMN list.

6.2.1.8.4 Method of test

Initial conditions

The UE is in automatic mode PLMN selection.

MCC of HPLMN shall be different from other PLMNs in the network to avoid periodic search for HPLMN.

Parameters changed from the default values in table 6.1.3.1.

Cell	PLMN	Radio Access Technology
Cell 1	PLMN 3	UTRAN
Cell 2	PLMN 3	GSM
Cell 3	PLMN 4	UTRAN
Cell 4	PLMN 4	GSM
Cell 5	PLMN 5	UTRAN

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 1	GSM
$EF_{HPLMNwAcT}$	1st	PLMN 2	UTRAN
	2nd		GSM
$EF_{PLMNwACT}$	1st	PLMN 3	UTRAN
	2nd	PLMN 4	GSM
$EF_{OPLMNwACT}$	1st	PLMN 5	UTRAN
	2nd	PLMN 6	GSM

Test procedure

a) The SS activates cells 1-5 and monitors the cells for random access requests from the UE

b) The UE is switched on

c) The SS waits for random access requests from the UE

d) Cell 1 is switched off

e) The SS waits for random access requests from the UE

f) Cell 4 is switched off

g) The SS waits for random access requests from the UE

6.2.1.8.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1 (1st priority RAT for $EF_{PLMNwACT}$). The displayed PLMN shall be PLMN3 (UTRAN) within [FFS seconds].

2) In step e), the response from the UE shall be on Cell 4 (2nd priority RAT for $EF_{PLMNwACT}$). The displayed PLMN shall be PLMN4 (GSM) within [FFS seconds].

3) In step g), the response from the UE shall be on Cell 5 (1st priority RAT for $EF_{OPLMNwACT}$). The displayed PLMN shall be PLMN5 (UTRAN) within [FFS seconds].

6.2.1.9 Selection of RAT for OPLMN; Automatic mode

6.2.1.9.1 Definition

Test to verify that the UE selects the OPLMN RAT according to the OPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall not try to obtain registration on the same PLMN(s) with other RAT(s) but instead search for other PLMN/access technology combinations with received high quality signal in random order.

6.2.1.9.2 Conformance requirement

1. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

   1.1 HPLMN (if not previously selected);

   1.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

   1.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order)

   1.4 Other PLMN/access technology combinations with received high quality signal in random order

   1.5 Other PLMN/access technology combinations in order of decreasing signal quality

   If successful registration is achieved, the MS indicates the selected PLMN.

   If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

   If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in a forbidden LAI list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

6.2.1.10.3 Test purpose

1. To verify that,

   1.1 If neither RPLMN, HPLMN, UPLMN nor OPLMN is available, the UE tries to obtain registration on “Other PLMN/access technology combinations with received high quality signal in random order”

   1.2 If no PLMN is available in test purpose 1.1, the UE tries to obtain registration on “Other PLMN/access technology combinations in order of decreasing signal quality”

2. The “random order” in test purpose 1.1 is not verified

6.2.1.10.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

Parameters changed from the default values in table 6.1.3.1.

Cell	Signal level [dBm]	"High Quality signal"	PLMN	Radio Access Technology
Cell 1	-80	Yes	PLMN 7	UTRAN
Cell 2	-80	Yes	PLMN 8	GSM
Cell 3	-85	No	PLMN 9	UTRAN
Cell 4	-90	No	PLMN 10	GSM
Cell 5	-95	No	PLMN 11	UTRAN
Cell 6	-100	No	PLMN 12	GSM

NOTE: "High Quality signal" has not yet been defined in 3GPP.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}, $EF_{RPLMNACT}$		PLMN 1	GSM
$EF_{HPLMNwAcT}$	1st	PLMN 2	UTRAN
	2nd		GSM
$EF_{PLMNwACT}$	1st	PLMN 3	UTRAN
	2nd	PLMN 4	GSM
$EF_{OPLMNwACT}$	1st	PLMN 5	UTRAN
	2nd	PLMN 6	GSM
EF_{FPLMN}	PLMN 7		
	PLMN 12		

Test procedure

a) The SS activates cells 1-6 and monitors the cells for random access requests from the UE

b) The UE is switched on

c) The SS waits for random access requests from the UE

d) Cell 2 is switched off

e) The SS waits for random access requests from the UE

f) Cell 3 is switched off

g) The SS waits for random access requests from the UE

h) Cell 4 is switched off

i) The SS waits for random access requests from the UE

j) Cell 5 is switched off

6.2.1.10.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 2. The displayed PLMN8 within [FFS seconds].

2) In step e), the response from the UE shall be on Cell 3. The displayed PLMN shall be PLMN9 within [FFS seconds].

3) In step g), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN10 within [FFS seconds].

4) In step i), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN11 within [FFS seconds].

5) After step j), the UE shall inform within [FFS seconds] that only limited service is possible.

6.2.2 Cell selection and reselection

6.2.2.1 Cell selection; UTRAN / GSM

6.2.2.1.1 Definition

Test to verify that the UE performs cell selection correctly when both a GSM and UTRA network is available.

6.2.2.1.2 Conformance requirement

1. Cell selection procedure to find a suitable cell to camp on:

   1.1 Create a candidate list of potential cells to camp on, using:

      1.1.1 Initial Cell Selection procedure; or

      1.1.2 Stored Information Cell Selection procedure

   1.2 For each cell on the candidate list, measure the quality value, $Q_{meas,LEV}$

   1.3 For each cell on the candidate list calculate the cell selection value, Squal and Srxlev

   1.4 Rank the cells and select the best cell

   1.5 Select the cell that fulfils the criteria $Q_{map,n} > Q_{map,s} + Q_{offsets,n}$ best. Check if the selected cell fulfils all requirements for a suitable cell. If so, choose this cell to camp on. If this cell does not fulfil all requirements for a suitable cell, this cell and all cells on the same frequency shall be removed as candidates for cell selection in case the barred cell does not accept intra-frequency cell selection and re-selection. On the other hand, in case the barred cell accepts intra-frequency cell selection and re-selection, only the barred cell shall be removed as candidate for cell selection, and step 1.4 shall be repeated for the remaining cells.

2. Different types of measurements are used in different radio access technologies and modes for the cell selection and reselection (CPICH Ec/N0 or CPICH SIR in UTRA FDD, P-CCPCH RSCP in UTRA TDD, RXLEV in GSM). Whenever a direct comparison of these measurements is required, mapping functions shall be applied. Mapping functions are used for mapping a certain range of measurement values Q_{meas_LEV} (CPICH_EC/N0, CPICH_RSCP_LEV, P-CCPCH_RSCP_LEV, RXLEV) to a representing quality value Q_{map} (0..99, step size 1).

3. In the *Initial cell selection* procedure, the UE shall select one radio access technology and search for a suitable cell. If no suitable cell is found, the UE shall select another radio access technology and search for a suitable cell, and so on. In the *Stored information cell selection* procedure, the UE may use stored information about the selected PLMN. The information may contain information from several radio access technologies.

3. TS 25.304, 5.2.1

6.2.2.1.3 Test purpose

To verify that

1. The UE meets conformance requirement 1.
2. The UE meets conformance requirement 2
3. The UE meets conformance requirement 3

6.2.2.1.4 Method of test

Initial conditions

The relative RF signal to total interference ratio at the UE (*CPICH_Ec/Io*) between the cells shall be:

T1: Cell 1 < Cell 2 < Cell 3 < Cell 4 < Cell 5 < Cell 6

T2: Cell 1 > Cell 2 > Cell 3 > Cell 4 > Cell 5 > Cell 6

Cell 2 and 5 have S<0, Cell 3 and 6 are barred.

Parameters changed from the default values in table 6.1.3.1.**Parameter**	**Unit**	**Cell 1 (UTRAN)**		**Cell 2 (UTRAN)**		**Cell 3 (UTRAN)**	
		T1	**T2**	**T1**	**T2**	**T1**	**T2**
Channel Number		UARFCN 1		UARFCN 1		UARFCN 2	
$\hat{I}_{or}/I_{oc}$	dBm	-5.71	3.06	-3.71	0.06	0.02	-7.25
CPICH_Ec/Io	dB	-18	-13	-16	-16	-13	-18
CPICH RSCP	dBm	-86	-77	-84	-80	-80	-87
Qqualmin	dB	-20		-10			
Qrxlevmin	dBm	-100		-100		-100

Srxlev	dBm	14	23	16	20	20	13
CellBarred		0		0		1	

Parameter	**Unit**	**Cell 4 (GSM)**		**Cell 5 (GSM)**		**Cell 6 (GSM)**	
		T1	**T2**	**T1**	**T2**	**T1**	**T2**
Channel Number		ARFCN 1		ARFCN 2		ARFCN 3	
RF Signal Level	dBm	-70	-95	-60	-100	-50	-105
RXLEV_ACCESS_MIN	dBm	-100		-50		-110	
C1	dBm	30	5	-10	-50	60	5
CellBarred		0		0		1	

Test procedure

a) The SS activates the cells 1-6 according to T1 and monitors cell 1, 2 and 3 for random access request from the UE

b) The UE is switched on.

c) The SS waits for random access request from the UE

d) The UE is switched off.

e) The SS monitors cells 4, 5 and 6 for random access requests from the UE.

f) The UE is switched on.

g) The SS waits to see if there is any random access request from the UE.

h) The stored information cell selection list in the UE is deleted and the UE is switched off.

i) Step a-g) is repeated except that the cells are set according to T2 and Cell 1 is set to another PLMN

6.2.2.1.5 Test Requirements

1) In step c), the first response from the UE shall be on Cell 1 within 33 seconds. (Initial cell selection)

[Editor's note: The 33 seconds is taken from GSM as there is no requirement in UMTS to the initial cell selection time. UMTS should not have worse performance than GSM]

2) In step g), there shall be no response from the UE on either Cell 4, 5 or 6 within 33 seconds. (Stored Information cell selection)

[Editor's note: The 33 seconds is taken from GSM as there is no requirement in UMTS to the stored cell selection time. UMTS should not have worse performance than GSM]

3) In step i), the first response from the UE shall be on Cell 4. (Initial cell selection) and no other responses

6.2.2.2 Cell reselection; UTRAN to GSM

6.2.2.2.1 Definition

Test to verify that the UE performs cell reselection correctly when both a GSM and UTRAN network is available and if the serving cell becomes barred or S<0.

6.2.2.2.2 Conformance requirement

1. While camped on a cell of the selected PLMN ("camped normally"), the UE may need to select a different cell ("normal cell reselection" state). The following events trigger a cell reselection:

   1.1 Time for cell re-selection evaluation

   1.2 Cell selection criterion S is not fulfilled

   1.3 Cell has become barred or forbidden

   In case 1.2 and 1.3 the parameters Qhyst and Treselection shall not be considered in the criteria.

2. The UE shall perform a cell reselection if a non-serving cell is evaluated to be better than the serving cell. The best cell is the cell with the highest cell-ranking criterion R and (Squal>0, Srxlev>0). The UE shall reselect the new cell, if the cell reselection criteria are fulfilled during a time interval Treselection.

3. Non-suitable cells (Squal > 0 or Srxlev >0): If the best cell according to cell reselection criteria, does not fulfil all requirements for a suitable cell, that cell, together with all cells on that frequency shall be removed as candidate for cell re-selection.

4. Different types of measurements are used in different radio access technologies and modes for the cell selection and reselection (CPICH Ec/N0 or CPICH SIR in UTRA FDD, P-CCPCH RSCP in UTRA TDD, RXLEV in GSM). Whenever a direct comparison of these measurements is required, mapping functions shall be applied.

Mapping functions are used for mapping a certain range of measurement values Q_{meas_LEV} (CPICH_EC/N0, CPICH_RSCP_LEV, P-CCPCH_RSCP_LEV, RXLEV) to a representing quality value Q_{map} (0..99, step size 1).

4. TS 25.304, 7.1

6.1.2.2.3 Test purpose

1. To verify that the UE meets conformance requirement 1.2 and 1.4
2. To verify that the UE meets conformance requirement 2
3. To verify that the UE meets conformance requirement 3

NOTE: Cell reselection caused by a better cell being found (conformance requirement 2.1) is tested in TS 34.121, 8.2.3.3 Cell re-selection UTRAN to GSM.

6.2.2.2.4 Method of test

Initial conditions

Treselection, Qhyst, Qoffset, TEMP_OFFSET and PENALTY_TIME are not used, so the cell-ranking criterion R equals Q.

The relative RF signal to total interference ratio at the UE (*CPICH_Ec/Io*) between the cells shall be:

Cell 1 (UTRAN) > Cell 2 (GSM) > Cell 3 (GSM)

Parameters changed from the default values in table 6.1.3.1.

Parameter	Unit	Cell 1 (UTRAN)
Channel Number		UARFCN 1
$\hat{I}_{or}/I_{oc}$	dBm	5.87
CPICH_Ec/Io	dB	-11
CPICH RSCP	dBm	-74
Qqualmin	dB	-20
Qrxlevmin	dBm	-100
Squal	dB	9
Srxlev	dBm	26

Parameter	Unit	Cell 2 (GSM)	Cell 3 (GSM)
Channel Number		ARFCN 1	ARFCN 2
RF Signal Level	dBm	-80	-90
RXLEV_ACCESS _MIN	dBm	-100	-100
C1	dBm	20	10

Test procedure

a) The SS activates cells 1, 2, and 3. The SS monitors cells 1, 2 and 3 for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access request from the UE

d) The SS sets Cell 1 to be barred

e) The SS waits for random access request from the UE

f) The stored information cell selection list in the UE is deleted and the UE is switched off.

g) Step a-e) is repeated except that in step d), Qqualmin is increased to -5 dB, so S will become negative instead of being barred

h) The stored information cell selection list in the UE is deleted and the UE is switched off.

i) Step a-e) is repeated except that in step d), Cell 1 shall be on another PLMN while maintaining the same RF level.

6.2.2.2.5 Test Requirements

1) In step c), the UE shall respond on Cell 1 within 33 seconds

[Editor's note: The 33 seconds is taken from GSM as there is no requirement in UMTS to the initial cell selection time. UMTS should not have worse performance than GSM]

2) In step e), the UE shall respond on Cell 2 within 12 seconds.

NOTE: 1280 msec. for DRX cycle + 1280 msec. for system info scheduling + 5 sec. actual reselection time + 1280 msec. for reading neighbour BCCH + 25%. Allow 12 sec.

3) The responses in step g) shall first be a response on Cell 1 and then a response on Cell 2.

4) The responses in step i) shall first be a response on Cell 1 and then a response on Cell 2.

6.2.2.3 Cell reselection timings; GSM to UTRAN

6.2.2.3.1 Definition

Test to verify that the UE meets the cell reselection timing requirements when both a GSM and UTRAN network is available.

6.2.2.3.2 Conformance requirement

1. If the broadcast neighbour cell list includes UTRAN cells or UTRAN frequencies (with or without scrambling code group information), the UE shall, at least every 5 seconds update the value RLA_C for the serving cell and each of the at least 6 strongest non serving GSM cells.

   1.1 The UE shall then reselect a suitable UTRAN cell if its measured RSCP value exceeds the value of RLA_C for the serving cell and all of the suitable non-serving GSM cells by the value XXX_Qoffset for a period of 5 seconds and, for FDD, the UTRAN cells measured Ec/No value is equal or greater than the value FDD_Qmin.

   - Ec/No and RSCP are the measured quantities

   - FDD_Qmin and XXX_Qoffset are broadcast on BCCH of the serving cell. XXX indicates other radio access technology/mode.

   1.2 In case of a cell reselection occurring within the previous 15 seconds, XXX_Qoffset is increased by 5 dB.

1.3 Cell reselection to UTRAN shall not occur within 5 seconds after the UE has reselected a GSM from an UTRAN cell if a suitable GSM cell can be found.

1.4 If more than one UTRAN cell fulfils the above criteria, the UE shall select the cell with the greatest Qmeas value.

2. The UE shall be able to identify and select a new best UTRAN cell, which is part of the neighbour cell list, within 30 seconds after it has been activated under the condition that there is only one UTRAN frequency in the neighbour cell list. The allowed time is increased by 30 seconds for each additional UTRAN frequency in the neighbour cell list. However, multiple UTRAN cells on the same frequency in the neighbour cell list does not increase the allowed time.

NOTE: Definitions of measurements are in 3G TS 25.215 and 3G TS 25.101, 3.2 and GSM 05.08, 6.1.

References

1. GSM TS 05.08, 6.6.4
2. GSM TS 05.08, 6.6

6.1.2.3.3 Test purpose

1. To verify that

1.1 The UE meets conformance requirement 1.1 and additionally, that no reselection is performed if the period is less than 5 sec.

1.2 The UE meets conformance requirement 1.2

1.3 The UE meets conformance requirement 1.3

6.2.2.3.4 Method of test

Initial conditions

Parameter	Unit	Cell 1 (GSM)
Absolute RF Channel Number		ARFCN 1
RF Signal Level	dBm	-75
RXLEV_ACCESS_MIN	dBm	-100
MS_TXPWR_MAX_CCH	dBm	Max. output power of UE~~MS~~
FDD_Qmin	dBm	-20
XXX_Qoffset	dBm	5

Parameters changed from the default values in table 6.1.3.1.

Parameter	Unit	Cell 2 (UTRAN)
UTRA RF Channel Number		UARFCN 1
$\hat{I}_{or}/I_{oc}$	dB	-4.74
CPICH_Ec/Io	dB	-16
CPICH_RSCP	dBm	-85
Qqualmin	dB	-20
Qrxlevmin	dBm	-100
Squal	dB	4
Srxlevmin	dBm	15

Test procedure

NOTE: Step a-c): Test purpose 1.3. Step d-g): test purpose 1.1. Step h-k): test purpose 1.2

a) The SS activates the channels. The UE is not paged on any of the cells.

b) The UE is switched on.

c) After 50 seconds, the SS starts paging continuously on cells 1 and 2 for 20 seconds. The SS monitors cells 1 and 2 for random access requests from the UE.

d) The SS stops paging on cells 1 and 2 and waits for 20 seconds. (The UE should revert to Cell 1 due to cell reselection).

e) The SS starts paging continuously on Cell 2.

f) The SS decreases the transmit level of Cell 1 to –95dBm for a period of 4 s (RSCP will then exceed RXLEV by more than XXX_Qoffset) and then changes the level back to the original value.

g) The UE waits to see if there is any random access requests from the UE on Cell 2

h) The SS decreases the transmit level of Cell 1 to –95dBm and waits for the UE to access on Cell 2. The SS records the time t from the decrease in the level of Cell 1 to the first response from the UE.

i) The SS stops paging on Cell 2 and changes the transmit level of Cell 1 back to the original value.

j) The SS waits 20 seconds. (The UE should revert to Cell 1 due to cell reselection).

k) The SS decreases the transmit level of Cell 1 to –95dBm. After t+2 seconds, the SS starts paging continuously on Cell 1, changes the level of Cell 1 back to the original level and waits to see if there is any random access request on Cell 1.

6.2.2.3.5 Test Requirements

1) In step c), the UE shall transmit 2 random access requests on Cell 1 followed by 2 random access requests on Cell 2. Subsequent random access requests on Cell 1 shall not occur within 4,5 sec of the second random access request on Cell 1.

2) In step g), there shall be no access on Cell 2 within 34 seconds of decreasing the level of Cell 1.

3) In step h), the UE shall respond on Cell 2.

4) In step k), there shall be no response on Cell 1 within 11 seconds after the level of Cell 1 is changed back to the original level.

NOTE: The 11 seconds is derived from (t+15) seconds minimum cell reselection timer minus (t+2) seconds from the start of step k) up to the increase of the level of Cell 1. A further 2 seconds are subtracted to cover for any uncertainty introduced by the random access process occurring after step g).

CHANGE REQUEST

⌘ **34.123-1** **CR** **042** ⌘ rev **-** ⌘ Current version: **3.1.0** ⌘

*For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.*

Proposed change affects: ⌘ (U)SIM ☐ ME/UE ☒ Radio Access Network ☐ Core Network ☐

Title:	⌘	Editorial modification for CC test cases (Clause 10)
Source:	⌘	MITSUBISHI ELECTRIC CORPORATION
Work item code:	⌘	***Date:*** ⌘
Category:	⌘	**D** ***Release:*** ⌘ R99

Use one of the following categories:
- ***F*** *(essential correction)*
- ***A*** *(corresponds to a correction in an earlier release)*
- ***B*** *(Addition of feature),*
- ***C*** *(Functional modification of feature)*
- ***D*** *(Editorial modification)*

Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:

2	*(GSM Phase 2)*
R96	*(Release 1996)*
R97	*(Release 1997)*
R98	*(Release 1998)*
R99	*(Release 1999)*
REL-4	*(Release 4)*
REL-5	*(Release 5)*

Reason for change:	⌘	The applicability statements still remain in the all “definition” sub-clauses in clause 10. They should be removed. Editorial corrections should be applied.
Summary of change:	⌘	The applicability statements are removed from all CC test cases in clause 10. The following editorial corrections are applied to clause 10 • Mobile terminated establishment of RRC -> Mobile terminated establishment of Radio Resource Connection • SS initiated Establishment of RRC Connection -> Mobile terminated establishment of Radio Resource Connection
Consequences if not approved:	⌘	

Clauses affected:	⌘	10
Other specs affected:	⌘	☐ Other core specifications ⌘ ☐ Test specifications ☐ O&M Specifications
Other comments:	⌘	

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at:
http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.

3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

10 Circuit Switched Call Control (CC)

10.1 Circuit switched Call Control (CC) state machine verification

10.1.1 General on CC state machine verification

The principle of checking the call control functions consists in the validation of each call control identified state.

State U0 as an initial state is not verified in the tests of 10.1.2 (establishment of an outgoing call).

State U0.1 is never verified.

The steps to be followed within each performed test are:

- bring the UE into the required state;
- trigger the tested event;
- check the UE response and new state.

In clauses 10.1.2 and 10.1.3 different tables are defined to bring the UE into the required initial state. The exact table to be chosen is specified individually in clause "Initial conditions" of "Method of test" for each test case.

For each test, unless otherwise specified, a circuit switched basic service among those supported by the UE but excluding the emergency call teleservice shall be chosen arbitrarily, and the test shall be performed according to that basic service. If the only circuit switched basic service supported by the mobile is emergency call, then the incoming call tests shall not be performed and the other call control tests shall be performed with the EMERGENCY SETUP message replacing the SETUP message.

The initial states are to be checked through STATUS ENQUIRY messages sent by the SS, when feasible. This is not explicitly stated in the tables of expected sequences of signalling messages. The checking of final states are explicitly included into the expected sequences of signalling messages.

The following postamble may be used by the SS to bring UE back to idle mode in those test cases, in which it is not already included into expected sequence of signalling messages:

Table 10.1.1/1: A postamble to bring the UE back to idle mode.

Step	Direction		Message	Comments
	UE	SS		
N n+1 n+2	<-- --> UE		RRC CONNECTION RELEASE RRC CONNECTION RELEASE COMPLETE	 the UE shall release the main signalling link

The postamble has not been included into the all of the tests in order to leave an option to concatenate the procedures in the future by using a final state of a test case as an initial state to another one.

For the special case of U0, the state is checked by sending STATUS ENQUIRY message with all possible values of transaction identifier (seven values) as U0 is the only state in which for every TI the UE will answer with release complete with cause #81. If U0 is to be verified when no RRC connection exists, first a mobile terminating radio connection must be established.

The UE responses are either call management messages received by the SS or lower layers functions activated within the UE or MMI actions (e.g. the buzzing of an alerting tone).

A time-out within the UE is triggered by the SS when it does not answer back an UE expected response.

The test sequences may be split in 3 main groups:

- establishment and release of an outgoing call;
- establishment and release of an incoming call;
- in-call functions.

Some test cases use Basic Generic Procedures, "Mobile terminated establishment of ~~rrc~~Radio Resource ~~c~~Connection" and "Radio Bearer Setup Procedure" defined in TS34.108 clause 7.

General tolerance value on protocol timers defined in TS34.108 is used in some test cases if no specific tolerance on timer is defined in a test case.

Remark on verification of transient states:

Some call control states of the user equipment may be transient, depending on implementation, configuration of the UE and previous messages.

If a test starts in a transient state, then the test is executed without verification of the starting state.

10.1.2 Establishment of an outgoing call

Initial conditions

As a minimum requirement the UE is updated and has been given a TMSI, a ciphering key and cipher key sequence number, and the layer 2, RRC and MM functionalities have been verified.

There are as many CM initial conditions as states to be checked.

The tables below describe message exchanges which bring the UE in the requested initial states.

A state may be taken as initial only when all the states which lead to this initial states have been validated. The order followed in the test procedure will be U0, U0.1, U1, U3, U4, U10, U12, U19, U11 as seen in the table underneath.

The UE is brought again in the initial state starting with U0 at each new test performed.

Table 10.1.2/1: Establishment of an outgoing call, procedure 1 (late assignment)

Step	Direction		Message	Comments
	UE	SS		
1		->	RRC CONNECTION REQUEST	Initiate outgoing call
2		<-	RRC CONNECTION SETUP

14		->	CONNECT ACKNOWLEDGE	U10
A15		<-	DISCONNECT	U12 (note 9)
B15		<-	DISCONNECT	U12 (note 10)
B16		->	RELEASE	U19
C15				MMI action, terminate call
C16		->	DISCONNECT	U11

NOTE 8: Assigned channel is appropriate for the chosen bearer capability (see 10.1).

NOTE 9: The Progress Indicator IE with progress description #8 "in band information or appropriate pattern now available" is included.

NOTE 10:The Progress Indicator IE is not included.

10.1.2.1 Outgoing call / U0 null state

10.1.2.1.1 Outgoing call / U0 null state / MM connection requested

10.1.2.1.1.1 Definition

The call control entity of the User Equipment requests the MM-sublayer to establish a mobile originating MM-connection. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.1.1.2 Conformance requirement

1) Upon initiation of an outgoing basic call by user the UE shall initiate establishment of an MM connection, using as first MM message a CM SERVICE REQUEST message with CM service type "Mobile originating call establishment or packet mode connection establishment".

References

TS 24.008 clause 5.2.1.1, TS24.008 clause 4.5.1.1, TS 25.331 clause 8.1.3.

10.1.2.1.1.3 Test purpose

To verify that upon initiation of an outgoing basic call by user the UE initiates establishment of an MM connection, using as first MM message a CM SERVICE REQUEST message with CM service type "Mobile originating call establishment or packet mode connection establishment".

10.1.2.1.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. When the SS receives CM SERVICE REQUEST, the contents of it shall be checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	->		RRC CONNECTION REQUEST	initiate outgoing call
2	<-		RRC CONNECTION SETUP	
3	->		RRC CONNECTION SETUP COMPLETE	
4	->		CM SERVICE REQUEST	verify the type of call which is asked for "basic" or "emergency by the UE
5	<-		RRC CONNECTION RELEASE	
6	->		RRC CONNECTION RELEASE COMPLETE	
7	UE			the UE shall release the main signalling link

Specific message contents:

None.

10.1.2.1.1.5 Test requirements

After step 3 the UE shall initiate establishment of an MM connection, using as first MM message a CM SERVICE REQUEST message with CM service type "Mobile originating call establishment or packet mode connection establishment".

10.1.2.2 Outgoing call / U0.1 MM connection pending

10.1.2.2.1 Outgoing call / U0.1 MM connection pending / CM service rejected

10.1.2.2.1.1 Definition~~Definition~~

A request for MM connection is rejected by the SS. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.2.1.2 Conformance requirement

Upon receiving indication of an MM-connection establishment being rejected, CC entity should inform upper layer of this rejection.

References

TS 24.008, clause 4.5.1.1 , TS 24.007, clause 6.2.2.

10.1.2.2.1.3 Test purpose

To verify that a CC entity of the UE in CC-state U0.1, "MM-connection pending", upon the UE receiving a CM SERVICE REJECT message, returns to CC state U0, "Null".

10.1.2.2.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U0.1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. When the SS receives CM SERVICE REQUEST, the contents of it shall be checked. The SS rejects it by CM SERVICE REJECT. Then the SS will check the state of the UE by using STATUS ENQUIRY with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	CM SERVICE REJECT	
2		<-	STATUS ENQUIRY	
3		->	RELEASE COMPLETE	cause shall be 81# (invalid TI value)
4	SS			repeat steps 2-3 to cover all the transaction identifiers from 000 ...110
5		<-	RRC CONNECTION RELEASE	
6		->	RRC CONNECTION RELEASE COMPLETE	
7	UE			the UE shall release the main signalling link

Specific message contents:

None.

10.1.2.2.1.5 Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.2.2 Outgoing call / U0.1 MM connection pending / CM service accepted

10.1.2.2.2.1 Definition

A CM request is accepted for the MM-connection by the SS. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.2.2.2 Conformance requirement

A CC entity of the UE in CC-state U0.1, "MM-connection pending", upon the UE receiving a CM SERVICE ACCEPT message, shall send a SETUP message specifying the Called party BCD number that was entered into the UE and then enter CC state U1, "Call initiated".

References

TS 24.008, clause 4.5.1.1, TS24.008, clause 5.2.1.1.

10.1.2.2.2.3 Test purpose

To verify that a CC entity of the UE in CC-state U0.1, "MM-connection pending", upon the UE receiving a CM SERVICE ACCEPT message, sends a SETUP message specifying the Called party BCD number that was entered into the UE and then enters CC state U1, "Call initiated".

10.1.2.2.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U0.1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. When the UE is requesting a MM-connection, the SS will indicate acceptance by sending a CM SERVICE ACCEPT message. The UE shall respond with SETUP. Then the SS will check the state of the call control entity by STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	CM SERVICE ACCEPT	
2		->	SETUP	with called party BCD number.
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause shall be 30# (response to enq.) and state U1 call initiated.

Specific message contents:

None.

10.1.2.2.2.5 Test requirements

After step 1 a CC entity of the UE in CC-state U0.1, "MM-connection pending", shall send a SETUP message specifying the Called party BCD number that was entered into the UE and then enter CC state U1, "Call initiated".

10.1.2.2.3 Outgoing call / U0.1 MM connection pending / lower layer failure

10.1.2.2.3.1 Definition

The call control entity of the UE being in the state, U0.1, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.2.3.2 Conformance requirement

1) Upon a lower layer failure the UE releases the MM connection in progress and returns to idle mode. In that state no call exists, and the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

References

TS 24.008, clause 4.5.1.2, TS 24.008, clause 5.2.1.1., TS 24.008 clause 5.5.3.2. and TS 24.008 clause 8.3.

10.1.2.2.3.3 Test purpose

To verify that after the UE with a CC entity in state U0.1, "MM-connection pending", has detected a lower layer failure and has returned to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

10.1.2.2.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U0.1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. When the UE has sent a CM SERVICE REQUEST message, the SS generates a lower layer failure at the UE. The SS waits long enough to enable the UE to return to idle state listening to paging, and then pages UE to create RRC connection. Finally, the SS will check the state of the UE by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS generates lower layer failure.
2		SS		SS waits 20 s for the UE to return to listening to paging.
3			~~SS Initiated Establishment of RRC Connection~~Mobile terminated establishment of Radio Resource Connection	See TS34.108
4	<-		STATUS ENQUIRY	
5	->		RELEASE COMPLETE	cause shall be 81# (invalid TI value).
6		SS		repeat steps 4-5 to cover all the transaction identifiers from 000 ...110.
7	<-		RRC CONNECTION RELEASE	the main signalling link shall be released.
8	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.2.2.3.5 Test requirements

After step 4 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.3 Outgoing call / U1 call initiated

10.1.2.3.1 Outgoing call / U1 call initiated / receiving CALL PROCEEDING

10.1.2.3.1.1 Definition

The call control entity of the UE being in the state, U1, a CALL PROCEEDING message is sent by the SS. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.3.1.2 Conformance requirement

1) A CC entity of the UE in CC-state U1, "Call initiated", upon receipt of a CALL PROCEEDING message, shall enter CC state U3, "Mobile originating call proceeding".

References

TS 24.008, clauses 5.2.1.1, 5.2.1.2 and 5.2.1.3.

10.1.2.3.1.3 Test purpose

To verify that a CC entity of the UE in CC-state U1, "Call initiated", upon receipt of a CALL PROCEEDING message, enters CC state U3, "Mobile originating call proceeding".

10.1.2.3.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U1. The SS sends a CALL PROCEEDING message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U3.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		CALL PROCEEDING	tone generation not mandatory
2	<-		STATUS ENQUIRY	
3	->		STATUS	cause 30#, state U3

Specific message contents:

None.

10.1.2.3.1.5 Test requirements

After step 1 a CC entity of the UE in CC-state U1, "Call initiated", shall enter CC state U3, "Mobile originating call proceeding".

10.1.2.3.2 Outgoing call / U1 call initiated / rejecting with RELEASE COMPLETE

10.1.2.3.2.1 Definition

The call control entity of the UE being in the state, U1, the call is rejected by a RELEASE COMPLETE message sent by the SS. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.3.2.2 Conformance requirement

1) A CC entity of the UE in CC-state U1, "Call initiated", upon receipt of a RELEASE COMPLETE message with valid cause value, shall enter CC state U0, "Null".

2) On returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".

3) On releasing the MM-connection, the UE shall wait for MM layer release initiated by the network.

References

Conformance requirement 1: TS 24.008, clause 5.4.2, TS 24.008, clause 5.4.4.

Conformance requirement 2: TS 24.008, clause 5.5.3.2.

Conformance requirement 3: TS 24.008, clause 5.4.4.1.3, TS 24.008, clause 4.5.3, TS 25.331, clause 8.1.4.

10.1.2.3.2.3 Test purpose

1) To verify that a CC entity of the UE in CC-state U1, "Call initiated", upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".

2) To verify that in returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

3) To verify that in releasing the MM-connection, the UE shall wait for MM layer release initiated by SS.

10.1.2.3.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U1. The SS sends a RELEASE COMPLETE message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE COMPLETE	See specific message content below.
2		<-	STATUS ENQUIRY	
3		->	RELEASE COMPLETE	cause 81# (invalid TI value)
4	SS			repeat steps 2-3 to cover all the transaction identifiers from 000...110
5		<-	RRC CONNECTION RELEASE	the main signalling link shall be released.
6		->	RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

RELEASE COMPLETE

1) With a valid cause value among:

related to numbering,

#1 unallocated number

#3 no route to destination

#22 number changed

#28 invalid number format

related to bearer capabilities,

#8 operator determined barring

#57 bearer capability not authorized

#58 bearer capability not presently available

#63 service or option not available

#65 bearer service not implemented

#34 no circuit/channel available (call queuing).

10.1.2.3.2.5 Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.3.3 Outgoing call / U1 call initiated / T303 expiry

10.1.2.3.3.1 Definition

The call control entity of the UE being in the state, U1, if no response is then received from the SS, timer T303 expires at the UE side. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.3.3.2 Conformance requirement

1) A CC entity of the UE in CC-state U1, "Call initiated", upon expiry of T303 shall send a DISCONNECT message to its peer entity and enter state U11, "Disconnect request".

References

TS 24.008, clause 5.2.1.1, TS 24.008, clause 5.4.

10.1.2.3.3.3 Test purpose

1) To verify that a CC entity of the UE in CC-state U1, "Call initiated", upon expiry of T303 sends a DISCONNECT message to its peer entity and enters state U11, "Disconnect request".

10.1.2.3.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U1. When T303 expires at the UE, the UE shall send DISCONNECT. The SS checks by using the status enquiry procedure that the CC entity has entered the state U11, disconnect request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS waits for T303 expiry.
2	->		DISCONNECT	Shall be transmitted between 24 s and 36 s after the CM SERVICE REQUEST.
3		<-	STATUS ENQUIRY	
4	->		STATUS	cause 30#, status U11

Specific message contents:

None.

10.1.2.3.3.5 Test requirements

Upon expiry of timer T303, a CC entity of the UE in CC-state U1, "Call initiated", shall send a DISCONNECT message and enter state U11, "Disconnect request".

10.1.2.3.4 Outgoing call / U1 call initiated / lower layer failure

10.1.2.3.4.1 Definition

The call control entity of the UE being in the state, U1, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.3.4.2 Conformance requirement

Upon a lower layer failure MM informs the relevant CM entities that the MM connection has been interrupted. As call re-establishment is not allowed, the CC entity must perform a local release. The UE returns to idle mode. In that state no call exists, and the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

References

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U1 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U1. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		unknown message	message type not defined for PD
2	->		STATUS	cause 97#, state U1
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U1

Specific message contents:

None.

10.1.2.3.7.5 Test requirements

After step 1 and step 3 a CC entity of the UE in CC-state U1, "Call initiated", shall return a STATUS message.

10.1.2.4 Outgoing call / U3 UE originating call proceeding

10.1.2.4.1 Outgoing call / U3 UE originating call proceeding / ALERTING received

10.1.2.4.1.1 Definition

The call control entity of the UE being in the state, U3, an ALERTING message is sent to the UE as a indication that a call is being alerted at a called end. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.4.1.2 Conformance requirement

1) A CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a ALERTING message shall enter CC-state U4, "Call Delivered".

References

TS 24.008 clause 5.2.1.5.

10.1.2.4.1.3 Test purpose

To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a ALERTING message enters CC-state U4, "Call Delivered".

10.1.2.4.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U3 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends an ALERTING message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U4, call delivered.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		ALERTING	
2	<-		STATUS ENQUIRY	
3	->		STATUS	cause 30#, state U4

Specific message contents:

None.

10.1.2.4.1.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", shall enter CC-state U4, "Call Delivered".

10.1.2.4.2 Outgoing call / U3 UE originating call proceeding / CONNECT received

10.1.2.4.2.1 Definition

The call control entity of the UE being in the state, U3, a CONNECT message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.4.2.2 Conformance requirement

1) A CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a CONNECT message shall return a "CONNECT ACKNOWLEDGE" message to its peer entity and enter the CC state U10, "Active".

2) The UE shall then stop any locally generated indication.

References

Conformance requirement 1: TS 24.008 clause 5.2.1.6.

Conformance requirement 2: TS 24.008 clause 5.2.1.6.

10.1.2.4.2.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a CONNECT message returns a "CONNECT ACKNOWLEDGE" message to its peer entity and enters the CC state U10, "Active".

2) To verify that the UE stops locally generated indication, if any.

10.1.2.4.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U3 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The SS sends a CONNECT message to the UE. The UE shall respond by sending a CONNECT ACKNOWLEDGE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U10, active.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Radio Bearer Setup Procedure	(DTCH), SeeTS34.108
2	<-		CONNECT	the UE shall stop tone generation, if any
3	->		CONNECT ACKNOWLEDGE	
4	<-		STATUS ENQUIRY	
5	->		STATUS	cause 30#, state U10

Specific message contents:

None.

10.1.2.4.2.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", shall return a "CONNECT ACKNOWLEDGE" message and enter the CC state U10, "Active".

The UE shall stop locally generated indication.

10.1.2.4.3 Outgoing call / U3 UE originating call proceeding / PROGRESS received without in band information

10.1.2.4.3.1 Definition

The call control entity of the UE being in the state, U3, a PROGRESS message is received by the UE. The PROGRESS message does not contain indication of in-band information availability. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.4.3.2 Conformance requirement

1) A CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a PROGRESS message with valid cause values shall stay in CC-state U3.

2) After receipt of the PROGRESS message timer T310 shall be stopped.

References

Conformance requirement 1: TS 24.008 clause 5.2.1.4.

Conformance requirement 2: TS 24.008 clause 11.3.

10.1.2.4.3.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a PROGRESS message with valid cause values stays in CC-state U3.

2) To verify that after receipt of the PROGRESS message timer T310 is stopped.

10.1.2.4.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U3 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends a PROGRESS message not containing indication of in-band information availability to the UE. The SS checks that the UE has stopped T310, i.e. at T310 time-out no DISCONNECT message is sent by the UE. Then the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		PROGRESS	(note)
2	<-		STATUS ENQUIRY	
3	->		STATUS	cause 30#, state U3
4		SS		SS waits at least 45 seconds and checks no DISCONNECT is sent by the UE
5	<-		STATUS ENQUIRY	
6	->		STATUS	cause 30#, state U3

NOTE: Tested with a valid cause value among:

#4 call has returned to PLMN/ISDN

#32 call is end-to-end PLMN/ISDN or

any value in the set #(21-127)

Specific message contents:

None.

10.1.2.4.3.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", shall stay in CC-state U3.

After step 3 SS waits at least 45 seconds and checks no DISCONNECT is sent by the UE

10.1.2.4.4 Outgoing call / U3 UE originating call proceeding / PROGRESS with in band information

10.1.2.4.4.1 Definition

The call control entity of the UE being in the state, U3, a PROGRESS message indicating availability of in band information is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.4.4.2 Conformance requirement

1) A CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a PROGRESS message indicating in-band announcement shall through-connect the traffic channel for speech, if DTCH is in a speech mode. If DTCH is not in speech mode, the UE shall not through-connect the DTCH.

2) After receipt of the PROGRESS message, T310 shall be stopped.

References

TS 25.331 clause 8.2.1., TS 24.008 clause 5.1.3, TS 24.008 clause 5.2.1.4., TS 24.008 clause 5.2.1.9, TS 24.008 clause 5.5.1., TS 24.008 clause 11.3.

10.1.2.4.4.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a PROGRESS message indicating in-band announcement through-connects the traffic channel for speech, if DTCH is in speech mode. If DTCH is not in a speech mode, the UE does not through-connect the DTCH.

2) To verify that after receipt of the PROGRESS message, T310 is stopped.

10.1.2.4.4.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U3 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The SS sends a PROGRESS message containing indication of in-band information availability to the UE. The SS checks that if channel mode is speech, the DTCH shall be through connected. If channel mode is not speech, the DTCH shall not be through connected. Also the SS checks that the UE has stopped T310, i.e. at T310 time-out no DISCONNECT message is sent by the UE. Then the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Radio Bearer Setup Procedure	(DTCH), See TS34.108
2	<-		PROGRESS	(note) the UE shall stop all the CC timers , if channel mode is speech, the DTCH shall be through connected. If channel mode is not speech, the DTCH shall not be through connected.
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U3
5		SS		SS waits at least 45 seconds and checks no DISCONNECT is sent by the UE.
6	<-		STATUS ENQUIRY	
7	->		STATUS	cause 30#, state U3
8		SS		If the channel mode is speech the SS will check that the user connection for speech is attached (both downlink and uplink).

Specific message contents:

NOTE: Tested with a valid cause value among:

#1 call is not end to end PLMN/ISDN

#2 destination address is non PLMN/ISDN

#3 originating address is non PLMN/ISDN

#8 in band information or appropriate pattern now available or any value in the set #(6-20).

10.1.2.4.4.5 Test requirements

After step 2 a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", shall through-connect the traffic channel for speech, if DTCH is in a speech mode. If DTCH is not in speech mode, the UE shall not through-connect the DTCH.

After step 2 the SS waits at least 45 seconds and checks no DISCONNECT is sent by the UE

After step 5 the SS checks that the user connection for speech is attached (both downlink and uplink), if the channel mode is speech.

10.1.2.4.5 Outgoing call / U3 UE originating call proceeding / DISCONNECT with in band tones

10.1.2.4.5.1 Definition

The call control entity of the UE being in the state, U3, a DISCONNECT message indicating availability of in band information is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.4.5.2 Conformance requirement

1) A CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a DISCONNECT with progress indicator #8, shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.

References

TS 24.008 clause 5.2.1.4., TS 24.008 clause 5.4.4.

10.1.2.4.5.3 Test purpose

To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a DISCONNECT with progress indicator #8 through-connects the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE sends a RELEASE message.

The UE is brought into the state U3 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U3. The SS generates a lower layer failure at the UE. The SS waits long enough to enable the UE to return to idle state listening to paging, and then pages UE to create RRC connection. Finally, the SS will check the state of the UE by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS generates lower layer failure
2		SS		SS waits 20 s for the UE to return to listening to paging
3			~~SS Initiated Establishment of RRC Connection~~Mobile terminated establishment of Radio Resource Connection	See TS34.108
4	<-		STATUS ENQUIRY	
5	->		RELEASE COMPLETE	cause 81# (invalid TI value)
6		SS		repeat steps 4-5 to cover all the transaction identifiers from 000...110
7	<-		RRC CONNECTION RELEASE	the main signalling link shall be released.
8	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.2.4.11.5 Test requirements

After step 4 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.4.12 Outgoing call / U3 UE originating call proceeding / unknown message received

10.1.2.4.12.1 Definition

The call control entity of the UE being in the state, U3, an unknown message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.4.12.2 Conformance requirement

1) A CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding" having received an unknown message from its peer entity shall return a STATUS message.

References

TS 24.008 clause 8.5.

10.1.2.4.12.3 Test purpose

To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding" having received an unknown message from its peer entity returns a STATUS message.

10.1.2.4.12.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U3 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		unknown message	message type not defined for PD
2	->		STATUS	cause 97#, state U3
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U3

Specific message contents:

None.

10.1.2.4.12.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", shall return a STATUS message.

10.1.2.4.13 Outgoing call / U3 UE originating call proceeding / Internal alerting indication

10.1.2.4.13.1 Definition

The call control entity of the UE being in the state, U3, an ALERTING message is sent to the UE when the user connection is not attached to the radio path. ~~This test is applicable for any equipment supporting mobile originated circuit switched basic service for telephony.~~

10.1.2.4.13.2 Conformance requirement

1) When the call control entity of the UE in the "mobile originating call proceeding" state receives an ALERTING message then it shall enter "call delivered" state and, for speech calls, if the user connection is not attached to the radio path, the UE shall internally generate an alerting indication.

References

TS 24.008 clause 5.2.1.5.

10.1.2.4.13.3 Test purpose

When the call control entity of the UE in the "mobile originating call proceeding" state receives an ALERTING message then it enters "call delivered" state and, for speech calls, if the user connection is not attached to the radio path, the UE generates internally an alerting indication.

10.1.2.4.13.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.
- way to give internally generated alerting indication for outgoing calls

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U3 by using table 10.1.2/1.

Test procedure

The SS sends an ALERTING message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U4, call delivered. Also it is checked that the UE generates internally alerting indication to the user in the way described in the ICS/IXIT statements.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		ALERTING	the UE shall generate an alerting indication to the user in the way described in the ICS/IXIT statements
2	<-		STATUS ENQUIRY	
3	->		STATUS	cause 30#, state U4

Specific message contents:

None.

10.1.2.4.13.5 Test requirements

After step 1 CC entity of the UE in CC state U3, the "Mobile Originating Call Proceeding" shall enter "Call Delivered" state and, for speech calls, if the user connection is not attached to the radio path, the UE shall internally generate an alerting indication.

10.1.2.5 Outgoing call / U4 call delivered

10.1.2.5.1 Outgoing call / U4 call delivered / CONNECT received

10.1.2.5.1.1 Definition

The call control entity of the UE being in the state, U4, a CONNECT message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.5.1.2 Conformance requirement

1) A CC-entity of the UE in CC-state U4, "Call Delivered", upon receipt of the CONNECT message shall return a CONNECT ACKNOWLEDGE to its peer entity and enter the CC-state U10, "Active".

References

TS 24.008 clause 5.2.1.6.

10.1.2.5.1.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", upon receipt of the CONNECT message returns a CONNECT ACKNOWLEDGE to its peer entity and enters the CC-state U10, "Active".

10.1.2.5.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The SS sends a CONNECT message to the UE. The UE shall respond by sending a CONNECT ACKNOWLEDGE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U10, active.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	CONNECT	
2		->	CONNECT ACKNOWLEDGE	UE stops alerting, if applicable
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause 30#, state U10

Specific message contents:

None.

10.1.2.5.1.5 Test requirements

After step 1 a CC entity of the UE in CC state U4, "Call Delivered", shall return a CONNECT ACKNOWLEDGE message and enter the CC state U10, "Active".

10.1.2.5.2 Outgoing call / U4 call delivered / termination requested by the user

10.1.2.5.2.1 Definition

The call control entity of the UE being in the state, U4, the user requests to terminate the call. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.5.2.2 Conformance requirement

1) A CC-entity of the UE in CC-state U4, "Call Delivered", upon request by the user to terminate shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

References

TS 24.007 clause 6.2.2.,TS 24.008 clause 5.4.3.

10.1.2.5.2.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.2.5.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The user requests termination of the call. The UE shall send a DISCONNECT message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U11, disconnect request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				MMI action, terminate call
2	->		DISCONNECT	
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U11

Specific message contents:

None.

10.1.2.5.2.5 Test requirements

After step 1 a CC entity of the UE in CC state U4, "Call Delivered", shall send a DISCONNECT message and enter the CC state U11, "Disconnect Request".

10.1.2.5.3 Outgoing call / U4 call delivered / DISCONNECT with in band tones

10.1.2.5.3.1 Definition

The call control entity of the UE being in the state, U4, a DISCONNECT message indicating availability of in band information is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.5.3.2 Conformance requirement

1) A CC-entity of the UE in CC-state U4, "Call Delivered" shall, upon receipt of a DISCONNECT with a progress indicator indicating in-band information, shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.

References

TS 25.331 clause 8.2.1., TS 24.008 clause 5.4.4.1.1., TS 24.008 clause 5.5.1., TS 24.008 clause 5.2.1.9.

10.1.2.5.3.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", upon receipt of a DISCONNECT with a progress indicator indicating in-band information, through-connects the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.

10.1.2.5.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The SS sends a DISCONNECT message containing indication of in-band information availability to the UE. The SS checks that if channel mode is MO telephony, the DTCH shall be through connected and the UE enters state U12, disconnect indication. If channel mode is not speech, the DTCH shall not be through connected and the UE shall enter state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	(note)
A2		SS		DTCH in speech mode: the SS will check that the audio path for in band tones is attached.
A3		<-	STATUS ENQUIRY	
A4		->	STATUS	cause 30#, state U12
B2		->	RELEASE	DTCH is not in speech mode:
B3		<-	STATUS ENQUIRY	
B4		->	STATUS	cause 30#, state U19

Specific message contents:

NOTE: the Progress Indicator, Progress Description:

#8 in band information or appropriate pattern now available.

10.1.2.5.3.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U4, "Call Delivered", shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.

10.1.2.5.4 Outgoing call / U4 call delivered / DISCONNECT without in band tones

10.1.2.5.4.1 Definition

The call control entity of the UE being in the state, U4, a DISCONNECT message is received by the UE. The DISCONNECT message does not contain indication of in-band information availability. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.5.4.2 Conformance requirement

1) A CC-entity of the UE in CC-state U4, "Call Delivered", upon receipt of a DISCONNECT without progress indicator, shall return a RELEASE message and enter the CC-state U19, "Release Request".

References

TS 24.008 clause 5.4.4.

10.1.2.5.4.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", upon receipt of a DISCONNECT without progress indicator, returns a RELEASE message and enters the CC-state U19, "Release Request".

10.1.2.5.4.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The SS sends a DISCONNECT message not containing indication of in-band information availability to the UE. The UE shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the UE has entered the state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	without progress indicator
2		->	RELEASE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause 30#, state U19

Specific message contents:

None.

10.1.2.5.4.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U4, "Call Delivered", shall return a RELEASE message and enter the CC-state U19, "Release Request".

10.1.2.5.5 Outgoing call / U4 call delivered / RELEASE received

10.1.2.5.5.1 Definition

The call control entity of the UE being in the state, U4, a RELEASE message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.5.5.2 Conformance requirement

1) A CC-entity of the UE in CC-state U4, "Call Delivered", upon receipt of the RELEASE message shall respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null".

2) The UE on returning to idle mode shall release the MM-connection and the CC-entities relating to the seven mobile originating transaction identifiers shall be in CC-state U0, "Null".

References

Conformance requirement 1: TS 24.008 clause 5.4.2., TS 24.008 clause 5.4.4.

Conformance requirement 2: TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2.

10.1.2.5.5.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", upon receipt of the RELEASE message will respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null".

2) To verify that the UE on returning the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The SS sends a RELEASE message to the UE. The UE shall respond with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		RELEASE	with cause "Normal, unspecified"
2	->		RELEASE COMPLETE	
3	<-		STATUS ENQUIRY	
4	->		RELEASE COMPLETE	cause 81# (invalid TI value)
5	SS			repeat steps 3-4 to cover all the transaction identifiers from 000...110
6	<-		RRC CONNECTION RELEASE	the main signalling link shall be released.
7	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.2.5.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U4, "Call Delivered", shall respond with the RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.5.6 Outgoing call / U4 call delivered / lower layer failure

10.1.2.5.6.1 Definition

The call control entity of the UE being in the state, U4, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.5.6.2 Conformance requirement

1) When CC-entity of the UE in CC-state U4, "Call Delivered" has detected a lower layer failure and has returned to idle mode, the CC-entities relating to the seven mobile originating transaction identifiers shall be in CC-state U0, "Null".

References

TS 24.008 clause 4.5.2.3., TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2., TS 25.331 clause 8.1.4.

10.1.2.5.6.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered" having detected a lower layer failure and has returned to idle mode, the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".

10.1.2.5.6.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U4 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U4. The SS generates a lower layer failure at the UE. The SS waits long enough to enable the UE to return to idle state listening to paging, and then pages UE to create RRC connection. Finally, the SS will check the state of the UE by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS generates lower layer failure
2		SS		SS waits 20 s for the UE to return to listening to paging
3			~~SS Initiated Establishment of RRC Connection~~Mobile terminated establishment of Radio Resource Connection	See TS34.108
4	<-		STATUS ENQUIRY	
5	->		RELEASE COMPLETE	cause 81# (invalid TI value)
6		SS		repeat steps 4-5 to cover all the transaction identifiers from 000...110
7	<-		RRC CONNECTION RELEASE	the main signalling link shall be released.
8	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.2.5.6.5 Test requirements

After step 4 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.5.7 Outgoing call / U4 call delivered / traffic channel allocation

10.1.2.5.7.1 Definition

The call control entity of the UE being in the state, U4, a radio bearer establishment procedure is performed. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.5.7.2 Conformance requirement

1) A CC-entity of the UE in CC-state U4, "Call Delivered", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, shall stay in CC-state U4.

References

TS 25.331 clause 8.2.1., TS 24.008 clause 5.2.1.9.

10.1.2.5.7.3 Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call Delivered", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, stays in CC-state U4.

10.1.2.5.7.4 Method of test

10.1.2.6.2.3 Test purpose

1) To verify that the a CC-entity of the UE in CC-state U10, "Call Active", upon receive of the RELEASE will respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null"

2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null"

10.1.2.6.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U10 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to

initiate a call. The CC entity of the UE is brought to the state U10. The SS sends a RELEASE message to the UE. The UE shall respond with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		RELEASE	with cause "Normal, unspecified"
2	->		RELEASE COMPLETE	the UE starts T3240
3	<-		STATUS ENQUIRY	
4	->		RELEASE COMPLETE	cause 81# (invalid TI value)
5		SS		repeat steps 3-4 to cover all the transaction identifiers from 000...110
6	<-		RRC CONNECTION RELEASE	the main signalling link shall be released.
7	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.2.6.2.5 Test requirements

After step 1 a CC entity of the UE in CC state U10, "Call Active", shall return a RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.6.3 U10 call active / DISCONNECT with in band tones

10.1.2.6.3.1 Definition

The call control entity of the UE being in the state, U10, a DISCONNECT message indicating availability of in band information is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.6.3.2 Conformance requirement

1) A CC-entity of the UE in CC-state U10, "Call Active", upon receipt of a DISCONNECT message with a Progress Indicator indicating in-band information, shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.

References

TS 24.008 clause 5.4.4.1.1., TS 24.008 clause 5.5.1.

10.1.2.6.3.3 Test purpose

To verify that a CC-entity of the UE in CC-state U10, "Call Active", upon receipt of a DISCONNECT message with a Progress Indicator indicating in-band information, through-connects the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE sends a RELEASE message.

10.1.2.6.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U10 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U10. The SS sends a DISCONNECT message containing indication of in-band information availability to the UE. The SS checks that if channel mode is speech, the DTCH shall be through connected and the UE enters state U12, disconnect indication. If channel mode is not speech, the DTCH shall not be through connected and the UE enters state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		DISCONNECT	(note)
A2	SS			DTCH in speech mode: the SS will check that the audio path for in band tones is attached.
A3	<-		STATUS ENQUIRY	
A4	->		STATUS	cause 30#, state U12
				DTCH is not in speech mode:
B2	->		RELEASE	
B3	<-		STATUS ENQUIRY	
B4	->		STATUS	cause 30#, state U19

Specific message contents:

NOTE: the Progress Indicator, Progress Description:

#8 in band information or appropriate pattern now available.

10.1.2.6.3.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U10, "Call Active", shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.

10.1.2.6.4 U10 call active / DISCONNECT without in band tones

10.1.2.6.4.1 Definition

The call control entity of the UE being in the state, U10, a DISCONNECT message is received by the UE. The DISCONNECT message does not contain indication of in-band information availability. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.6.4.2 Conformance requirement

1) A CC-entity of the UE in CC-state U10, "Call Active", upon receipt of a DISCONNECT message without progress indicator, shall return a RELEASE message and enter the CC-state U19, "Release Request".

References

TS 24.008 clause 5.4.4.

10.1.2.6.4.3 Test purpose

To verify that the a CC-entity of the UE in CC-state U10, "Call Active", upon receipt of a DISCONNECT message without progress indicator, returns a RELEASE message and enters the CC-state U19, "Release Request".

10.1.2.6.4.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U10 by using table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U10. The SS sends a DISCONNECT message not containing indication of in-band information availability to the UE. The UE shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the UE has entered the state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	without progress indicator
2		->	RELEASE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause 30#, state U19

Specific message contents:

None.

10.1.2.6.4.5 Test requirements

A CC-entity of the UE in CC-state U10, "Call Active", shall return a RELEASE message and enter the CC-state U19, "Release Request".

10.1.2.6.5 U10 call active / RELEASE COMPLETE received

10.1.2.6.5.1 Definition

The call control entity of the UE being in the state, U10, the call is cleared by a RELEASE COMPLETE message sent by the SS. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.6.5.2 Conformance requirement

1) A CC entity of the UE in CC-state U10, "active", upon receipt of a RELEASE COMPLETE message with valid cause value, shall enter CC state U0, "Null".

2) On returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".

References

Conformance requirement 1: TS 24.008, clause 5.4.2, TS 24.008, clause 5.4.4.

Conformance requirement 2: TS 24.008, clause 5.4.4.1.3.

10.1.2.6.5.3 Test purpose

1) To verify that a CC entity of the UE in CC-state U10, "Call active" upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".

2) To verify that in returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

10.1.2.6.5.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U10 by using table 10.1.2/1.

Test procedure

The SS sends a RELEASE COMPLETE message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		RELEASE COMPLETE	note 1
2	<-		STATUS ENQUIRY	note 2
3	->		RELEASE COMPLETE	cause 81# (invalid TI value),
4	SS			repeat steps 2-3 to cover all the transaction identifiers from 000...110
5	<-		RRC CONNECTION RELEASE	the main signalling link shall be released.
6	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

NOTE 1: With the cause value chosen arbitrarily.

NOTE 2: TI flag has the value indicating the UE as a originator of the call.

10.1.2.6.5.5 Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.6.6 U10 call active / SETUP received

10.1.2.6.6.1 Definition

If the UE does not react correctly when receiving a SETUP message on a new Transaction Identifier during an active call, the active call may be lost.

~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.6.6.2 Conformance requirement

1) A UE that has a call established when receiving a SETUP message shall respond either with a CALL CONFIRMED message or a RELEASE COMPLETE message, both with cause #17 "user busy".

2) The call control state of the existing transaction shall not be affected by the incoming SETUP message.

Reference(s):

Conformance requirement 1: TS 24.008, clause 5.2.2.3.1.

Conformance requirement 2: TS 24.008, clause 5.1.1.

10.1.2.6.6.3 Test purpose

1) To verify that a User Equipment that has a call established and receives a SETUP message answers either with a CALL CONFIRMED message with cause "user busy" if it supports call waiting, or with a RELEASE COMPLETE message with cause "user busy" otherwise.

2) To verify that after having sent this message, the UE is still in state U10 for the established call.

10.1.2.6.6.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is idle updated with valid TMSI and CKSN.

The UE is brought into the state U10 by using table 10.1.2/1.

Related ICS/IXIT statement(s)

- supported MO circuit switched basic services.

- support of call waiting Y/N.

Test Procedure

The UE has a mobile originated call in the U10 state. When UE sends a SETUP message and SS receives it in the first call establishment, SS sends a CALL PROCEEDINF message without Network Call Control Capability IE.

The SS sends a SETUP message to the UE (with signal IE indicating "call waiting tone on" and without Network Call Control Capability IE).

If the UE does not support call waiting it shall answer by a RELEASE COMPLETE message.

If the UE supports call waiting it shall answer by a CALL CONFIRMED message followed by an ALERTING. The second transaction is then released by the SS with a RELEASE COMPLETE message.

In both cases the SS checks by using the status enquiry procedure that the CC entity of the UE is still in state U10, active call for the original call.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	SETUP	this message establishes a second transaction The TI value shall be the same as the one that is in use for the MO call. The TI flag shall have the value specified for an MT call.
A2		->	RELEASE COMPLETE	if the UE does not support call waiting with cause user busy" with the TI of the second transaction
B2		->	CALL CONFIRMED	if the UE supports call waiting with cause user busy" with the TI of the second transaction
B3		->	ALERTING	with the TI of the second transaction
B4		<-	RELEASE COMPLETE	with the TI of the second transaction
5		<-	STATUS ENQUIRY	with the TI of the original transaction
6		->	STATUS	cause 30#, state U10 with the TI of the original transaction

NOTE: The Transaction Identifier of the second transaction shall be different from the one of the already established transaction.

Specific message contents

SETUP message contains a Signal IE with value "call waiting tone on" (H'07).

10.1.2.6.6.5 Test requirements

After step 1 a UE that has a call established shall answer either with a CALL CONFIRMED message with cause "user busy" if it supports call waiting, or with a RELEASE COMPLETE message with cause "user busy" otherwise.

After step A2 or B2 the UE is still in state U10 for the established call.

10.1.2.7 U11 disconnect request

10.1.2.7.1 U11 disconnect request / clear collision

10.1.2.7.1.1 Definition

The call control entity of the UE being in the state, U11, a DISCONNECT message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.7.1.2 Conformance requirement

1) A CC-entity of the UE in CC-state U11, "Disconnect Request", upon receipt of a DISCONNECT message, shall return to its peer entity the RELEASE message and enter the CC-state U19, "Release Request".

References

TS 24.008 clause 5.4.5.

10.1.2.7.1.3 Test purpose

To verify that the a CC-entity of the UE in CC-state U11, "Disconnect Request", upon receipt of a DISCONNECT message, returns to its peer entity the RELEASE message and enters the CC-state U19, "Release Request".

10.1.2.7.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U11 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U11. The SS sends a DISCONNECT message to the UE. The UE shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the UE has entered the state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	
2		->	RELEASE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause 30#, state U19

Specific message contents:

None.

10.1.2.7.1.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U11, "Disconnect Request", shall return the RELEASE message and enter the CC-state U19, "Release Request".

10.1.2.7.2 U11 disconnect request / RELEASE received

10.1.2.7.2.1 Definition

The call control entity of the UE being in the state, U11, a RELEASE message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.7.2.2 Conformance requirement

1) A CC-entity of the UE in CC-state U11, "Disconnect Request", upon receipt of the RELEASE message shall return RELEASE COMPLETE and enter the CC-state U0, "Null".

2) On returning to the idle mode the UE shall release the MM-connection and the CC-entities relating to the seven mobile originating transaction identifiers shall be in CC-state U0, "Null".

References

Conformance requirement 1: TS 24.008 clause 5.4.3.

Conformance requirement 2: TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2., TS 24.008 clause 8.3.

10.1.2.7.2.3 Test purpose

1) To verify that the a CC-entity of the UE in CC-state U11, "Disconnect Request", upon receipt of the RELEASE message shall return RELEASE COMPLETE and enter the CC-state U0, "Null".

2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".

10.1.2.7.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U11 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U11. The SS sends a RELEASE message to the UE. The UE shall respond with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	
2		->	RELEASE COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	RELEASE COMPLETE	cause 81# (invalid TI value)
5		SS		repeat steps 3-4 to cover all the transaction identifiers from 000...110
6		<-	RRC CONNECTION RELEASE	the main signalling link shall be released.
7		->	RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.2.7.2.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U11, "Disconnect Request", shall return the RELEASE COMPLETE.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.7.3 U11 disconnect request / timer T305 time-out

10.1.2.7.3.1 Definition

The call control entity of the UE being in the state, U11, if no response is then received from the SS, timer T305 expires at the UE side. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.7.3.2 Conformance requirement

1) A CC-entity of the UE in CC-state U11, "Disconnect Request" shall on expiry of T305, proceed with the connection release procedure by sending the RELEASE message to its peer entity and shall enter the CC-state U19, "Release Request".

References

TS 24.008 clause 5.4.3., TS 24.008 clause 11.3.

10.1.2.7.3.3 Test purpose

To verify that the CC-entity of the UE in CC-state U11, "Disconnect Request" shall on expiry of T305, proceed with the connection release procedure by sending the RELEASE message to its peer entity and enters the CC-state U19, "Release Request".

10.1.2.7.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U11 by using table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U11. Then T305 expires at the UE and the UE shall send a RELEASE message. The SS checks timer T305 accuracy and that the CC entity has entered the state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS waits until T305 expires at the UE
2		->	RELEASE	SS checks the time between DISCONNECT and RELEASE (note), check the timer T305 accuracy
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause 30#, state U19

Specific message contents:

NOTE: With the same cause value as originally contained in the DISCONNECT message. An additional cause information element (#102 recovery on timer expiry) may be included.

10.1.2.7.3.5 Test requirements

Upon expiry of timer T305 a CC-entity of the UE in CC-state U11, "Disconnect Request", shall proceed with the connection release procedure by sending the RELEASE message and enter the CC-state U19, "Release Request".

10.1.2.7.4 U11 disconnect request / lower layer failure

10.1.2.7.4.1 Definition

The call control entity of the UE being in the state, U11, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.7.4.2 Conformance requirement

1) A CC-entity of the UE in CC-state U11, "Disconnect Request" having detected a lower layer failure shall return to the idle mode. The CC entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".

References

TS 24.008 clause 4.5.2.3., TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2., TS 25.331 clause 8.1.4., TS 24.008 clause 8.3.

10.1.2.7.4.3 Test purpose

To verify that the a CC-entity of the UE in CC-state U11, "Disconnect Request" having detected a lower layer failure returns to the idle mode. The CC entities relating to the seven mobile originating transaction identifiers are thus in state U0, "Null".

10.1.2.7.4.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U11 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U11. The SS generates a lower layer failure at the UE. The SS waits long enough to enable the UE to return to idle state listening to paging, and then pages UE to create RRC connection. Finally, the SS will check the state of the UE by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS generates lower layer failure
2		SS		SS waits 20 s for the UE to return to listening to paging
3			~~SS Initiated Establishment of RRC Connection~~Mobile terminated establishment of Radio Resource Connection	See TS34.108
4	<-		STATUS ENQUIRY	
5	->		RELEASE COMPLETE	cause 81# (invalid TI value)
6		SS		repeat steps 4-5 to cover all the transaction identifiers from 000...110
7	<-		RRC CONNECTION RELEASE	the main signalling link shall be released.
8	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.2.7.4.5 Test requirements

After step 4 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.7.5 U11 disconnect request / unknown message received

10.1.2.7.5.1 Definition

The call control entity of the UE being in the state, U4, an unknown message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.7.5.2 Conformance requirement

1) A CC-entity of the UE in CC-state U100, "Call Delivered", having received an unknown message from its peer entity shall return a STATUS message.

References

TS 24.008 clause 8.4.

10.1.2.7.5.3 Test purpose

To verify that a CC-entity of the UE in CC-state U11, "Call Delivered", having received an unknown message from its peer entity returns a STATUS message.

10.1.2.7.5.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U11 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U11. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		unknown message	message type not defined for PD
2	->		STATUS	cause 97#, state U11
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U11

Specific message contents:

None.

10.1.2.7.5.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U11, "Disconnect Request", shall return a STATUS message.

10.1.2.8 U12 disconnect indication

10.1.2.8.1 U12 disconnect indication / call releasing requested by the user

10.1.2.8.1.1 Definition

The call control entity of the UE being in the state, U12, the user requests to terminate the call. ~~This test is applicable only for user equipment supporting bearer capability for speech.~~

10.1.2.8.1.2 Conformance requirement

1) A CC-entity of the UE in CC-state U12, "Disconnect Indication" being in network initiated call release phase, shall, upon receiving a call release request from the user send a RELEASE to its peer entity and enter CC-state U19, "Release Request".

References

TS 24.007 clause 6.2.2., TS 24.008 clause 5.4.4.

10.1.2.8.1.3 Test purpose

To verify that a CC-entity of the UE in CC-state U12, "Disconnect Indication" being in network initiated call release phase, shall, upon receiving a call release request from the user sends a RELEASE to its peer entity and enters CC-state U19, "Release Request"

10.1.2.8.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U12 by using Option A of table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U12. The user requests termination of the call. The UE shall send a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				MMI action, "on hook"
2	->		RELEASE	
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U19

Specific message contents:

None.

10.1.2.8.1.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U12, "Disconnect Indication" being in network initiated call release phase, shall send a RELEASE message and enter CC-state U19, "Release Request".

10.1.2.8.2 U12 disconnect indication / RELEASE received

10.1.2.8.2.1 Definition

The call control entity of the UE being in the state, U12, a RELEASE message is received by the UE. ~~This test is applicable only for user equipment supporting bearer capability for speech.~~

10.1.2.8.2.2 Conformance requirement

1) A CC-entity of the UE in CC-state U12, "Disconnect Indication", upon receipt of a RELEASE message shall return to its peer entity the RELEASE COMPLETE message and enter the CC-state U0, "Null".

2) On returning to the idle mode the UE shall release the MM-connection and the CC-entities relating to the seven mobile originating transaction identifiers shall be in CC-state U0, "Null".

References

Conformance requirement 1: TS 24.008 clause 5.4.2

Conformance requirement 2: TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2., TS 24.008 clause 8.3.

10.1.2.8.2.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U12, "Disconnect Indication", upon receipt of a RELEASE message returns to its peer entity the RELEASE COMPLETE message and enters the CC-state U0, "Null".

2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null".

10.1.2.8.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U12 by using Option A of table 10.1.2/1.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U12. The SS sends a RELEASE message to the UE. The UE shall respond with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	
2		->	RELEASE COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	RELEASE COMPLETE	cause 81# (invalid TI value)
5		SS		repeat steps 3-4 to cover all the transaction identifiers from 000...110
6		<-	RRC CONNECTION RELEASE	the main signalling link shall be released.
7		->	RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.2.8.2.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U12, "Disconnect Indication", shall return the RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.8.3 U12 disconnect indication / lower layer failure

10.1.2.8.3.1 Definition

The call control entity of the UE being in the state, U12, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated. ~~This test is applicable only for user equipment supporting bearer capability for speech.~~

10.1.2.8.3.2 Conformance requirement

1) A CC-entity of the UE in CC-state U12, "Disconnect Indication" having detected a lower layer failure shall return to idle mode. The CC-entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".

References

TS 24.008 clause 4.5.3.2., TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2., TS 25.331 clause 8.1.4., TS 24.008 clause 8.3.

10.1.2.8.3.3 Test purpose

To verify that a CC-entity of the UE in CC-state U12, "Disconnect Indication" having detected a lower layer failure returns to idle mode. The CC-entities relating to the seven mobile originating transaction identifiers are thus in state U0, "Null".

10.1.2.8.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U12 by using Option A of table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U12. The SS generates a lower layer failure at the UE. The SS waits long enough to enable the UE to return to idle state listening to paging, and then pages UE to create RRC connection. Finally, the SS will check the state of the UE by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS generates lower layer failure
2		SS		SS waits 20 s for the UE to return to listening to paging
3			~~SS Initiated Establishment of RRC Connection~~Mobile terminated establishment of Radio Resource Connection	See TS34.108
4	<-		STATUS ENQUIRY	
5	->		RELEASE COMPLETE	cause 81# (invalid TI value)
6		SS		repeat steps 4-5 to cover all the transaction identifiers from 000...110
7	<-		RRC CONNECTION RELEASE	the main signalling link shall be released.
8	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.2.8.3.5 Test requirements

After step 4 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.8.4 U12 disconnect indication / unknown message received

10.1.2.8.4.1 Definition

The call control entity of the UE being in the state, U12, an unknown message is received by the UE. ~~This test is applicable only for user equipment supporting bearer capability for speech.~~

10.1.2.8.4.2 Conformance requirement

A CC-entity of the UE in CC-state U12, "Disconnect Indication" having received an unknown message from its peer entity shall return a STATUS message.

References

TS 24.008 clause 8.4.

10.1.2.8.4.3 Test purpose

To verify that a CC-entity of the UE in CC-state U12, "Disconnect Indication" having received an unknown message from its peer entity returns a STATUS message.

10.1.2.8.4.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U12 by using Option A of table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U12. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		unknown message	message type not defined for PD
2	->		STATUS	cause 97#, state U12
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U12

Specific message contents:

None.

10.1.2.8.4.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U12, "Disconnect Indication", shall return a STATUS message.

10.1.2.9 Outgoing call / U19 release request

10.1.2.9.1 Outgoing call / U19 release request / timer T308 time-out

10.1.2.9.1.1 Definition

The call control entity of the UE being in the state, U19, if no response is then received from the SS, timer T308 expires at the UE side. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.9.1.2 Conformance requirement

1) A CC-entity of the UE in CC-state U19, "Release Request" will, upon the first expiry of timer T308 send the RELEASE message to its peer entity and remain in the CC-state U19.

References

TS 24.008 clause 5.4.4.1.3.1, TS 24.008 clause 11.3.

10.1.2.9.1.3 Test purpose

To verify that a CC-entity of the UE in CC-state U19, "Release Request" will, upon the first expiry of timer T308 send the RELEASE message to its peer entity and remain in the CC-state U19.

10.1.2.9.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U19 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U19. When T308 expires at the UE, the UE shall send a RELEASE message. The SS checks timer T308 accuracy and that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS waits until T308 at the UE
2	->		RELEASE	SS checks the time between the two RELEASE messages check the timer T308 accuracy
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U19

Specific message contents:

None.

10.1.2.9.1.5 Test requirements

Upon the first expiry of timer T308 (after step 1) a CC-entity of the UE in CC-state U19, "Release Request", shall send the RELEASE message and remain in the CC-state U19.

10.1.2.9.2 Outgoing call / U19 release request / 2nd timer T308 time-out

10.1.2.9.2.1 Definition

The call control entity of the UE being in the state, U19, if no response is then received after timer T308 has expired two times in success at the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.9.2.2 Conformance requirement

1) A CC-entity of the UE in CC-state U19, "Release Request", upon the 2nd expiry of the timer T308, shall enter the CC-state U0, "Null".

2) Subsequently the UE shall proceed with releasing the MM-connection and enter the idle mode with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

References

Conformance requirement 1: TS 24.008 clause 5.4.4.1.3.1., TS 24.008 clause 11.3.

Conformance requirement 2: TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2.

10.1.2.9.2.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U19, "Release Request", upon the 2nd expiry of the timer T308, enters the CC-state U0, "Null".

2) To verify that subsequently the UE proceeds with releasing the MM-connection and enters the idle mode with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

10.1.2.9.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U19 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U19. The SS allows T308 expiry at the UE, and the UE shall repeat sending the RELEASE message and start timer T308 again. The SS allows again T308 expiry at the UE. The UE shall abort the RRC connection. The SS waits long enough to enable the UE to return to idle state listening to paging, and then pages UE to create RRC connection. Finally, the SS will check the state of the UE by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS waits until T308 expiry at the UE
2	->		RELEASE	
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U19
5		SS		SS waits until the second T308 expiry at the UE
6		SS		SS waits T3240 expiry at the UE
7	UE			the main signalling link shall be released.
8		SS		SS waits 10 s for the UE to return to listening to paging

10.1.2.9.3.3 Test purpose

To verify that a CC-entity of the UE in CC-state U19, "Release Request", upon receipt of a RELEASE, shall release the MM-connection and enters the CC-state U0, "Null" with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

10.1.2.9.3.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U19 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U19. The SS sends a RELEASE message to the UE. The UE shall release the MM-connection. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	(note)
2		<-	STATUS ENQUIRY	
3		->	RELEASE COMPLETE	cause 81# (invalid TI value)
4		SS		repeat steps 2-3 to cover all the transaction identifiers from 000...110
5		<-	RRC CONNECTION RELEASE	the main signalling link shall be released.
6		->	RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

NOTE: With the same cause number as originally contained in DISC and optional cause #102 recovery on timer expiry.

10.1.2.9.3.5 Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.2.9.4 Outgoing call / U19 release request / RELEASE COMPLETE received

10.1.2.9.4.1 Definition

The call control entity of the UE being in the state, U19, a RELEASE COMPLETE message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.1.2.9.4.2 Conformance requirement

1) A CC-entity of the UE in CC-state U19, "Release Request", upon receipt of a RELEASE COMPLETE, shall release the MM-connection and enter the CC-state U0, "Null" with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

NOTE 13: If necessary (see ICS/IXIT statement), the UE is made to accept the call in the way described in a ICS/IXIT statement.

10.1.3.1 Incoming call / U0 null state

10.1.3.1.1 Incoming call / U0 null state / SETUP received with a non supported bearer capability

10.1.3.1.1.1 Definition

The call control entity of the UE being in the state, U0, a SETUP message is received with only one bearer capability and this bearer capability is not supported by the UE. ~~This test is applicable for all equipment.~~

10.1.3.1.1.2 Conformance requirement

1) A CC entity of the UE, upon receipt of SETUP containing one bearer capability and this bearer capability is not supported, shall return a RELEASE COMPLETE with correct cause value to its peer entity and return to the idle mode. The CC-entities relating to the seven mobile terminating transaction identifiers shall be in the state U0,"Null".

References

TS 24.008 clause 5.2.2.2., TS 24.008 annex B.

10.1.3.1.1.3 Test purpose

To verify that a CC entity of the UE, upon receipt of SETUP containing one bearer capability and this bearer capability is not supported, returns a RELEASE COMPLETE with correct cause value to its peer entity, and returns to the idle mode. To verify that the CC-entities relating to the seven mobile terminating transaction identifiers are then in the state U0,"Null".

10.1.3.1.1.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

A mobile terminated call is initiated. The UE receives a SETUP message that contains a bearer capability not supported by the UE. The UE returns a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity is still in the state U0 with all the relevant transaction identifiers.

Expected sequence

7	<-		SETUP	(note 1)
8	->		RELEASE COMPLETE	(note 2)
9	<-		STATUS ENQUIRY	
10	->		RELEASE COMPLETE	Cause #81 (invalid TI value).
11	SS			Repeat steps 9-10 to cover all the transaction identifiers from 000... 110.

Specific message contents:

NOTE 1: With one bearer capability and that bearer capability is not supported by the UE.

NOTE 2: With cause #88 incompatible destination.

10.1.3.1.1.5 Test requirements

After step 7 a CC entity of the UE shall return a RELEASE COMPLETE message with cause value #88 (incompatible destination) and return to the idle mode.

After step 9 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.2 Incoming call / U6 call present

10.1.3.2.1 Incoming call / U6 call present / automatic call rejection

10.1.3.2.1.1 Definition

Although the state U6 is transient, the ability to refuse a call (automatically) in this state is tested, if it is implemented at the UE. ~~The test is applicable for those equipments described above supporting at least one mobile terminating circuit switched basic service.~~

10.1.3.2.1.2 Conformance requirement

1) A CC entity of the UE in CC-state U6, "Call Present", upon receipt of a rejection indication of the incoming call from the user, send RELEASE COMPLETE with the appropriate cause value to its peer entity and enter the CC-state U0, "Null". The CC entities relating to the seven mobile terminating transaction identifiers shall be in state U0, "Null".

References

TS 24.007 clause 6.2.2., TS 24.008 clause 5.2.2.3.1., TS 24.008 clause 5.5.3.2, TS 24.008 clause 8.3.

10.1.3.2.1.3 Test purpose

To verify that a CC entity of the UE in CC-state U6, "Call Present", shall upon receipt of a rejection indication of the incoming call from the user, shall send RELEASE COMPLETE with the appropriate cause value to its peer entity and enter the CC-state U0, "Null". The CC entities relating to the seven mobile terminating transaction identifiers are then in state U0, "Null".

10.1.3.2.1.4 Method of test

Related ICS/IXIT statements

- supported teleservices;
- the UE supports an ability to refuse a call after receipt of a SETUP message.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U6 by using table 10.1.3/2.

Test procedure

A teleservice is selected that is supported by the UE; if the UE supports speech, the selected teleservice is speech. If necessary, the UE is configured for that teleservice. Then a mobile terminated call is initiated. The call control entire of the UE is brought to the state U6 (Note: The state U6 is not checked, since it is not stable). The UE is made to refuse the call (the refusal may require some preliminary preparations in order to achieve refusal at this point). The UE shall send a RELEASE COMPLETE message and enter a call control state U0. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				the UE is made to refuse the call
2		->	RELEASE COMPLETE	(note)
3		<-	STATUS ENQUIRY	
4		->	RELEASE COMPLETE	cause 81# (invalid TI value)
5		SS		repeat steps 3-4 to cover all the transaction identifiers from 000...110
6		<-	RRC CONNECTION RELEASE	the main signalling link shall be released.
7		->	RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

NOTE: With cause value #21 call rejected.

10.1.3.2.1.5 Test requirements

After step 1 a CC entity of the UE shall return a RELEASE COMPLETE message with cause value #21 (call rejected) and return to the idle mode.

After step 11 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.3 Incoming call / U9 mobile terminating call confirmed

10.1.3.3.1 Incoming call / U9 mobile terminating call confirmed / alerting or immediate connecting

10.1.3.3.1.1 Definition

The call control entity of the UE having entered the state, U9, with signal information received in the preceding SETUP message, the subsequent behaviour of the UE is tested. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

10.1.3.3.1.2 Conformance requirement

1) A CC entity in CC-state U9, "Mobile Terminating Call Confirmed", (if signalled by the network in previous SETUP message that it may alert) shall either send a ALERTING message to its peer entity and enter state U7, or send a CONNECT message to its peer entity and enter U8.

References

TS 24.008 clause 5.2.2.3.2.

10.1.3.3.1.3 Test purpose

To verify that a CC entity in CC-state U9, "Mobile Terminating Call Confirmed", (if signalled by the network in previous SETUP message that it may alert) will either send a ALERTING message to its peer entity and enter state U7, or send a CONNECT message to its peer entity and enter U8.

10.1.3.3.1.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/2.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9 by using a SETUP message containing signalling information element. (The state U9 is not a stable state in this case, and consequently it is not checked as an initial state.) If the UE supports immediate connect for the selected basic service (p = Y), it sends a CONNECT message and enters the state U8, connect request. Otherwise (p = N) the UE sends an ALERTING message and enters the state U7, call receiving. The SS checks by using the status enquiry procedure that the CC entity has entered its state as described.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
A11		->	CONNECT	p = Y
A12		<-	STATUS ENQUIRY	
A13		->	STATUS	cause 30#, state U8
B11		->	ALERTING	p = N
B12		<-	STATUS ENQUIRY	
B13		->	STATUS	cause 30#, state U7

Specific message contents:

None.

10.1.3.3.1.5 Test requirements

A CC entity in CC-state U9, "Mobile Terminating Call Confirmed", (if signalled by the network in previous SETUP message that it may alert) shall either send an ALERTING message and enter state U7, or send a CONNECT message and enter U8.

10.1.3.3.2 Incoming call / U9 mobile terminating call confirmed / DTCH assignment

10.1.3.3.2.1 Definition

The call control entity of the UE being in the state, U9, a radio bearer establishment procedure is performed for traffic channel. ~~This test is applicable for any equipment supporting at least one MT circuit switched basic service, for which immediate connect is not used.~~

10.1.3.3.2.2 Conformance requirement

1) A CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, shall send a ALERTING message and enter state U7.

References

TS 25.331 clause 8.2,1, TS 24.008 clause 5.2.2.7., TS 24.008 clause 5.2.2.3.2.

10.1.3.3.2.3 Test purpose

To verify that a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, shall sends a ALERTING message and enters state U7.

10.1.3.3.2.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/4.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9 (by using a SETUP message not containing the signal information element). The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The UE sends an ALERTING message and enters state U7, call received. The SS verifies by using the status enquiry procedure that the UE has entered the correct state.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Radio Bearer Setup Procedure	DTCH, See TS34.108
2	->		ALERTING	
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U7

Specific message contents:

None.

10.1.3.3.2.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed" shall send a ALERTING message and enter state U7.

10.1.3.3.3 Incoming call / U9 mobile terminating call confirmed / termination requested by the user

10.1.3.3.3.1 Definition

The call control entity of the UE being in the state, U9, the user requests for releasing of the call. ~~This test is applicable for any equipment supporting at least one MT circuit switched basic service for which immediate connection is not used and, in addition to this, the facility to send a DISCONNECT message in state U9.~~

10.1.3.3.3.2 Conformance requirement

1) A CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", upon request by the user to terminate shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

References

TS 24.007 clause 6.2.2., TS 24.008 clause 5.4.3.

10.1.3.3.3.3 Test purpose

To verify that a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.3.3.3.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used;
- the UE supports user requested call clearing in the state U9.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/4.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9 (by using a SETUP message not containing the signal information element). Then the user requests termination of the call, if possible. The UE sends a DISCONNECT message and enters state U11, disconnect request. The SS verifies by using the status enquiry procedure that the UE has entered the correct state.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				the UE is made to clear the call
2	->		DISCONNECT	
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U11

Specific message contents:

None.

10.1.3.3.3.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.3.3.4 Incoming call / U9 mobile terminating call confirmed / DISCONNECT received

10.1.3.3.4.1 Definition

The call control entity of the UE being in the state, U9, a DISCONNECT message is received by the UE. ~~This test is applicable for any equipment supporting at least one MT circuit switched basic service, for which immediate connect is not used.~~

10.1.3.3.4.2 Conformance requirement

1) A CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", upon receipt of a DISCONNECT shall return a RELEASE message and enter the CC-state U19, "Release Request".

References

TS 24.008 clause 5.4.4.

10.1.3.3.4.3 Test purpose

To verify that a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", upon receipt of a DISCONNECT returns a RELEASE message and enters the CC-state U19, "Release Request".

10.1.3.3.4.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/4.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9. The SS sends a DISCONNECT message to the UE. The UE responds by sending a RELEASE message and enters state U19, release request. The SS verifies by using the status enquiry procedure that the UE has entered the correct state.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	
2		->	RELEASE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause 30#, state U19

Specific message contents:

None.

10.1.3.3.4.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U9, "UE Terminating Call Confirmed", shall return a RELEASE message and enter the CC-state U19, "Release Request".

10.1.3.3.5 Incoming call / U9 mobile terminating call confirmed / RELEASE received

10.1.3.3.5.1 Definition

The call control entity of the UE being in the state, U9, a RELEASE message is received by the UE. ~~This test is applicable for any equipment supporting at least one MT circuit switched basic service, for which immediate connect is not used.~~

10.1.3.3.5.2 Conformance requirement

1) A CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", upon receipt of a RELEASE shall return a RELEASE COMPLETE and enter the CC-state U0, "Null".

2) On returning to the idle mode the UE shall release the MM-connection and the CC-entities relating to the seven mobile terminating transaction identifiers shall be in CC-state U0, "Null".

References

Conformance requirement 1: TS 24.008 clause 5.4.4.

Conformance requirement 2: TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2., TS 24.008 clause 8.3.

10.1.3.3.5.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".

2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".

10.1.3.3.5.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/4.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is

telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9. The SS sends a RELEASE message to the UE. The UE responds by sending a RELEASE COMPLETE message and enters state U0, null. The SS verifies by using the status enquiry procedure that the UE has entered the correct state with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	with cause "Normal, unspecified"
2		->	RELEASE COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	RELEASE COMPLETE	cause 81# (invalid TI value)
5		SS		repeat steps 3-4 to cover all the transaction identifiers from 000...110
6		<-	RRC CONNECTION RELEASE	the main signalling link shall be released.
7		->	RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.3.3.5.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U9, "UE Terminating Call Confirmed", shall return a RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.3.6 Incoming call / U9 mobile terminating call confirmed / lower layer failure

10.1.3.3.6.1 Definition

The call control entity of the UE being in the state, U9, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated. ~~This test is applicable for any equipment supporting at least one MT circuit switched basic service, for which immediate connect is not used.~~

10.1.3.3.6.2 Conformance requirement

1) A CC entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", having detected a lower layer failure shall return to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

References

TS 24.008 clause 4.5.2.3., TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2., TS 24.008 clause 8.3.

10.1.3.3.6.3 Test purpose

To verify that a CC entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", having detected a lower layer failure returns to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

10.1.3.3.6.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/4.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The UE is brought to the state U9. The SS generates a lower layer failure at the UE. The SS waits long enough to enable the UE to return to idle state listening to paging, and then pages UE to create RRC connection. Finally, the SS will check the state of the UE by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS generates lower layer failure
2		SS		SS waits 20 s for the UE to return to listening to paging
3			~~SS Initiated Establishment of RRC Connection~~Mobile terminated establishment of Radio Resource Connection	See TS34.108
4	<-		STATUS ENQUIRY	
5	->		RELEASE COMPLETE	cause 81# (invalid TI value)
6		SS		repeat steps 4-5 to cover all the transaction identifiers from 000...110
7	<-		RRC CONNECTION RELEASE	the main signalling link shall be released.
8	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.3.3.6.5 Test requirements

After step 4 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.3.7 Incoming call / U9 mobile terminating call confirmed / unknown message received

10.1.3.3.7.1 Definition

The call control entity of the UE being in the state, U9, an unknown message is received by the UE. ~~This test is applicable for any equipment supporting at least MT circuit switched basic service, for which immediate connect is not used.~~

10.1.3.3.7.2 Conformance requirement

1) A CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed" having received an unknown message from its peer entity shall return a STATUS message.

References

TS 24.008 clause 8.4.

10.1.3.3.7.3 Test purpose

To verify that a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed" having received an unknown message from its peer entity returns a STATUS message.

10.1.3.3.7.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U9 by using table 10.1.3/4.

Test procedure

A MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	unknown message	message type not defined for PD
2		->	STATUS	cause 97#, state U9
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause 30#, state U9

Specific message contents:

None.

10.1.3.3.7.5 Test requirements

After step 1 a CC-entity of the UE in CC-state U9, "UE Terminating Call Confirmed", shall return a STATUS message.

10.1.3.4 Incoming call / U7 call received

10.1.3.4.1 Incoming call / U7 call received / call accepted

10.1.3.4.1.1 Definition

The call control entity of the UE being in the state, U7, a user accepts the incoming call. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.~~

10.1.3.4.1.2 Conformance requirement

1) A CC entity of a UE in CC-state U7, "Call Received", upon a user accepting the incoming call, shall send a CONNECT message to its peer entity and enter the CC-state U8, "Connect Request".

References

TS 24.007 clause 6.2.2., TS 24.008 clause 5.2.2.5.

10.1.3.4.1.3 Test purpose

To verify that a CC entity of a UE in CC-state U7, "Call Received", upon a user accepting the incoming call, shall send a CONNECT message to its peer entity and enter the CC-state U8, "Connect Request"

10.1.3.4.1.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The SS sends a DISCONNECT message. The UE responds with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	DISCONNECT	(note)
2		->	RELEASE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause 30#, state U19

Specific message contents:

NOTE: With a progress indicator indicating in-band information; Progress Indicator, Progress Description #8.

10.1.3.4.3.5 Test requirements

After step 1 a CC entity of a UE in CC-state U7, "Call Received", if a DTCH was not assigned, shall return a RELEASE message and enter the CC-state U19, "Release Request".

10.1.3.4.4 Incoming call / U7 call received / RELEASE received

10.1.3.4.4.1 Definition

The call control entity of the UE being in the state, U7, a RELEASE message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.~~

10.1.3.4.4.2 Conformance requirement

1) A CC entity of a UE in CC-state U7, "Call Received", upon receipt of a RELEASE shall return a RELEASE COMPLETE and enter the CC-state U0, "Null".

2) On returning to the idle mode the UE shall release the MM-connection and the CC-entities relating to the seven mobile terminating transaction identifiers shall be in CC-state U0, "Null".

References

Conformance requirement 1: TS 24.008 clause 5.4.4.

Conformance requirement 2: TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2.

10.1.3.4.4.3 Test purpose

1) To verify that a CC entity of a UE in CC-state U7, "Call Received", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".

2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".

10.1.3.4.4.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The SS sends a RELEASE message. The UE responds with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U0, null, with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	with cause "Normal, unspecified"
2		->	RELEASE COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	RELEASE COMPLETE	cause 81# (invalid TI value)
5		SS		repeat steps 3-4 to cover all the transaction identifiers from 000...110
6		<-	RRC CONNECTION RELEASE	the main signalling link shall be released.
7		->	RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.3.4.4.5 Test requirements

After step 1 a CC entity of a UE in CC-state U7, "Call Received", shall return a RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.4.5 Incoming call / U7 call received / lower layer failure

10.1.3.4.5.1 Definition

The call control entity of the UE being in the state, U7, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.~~

10.1.3.4.5.2 Conformance requirement

1) A CC entity of a UE in CC-state U7, "Call Received", having detected a lower layer failure shall return to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

References

TS 24.008 clause 4.5.2.3., TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2., TS 24.008 clause 8.3.

10.1.3.4.5.3 Test purpose

To verify that a CC entity of a UE in CC-state U7, "Call Received", having detected a lower layer failure returns to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

10.1.3.4.5.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/2.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The UE is brought to the state U7. The SS generates a lower layer failure at the UE. The SS waits long enough to enable the UE to return to idle state listening to paging, and then pages UE to create RRC connection. Finally, the SS will check the state of the UE by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS generates lower layer failure
2		SS		SS waits 20 s for the UE to return to listening to paging
3			~~SS Initiated Establishment of RRC Connection~~Mobile terminated establishment of Radio Resource Connection	See TS34.108
4	<-		STATUS ENQUIRY	
5	->		RELEASE COMPLETE	cause 81# (invalid TI value)
6		SS		repeat steps 4-5 to cover all the transaction identifiers from 000...110
7	<-		RRC CONNECTION RELEASE	the main signalling link shall be released.
8	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.3.4.5.5 Test requirements

After step 4 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.4.6 Incoming call / U7 call received / unknown message received

10.1.3.4.6.1 Definition

The call control entity of the UE being in the state, U7, an unknown message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.~~

10.1.3.4.6.2 Conformance requirement

1) A CC entity of a UE in CC-state U7, "Call Received", having received an unknown message from its peer entity shall return a STATUS message.

References

TS 24.008 clause 8.4.

10.1.3.4.6.3 Test purpose

To verify that a CC entity of a UE in CC-state U7, "Call Received", having received an unknown message from its peer entity returns a STATUS message.

10.1.3.4.6.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	unknown message	message type not defined for PD
2		->	STATUS	cause 97#, state U7
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause 30#, state U7

Specific message contents:

None.

10.1.3.4.6.5 Test requirements

After step 1 a CC entity of a UE in CC-state U7, "Call Received", shall return a STATUS message.

10.1.3.4.7 Incoming call / U7 call received / DTCH assignment

10.1.3.4.7.1 Definition

The call control entity of the UE being in the state, U7, a radio bearer establishment procedure is performed for traffic channel. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service for which immediate connect is not used.~~

10.1.3.4.7.2 Conformance requirement

1) A CC entity of a UE in CC-state U7, "Call Received", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, shall stay in CC-state U7.

References

TS25.331 clause 8.2.1, TS 24.008 clause 5.2.2.7.

10.1.3.4.7.3 Test purpose

To verify that a CC entity of a UE in CC-state U7, "Call Received", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, stays in CC-state U7.

10.1.3.4.7.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The SS verifies by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Radio Bearer Setup Procedure	DTCH, See TS34.108
2	<-		STATUS ENQUIRY	
3	->		STATUS	cause 30#, state U7

Specific message contents:

None.

10.1.3.4.7.5 Test requirements

After step 1 the CC state U7, "Call Received", shall remain unchanged.

10.1.3.4.8 Incoming call / U7 call received / RELEASE COMPLETE received

10.1.3.4.8.1 Definition

The call control entity of the UE being in the state, U7, the call is cleared by a RELEASE COMPLETE message sent by the SS. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service, for which immediate connect is not used.~~

10.1.3.4.8.2 Conformance requirement

1) A CC entity of the UE in CC-state U7, "call received", upon receipt of a RELEASE COMPLETE message with valid cause value, shall enter CC state U0, "Null".

2) On returning to idle mode, the CC entities relating to the seven mobile terminating transaction identifiers shall be in state U0, "Null".

References

Conformance requirement 1: TS 24.008, clause 5.4.2, TS 24.008, clause 5.4.4.

Conformance requirement 2: TS 24.008, clause 5.4.4.1.3.

10.1.3.4.8.3 Test purpose

1) To verify that a CC entity of the UE in CC-state U7, "Call received", upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".

2) To verify that in returning to idle mode, the CC entities relating to the seven mobile terminating transaction identifiers are in state U0, "Null".

10.1.3.4.8.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;

  MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U7 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected service is telephony. If necessary, the UE is configured for that basic service. The mobile terminated call is initiated. the CC entity of the UE is brought to U7. The SS sends a RELEASE COMPLETE message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE COMPLETE	note 1
2		<-	STATUS ENQUIRY	
3		->	RELEASE COMPLETE	cause 81# (invalid TI value), note 2
4		SS		repeat steps 2-3 to cover all the transaction identifiers from 000...110
5		<-	RRC CONNECTION RELEASE	the main signalling link shall be released.
6		->	RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

NOTE 1: With the cause value chosen arbitrarily.

NOTE 2: TI flag has the value indicating the SS as a originator of the call.

10.1.3.4.8.5 Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.5 Incoming call / U8 connect request

10.1.3.5.1 Incoming call / U8 connect request / CONNECT acknowledged

10.1.3.5.1.1 Definition

The call control entity of the UE being in the state, U8, a CONNECT ACKNOWLEDGE message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

10.1.3.5.1.2 Conformance requirement

A CC entity of a UE in CC-state U8, "Connect Request", upon receipt of CONNECT ACKNOWLEDGE shall enter the CC-state U10, "Call Active".

References

TS 24.008 clause 5.2.2.6.

10.1.3.5.1.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon receipt of CONNECT ACKNOWLEDGE shall enter the CC-state U10, "Call Active".

10.1.3.5.1.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/2.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8 (if the UE uses immediate connection for the selected basic service then p = Y, otherwise p = N). The SS sends a CONNECT ACKNOWLEDGE message. The SS checks by using the status enquiry procedure that the CC entity of the UE has entered state U10, active.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
A1			Radio Bearer Setup Procedure	p = Y, See TS34.108
2		<-	CONNECT ACKNOWLEDGE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause 30#, state U10

Specific message contents:

None.

10.1.3.5.1.5 Test requirements

After step 2 a CC entity of a UE in CC-state U8, "Connect Request", shall enter the CC-state U10, "Call Active".

10.1.3.5.2 Incoming call / U8 connect request / timer T313 time-out

10.1.3.5.2.1 Definition

The call control entity of the UE being in the state, U8, if no response is then received from the SS, timer T313 expires at the UE side. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

10.1.3.5.2.2 Conformance requirement

A CC entity of a UE in CC-state U8, "Connect Request", having waited for a reasonable length of time (e.g. expiry of timer T313) without receiving the appropriate protocol message to complete the incoming call, shall initiate the clearing of that incoming call by sending the CC message DISCONNECT and enter the CC-state U11, "Disconnect Request".

If an UE disconnects too early then, in the case of very late assignment of a traffic channel, systematic waste of radio resources may occur.

References

TS 24.008 clause 5.2.2.6., TS 24.008 clause 5.4.3.

10.1.3.5.2.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", having waited for a reasonable length of time (e.g. expiry of timer T313) without receiving the appropriate protocol message to complete the incoming call, shall initiate the clearing of that incoming call by sending the CC message DISCONNECT and enter the CC-state U11, "Disconnect Request"

10.1.3.5.2.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/2.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8 (if the UE uses immediate connection for the selected basic service then p = Y, otherwise p = N). The T313 expires at the UE and the UE sends a DISCONNECT message and enters state U11, disconnect request. The SS checks by using the status enquiry procedure that the UE has entered the correct state.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
A1			Radio Bearer Setup Procedure	p = Y, See TS34.108
2	->		DISCONNECT	Shall not be sent before 15 seconds after entry into state U8. But, shall be sent before 1,1 * T313 after entry into state U8.
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U11

Specific message contents:

None.

10.1.3.5.2.5 Test requirements

Upon expiry of timer T313 without receiving the appropriate protocol message to complete the incoming call a CC entity of a UE in CC-state U8, "Connect Request", shall initiate the clearing of that incoming call by sending a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.3.5.3 Incoming call / U8 connect request / termination requested by the user

10.1.3.5.3.1 Definition

The call control entity of the UE being in the state, U10, the user requests for releasing of the call. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

10.1.3.5.3.2 Conformance requirement

1) A CC entity of a UE in CC-state U8, "Connect Request", upon request by the user to terminate shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

References

TS 24.007 clause 6.2.2., TS 24.008 clause 5.4.3.

10.1.3.5.3.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.3.5.3.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8 (if the UE uses immediate connection for the selected basic service then p = Y, otherwise p = N). Then the user requests termination of the call. The UE sends a DISCONNECT message and enters state U11, disconnect request. The SS verifies by using the status enquiry procedure that the UE has entered the correct state.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
A1			Radio Bearer Setup Procedure	p = Y, See TS34.108
2				the user requests to clear the call
3		->	DISCONNECT	
4		<-	STATUS ENQUIRY	
5		->	STATUS	cause 30#, state U11

Specific message contents:

None.

10.1.3.5.3.5 Test requirements

After step 2 a CC entity of a UE in CC-state U8, "Connect Request", shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

10.1.3.5.4 Incoming call / U8 connect request / DISCONNECT received with in-band information

10.1.3.5.4.1 Definition

The call control entity of the UE being in the state, U8, a DISCONNECT message indicating availability of in band information is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

10.1.3.5.4.2 Conformance requirement

A CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a DISCONNECT with progress indicator #8 shall enter CC-state U12, if the traffic channel is in speech mode. If the DTCH is not in speech mode, the UE shall send a RELEASE message and enter CC-state U19.

References

TS 24.008 clause 5.4.4., TS 24.008 clause 5.5.1.

10.1.3.5.4.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a DISCONNECT with progress indicator #8 enters CC-state U12, if the traffic channel is in speech mode, and that the UE sends a RELEASE message and enters CC-state U19 if the DTCH is not in speech mode.

10.1.3.5.4.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/4.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8. The SS sends a DISCONNECT message containing indication of in-band information availability to the UE. If channel mode is speech, the UE enters state U12, disconnect indication. If channel mode is not speech, the UE sends a RELEASE message and enters state U19, release request.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		DISCONNECT	(note)
A2	<-		STATUS ENQUIRY	DTCH in speech mode:
A3	->		STATUS	cause 30#, state U12
B2	->		RELEASE	DTCH is not in speech mode:
B3	<-		STATUS ENQUIRY	
B4	->		STATUS	cause 30#, state U19

Specific message contents:

NOTE: With a progress indicator indicating in-band information; Progress Indicator, Progress description #8.

10.1.3.5.4.5 Test requirements

After step 1 a CC entity of a UE in CC-state U8, "Connect Request", shall enter CC-state U12, if the traffic channel is in speech mode. If the DTCH is not in speech mode, the UE shall send a RELEASE message and enter CC-state U19.

10.1.3.5.5 Incoming call / U8 connect request / DISCONNECT received without in-band information

10.1.3.5.5.1 Definition

The call control entity of the UE being in the state, U8, a DISCONNECT message is received by the UE. The DISCONNECT message does not contain indication of in-band information availability. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

10.1.3.5.5.2 Conformance requirement

1) A CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a DISCONNECT without progress indicator, shall return a RELEASE message and enter the CC-state U19, "Release Request".

References

TS 24.008 clause 5.4.4., TS 24.008 clause 5.4.4.1.2.

10.1.3.5.5.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a DISCONNECT without progress indicator, returns a RELEASE message and enters the CC-state U19, "Release Request".

10.1.3.5.5.4 Method of test

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8. The SS sends a RELEASE message. The UE responds with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U0, null, with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	RELEASE	with cause "Normal, unspecified"
2		->	RELEASE COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	RELEASE COMPLETE	cause 81# (invalid TI value)
5		SS		repeat steps 3-4 to cover all the transaction identifiers from 000...110
6		<-	RRC CONNECTION RELEASE	the main signalling link shall be released.
7		->	RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.3.5.6.5 Test requirements

After step 1 a CC entity of a UE in CC-state U8, "Connect Request", shall return a RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.5.7 Incoming call / U8 connect request / lower layer failure

10.1.3.5.7.1 Definition

The call control entity of the UE being in the state, U8, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

10.1.3.5.7.2 Conformance requirement

1) A CC entity of a UE in CC-state U8, "Connect Request", having detected a lower layer failure shall return to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

References

TS 24.008 clause 4.5.2.3., TS 24.008 clause 4.5.3., TS 24.008 clause 5.5.3.2.

10.1.3.5.7.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", having detected a lower layer failure returns to idle mode with the CC entities relating to the seven mobile terminating transaction identifiers in CC-state U0, "Null".

10.1.3.5.7.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The UE is brought to the state U8. The SS generates a lower layer failure at the UE. The SS waits long enough to enable the UE to return to idle state listening to paging, and then pages UE to create RRC connection. Finally, the SS will check the state of the UE by using STATUS ENQUIRY with the relevant transaction identifiers.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS		SS generates lower layer failure
2		SS		SS waits 20 s for the UE to return to listening to paging
3	<-		~~SS Initiated Establishment of RRC Connection~~Mobile terminated establishment of Radio Resource Connection	See TS34.108
4	<-		STATUS ENQUIRY	
5	->		RELEASE COMPLETE	cause 81# (invalid TI value)
6		SS		repeat steps 4-5 to cover all the transaction identifiers from 000...110
7	<-		RRC CONNECTION RELEASE	the main signalling link shall be released.
8	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.3.5.7.5 Test requirements

After step 4 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.1.3.5.8 Incoming call / U8 connect request / DTCH assignment

10.1.3.5.8.1 Definition

The call control entity of the UE being in the state, U8, a radio bearer establishment procedure is performed for traffic channel. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

10.1.3.5.8.2 Conformance requirement

1) A CC entity of a UE in CC-state U8, "Connect Request", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, shall stay in the CC-state U8.

References

TS 25.331 clause 8.2.1., TS 24.008 clause 5.2.2.7.

10.1.3.5.8.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, stays in the CC-state U8.s

10.1.3.5.8.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/1.

Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8. The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The SS verifies by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			Radio Bearer Setup Procedure	DTCH, See TS34.108
2	<-		STATUS ENQUIRY	
3	->		STATUS	cause 30#, state U8

Specific message contents:

None.

10.1.3.5.8.5 Test requirements

After step 1 the CC-state U8, "Connect Request", shall remain unchanged.

10.1.3.5.9 Incoming call / U8 connect request / unknown message received

10.1.3.5.9.1 Definition

The call control entity of the UE being in the state, U8, an unknown message is received by the UE. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

10.1.3.5.9.2 Conformance requirement

1) A CC entity of a UE in CC-state U8, "Connect Request", having received an unknown message from its peer entity shall return a STATUS message.

References

TS 24.008 clause 8.4.

10.1.3.5.9.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", having received an unknown message from its peer entity returns a STATUS message.

After step 1 a CC entity of a UE in CC-state U8, "Connect Request", shall return a STATUS message.

10.1.4 In call functions

10.1.4.1 In-call functions / DTMF information transfer

10.1.4.1.1 In-call functions / DTMF information transfer / basic procedures

10.1.4.1.1.1 Definition

Dual Tone Multi Frequency (DTMF) is an inband one out of four plus one out of four signalling system primarily used from terminal instruments in telecommunication networks. ~~This test is applicable for any equipment supporting bearer capability for speech.~~

10.1.4.1.1.2 Conformance requirement

1) An UE supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone, shall send a START DTMF message on the correct DCCH.

2) An UE supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone (the corresponding IA5 character being selected from

among the ones supported), shall send a START DTMF message specifying the correct IA5 character in the "keypad information" field of the keypad facility information element.

References

TS 24.008 clause 5.5.7.

10.1.4.1.1.3 Test purpose

1) To verify that an UE supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone, sends a START DTMF message on the correct DCCH.

2) To verify that an UE supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone (the corresponding IA5 character being selected from among the ones supported), sends a START DTMF message specifying the correct IA5 character in the "keypad information" field of the keypad facility information element.

10.1.4.1.1.4 Method of test

Related ICS/IXIT statements

- supported teleservices;
- supported character set (e.g. 0-9, #, *, A, B, C, D);
- if and how DTMF tone is indicated to the user.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is brought into the state U10 “Active” for speech by using Generic call setup procedure for mobile originating circuit switched call defined in TS34.108.

Test procedure

The UE being in the call active state, a user causes a DTMF tone to be generated e.g. by depression of a key in the UE. A DTMF digit corresponding to the digit indicated by the user is sent in a START DTMF message by the UE. The SS will return a START DTMF ACKNOWLEDGE message to the UE. This acknowledgement may be used in the UE to generate an indication as a feedback for a successful transmission. Then the user indicates that the DTMF sending should cease e.g. by releasing the key. The UE will send a STOP DTMF message to the network which is acknowledged with STOP DTMF ACKNOWLEDGE by the SS.

The sequence described above is repeated for each of the applicable characters 0-9, #, *, A, B, C, and D.

Then a case of rejecting a DTMF tone is tested and the state of the UE is verified.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	->		START DTMF	the user causes DTMF tone to be generated
		SS		the SS will verify that the transmitted information corresponds to the digit pressed
2	<-		START DTMF ACKNOWLEDGE	possible indication of a DTMF tone depending the ICS/IXIT statements
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U10
5	->		STOP DTMF	
6	<-		STOP DTMF ACKNOWLEDGE	the DTMF tone indication shall be stopped
7				the steps 1-4 shall be repeated for each of the applicable characters 0-9, #, *, A, B, C, D.
8	<-		STATUS ENQUIRY	
9	->		STATUS	cause 30#, state U10
10	->		START DTMF	
11	<-		START DTMF REJECT	
12	<-		STATUS ENQUIRY	
13	->		STATUS	cause 30#, state U10

Specific message contents:

None.

10.1.4.1.1.5 Test requirements

Upon a user making to send a DTMF tone a CC entity for speech in the CC state U10, "Active", shall send a START DTMF message on the DCCH to SS.

The SS will verify that the transmitted information corresponds to the digit pressed in the UE.

After step 7 (successful DTMF transmission) the CC-state U10, "Active", shall remain unchanged.

After step 11 (unsuccessful DTMF transmission) the CC-state U10, "Active", shall remain unchanged.

10.1.4.2 In-call functions / user notification

User notification procedure allows the network to notify a UE of any call-related event during the "active" state of a call. It also may allow a UE to notify the remote user of any appropriate call-related event during the "active" state of a call by sending a NOTIFY message containing a notification indicator to the network. No state change occurs at any of the interface sides during this procedure.

10.1.4.2.1 In-call functions / User notification / UE terminated

10.1.4.2.1.1 Definition

This is a case for testing user notification procedure terminated by the user equipment. ~~The test is applicable for those equipments supporting at least one circuit switched basic service.~~

10.1.4.2.1.2 Conformance requirement

1) A CC entity of a UE in CC-state U10, "active", upon receiving of a NOTIFY message shall remain in the active state.

References

TS 24.008 clause 5.3.1.

10.1.4.2.1.3 Test purpose

To verify that a CC entity of a UE in CC-state U10, "active", upon receiving of a NOTIFY message remains in the active state.

10.1.4.2.1.4 Method of test

Related ICS/IXIT statements

- supported circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state “idle, updated” with valid TMSI and CKSN.

The UE is brought into the state U10 “Active” by using Generic call setup procedure for mobile originating circuit switched calls defined in TS34.108.

Test procedure

The UE being in the call active state, the SS will send a NOTIFY message to the UE. The state of the UE is checked after that.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		NOTIFY	
2	<-		STATUS ENQUIRY	
3	->		STATUS	cause 30#, state U10

Specific message contents:

None.

10.1.4.2.1.5 Test requirements

After step 1 a CC entity of the UE in the CC-state U10, "active", shall remain in the active state.

10.1.4.3 In-call functions / channel changes

The two following test cases are for testing some elementary radio resource level procedures during an active state of a call to ensure call maintenance also during Hard handover.

10.1.4.3.1 In-call functions / channel changes / a successful channel change in active state/ Hard handover

10.1.4.3.1.1 Definition

This is a case to test a change of the frequency of a physical channel during active state of a call. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

10.1.4.3.1.2 Conformance requirement

1) The UE being in the call active state after having successful completed a physical channel reconfiguration, shall remain in the call active state.

References

TS 24.008 clause 5.3.4.3.2, and TS 25.331 clause 8.3.5.

10.1.4.3.1.3 Test purpose

To verify that the UE being in the call active state after having successful completed a physical channel reconfiguration remains in the call active state.

10.1.4.3.1.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state “idle, updated” with valid TMSI and CKSN.

The UE is brought into the state U10 “Active” by using Generic call setup procedure for mobile originating circuit switched calls defined in TS34.108.

Test procedure

The UE being in the call active state, the SS initiated physical channel reconfiguration procedure causing an intracell change of channel by sending a PHYSICAL CHANNEL RECONFIGURATION message to the UE. The UE performs physical channel reconfiguration procedure and after the main signalling link is successfully established, the UE returns a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC. The state of the UE is then checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	PHYSICAL CHANNEL RECONFIGURATION	
2		->	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	
3		<-	STATUS ENQUIRY	
4		->	STATUS	cause 30#, state U10

Specific message contents:

None.

10.1.4.3.1.5 Test requirements

The UE being in the call active state after having successful completed a physical channel reconfiguration, shall remain in the call active state.

10.1.4.3.2 In-call functions / channel changes / an unsuccessful channel change in active mode/Hard handover

10.1.4.3.2.1 Definition

This is a case to test an unsuccessful change of the frequency of a physical channel during active state of a call. ~~This test is applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

10.1.4.3.2.2 Conformance requirement

1) The UE, when returning to the old channel after physical channel reconfiguration failure, shall remain in the call active state.

References

TS 24.008 clause 5.3.4.3.

10.1.4.3.2.3 Test purpose

To verify that the UE, when returning to the old channel after physical channel reconfiguration failure, will remain in the call active state.

10.1.4.3.2.4 Method of test

Related ICS/IXIT statements

- supported MT circuit switched basic services;

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state “idle, updated” with valid TMSI and CKSN.

The UE is brought into the state U10 “Active” by using Generic call setup procedure for mobile originating circuit switched calls defined in TS34.108.

Test procedure

The SS sends a PHYSICAL CHANNEL RECONFIGURATION message, but does not activate the assigned physical channel. The UE shall attempt try to activate the new channel (this is not verified) and shall then reactivate the "old" channel. The UE shall send a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC and shall set the cause value in IE "failure cause" to "physical channel failure". The state of the UE is then checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<-	PHYSICAL CHANNEL RECONFIGURATION	The UE attempts and fails to re-configure the physical channel.
2	->		PHYSICAL CHANNEL RECONFIGURATION FAILURE	NOTE
3		<-	STATUS ENQUIRY	
4	->		STATUS	cause 30#, state U10

Specific message contents:

NOTE: With the cause value "physical channel failure".

10.1.4.3.2.5 Test requirements

The UE being in the call active state after physical channel reconfiguration failure, shall remain in the call active state.

10.1.4.4 In-call functions / UE terminated in-call modification

10.1.4.4.1 In-call functions / UE terminated in-call modification / modify when new mode is not supported

10.1.4.4.1.1 Definition

This is to test a special case of a in-call modification procedure, in which the new mode is not supported (and consequently not one of those negotiated and agreed during the establishment phase of the call). ~~This test is applicable for any equipment supporting at least one circuit switched basic service.~~

10.1.4.4.1.2 Conformance requirement

1) In the case that the UE supports the network originated in-call modification procedure, the UE after having received a MODIFY message with a new mode which is not the actual one and cannot be supported by the UE shall reject it by sending a MODIFY REJECT message or a STATUS message.

2) In the case that the UE does not support the network originated in-call modification procedure, the UE shall, when receiving a MODIFY message, treat the message as unknown and respond with a STATUS message.

References

1) TS 24.008 clauses 5.3.4.3.4.2 and 5.3.4.4.

2) TS 24.008 clause 5.3.4.

10.1.4.4.1.3 Test purpose

1) To verify that an UE supporting the network originated in-call modification procedure, after having received a MODIFY message with a new mode which is not the actual one and cannot be supported by the UE, rejects it by sending a MODIFY REJECT.

2) To verify that an UE not supporting the network originated in-call modification procedure, after having received a MODIFY message, responds with a STATUS message.

10.1.4.4.1.4 Method of test

Related ICS/IXIT statements

- supported circuit switched basic services;
- the UE supports the network originated in-call modification procedure (p = Yes/No).

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state “idle, updated” with valid TMSI and CKSN.

The UE is brought into the state U10 “Active” by using Generic call setup procedure for mobile originating circuit switched calls defined in TS34.108.

Test procedure

The UE being in the call active state, the SS initiates in-call modification procedure by sending a MODIFY message with new mode different from actual mode and one of those not supported by the UE. The UE either returns a MODIFY REJECT message with the old bearer capability or a STATUS message with reject cause #97, depending on the ICS/IXIT statement. The state of the UE is then checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<-		MODIFY	with new mode different from actual one
2a	->		MODIFY REJECT	with the old call mode included OR, p = Yes
2b	->		STATUS	cause #97, state U10, p = No
3 4	<- ->		STATUS ENQUIRY STATUS	 cause 30#, state U10

Specific message contents:

None.

10.1.4.4.1.5 Test requirements

In the case that the UE supports the network originated in-call modification procedure, the UE after having received a MODIFY message with a new mode which is not the actual one and cannot be supported by the UE shall reject it by sending a MODIFY REJECT message and shall remain in the call active state.

In the case that the UE does not support the network originated in-call modification procedure, the UE shall, when receiving a MODIFY message, treat the message as unknown and respond with a STATUS message. The UE shall remain in the call active state.

10.1.4.5 In-call functions / UE originated in-call modification

10.1.4.5.1 In-call functions / UE originated in-call modification / a successful case of modifying

10.1.4.5.1.1 Definition

This test is to test a successful case of in-call modification, which is triggered by the calling tone identification (CNG) received by the UE. ~~This test is applicable for any equipment supporting any dual mode bearer capability service (Teleservice 61 - Alternate Speech/Group 3 fax).~~

10.1.4.5.1.2 Conformance requirement

1) The procedure shall be initiated by the UE in the "active" state of the call. It shall send a MODIFY message including the new mode to be changed to; and enter the "mobile originating modify" state. The new mode given in the MODIFY message shall be one of those already negotiated and agreed during the establishment phase of the call. The UE shall stop sending user information according to the old mode and enter the state U26 "Mobile Originating Modify".

2) Upon receipt of the MODIFY COMPLETE message the UE shall start sending channel information according to the new call mode and enter the "active" state.

References

Conformance requirement 1: TS 24.008 clause 5.3.4.3.1.

Conformance requirement 2: TS 24.008 clause 5.3.4.3.2.

10.1.4.5.1.3 Test purpose

1) To verify that the procedure is initiated by the UE in the "active" state of the call. It sends a MODIFY message including the new mode to be changed to; and enters the "mobile originating modify" state. The new mode given in the MODIFY message is one of those already negotiated and agreed during the establishment phase of the call. The MODIFY originating side stops sending user information.

2) To verify that upon receipt of the MODIFY COMPLETE message the UE starts sending channel information according to the new call mode and enters the "active" state.

10.1.4.5.1.4 Method of test

Related ICS/IXIT statements

- a way to activate a dual mode call;
- a way to activate in-call modification;
- support of dual bearer capability services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The UE initiates a call for one of the supported dual mode services. The UE being in the call active state, in-call modification procedure is initiated for the selected service from the UE side. The UE shall send a MODIFY message with the new mode to the SS and the state of the UE is checked. The channel mode is modified with the RADIO BEARER RECONFIGURATION message including the appropriate channel mode for the new service. The SS then returns a MODIFY COMPLETE message. The state of the UE is then checked.

NOTE: ICM can be initiated by manual intervention at the UE.

Expected sequence

18	->		STATUS	cause 30#, state U26
19	<-		RADIO BEARER RECONFIGURATION	as specified in specific message contents
20	->		RADIO BEARER RECONFIGURATION COMPLETE	
21	<-		MODIFY COMPLETE	contains the new mode as bearer capability
22	SS			allow at least 2 seconds for the UE to adapt for the new mode
23	<-		STATUS ENQUIRY	
24	->		STATUS	cause 30#, state U10
25	SS			verify that the UE starts sending user information according to the new mode

Specific message contents:

SETUP message contains bearer capability 1 IE and bearer capability 2 IE for appropriate basic services.

CALL PROCEEDING message contains bearer capability 1 IE and bearer capability 2 IE for agreeing a dual mode call.

RADIO BEARER RECONFIGURATION message contains some IEs that is fit for BC in MODIFY message.

10.1.4.5.1.5 Test requirements

The UE shall send a MODIFY message including the new mode to be changed to; and enter the state U26 "Mobile Originating Modify". The new mode given in the MODIFY message shall be one of those already negotiated and agreed during the establishment phase of the call. The UE shall stop sending user information according to the old mode.

After step 21 the UE shall start sending channel information according to the new call mode and enter the CC state U10 "Active".

10.1.4.5.2 In-call functions / UE originated in-call modification / modify rejected

10.1.4.5.2.1 Definition

This is to test a special case of a in-call modification procedure, in which the in-call modification is rejected. ~~This test is applicable for any equipment supporting any dual mode bearer capability service (Teleservice 61 - Alternate Speech/Group 3 fax).~~

10.1.4.5.2.2 Conformance requirement

1) Upon receipt of the MODIFY REJECT message with the old bearer capability the UE shall: resume sending user information according to the present call mode; resume interpreting received user information according to the present call mode; and enter the "active" state.

References

TS 24.008 clause 5.3.4.3.4.1.

10.1.4.5.2.3 Test purpose

To verify that upon receipt of the MODIFY REJECT message with the old bearer capability the UE resumes sending user information according to the present call mode; resumes interpreting received user information according to the present call mode; and enters the "active" state.

10.1.4.5.2.4 Method of test

Related ICS/IXIT statements

- supported teleservices;
- support of dual bearer capability services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The UE initiates a call for one of the supported dual mode services. The UE being in the call active state, in-call modification procedure is initiated for the selected service from the UE side. The UE shall send a MODIFY message with new mode to the SS. The SS returns a MODIFY REJECT message. The state of the UE is then checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				MMI action to initiate a dual mode call Steps 2-13 of test case 10.1.4.5.1 are performed and the UE is in CC-state "Active"

3	<-		MODIFY REJECT	with cause #58 bearer capability not available and with old bearer capabilities
4	<-		STATUS ENQUIRY	
5	->		STATUS	cause 30#, state U10

Specific message contents:

None.

10.1.4.5.2.5 Test requirements

After step 3 the UE shall resume sending user information according to the present call mode; resume interpreting received user information according to the present call mode; and enter the CC state U10 "Active".

10.1.4.5.3 In-call functions / UE originated in-call modification / an abnormal case of acceptance

10.1.4.5.3.1 Definition

This is to test a special case of a in-call modification procedure, in which the in-call modification is accepted incorrectly. ~~This test is applicable for any equipment supporting any dual mode bearer capability service (Teleservice 61 - Alternate Speech/Group 3 fax).~~

10.1.4.5.3.2 Conformance requirement

1) Upon receipt of the MODIFY COMPLETE message indicating a call mode which does not correspond to the requested one the UE shall discard it and take no action.

References

TS 24.008 clause 5.3.4.4.

10.1.4.5.3.3 Test purpose

To verify that upon receipt of the MODIFY COMPLETE message indicating a call mode which does not correspond to the requested one the UE discards it and takes no action.

10.1.4.5.3.4 Method of test

Related ICS/IXIT statements

- supported teleservices;
- support of dual bearer capability services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The UE initiates a call for one of the supported dual mode services. The UE being in the call active state, in-call modification procedure is initiated for the selected service from the UE side. The UE shall send a MODIFY message with new mode to the SS. The SS returns a MODIFY COMPLETE message specifying a mode that does not correspond to the requested one. It will be verified then that the UE shall not take any action and the state of the UE will be checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				MMI action to initiate a dual mode call Steps 2-13 of test case 10.1.4.5.1 are performed and the UE is in CC-state "Active"
2	->		MODIFY	MMI action to change the mode
3	<-		MODIFY COMPLETE	with a mode that does not correspond to the requested one
4	<-		STATUS ENQUIRY	
5	->		STATUS	cause 30#, state U26

Specific message contents:

MODIFY COMPLETE message contains the Bearer capability IE that dose not correspond to the requested one by the MODIFY message.

10.1.4.5.3.5 Test requirements

After step 3 the UE shall discard received MODIFY REJECT message and take no action. The CC-entity of the UE in CC-state U26, "Mobile Originating Modify", shall remain in the call state U26.

10.1.4.5.4 In-call functions / UE originated in-call modification / an abnormal case of rejection

10.1.4.5.4.1 Definition

This is to test a special case of a in-call modification procedure, in which the in-call modification is rejected incorrectly. ~~This test is applicable for any equipment supporting any dual mode bearer capability service (Teleservice 61 - Alternate Speech/Group 3 fax).~~

10.1.4.5.4.2 Conformance requirement

1) Upon receipt of the MODIFY REJECT message indicating a call mode which does not correspond to the actual one the UE shall discard it and take no action.

References

TS 24.008 clause 5.3.4.4.

10.1.4.5.4.3 Test purpose

To verify that upon receipt of the MODIFY REJECT message indicating a call mode which does not correspond to the actual one the UE discards it and takes no action.

10.1.4.5.4.4 Method of test

Related ICS/IXIT statements

- supported teleservices;
- support of dual bearer capability services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The UE initiates a call for one of the supported dual mode services. The UE being in the call active state, in-call modification procedure is initiated for the selected service from the UE side. The UE shall send a MODIFY message with new mode to the SS. The SS returns a MODIFY REJECT message specifying a mode that does not correspond to the actual one. The state of the UE is then checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				MMI action to initiate a dual mode call Steps 2-13 of test case 10.1.4.5.1 are performed and the UE is in CC-state “Active”
2	->		MODIFY	MMI action to change the mode
3	<-		MODIFY REJECT	with a mode that does not correspond to the actual one
4	<-		STATUS ENQUIRY	
5	->		STATUS	cause 30#, state U26

Specific message contents:

MODIFY REJECT message contains the Bearer capability IE that dose not correspond to the actual one specified in the Bearer capability 1IE of the SETUP message. And also contains a cause value #58 "bearer capability not presently available".

10.1.4.5.4.5 Test requirements

After step 3 the UE shall discard received MODIFY REJECT message and take no action. The CC-entity of the UE in CC-state U26, "Mobile Originating Modify", shall remain in the call state U26.

10.1.4.5.5 In-call functions / UE originated in-call modification / time-out of timer T323

10.1.4.5.5.1 Definition

This is to test a special case of a in-call modification procedure, in which timer T323 expires in state U26, mobile originating modify. ~~This test is applicable for any equipment supporting any dual mode bearer capability service Teleservice 61 - Alternate Speech/Group 3 fax).~~

10.1.4.5.5.2 Conformance requirement

1) Upon expiration of T323 the UE shall initiate the procedures for call clearing with cause #102 "recovery on timer expiry".

References

TS 24.008 clause 5.3.4.3.4.3.

10.1.4.5.5.3 Test purpose

To verify that upon expiration of T323 the UE shall initiate the procedures for call clearing with cause #102 "recovery on timer expiry".

10.1.4.5.5.4 Method of test

Related ICS/IXIT statements

- supported circuit switched basic services;
- support of dual bearer capability services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The UE initiates a call for one of the supported dual mode services. The UE being in the call active state, in-call modification procedure is initiated for the selected service from the UE side. The UE shall send a MODIFY message with new mode to the SS. The SS does not respond until timer T323 expires at the UE. The UE is expected to respond with a DISCONNECT message. The SS checks timer T323 accuracy between emission of MODIFY and reception of DISCONNECT messages, the state of the UE and a cause value from the DISCONNECT message.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				MMI action to initiate a dual mode call Steps 2-13 of test case 10.1.4.5.1 are performed and the UE is in CC-state "Active"
2	->		MODIFY	MMI action to change the mode
3	SS			the SS waits for the timer T323 expiry
4	->		DISCONNECT	cause value #102, the SS checks timer check the timer T323 accuracy
5	<-		STATUS ENQUIRY	
6	->		STATUS	cause 30#, state U11

Specific message contents:

None.

10.1.4.5.5.5 Test requirements

Upon expiry of timer T323 the UE shall initiate the procedures for call clearing by sending a DISCONNECT message with cause #102 "recovery on timer expiry" and enter the CC-state U11, "Disconnect Request".

10.1.4.5.6 In-call functions / UE originated in-call modification / a successful channel change in state mobile originating modify

10.1.4.5.6.1 Definition

This is to test a special case of a in-call modification procedure, in which a change of a physical channel occurs in state U26, mobile originating modify. ~~This test is applicable for any equipment supporting any dual mode bearer capability service (Teleservice 61 - Alternate Speech/Group 3 fax).~~

10.1.4.5.6.2 Conformance requirement

1) A CC-entity of the UE in CC-state U26, "Mobile Originating Modify", after successful completion of a radio bearer reconfiguration procedure with a physical channel change shall remain in the call state U26.

2) Upon receipt of the MODIFY COMPLETE message the UE shall start sending user information according to the new call mode and enter the "active" state.

References

1) TS 24.008 clause 5.3.4.3.2, TS25.311 clause 8.3.5.

2) TS 24.008 clause 5.3.4.3.2.

10.1.4.5.6.3 Test purpose

1) To verify that a CC-entity of the UE in CC-state U26, "Mobile Originating Modify", after successful completion of a radio bearer reconfiguration procedure remains in the call state U26.

2) To verify that upon receipt of the MODIFY COMPLETE message the UE starts sending user information according to the new call mode and enters the "active" state.

10.1.4.5.6.4 Method of test

Related ICS/IXIT statements

- supported circuit switched basic services;

- support of dual bearer capability services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The UE initiates a call for one of the supported dual mode services. The UE being in the call active state, in-call modification procedure is initiated for the selected service from the UE side. The UE shall send a MODIFY message with a new mode to the SS. The SS does not respond immediately, but performs radio bearer reconfiguration procedure including the appropriate channel mode for the new service. The state of the UE is then checked. The SS then returns a MODIFY COMPLETE message. The state of the UE is checked finally.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				MMI action to initiate a dual mode call Steps 2-13 of test case 10.1.4.5.1 are performed and the UE is in CC-state “Active”
2	->		MODIFY	MMI action to change the mode
3	<-		RADIO BEARER RECONFIGURATION	channel mode implied by the MODIFY message
4	->		RADIO BEARE RECONFIGURATION COMPLETE	
5	<-		STATUS ENQUIRY	
6	->		STATUS	cause 30#, state U26
7	<-		MODIFY COMPLETE	
8	<-		STATUS ENQUIRY	
9	->		STATUS	cause 30#, state U10

Specific message contents:

RADIO BEARER RECONFIGURATION message contains some IEs that is fit for BC in MODIFY message. And also contains the Frequency info IE with the value which is different from previous established one by Radio bearer establishment.

10.1.4.5.6.5 Test requirements

After step 4 a CC-entity of the UE in CC-state U26, "Mobile Originating Modify", shall remain in the call state U26.

After step 7 the UE shall start sending user information according to the new call mode and enter the CC state U10, "Active".

10.1.4.5.7 In-call functions / UE originated in-call modification / an unsuccessful channel change in state mobile originating modify

10.1.4.5.7.1 Definition

This is to test a special case of a in-call modification procedure, in which an unsuccessful change of a physical channel occurs in state U26, mobile originating modify. ~~This test is applicable for any equipment supporting any dual mode bearer capability service (Teleservice 61 - Alternate Speech/Group 3 fax).~~

10.1.4.5.7.2 Conformance requirement

1) A CC-entity of the UE in CC-state U26, "Mobile Originating Modify", when returning to the old channel after handover failure and having established the link, shall remain in the call state U26.

References

TS 24.008 clause 5.3.4.3.2.

10.1.4.5.7.3 Test purpose

To verify that a CC-entity of the UE in CC-state U26, "Mobile Originating Modify", when returning to the old channel after handover failure and having established the link, remains in the call state U26.

10.1.4.5.7.4 Method of test

Related ICS/IXIT statements

- supported teleservices;
- support of dual bearer capability services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The UE initiates a call for one of the supported dual mode services. The UE being in the call active state, in-call modification procedure is initiated for the selected service from the UE side. The UE shall send a MODIFY message with a new mode to the SS. The SS initiates handover procedure. When the UE tries to establish the main signalling link, it is prohibited by the SS. Then the UE shall return back to the old channel and re-establish correctly the link. The state of the UE is then checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				MMI action to initiate a dual mode call Steps 2-13 of test case 10.1.4.5.1 are performed and the UE is in CC-state “Active”
2	->		MODIFY	MMI action to change the mode
3	<-		RADIO BEARER RECONFIGURATION	
4	SS			the SS does not re-configure the physical channel
5	->		RADIO BEARER RECONFIGURATION FAILURE	after the UE has re-established the main signalling link in the old channel NOTE
6	<-		STATUS ENQUIRY	
7	->		STATUS	cause 30#, state U26

Specific message contents:

RADIO BEARER RECONFIGURATION message contains some IEs that is fit for BC in MODIFY message. And also contains the Frequency info IE with the value which is different from previous established one by Radio bearer establishment.

NOTE: With the cause value "physical channel failure".

10.1.4.5.7.5 Test requirements

After step 5 a CC-entity of the UE in CC-state U26, "Mobile Originating Modify", shall remain in the call state U26.

10.1.4.5.8 In-call functions / UE originated in-call modification / unknown message received

10.1.4.5.8.1 Definition

This is to test a special case of a in-call modification procedure, in which an unknown message is received in state U26, mobile originating modify. ~~This test is applicable for any equipment supporting any dual mode bearer capability service Teleservice 61 - Alternate Speech/Group 3 fax).~~

10.1.4.5.8.2 Conformance requirement

A CC entity of a UE in CC-state U26, "Mobile Originating Modify", having received an unknown message from its peer entity shall return a STATUS message.

References

TS 24.008 clause 8.4.

10.1.4.5.8.3 Test purpose

To verify that a CC entity of a UE in CC-state U26, "Mobile Originating Modify", having received an unknown message from its peer entity returns a STATUS message.

10.1.4.5.8.4 Method of test

Related ICS/IXIT statements

- supported teleservices;
- support of dual bearer capability services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The UE initiates a call for one of the supported dual mode services. The UE being in the call active state, in-call modification procedure is initiated for the selected service from the UE side. The UE shall send a MODIFY message with a new mode to the SS. The SS sends a message with message type not defined for the protocol discriminator. The state of the UE is then checked.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				MMI action to initiate a dual mode call Steps 2-13 of test case 10.1.4.5.1 are performed and the UE is in CC-state "Active"
2	->		MODIFY	MMI action to change the mode
3	<-		unknown message	message type not defined for PD
4	->		STATUS	cause 97#, state U26

Specific message contents:

None.

10.1.4.5.8.5 Test requirements

After step 3 a CC entity of a UE in CC-state U26, "Mobile Originating Modify", shall return a STATUS message.

10.1.4.5.9 In-call functions / UE originated in-call modification / a release complete received

10.1.4.5.9.1 Definition

The call control entity of the UE being in the state, U26, the call is cleared by a RELEASE COMPLETE message sent by the SS. ~~This test is applicable for any equipment supporting any dual mode bearer capability service (Teleservice 61 - Alternate Speech / Group 3 fax).~~

10.1.4.5.9.2 Conformance requirement

1) A CC entity of the UE in CC-state U26, "mobile originating modify", upon receipt of a RELEASE COMPLETE message with valid cause value, shall enter CC state U0, "Null".

2) On returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers shall be in state U0, "Null".

Reference(s)

Conformance requirement 1: TS 24.008 clause 5.4.2, TS 24.008 clause 5.4.4.

Conformance requirement 2: TS 24.008 clause 5.4.4.1.3.

10.1.4.5.9.3 Test purpose

1) To verify that a CC entity of the UE in CC-state U26, "mobile originating modify", upon receipt of a RELEASE COMPLETE message with valid cause value, enters CC state U0, "Null".

2) To verify that on returning to idle mode, the CC entities relating to the seven mobile originating transaction identifiers are in state U0, "Null".

10.1.4.5.9.4 Method of test

Related ICS/IXIT statements

- a way to activate a dual mode call;
- a way to activate in-call modification;
- support of dual bearer capability services.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test Procedure

The UE initiates a call for one of the supported dual mode services. The UE being in the call active state, in-call modification procedure is initiated for the selected service from the UE side. The UE shall send a MODIFY message with the new mode to the SS and the state of the UE is checked. The SS sends a RELEASE COMPLETE message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

NOTE: ICM can be initiated by manual intervention at the UE.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				MMI action to initiate a dual mode call Steps 2-13 of test case 10.1.4.5.1 are performed and the UE is in CC-state “Active”
2	->		MODIFY	as specified in specific message contents
3	<-		STATUS ENQUIRY	
4	->		STATUS	cause #30, state U26
5	<-		RELEASE COMPLETE	
6	<-		STATUS ENQUIRY	
7	->		RELEASE COMPLETE	cause #81 (invalid TI value)
8	SS			repeat steps 6 - 7 to cover all the transaction identifiers from 000 ... 110
9	<-		RRC CONNECTION RELEASE	the main signalling link shall be released
10	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

None.

10.1.4.5.9.5 Test requirements

The UE shall send a MODIFY message and enter the state U26 "Mobile Originating Modify".

After step 7 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

10.2 Call Re-establishment

10.2.1 Call Re-establishment/call present, re-establishment allowed

10.2.1.1 Definition

This is to test a successful case of a call re-establishment procedure. ~~This test is applicable for any equipment supporting at least one bearer capability. If the UE does not perform call re-establishment procedure correctly, the network will waste resources.~~

10.2.1.2 Conformance requirement

1) If the call is in the "active" state or "mobile originating modify" state, the indication from MM that re-establishment is possible shall cause call control to request re-establishment from the MM-connection, suspend any further message to be sent and await the completion of the re-establishment procedure.

2) When the call control entity is notified that the MM-connection is re-established, it shall then resume the transmission of possibly suspended messages and resume user data exchange when an appropriate channel is available.

References

1) TS 24.008 clause 4.5.1.6 and 5.5.4.2.

2) TS 24.008 clause 4.5.1.6 and 5.5.4.3.

10.2.1.3 Test purpose

The purpose of this test is to verify that the UE can correctly perform a call re-establishment procedure.

10.2.1.4 Method of test

Related ICS/IXIT statements

- supported teleservices.

Initial conditions

System Simulator:

The SS simulates cells A and B. The LAC of cell A is different from the LAC of cell B. The PLMN identities of cell A and B are equal.

The call re-establishment parameter concerning cell A is set to an arbitrary value.

Cell B is not barred. Cell B is indicated as a neighbour cell of cell A in SYSTEM INFORMATION messages of cell A. Cell reselect hysteresis parameter of cell A is set to zero.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN on cell A.

Test procedure

The UE is brought into the state U10 “Active” by using Generic call setup procedure for mobile originating circuit switched calls defined in TS34.108. The RF level of cell A is lowered so that cell B is to be selected (when the UE performs re-establishment after radio link failure), while keeping the C1 and C2 of cell A greater than zero. SS waits for at least 5 seconds. Then the SS stops transmission on the DTCH/DCCH. The UE shall re-establish the call on cell B

using a CM RE-ESTABLISHMENT message. The SS performs security mode control and radio bearer establishment procedures. The UE shall through-connect the appropriate bearer channel. Then, the call is cleared by the SS.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				The UE is brought into the state U10 "Active" by using Generic call setup procedure for mobile originating circuit switched calls defined in TS34.108 (the appropriate bearer channel is through connected in both directions in DTCH)
2		SS		The RF level of cell A is lowered. The SS waits at least 5 seconds. The SS stops transmission on the DTCH/DCCH.
3	->		RRC CONNECTION RE-ESTABLISHMENT REQUEST	this is sent on cell B.
4	<-		RRC CONNECTION RE-ESTABLISHMENT	
5	->		RRC CONNECTION RE-ESTABLISHMENT COMPLETE	
6	->		CM REESTABLISHMENT REQUEST	note specific message contents
7	<-		SECURITY MODE COMMAND	SS starts deciphering after sending the message.
8	->		SECURITY MODE COMPLETE	Shall be sent enciphered. All following messages shall be sent enciphered.
9		SS		SS starts ciphering.
10			Radio Bearer Setup Procedure	See TS34.108
11		UE		The appropriate bearer channel is through connected in both directions.
12	<-		DISCONNECT	with cause value "Normal"
13	->		RELEASE	
14	<-		RELEASE COMPLETE	
15	<-		RRC CONNECTION RELEASE	The main signalling link is released.
16	->		RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

CM RE-ESTABLISHMENT REQUEST message contains Ciphering key sequence number IE with the value which the UE was allocated in .

10.2.1.5 Test requirements

After step 2 a CC entity of the UE in the "active" state, shall suspend any further message to be sent and await the completion of the re-establishment procedure.

After step 10 the UE resume user data exchange when an appropriate channel is available.

10.2.2 Call Re-establishment/call under establishment, transmission stopped

10.2.2.1 Definition

This is to test a special case of a call re-establishment, in which it is not allowed for a UE to attempt re-establishment of a call, since the call has not been established yet. ~~This test is applicable for any equipment supporting at least one mobile originated circuit switched basic service.~~

10.2.2.2 Conformance requirement

When a lower layer failure occurs while an MM-connection is active, if the state of the call control entity is not "active", the UE shall release the MM-connection and shall not attempt call re-establishment.

References

TS 24.008 clauses 4.5.1.6 and 5.5.4.2.

10.2.2.3 Test purpose

The purpose of this test is to verify that the UE does not attempt call re-establishment when it is not allowed to take place because of the call control state.

10.2.2.4 Method of test

Related ICS/IXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

The SS simulates cell A.

Cell A is not barred.

User Equipment:

The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The call control entity of the UE is brought to state U4, "call delivered" by using Generic call setup procedure for mobile originating circuit switched calls defined in TS34.108. The SS stops transmission on the DTCH/DCCH. The UE shall not require re-establishment of the call on cell A.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				the UE is made to initiate a call
2	->		RRC CONNECTION REQUEST	
3	<-		RRC CONNECTION SETUP	
4	->		RRC CONNECTION SETUP COMPLETE

7	->		AUTHENTICATION RESPONSE	
8	<-		SECURITY MODE COMMAND	SS starts deciphering after sending the message.
9	->		SECURITY MODE COMPLETE	All following messages shall be sent enciphered.
10		SS		SS starts ciphering.
11	->		SETUP	
12	<-		CALL PROCEEDING	
13			Radio Bearer Setup Procedure	See TS34.108
14	<-		ALERTING	U4
15		SS		the SS stops transmission on the DTCH/DCCH
16		UE		the UE shall not attempt re-establishment on cell A. This is checked for 30 seconds after the radio link failure.

Specific message contents:

None.

10.2.2.5 Test requirements

After step 15 the UE that is not in "active" state, shall release the MM-connection and shall not attempt call re-establishment.

10.3 User to user signalling

10.3.1 Definition

The "user to user" information element is used to convey information between the mobile user and a remote ISDN user. ~~This test is therefore applicable for any equipment supporting at least one mobile terminating circuit switched basic service.~~

NOTE: There is no test for an UE originating call including a "user-user" information element since it is not a mandatory UE feature.

10.3.2 Conformance requirement

The inclusion of the "user-user" information element in downlink call control messages shall cause no adverse effects on the operation of the UE.

References

TS 24.008 clauses 5.2.2, 9.3.7, 9.3.23.1 and 10.5.4.25

10.3.3 Purpose of the test

The purpose of this test is to verify that inclusion of the "user-user" information element in either of the down link messages, SETUP or DISCONNECT causes no adverse effects on the operation of the UE.

10.3.4 Method of test

Related ICS/IXIT statement(s)

- Supported MT circuit switched basic services.
- Support of user-user information element, and details of suitable codings.

Initial conditions.

System Simulator:

The SS simulates 1 cell, with default parameters.

User Equipment:

The UE is in MM-state "idle updated", with a valid TMSI and CKSN.

Test procedure

The SS attempts to set up a mobile terminated call, with one of the supported circuit switched basic services which has been arbitrarily chosen, the generic call set up procedures for mobile terminating circuit switched calls,(either speech or data) as specified in TS34.108 clause 7. The default SETUP message contents are modified to include the user-user Information Element. The UE shall not respond adversely to the inclusion of the user-user information element.

After 30 seconds the SS sends a DISCONNECT message, again the UE shall not respond adversely to the inclusion of the user-user information element, but shall continue to clear down the call normally.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1				Generic Call Setup procedure for mobile terminating circuit switched calls defined in TS 34.108, depending on choice of Bearer Capability. The SETUP message contains the user-user IE, see Specific message contents.
2				The SS waits 30 seconds.
3		<-	DISCONNECT	Message contains the user-user IE, see Specific message contents
4		->	RELEASE	
5		<-	RELEASE COMPLETE	
6		<-	RRC CONNECTION RELEASE	
7		->	RRC CONNECTION RELEASE COMPLETE	

Specific message contents:

SETUP message contains user-user IE with the string coded in IA5 characters: for example "Call Setup".

DISCONNECT message contains user-user IE with the string coded in IA5 characters: for example "Call Disconnect". (The codings above are for example only. For the case of an UE which supports "user-user" signalling it may be necessary to add meaning to the data fields, see ICS/IXIT statement(s).)

NOTE: The codings above are for example only. For the case of an UE which supports "user-user" signalling it may be necessary to add meaning to the data fields, see ICS/IXIT statement(s).

10.3.5 Test requirements

The inclusion of the "user-user" information element in downlink call control messages shall cause no adverse effects on the operation of the UE.

Proposed change affects: ⌘ (U)SIM ☐ ME/UE ☒ Radio Access Network ☐ Core Network ☐

Title:	⌘	Update of radio bearer test cases
Source:	⌘	Ericsson
Work item code:	⌘	***Date:*** ⌘ 2000-11-15
Category:	⌘ **F**	***Release:*** ⌘ R99

Use one of the following categories:
F *(essential correction)*
A *(corresponds to a correction in an earlier release)*
B *(Addition of feature),*
C *(Functional modification of feature)*
D *(Editorial modification)*
Detailed explanations of the above categories can be found in 3GPP TR 21.900.

Use one of the following releases:
2 (GSM Phase 2)
R96 (Release 1996)
R97 (Release 1997)
R98 (Release 1998)
R99 (Release 1999)
REL-4 (Release 4)
REL-5 (Release 5)

Reason for change: ⌘ Update of radio bearer test cases.

Summary of change: ⌘
- A generic radio bearer test procedure has been defined in 14.1.1.
- Radio bearer test cases have been updated for using the generic test procedure.
- Radio bearer identities, RB5, RB6, RB7 and RB8, have been assigned to the radio bearers and RAB sub-flows to be tested.
- Clarifications made to test cases 14.2.19 and 14.2.21 (asymmetric reference radio bearer configurations for streaming UL:64/DL:0 and UL:128/DL:0 kbps)
- Test case 14.2.23, 14.2.25, 14.2.36, 14.2.38, 14.2.39, 14.2.42 and 14.2.44 have been split into alternative test cases based on used TTI and channel coding.
- Details have been added to following test cases:
  - 14.2.23 to 14.2.37 (Interactive or background)
  - 14.2.38 to 14.2.44 (Conversational speech + Interactive or background)
  - 14.2.45 (Conversational speech + Streaming)

Consequences if not approved: ⌘ Radio bearer testing will not be possible.

Clauses affected: ⌘ 14

How to create CRs using this form:
Comprehensive information and tips about how to create CRs can be found at:
http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under ftp://www.3gpp.org/specs/ For the latest version, look for the directory name with the latest date e.g. 2000-09 contains the specifications resulting from the September 2000 TSG meetings.
3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

14 Radio Bearer Services

14.1 General information for radio bearer tests

The role of radio bearer services is to cover all aspects of the radio interface transport. TS 34.108, clause 6.10 specifies reference radio bearer configurations to be tested.

The applicability of radio bearer tests is dependent on the UE uplink and downlink radio access capabilities and UE support tele- and bearer-services. See TS 34.123-2, Annex B for applicability of the specific test cases.

14.1.1 Generic radio bearer test procedure~~UE radio bearer test mode activation procedure~~

~~The Radio Bearer Test Mode Activation procedure is used to get UE in the state for radio bearer testing using the radio bearer setup configurations as specified in TS 34.108, clause 6.10.~~

Initial conditions

UE in idle mode

Test procedure

a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test.

b) The SS limits the UE allowed uplink transport format combinations according to the “Restricted UL TFCIs”, as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure.

c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the “UL RLC SDU size” value as specified for the sub-test of the actual radio bearer test.

d) The SS transmits, for all radio bearers under test, an RLC SDU having the size equal to the “Test data size” as specified for the sub-test of the actual radio bearer test. See note 1.

e) The SS checks that, for all radio bearers under test, the content of the received RLC SDU has the correct content and is received having the correct transport format. See [10] TS 34.109 clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

f) The SS opens the UE test loop.

g) Steps b) to f) are repeated for all sub-tests

h) The SS may optionally release the radio bearer.

i) The SS may optionally deactivate the radio bearer test mode.

Note 1. For the case when the reference radio bearer configuration under test uses RLC transperant mode in downlink then the radio bearer test case shall use a DL RLC SDU size (defined by the “Test data size” parameter) equal to the DL RLC PDU size. This is due to that the UE test loop function has no ability to perform reassembly of segmented DL RLC SDUs while the RLC is operated in transperent mode. See [7] TS 25.322 for details regarding UE operation in RLC transperent mode.

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

~~Initial conditions~~

~~UE in idle mode~~

~~Test procedure – Sub-test 1:~~

~~a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.4 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.~~

~~b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC3} using the RRC transport format combination control procedure.~~

c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1, 103 bits for RAB subflow#2 and to 60 bits for RAB subflow#3.

d) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1, using transport format combination DL TFC1. No data is transmitted on RAB subflow#2 and RAB subflow#3.

e) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1has the correct content and is received having the correct transport format. The SS checks that no data is received on RAB subflow#2 or RAB subflow#3.

f) The SS open the UE test loop.

Sub test 2:

g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC5}using the RRC transport format combination control procedure.

h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 81 bits for RAB subflow#1, 103 bits for RAB subflow#2 and to 60 bits for RAB subflow#3.

i) The SS transmits an RLC SDU of size 81 bits on RAB subflow#1, an RLC SDU of size 103 bits on RAB subflow#2 and an RLC SDU of size 60 bits on RAB subflow#3 using transport format combination DL_TFC2.

j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1, RAB subflow#2 and RAB subflow#3 have the correct content and are received having the correct transport format.

k) The SS may optionally open the UE test loop.

l) The SS may optionally release the radio bearer.

14.2.4.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 or RB7.
   - for sub-test 2: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by SS

~~1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.~~

~~2. At step 6 the UE transmitted transport format shall be~~

~~- TF1 (1x39) for RAB subflow#1.~~

~~3. At step 6 the UE shall return~~

~~- an RLC SDU on RAB subflow#1 with the same content as sent by SS; and~~

~~- no data shall be received on RAB subflow#2 or RAB subflow#3.~~

~~4. At step 13 the UE transmitted transport format shall be~~

~~- TF2 (1x81) for RAB subflow#1; and~~

~~- TF1 (1x103) for RAB subflow#2; and~~

~~- TF1 (1x60) for RAB subflow#3.~~

~~5. At step 13 the UE shall return~~

~~- an RLC SDU on RAB subflow#1 with the same content as sent by SS; and~~

~~- an RLC SDU on RAB subflow#2 with the same content as sent by SS; and~~

~~- an RLC SDU on RAB subflow#3 with the same content as sent by SS.~~

See 14.1.1 for test procedure.

~~Initial conditions~~

~~UE in idle mode~~

~~Test procedure~~

~~Sub-test 1:~~

~~a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.6 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.~~

~~b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC3} using the RRC transport format combination control procedure.~~

~~c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1 and 84 bits for RAB subflow#2.~~

~~d) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1, using transport format combination DL TFC1. No data is transmitted on RAB subflow#2.~~

e) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1has the correct content and is received having the correct transport format. The SS checks that no data is received on RAB subflow#2.

f) The SS open the UE test loop.

Sub test 2:

g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC5}using the RRC transport format combination control procedure.

h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 75 bits for RAB subflow#1 and 84 bits for RAB subflow#2.

i) The SS transmits an RLC SDU of size 75 bits on RAB subflow#1 and an RLC SDU of size 84 bits on RAB subflow#2 using transport format combination DL_TFC2.

j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 and RAB subflow#2 have the correct content and are received having the correct transport format.

k) The SS may optionally open the UE test loop.

l) The SS may optionally release the radio bearer.

14.2.6.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x75) and RB6/TF1 (1x84).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 2: an RLC SDU on each of RB5 and RB6 having the same content as sent by SS

~~1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.~~

~~2. At step 6 the UE transmitted transport format shall be~~

~~- TF1 (1x39) for RAB subflow#1.~~

~~3. At step 6 the UE shall return~~

~~- an RLC SDU on RAB subflow#1 with the same content as sent by SS; and~~

~~- no data shall be received on RAB subflow#2.~~

~~4. At step 13 the UE transmitted transport format shall be~~

~~- TF2 (1x75) for RAB subflow#1; and~~

~~- TF1 (1x84) for RAB subflow#2.~~

~~5. At step 13 the UE shall return~~

~~- an RLC SDU on RAB subflow#1 with the same content as sent by SS; and~~

~~- an RLC SDU on RAB subflow#2 with the same content as sent by SS.~~

Initial conditions

UE in idle mode

Test procedure

Sub test 1:

a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.7 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.

b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC3} using the RRC transport format combination control procedure.

c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1 and 87 bits for RAB subflow#2.

d) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1, using transport format combination DL TFC1. No data is transmitted on RAB subflow#2.

e) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1has the correct content and is received having the correct transport format. The SS checks that no data is received on RAB subflow#2.

f) The SS open the UE test loop.

Sub test 2:

g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC5}using the RRC transport format combination control procedure.

h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 61 bits for RAB subflow#1 and 87 bits for RAB subflow#2.

i) The SS transmits an RLC SDU of size 61 bits on RAB subflow#1 and an RLC SDU of size 87 bits on RAB subflow#2 using transport format combination DL_TFC2.

j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 and RAB subflow#2 have the correct content and are received having the correct transport format.

k) The SS may optionally open the UE test loop.

l) The SS may optionally release the radio bearer.

See 14.1.1 for test procedure.

~~Initial conditions~~

~~UE in idle mode~~

~~Test procedure~~

~~Sub test 1:~~

a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.9 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.

b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC3} using the RRC transport format combination control procedure.

c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1 and 63 bits for RAB subflow#2.

d) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1, using transport format combination DL TFC1. No data is transmitted on RAB subflow#2.

e) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1has the correct content and is received having the correct transport format. The SS checks that no data is received on RAB subflow#2.

f) The SS open the UE test loop.

Sub test 2:

g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC5}using the RRC transport format combination control procedure.

h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 55 bits for RAB subflow#1 and 63 bits for RAB subflow#2.

i) The SS transmits an RLC SDU of size 55 bits on RAB subflow#1 and an RLC SDU of size 63 bits on RAB subflow#2 using transport format combination DL_TFC2.

j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 and RAB subflow#2 have the correct content and are received having the correct transport format.

k) The SS may optionally open the UE test loop.

l) The SS may optionally release the radio bearer.

14.2.9.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

   - for sub-test 1: RB5/TF1 (1x39).

   - for sub-test 2: RB5/TF2 (1x55) and RB6/TF1 (1x63).

3. At step 15 the UE shall return

   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6.

   - for sub-test 2: an RLC SDU on each of RB5 and RB6 having the same content as sent by SS

1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 6 the UE transmitted transport format shall be

   - TF1 (1x39) for RAB subflow#1.

3. At step 6 the UE shall return

   - an RLC SDU on RAB subflow#1 with the same content as sent by SS; and

~~- no data shall be received on RAB subflow#2.~~

~~4. At step 13 the UE transmitted transport format shall be~~

~~- TF2 (1x55) for RAB subflow#1; and~~

~~- TF1 (1x63) for RAB subflow#2.~~

~~5. At step 13 the UE shall return~~

~~- an RLC SDU on RAB subflow#1 with the same content as sent by SS; and~~

~~- an RLC SDU on RAB subflow#2 with the same content as sent by SS.~~

~~Sub test 1:~~

~~a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.~~

~~b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC3} using the RRC transport format combination control procedure.~~

~~c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 576 bits for RAB subflow#1.~~

~~d) The SS transmits an RLC SDU of size 576 bits on RAB subflow#1, using transport format combination DL TFC1.~~

~~e) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1has the correct content and is received having the correct transport format. f) The SS open the UE test loop.~~

~~Sub test 2:~~

~~g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC5}using the RRC transport format combination control procedure.~~

~~h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1152 bits for RAB subflow#1.~~

~~i) The SS transmits an RLC SDU of size 1152 bits on RAB subflow#1using transport format combination DL_TFC2.~~

~~j) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1 has the correct content and are received having the correct transport format.~~

~~k) The SS may optionally open the UE test loop.~~

~~l) The SS may optionally release the radio bearer.~~

14.2.12.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x576).
   - for sub-test 2: RB5/TF2 (2x576).
3. At step 15 the UE shall return
   - for sub-test 1 and 2: an RLC SDU on RB5 having the same content as sent by SS.

~~1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.~~

~~2. At step 6 the UE transmitted transport format on RAB subflow#1 shall be TF1 (1x576).~~

~~3. At step 6 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

~~4. At step 13 the UE transmitted transport format on RAB subflow#1 shall be TF2 (2x576).~~

~~5. At step 13 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

14.2.15.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x576).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS.

~~1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.~~

~~2. At step 5 the UE transmitted transport format on RAB subflow#1 shall be TF1 (1x576).~~

~~3. At step 5 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

~~Initial conditions~~

~~UE in idle mode~~

~~Test procedure~~

~~Sub-test 1:~~

~~a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.17 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.~~

~~b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC5, UL_TFC6} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 576 bits for RAB subflow#1.~~

~~d) The SS transmits an RLC SDU of size 576 bits using transport format combination DL_TFC1 (1x576).~~

~~e) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1 has correct content and is received having the correct transport format.~~

~~f) The SS open the UE test loop.~~

~~Sub-test 2:~~

~~g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC5, UL_TFC7} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1152 bits for RAB subflow#1.~~

~~i) The SS transmits an RLC SDU of size 1152 bits using transport format combination DL_TFC2 (2x576).~~

~~j) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1 has correct content and is received having the correct transport format.~~

~~k) The SS open the UE test loop.~~

~~Sub-test 3:~~

~~l) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC3, UL_TFC5, UL_TFC8} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1728 bits for RAB subflow#1.~~

~~n) The SS transmits an RLC SDU of size 1728 bits using transport format combination DL_TFC3 (3x576).~~

~~o) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1 has correct content and is received having the correct transport format.~~

~~p) The SS open the UE test loop.~~

~~q) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC4, UL_TFC5, UL_TFC9} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2304 bits for RAB subflow#1.~~

~~s) The SS transmits an RLC SDU of size 2304 bits using transport format combination DL_TFC4 (4x576).~~

~~t) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1 has correct content and is received having the correct transport format.~~

u) The SS may optionally open the UE test loop.

v) The SS may optionally release the radio bearer.

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

Initial conditions

UE in idle mode

Test procedure

Sub-test 1:

a) The SS setup the radio bearer using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1. In downlink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.18 shall be used; and in uplink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12 shall be used.

b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 320 bits for RAB subflow#1.

d) The SS transmits an RLC SDU of size 320 bits using transport format combination DL_TFC1 (1x320).

e) The SS checks the content of the received RLC SDU.

f) The SS open the UE test loop.

Sub-test 2:

g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 640 bits for RAB subflow#1.

i) The SS transmits an RLC SDU of size 640 bits using transport format combination DL_TFC2 (2x320).

j) The SS checks the content of the received RLC SDU.

k) The SS open the UE test loop.

Sub-test 3:

l) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1280 bits for RAB subflow#1.

n) The SS transmits an RLC SDU of size 1280 bits using transport format combination DL_TFC3 (4x320).

o) The SS checks the content of the received RLC SDU.

p) The SS open the UE test loop.

Sub-test 4:

q) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2560 bits for RAB subflow#1.

s) The SS transmits an RLC SDU of size 2560 bits using transport format combination DL_TFC4 (8x320).

t) The SS checks the content of the received RLC SDU.

u) The SS may optionally open the UE test loop.

v) The SS may optionally release the radio bearer.

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

Note 2 SS is using a DL RLC SDU with 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return the first 320 bits of the test data.

Note 3 SS is using a DL RLC SDU size of 1152 bits as test data (=DL RLC PDU size for DL/TF2). UE will return the first 640 bits of the test data.

Note 4 SS is using a DL RLC SDU size of 1152 bits as test data (=DL RLC PDU size for DL/TF2). UE will return an RLC SDU repeating the received DL RLC SDU two times (truncating the last one to fit the UL RLC SDU size of 1280 bits).

Note 5 SS is using a DL RLC SDU size of 1152 bits as test data (=DL RLC PDU size for DL/TF2). UE will return an RLC SDU repeating the received DL RLC SDU three times (truncating the last one to fit the UL RLC SDU size of 2560 bits).

See 14.1.1 for test procedure.

~~Initial conditions~~

~~UE in idle mode~~

~~Test procedure~~

~~Sub-test 1:~~

~~a) The SS setup the radio bearer using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1. In uplink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.19 shall be used; and in downlink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12 shall be used.~~

~~b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC5, UL_TFC6} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 320 bits for RAB subflow#1.~~

~~d) The SS transmits an RLC SDU of size 576 bits using transport format combination DL_TFC1 (1x576).~~

~~e) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.~~

~~f) The SS open the UE test loop.~~

~~Sub-test 2:~~

~~g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC5, UL_TFC7} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 640 bits for RAB subflow#1.~~

~~i) The SS transmits an RLC SDU of size 640 bits using transport format combination DL_TFC1 (1x576).~~

~~j) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.~~

~~k) The SS open the UE test loop.~~

~~Sub-test 3:~~

~~l) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC3, UL_TFC5, UL_TFC8} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1280 bits for RAB subflow#1.~~

~~n) The SS transmits an RLC SDU of size 1280 bits using transport format combination DL_TFC1 (1x576).~~

~~o) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.~~

~~p) The SS open the UE test loop.~~

~~Sub-test 4:~~

~~q) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC4, UL_TFC5, UL_TFC9} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2560 bits for RAB subflow#1.~~

~~s) The SS transmits an RLC SDU of size 2560 bits using transport format combination DL_TFC1 (1x576).~~

~~t) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.~~

~~u) The SS may optionally open the UE test loop.~~

~~v) The SS may optionally release the radio bearer.~~

14.2.19.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

- for sub-test 1: RB5/TF1 (1x320).
- for sub-test 2: RB5/TF2 (2x320).
- for sub-test 3: RB5/TF3 (4x320).
- for sub-test 4: RB5/TF4 (8x320).

3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as the first 320 bits of the DL RLC SDU sent by the SS.
   - for sub-test 2: an RLC SDU on RB5 having the same content as the first 640 bits of the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 for which the first 1152 bits is equal to the sent DL RLC SDU and the remaining 128 bits are equal to the first 128 of the sent DL RLC SDU.
   - for sub-test 4: an RLC SDU on RB5 for which the first and second 1152 bits are equal to the sent DL RLC SDU and the remaining 256 bits are equal to the first 256 of the sent DL RLC SDU.

~~1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.~~

~~2. At step 6 the UE transmitted transport format on RAB subflow#1 shall be TF1 (1x320).~~

~~3. At step 6 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

~~4. At step 13 the UE transmitted transport format on RAB subflow#1 shall be TF2 (2x320).~~

~~5. At step 13 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

~~6. At step 20 the UE transmitted transport format on RAB subflow#1 shall be TF3 (4x320).~~

~~7. At step 20 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

~~8. At step 27 the UE transmitted transport format on RAB subflow#1 shall be TF4 (8x320).~~

~~9. At step 27 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

See 14.1.1 for test procedure.

~~Initial conditions~~

~~UE in idle mode~~

~~Test procedure~~

~~Sub-test 1:~~

~~a) The SS setup the radio bearer using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1. In downlink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.20 shall be used; and in uplink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12 shall be used.~~

~~b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 320 bits for RAB subflow#1.~~

~~d) The SS transmits an RLC SDU of size 320 bits using transport format combination DL_TFC1 (1x320).~~

~~e) The SS checks the content of the received RLC SDU.~~

~~f) The SS open the UE test loop.~~

~~Sub-test 2:~~

~~g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 640 bits for RAB subflow#1.~~

~~i) The SS transmits an RLC SDU of size 640 bits using transport format combination DL_TFC2 (2x320).~~

j) The SS checks the content of the received RLC SDU.

k) The SS open the UE test loop.

Sub-test 3:

l) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1280 bits for RAB subflow#1.

n) The SS transmits an RLC SDU of size 1280 bits using transport format combination DL_TFC3 (4x320).

o) The SS checks the content of the received RLC SDU.

p) The SS open the UE test loop.

Sub-test 4:

q) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2560 bits for RAB subflow#1.

s) The SS transmits an RLC SDU of size 2560 bits using transport format combination DL_TFC4 (8x320).

t) The SS checks the content of the received RLC SDU.

u) The SS open the UE test loop.

Sub-test 5:

v) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

x) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 5120 bits for RAB subflow#1.

y) The SS transmits an RLC SDU of size 5120 bits using transport format combination DL_TFC5 (16x320).

z) The SS checks the content of the received RLC SDU.

aa) The SS may optionally open the UE test loop.

bb) The SS may optionally release the radio bearer.Expected sequence

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

Note 2 SS is using a DL RLC SDU with 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return the first 320 bits of the test data.

Note 3 SS is using a DL RLC SDU size of 1152 bits as test data (=DL RLC PDU size for DL/TF2). UE will return the first 640 bits of the test data.

Note 4 SS is using a DL RLC SDU size of 1152 bits as test data (=DL RLC PDU size for DL/TF2). UE will return an RLC SDU repeating the received DL RLC SDU two times (truncating the last one to fit the UL RLC SDU size of 1280 bits).

Note 5 SS is using a DL RLC SDU size of 1152 bits as test data (=DL RLC PDU size for DL/TF2). UE will return an RLC SDU repeating the received DL RLC SDU three times (truncating the last one to fit the UL RLC SDU size of 2560 bits).

Note 6 SS is using a DL RLC SDU size of 1152 bits as test data (=DL RLC PDU size for DL/TF2). UE will return an RLC SDU repeating the received DL RLC SDU five times (truncating the last one to fit the UL RLC SDU size of 5120 bits).

See 14.1.1 for test procedure.

~~Initial conditions~~

~~UE in idle mode~~

~~Test procedure~~

~~Sub-test 1:~~

~~a) The SS setup the radio bearer using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1. In uplink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.21 shall be used; and in downlink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12 shall be used.~~

~~b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC6, UL_TFC7} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 320 bits for RAB subflow#1.~~

~~d) The SS transmits an RLC SDU of size 576 bits using transport format combination DL_TFC1 (1x576).~~

~~e) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.~~

~~f) The SS open the UE test loop.~~

~~Sub-test 2:~~

~~g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC6, UL_TFC8} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 640 bits for RAB subflow#1.~~

~~i) The SS transmits an RLC SDU of size 640 bits using transport format combination DL_TFC1 (1x576).~~

~~j) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.~~

~~k) The SS open the UE test loop.~~

~~Sub-test 3:~~

~~l) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC3, UL_TFC6, UL_TFC9} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1280 bits for RAB subflow#1.~~

~~n) The SS transmits an RLC SDU of size 1280 bits using transport format combination DL_TFC1 (1x576).~~

~~o) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.~~

~~p) The SS open the UE test loop.~~

~~Sub-test 4:~~

~~q) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC4, UL_TFC6, UL_TFC10} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2560 bits for RAB subflow#1.~~

~~s) The SS transmits an RLC SDU of size 2560 bits using transport format combination DL_TFC1 (1x576).~~

~~t) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.~~

~~u) The SS open the UE test loop.~~

~~Sub-test 5:~~

~~v) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC5, UL_TFC6, UL_TFC11} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~x) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 5120 bits for RAB subflow#1.~~

~~y) The SS transmits an RLC SDU of size 5120 bits using transport format combination DL_TFC1 (1x576).~~

~~z) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.~~

~~aa) The SS may optionally open the UE test loop.~~

~~bb) The SS may optionally release the radio bearer.~~

14.2.21.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

   - for sub-test 1: RB5/TF1 (1x320).

   - for sub-test 2: RB5/TF2 (2x320).

   - for sub-test 3: RB5/TF3 (4x320).

   - for sub-test 4: RB5/TF4 (8x320).

   - for sub-test 5: RB5/TF5 (16x320).

3. At step 15 the UE shall return

   - for sub-test 1: an RLC SDU on RB5 having the same content as the first 320 bits of the DL RLC SDU sent by the SS.

   - for sub-test 2: an RLC SDU on RB5 having the same content as the first 640 bits of the DL RLC SDU sent by the SS.

   - for sub-test 3: an RLC SDU on RB5 for which the first 1152 bits is equal to the sent DL RLC SDU and the remaining 128 bits are equal to the first 128 of the sent DL RLC SDU.

   - for sub-test 4: an RLC SDU on RB5 for which the first and second 1152 bits are equal to the sent DL RLC SDU and the remaining 256 bits are equal to the first 256 of the sent DL RLC SDU.

   - for sub-test 5: an RLC SDU on RB5 for which the first, second, third and fourth 1152 bits are equal to the sent DL RLC SDU and the remaining 512 bits are equal to the first 512 of the sent DL RLC SDU.

~~1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.~~

~~2. At step 6 the UE transmitted transport format on RAB subflow#1 shall be TF1 (1x320).~~

~~3. At step 6 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

~~4. At step 13 the UE transmitted transport format on RAB subflow#1 shall be TF2 (2x320).~~

~~5. At step 13 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

~~6. At step 20 the UE transmitted transport format on RAB subflow#1 shall be TF3 (4x320).~~

~~7. At step 20 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

~~8. At step 27 the UE transmitted transport format on RAB subflow#1 shall be TF4 (8x320).~~

~~9. At step 27 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

~~10. At step 34 the UE transmitted transport format on RAB subflow#1 shall be TF5 (16x320).~~

~~11. At step 34 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

14.2.22 Streaming / unknown / UL:0 DL:384 kbps / CS or PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

14.2.22.1 Conformance requirement

See 14.2.4.1.

14.2.22.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.22.

To be able to test the downlink radio bearer using the UE loopback function for the reference radio bearer UL:0 DL: 128 kbps,, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.1.12 (Conversational/unknown/UL:28.8 kbps) is used in uplink. For all sub-tests UL_TFC1 is used.

14.2.22.3 Method of test

Uplink TFS:

	TFI	~~RAB subflow #1~~RB5 (28.8 kbps)	DCCH

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

~~Initial conditions~~

~~UE in idle mode~~

~~Test procedure~~

~~Sub-test 1:~~

~~a) The SS setup the radio bearer using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1. In downlink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.22 shall be used; and in uplink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12 shall be used.~~

~~b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 320 bits for RAB subflow#1.~~

~~d) The SS transmits an RLC SDU of size 320 bits using transport format combination DL_TFC1 (1x320).~~

~~e) The SS checks the content of the received RLC SDU.~~

~~f) The SS open the UE test loop.~~

~~Sub-test 2:~~

~~g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 640 bits for RAB subflow#1.~~

~~i) The SS transmits an RLC SDU of size 640 bits using transport format combination DL_TFC2 (2x320).~~

~~j) The SS checks the content of the received RLC SDU.~~

~~k) The SS open the UE test loop.~~

~~Sub-test 3:~~

~~l) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1280 bits for RAB subflow#1.~~

~~n) The SS transmits an RLC SDU of size 1280 bits using transport format combination DL_TFC3 (4x320).~~

~~o) The SS checks the content of the received RLC SDU.~~

~~p) The SS open the UE test loop.~~

~~Sub-test 4:~~

~~q) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.~~

~~r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2560 bits for RAB subflow#1.~~

~~s) The SS transmits an RLC SDU of size 2560 bits using transport format combination DL_TFC4 (8x320).~~

~~t) The SS checks the content of the received RLC SDU.~~

~~u) The SS open the UE test loop.~~

~~Sub-test 5:~~

v) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

x) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 5120 bits for RAB subflow#1.

y) The SS transmits an RLC SDU of size 5120 bits using transport format combination DL_TFC5 (16x320).

z) The SS checks the content of the received RLC SDU.

aa) The SS open the UE test loop.

Sub-test 6:

bb) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

cc) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 10240 bits for RAB subflow#1.

dd) The SS transmits an RLC SDU of size 5120 bits using transport format combination DL_TFC6 (32x320).

ee) The SS checks the content of the received RLC SDU.

ff) The SS open the UE test loop.

Sub-test 7:

gg) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

hh) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 15360 bits for RAB subflow#1.

ii) The SS transmits an RLC SDU of size 5120 bits using transport format combination DL_TFC5 (48x320).

kk) The SS checks the content of the received RLC SDU.

ll) The SS may optionally open the UE test loop.

mm) The SS may optionally release the radio bearer.

14.2.22.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE shall return
   - for sub-test 1 to 7: an RLC SDU on RB5 having the same content as sent by SS.

1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 6 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
3. At step 13 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
4. At step 20 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
5. At step 27 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
6. At step 34 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
7. At step 41 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
8. At step 48 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.35.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4 to 18: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1 to 18: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.36.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (4x336).
   - for sub-test 4 to 18: RB5/TF4 (8x336).
3. At step 15 the UE shall return
   - for sub-test 1 to 18: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.38.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

   - for sub-test 1: RB5/TF1 (1x39).

   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).

   - for sub-test 3: RB8/TF1 (1x336)

   - for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).

   - for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).

   - for sub-test 6: RB8/TF2 (2x336)

   - for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).

   - for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).

3. At step 15 the UE shall return

   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.

   - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.

   - for sub-test 3 and 6: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 4 and 7: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 5 and 8: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

14.2.38.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:8 kbps / PS RAB / (TC, 10 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the turbo channel coding and 10 ms TTI case.

See 14.2.38.1 for test procedure and test requirements. Only sub-tests 1 to 5 are applicable for the 10 ms TTI case.

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.39.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
   - for sub-test 3, 6, 9 and 12: RB8/TF1 (1x336)
   - for sub-test 4, 7, 10 and 13: RB5/TF1 (1x39) and RB8/TF1 (1x336).
   - for sub-test 5, 8, 11 and 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.39.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
   - for sub-test 3: RB8/TF1 (1x336)
   - for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
   - for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
   - for sub-test 6, 9 and 12: RB8/TF2 (2x336)
   - for sub-test 7, 10 and 13: RB5/TF1 (1x39) and RB8/TF2 (2x336).
   - for sub-test 8, 11 and 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

14.2.39.3 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (CC, 10 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink convolutional channel coding and 10 ms TTI case.

See test case 14.2.39.1 for test procedure and test requirement.

14.2.39.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (CC, 20 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink convolutional channel coding and 20 ms TTI case.

See test case 14.2.39.2 for test procedure and test requirement.

14.2.40 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH

14.2.40.1 Conformance requirement

See 14.2.4.1.

14.2.40.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.40.

14.2.40.3 Method of test

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.40.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
   - for sub-test 3: RB8/TF1 (1x336)
   - for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
   - for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
   - for sub-test 6: RB8/TF2 (2x336)
   - for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).
   - for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).
   - for sub-test 9: RB8/TF3 (3x336)
   - for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x336).
   - for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x336).
   - for sub-test 12: RB8/TF4 (4x336)
   - for sub-test 13: RB5/TF1 (1x39) and RB8/TF4 (4x336).
   - for sub-test 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.41.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
   - for sub-test 3: RB8/TF1 (1x336)
   - for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
   - for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
   - for sub-test 6: RB8/TF2 (2x336)
   - for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).
   - for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).
   - for sub-test 9: RB8/TF3 (3x336)
   - for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x336).
   - for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x336).
   - for sub-test 12: RB8/TF4 (4x336)
   - for sub-test 13: RB5/TF1 (1x39) and RB8/TF4 (4x336).
   - for sub-test 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.42.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
   - for sub-test 3: RB8/TF1 (1x336)
   - for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
   - for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
   - for sub-test 6: RB8/TF2 (2x336)
   - for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).
   - for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).
   - for sub-test 9: RB8/TF3 (3x336)
   - for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x336).
   - for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x336).
   - for sub-test 12: RB8/TF4 (4x336)
   - for sub-test 13: RB5/TF1 (1x39) and RB8/TF4 (4x336).
   - for sub-test 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

14.2.42.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:256 kbps / PS RAB / 20 ms TTI

14.2.42.2.1 Conformance requirement

See 14.2.4.1.

14.2.42.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.42 for the downlink 20 ms TTI case.

14.2.42.2.3 Method of test

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.42.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
   - for sub-test 3: RB8/TF1 (1x336)
   - for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
   - for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
   - for sub-test 6: RB8/TF2 (2x336)
   - for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).
   - for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).
   - for sub-test 9: RB8/TF3 (3x336)
   - for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x336).
   - for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x336).
   - for sub-test 12, 15 and 18: RB8/TF4 (4x336)
   - for sub-test 13, 16 and 19: RB5/TF1 (1x39) and RB8/TF4 (4x336).

- for sub-test 14, 17 and 20: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x336).

3. At step 15 the UE shall return

- for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
- for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
- for sub-test 3, 6, 9, 12, 15 and 18: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 4, 7, 10, 13, 16 and 19: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 5, 8, 11, 14, 17 and 20: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.43.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).

- for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
- for sub-test 3: RB8/TF1 (1x336)
- for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
- for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
- for sub-test 6: RB8/TF2 (2x336)
- for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).
- for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).
- for sub-test 9: RB8/TF3 (3x336)
- for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x336).
- for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x336).
- for sub-test 12, 15, 18, 21 and 24: RB8/TF4 (4x336)
- for sub-test 13, 16, 19, 22 and 25: RB5/TF1 (1x39) and RB8/TF4 (4x336).
- for sub-test 14, 17, 20, 23 and 26: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x336).

3. At step 15 the UE shall return

- for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
- for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
- for sub-test 3, 6, 9, 12, 15, 18, 21 and 24: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 4, 7, 10, 13, 16, 19, 22 and 25: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 5, 8, 11, 14, 17, 20, 23 and 26: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

14.2.44 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:128 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

14.2.44.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:128 DL:2048 kbps / PS RAB / 10 ms TTI

14.2.44.1.1 Conformance requirement

See 14.2.4.1.

14.2.44.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.44 for the downlink 10 ms TTI case.

14.2.44.1.3 Method of test

14.2.44.2.3 Method of test

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.44.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
   - for sub-test 3: RB8/TF1 (1x336)
   - for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
   - for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
   - for sub-test 6: RB8/TF2 (2x336)
   - for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).
   - for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).
   - for sub-test 9: RB8/TF3 (4x336)
   - for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (4x336).
   - for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (4x336).
   - for sub-test 12,15,18,21,24,27,30: RB8/TF4 (8x336)
   - for sub-test 13,16,19,22,25,28,31: RB5/TF1 (1x39) and RB8/TF4 (8x336).
   - for sub-test 14,17,20,23,26,29,32: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (8x336).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.

- for sub-test 3, 6, 9, 12, 15, 18, 21, 24, 27, 30: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 4, 7, 10, 13, 16, 19, 22, 25, 28, 31: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 5, 8, 11, 14, 17, 20, 23, 26, 29, 32: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

14.2.44.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:128 DL:2048 kbps / PS RAB / 20 ms TTI

14.2.44.2.1 Conformance requirement

See 14.2.4.1.

14.2.44.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.44 for the downlink 20 ms TTI case.

14.2.44.2.3 Method of test

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.44.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).

- for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
- for sub-test 3: RB8/TF1 (1x336)
- for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
- for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
- for sub-test 6: RB8/TF2 (2x336)
- for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).
- for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).
- for sub-test 9: RB8/TF3 (4x336)
- for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (4x336).
- for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (4x336).
- for sub-test 12,15,18,21,24,27,30,33,36,39,42: RB8/TF4 (8x336)
- for sub-test 13,16,19,22,25,28,31,34,37,40,43: RB5/TF1 (1x39) and RB8/TF4 (8x336).
- for sub-test 14,17,20,23,26,29,32,35,38,41,44: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (8x336).

3. At step 15 the UE shall return

- for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
- for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
- for sub-test 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 4, 7, 10, 13, 16, 19, 22, 25, 28, 31, 34, 37, 40, 43: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 5, 8, 11, 14, 17, 20, 23, 26, 29, 32, 35, 38, 41, 44: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

14.2.45 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Streaming / unknown / UL:57.6 DL:57.6 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

14.2.45.1 Conformance requirement

See 14.2.4.1.

14.2.45.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.45.

14.2.45.3 Method of test

Note 1 See [10] TS 34.109 clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

14.2.45.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
   - for sub-test 3: RB8/TF1 (1x576)
   - for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x576).
   - for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x576).
   - for sub-test 6: RB8/TF2 (2x576)
   - for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x576).
   - for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x576).
   - for sub-test 9: RB8/TF2 (3x576)
   - for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x576).
   - for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x576).
   - for sub-test 12: RB8/TF2 (4x576)
   - for sub-test 13: RB5/TF1 (1x39) and RB8/TF4 (4x576).
   - for sub-test 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x576).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

Source: Matsushita Communication Industry Co.,Ltd., Nokia, ETSI **Date:** 13/11/2000

Subject: Technical Corrections to RRC test cases in clause 8

Work item:

Category: *(only one category shall be marked with an X)*

F	Correction	X	**Release:**	Phase 2	
A	Corresponds to a correction in an earlier release			Release 96	
B	Addition of feature			Release 97	
C	Functional modification of feature			Release 98	
D	Editorial modification			Release 99	X
				Release 00	

Reason for change:

1. In clause 8.1.1.2.4, under the specific message content sub-clause for PAGING TYPE 1 message in step 4, the "paging originator" IE should be "UTRAN originator" instead of "CN originator". Also, SIB 13 (not SIB 12) should be sent. For the expected sequence sub-clause, step 6 is added to complete the cell update procedure properly.
2. In clause 8.1.1.3.3, the correct value to use in the "paging originator" IE should be "UTRAN originator". This IE is wrongly specified in the conformance requirement statement.
3. In clause 8.1.1.5.4, the specific message content of PAGING TYPE 1 message in step 2 should have the "U-RNTI" IE set to the assigned UE identity. This is corrected.
4. In clause 8.1.1.7.4, the initial condition statement for the UE is ambiguous. In the beginning of the test, the UE should have executed a location registration (MM) or an attach (GMM) procedure so that TMSI or P-TMSI is assigned to it. Next, either identities are de-allocated using the detach procedure. In step 1, the SS shall attempt to page the UE using TMSI or P-TMSI assigned previously. The specific message content for PAGING TYPE 2 in step 1 is also revised.
5. For clauses 8.1.1.7 and 8.1.1.8, the reference clause in TS 25.331 V3.3.0 should be 8.1.11.
6. For clauses 8.1.1.8.4, step 3 in the expected sequence sub-clause should explicitly state that UE responds by sending UPLINK DIRECT TRANSFER. Correspond to this, the second test requirement in clause 8.1.1.8.5 is expanded.
7. In clause 8.1.2.1.4, the test procedure and test requirements sub-clauses are amended. Specifically, it is clarified that UE shall transmit RRC CONNECTION REQUEST twice. SS replies with a RRC CONNECTION SETUP message with unmatched "Initial UE identity" IE for the first attempt. For the second attempt, SS sends the same message with a matched "Initial UE identity" IE. A spelling mistake in step 2 specific message content has been corrected.
8. In clause 8.1.2.6.4, the second RRC CONNECTION REQUEST message shall be transmitted by the UE 15 seconds after SS has sent the second RRC CONNECTION REJECT message. The "protocol error indicator" IE in this message shall be set to "TRUE". The expected sequence and specific message content sub-clauses are revised. The test requirements in clause 8.1.2.6.5 is also updated accordingly.
9. For clauses 8.1.4.3.X and 8.1.4.4.X, the following errors are identified and corrected:
   - UE need not wait until T301 to expire before re-transmitting RRC CONNECTION RE-ESTABLISHMENT REQUEST message. Therefore, texts requiring that the messages should be received at intervals of T301 are removed.
   - The 'Specific Message Content' sub-clauses are expanded to differentiate between first and subsequent RRC CONNECTION RE-ESTABLISHMENT REQUEST messages on the uplink. Also specify the differences in RRC CONNECTION RE-ESTABLISHMENT messages used in different test steps.
   - The total number of RRC CONNECTION RE-ESTABLISHMENT REQUEST messages in clause 8.1.4.3.X should be N301+1 instead of N301-1.
   - In the last step for clause 8.1.4.4.X, the UE shall stop transmitting RRC CONNECTION RE-ESTABLISHMENT REQUEST messages exactly after (N301+1) transmissions. This is explicitly specified.
10. In clause 8.2.1.2.4, the "Integrity protection algorithm" IE for RADIO BEAER SETUP message in specific message content sub-clause is incorrectly specified. This IE can only take an enumerated value of "UIA1".
11. In clause 8.1.1.4.4, the specific message content of PAGING TYPE 1 message in step 2 should have the "Paging originator" IE set to the "CN originator" in order for the UE to respond in idle mode. The PAGING TYPE 1 message is also modified to include the IMSI identity stored in the USIM.
12. In clause 8.3.2.1.4, the URA-IDs quoted in the 'test procedure' and 'expect sequence' sub-clauses are not in correct order. It is clarified that the current URA ID stored in the UE is URA-ID 1, while the broadcasted URA-ID list contains only URA-ID 2.
13. In clause 8.3.1.1.5, after step 5 the UE should send CELL UPDATE message to cell 1 instead of cell 2 and after step 9 the UE should send CELL UPDATE message to cell 2 instead of cell 1.
14. In clause 8.3.1.2.4, the message content of CELL UPDATE CONFIRM (Step 4) should use the same message found in step 11 of Clause 8.3.1.1.3 instead of Clause 8.1.3.1.1.3.
15. In clause 8.3.1.7.4, step 7 and step 13 of the expected sequence, U-RNTI should be corrected to become C-RNTI.

8. Layer 3

8 Radio Resource Control RRC

8.1 RRC Connection Management Procedure

8.-1.1 Paging

8.1.1.1 Paging for Connection in idle mode

8.1.1.1.1 Definition

8.1.1.1.2 Conformance requirement

In idle mode, UE monitors the paging occasions determined using parameters from SYSTEM INFORMATION BLOCK messages. When the UE receives a PAGING TYPE 1 message transmitted on PCCH during one of its assigned paging occasions, it should attempt to establish an RRC connection.

Reference

3GPP TS 25.331 clause 8.1.2, 3GPP TS 25.211 clause 5.3.3.7, 3GPP TS ~~25.304 clause~~25.304 clause 8.

8.1.1.1.3 Test purpose

To confirm that the UE establishes an RRC connection after it receives a PAGING ~~TYPE1~~TYPE 1 message which includes IE "Paging Record"(UE identity-) set to the IMSI -of the UE.

8.1.1.1.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :Idle~~UE: Idle state (state 2 or state 3) as specified in clause 7.4 of TS 34.108 -with a CN UE identity (set to IMSI).

Test Procedure

The SS transmits a PAGING ~~TYPE1~~TYPE 1 message, which includes an unmatched CN UE identity for the UE in the idle state. The UE shall not change its state. The SS transmits a PAGING ~~TYPE1~~TYPE 1 message, which includes a matched CN UE identity for the UE in the idle state. During transmission of PAGING TYPE 1 messages, SS selects the correct paging indicator on the PICH in order to allow the UE to respond to paging. Then the UE transmits an RRC CONNECTION REQUEST to the SS, the SS transmits an RRC CONNECTION SETUP to the UE. When the UE receives this message, the UE establishes an RRC connection.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		SYSTEM INFORMATION BLOCK TYPE 13	Transmit these messages on the BCCH, in addition to the normal BCCH transmissions. See specific message contents.
2	←		PAGING ~~TYPE1~~TYPE 1	The SS transmits the message, which includes an unmatched identity (incorrect IMSI), ~~then~~ and the UE does not change its state.
3	←		PAGING ~~TYPE1~~TYPE 1	The SS transmits the message, which includes a matched identity (test-SIM IMSI).
4	→		RRC CONNECTION REQUEST	
5	←		RRC CONNECTION SETUP	SS assigns DPCH resources to allow UE to establish an RRC connection.

Specific Message Contents

SYSTEM INFORMATION TYPE 13

Information Element	Value/remark
CN domain system information list	Only 1 entry
CN domain system information	
- CN domain identity	Supported Domain (PS Domain or CS Domain)
- CHOICE CN Type	Supported CN type
- CN domain specific NAS system information	Default
- CN domain specific DRX cycle length coefficient	6
UE Timers and constants in idle mode	
- T300	5 sec.
- N300	3
- T312	10 sec
- N312	200

PAGING TYPE 1 (Step 2)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
CHOICE Paging originator	CN originator
- Paging cause	Terminating Call with one of the supported services (Conversational Call, Streaming Call, Interactive Call, Background Call, SMS)
- CN domain identity	Supported Domain (PS Domain or CS Domain)
- CHOICE UE Identity	IMSI
- IMSI	Set to an arbitrary octet string of length 7 bytes which is different from the IMSI value stored in the USIM card.

PAGING TYPE 1 (Step 3)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
CHOICE Paging originator	CN originator
- Paging cause	Terminating Call with one of the supported services (Conversational Call, Streaming Call, Interactive Call, Background Call, SMS)
- CN domain identity	Supported Domain (PS Domain or CS Domain)
- CHOICE UE Identity	IMSI
- IMSI	Set to the same octet string as in the IMSI stored in the USIM card

RRC CONNECTION REQUEST (Step 4)

Information Element	Value/remark
Initial UE identity	Same as the IMSI stored in the USIM card, or the registered TMSI or P-TMSI
Establishment Cause	Check to see if it is set to the same value as "Paging Cause" IE in the PAGING TYPE 1 message transmitted on step 3.
Protocol Error Indicator	Check to see if it is set to FALSE
Measured results on RACH	Not checked.

8.1.1.1.5 Test requirement

After step 2 the UE shall not transmit on the uplink CCCH in order to establish a RRC connection.

After step 5 the UE shall have an RRC connection based on dedicated physical channel resources.

8.1.1.2 Paging for Connection in connected mode (CELL_PCH)

8.1.1.2.1 Definition

8.1.1.2.2 Conformance requirement

In CELL_PCH state, a UE can respond to a paging request from UTRAN. In this case, the UTRAN has requested to establish a connection with the UE. The UE should then attempt to perform a cell update procedure and move to CELL_FACH state in order to respond to the paging using uplink CCCH.

Reference

3GPP TS 25.331 clause 8.1.2

8.1.1.2.3 Test purpose

To confirm that the UE enters the CELL_FACH state after it receives a PAGING TYPE 1 message which indicates that the paging has originated from UTRAN. To verify that the UE performs cell update procedure after entering the CELL_FACH state.

8.1.1.2.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_PCH state (state 6-15) as specified in clause 7.4 of TS 34.108 with a valid U-RNTI already assigned by the SS

Test Procedure

The SS transmits a PAGING ~~TYPE1~~TYPE 1 message, which includes an unmatched U-RNTI in CELL_PCH state. The UE does not change its state. Then SS transmits a PAGING TYPE 1 message with a matched identifier but originates from the CN instead of UTRAN. The UE should not change state after receiving this message. The SS transmits a PAGING ~~TYPE1~~TYPE 1 message, which includes a matched U-RNTI in the connected state. Then the UE enters the CELL_FACH state and performs the cell updating procedure.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		SYSTEM INFORMATION BLOCK TYPE 13	Transmit these messages on the BCCH, in addition to the normal BCCH transmissions. See specific message contents
2	←		PAGING TYPE 1	The SS transmits a message including an unmatched identifier. UE shall not respond to the paging.
3	←		PAGING TYPE 1	The SS transmits a message includes a matched identifier but with the originator being the CN, UE shall not respond to the paging.
4	←		PAGING TYPE 1	The SS transmits the message with the UTRAN being the originator and including the UE's assigned U-RNTI
5	→		CELL UPDATE	The UE enters the CELL_FACH state. UE performs cell updating procedure. The CELL UPDATE message shall contain the value "Cell Update Cause" set to "paging response".
6	←		CELL UPDATE CONFIRM	Use the default message specified in Annex A.

Specific Message Contents

PAGING TYPE 1 (Step 2)

Information Element	Value/remark
Paging record list Paging record - CHOICE Paging originator - U-RNTI - SRNC Identity - S-RNTI	Only 1 entry UTRAN originator Set to an arbitrary 16-bit string which is different from the SRNC identity- assigned. Set to an arbitrary 20-bit string which is different from the S-RNTI assigned.

PAGING TYPE 1 (Step 3)

Same as the PAGING TYPE 1 message as in Clause 8.1.1.1.4, with the exception that the "BCCH modification info" IE should be omitted in the message.

PAGING TYPE 1 (Step 4)

Information Element	Value/remark
Paging record list Paging record - CHOICE Paging originator - U-RNTI - SRNC Identity - S-RNTI	Only 1 entry ~~CN~~ UTRAN originator Set to the same SRNC identity as previously assigned. Set to the same S-RNTI as previously assigned.

SYSTEM INFORMATION BLOCK TYPE ~~12~~13

Use the ~~S~~same ~~as the~~ SYSTEM INFORMATION BL~~C~~OCK TYPE 13 message ~~used~~ as specified in Clause 8.1.1.1.~~3~~4.

8.1.1.2.5 Test requirement

After step 2- the UE shall not respond to the PAGING TYPE 1 message sent in step 2.

After step 3, the UE shall not respond to the PAGING TYPE 1 message sent in step 2.

After step 4, the UE shall enter the CELL FACH state and send a CELL UPDATE message with "Cell Update Cause" IE set to "paging response".

8.1.1.3 Paging for Connection in connected mode(URA_PCH)

8.1.1.3.1 Definition

8.1.1.3.2 Conformance requirement

This procedure is used to transmit a PAGING TYPE 1 message from the network to selected UEs in URA_PCH state using the paging control channel (PCCH). The UE listens to it and then enters the CELL_FACH state.

Reference

3GPP TS 25.331 clause 8.1.2

8.1.1.3.3 Test purpose

To confirm that the UE enters the CELL_FACH state after it receives a PAGING TYPE_1 message which includes IE "Paging Record"(U-RNTI) for the UE and which is set to "~~CN~~UTRAN originator" in IE "paging originator".

8.1.1.3.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: URA_PCH state (state 6-16) as specified in clause 7.4 of TS 34.108 with a valid U-RNTI assigned by the SS

Test Procedure

The SS transmits a PAGING TYPE_1 message, which includes an unmatched U-RNTI in URA_PCH state. The UE does not change its current state. The SS transmits a PAGING TYPE_1 message which includes a matched U-RNTI in the connected state. Then the UE listens to it and enters the CELL_FACH state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		PAGING TYPE_1	The SS transmits the message that includes an unmatched identifier, then the UE does not change its state.
2	←		PAGING TYPE_1	The SS transmits the message that includes a matched identifier.
3	→		CELL UPDATE	The UE enters the CELL_FACH state.

Specific Message Contents

PAGING TYPE 1 (Step 1)

Information Element	Value/remark
Paging record list Paging record - CHOICE Paging originator - U-RNTI - SRNC Identity - S-RNTI	Only 1 entry UTRAN originator Set to an unused SRNC identity which is different from the SRNC identity assigned. Set to an arbitrary 20-bit string which is different from the S-RNTI assigned.

PAGING TYPE 1 (Step 2)

Information Element	Value/remark
Paging record list Paging record - CHOICE Paging originator - U-RNTI - SRNC Identity - S-RNTI	Only 1 entry UTRAN originator Set to the previously assigned SRNC identity Set to previously assigned S-RNTI

8.1.1.3.5 Test requirement

After step 1 the UE shall not respond to the paging.

After step 2 the UE shall enter the CELL FACH state, and transmit CELL UPDATE message to initiate the cell updating procedure with the paging cause set to “paging response”.

8.1.1.4 Paging for Notification in idle mode

8.1.1.4.1 Definition

8.1.1.4.2 Conformance requirement

When a system information block on the BCCH is modified, the PAGING TYPE 1 message can be sent on the PCCH to inform the UE about the changes, which are currently taking place in the idle mode. The PAGING TYPE 1 message includes the IE "BCCH Modification Information". Upon receiving this notification from the UTRAN, the UE shall read the relevant MIB and/or SIB(s) subsequently during idle mode.

Reference

3GPP TS 25.331 clause 8.1.1.2

8.1.1.4.3 Test purpose

To confirm that the UE checks the new value tag of the master information block and reads the updated SYSTEM INFORMATION BLOCK messages after it receives a PAGING TYPE 1 message which includes the IE "BCCH Modification Information".

8.1.1.4.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: Idle state (state 2 or state 3) as specified in clause 7.4 of TS 34.108 with a CN UE identity.

Test Procedure

The UE is in the idle state before it starts to change the SYSTEM INFORMATION BLOCK TYPE 1 or 13 messages, depending on the CN type supported by the UE. The SS transmits a PAGING ~~TYPE1~~TYPE 1 message on the paging occasions assigned to the UE. The message shall include the IE "BCCH Modification Information" indicating the time when the first modified master information block is available. Before the starting time, SS continuously broadcast the original MASTER INFORMATION BLOCK and various types of SYSTEM INFORMATION BLOCK on the BCCH mapped to BCH transport channel. SS maintains this status until the SFN which corresponds to the starting time is reached. Then it transmits the new master information block followed by the new SYSTEM INFORMATION BLOCK TYPE 1 or 13 messages. In the new SIB TYPE 1 or 13 messages, the IE "DRX Cycle Length Coefficient" is altered when compared to the original SIB TYPE 1 or 13 messages. . At the next paging occasion, SS transmits a new PAGING TYPE 1 message. The message addresses the UE using its IMSI and the "paging cause" IE set to a terminating call type that is supported by the UE. The UE shall react to the PAGING TYPE 1 message and then send a RRC CONNECTION REQUEST message to SS.

Notes: For UEs supporting GSM-MAP CN type only, SYSTEM INFORMATION TYPE 1 messages are to be sent by SS in this test case. On the other hand, SS transmits SYSTEM INFORMATION TYPE 13 messages if the UE under test supports only ANSI-41 CN type.

-Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE 1 or SYSTEM INFORMATION BLOCK TYPE 13	SS transmits information on BCCH in order for UE to listen to one of the S-CCPCH physical channel, which carries PAGING TYPE 1 or 13 messages on PCCH. Relevant paging parameters are also broadcasted.
2		←	PAGING TYPE 1	SS transmits the message includes the IE "BCCH Modification Information", with the "Value Tag" changed from the "MIB Value Tag" of the current Master Information Block. Also the modification time is set to 4088 radio frame from the current SFN. SS continuously broadcast the same MASTER INFORMATION BLOCK and various types of SYSTEM INFORMATION BLOCK on BCCH for a period stretching 4087 frames.
3		← ←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE 1 or SYSTEM INFORMATION BLOCK TYPE 13	SS starts to transmit the MIB with the "MIB Value Tag" IE different from the original setting. At the same time, SS starts to transmit the affected SIB TYPE 1 or TYPE 13 messages continuously. The value of IE "DRx Cycle Length Coefficient" is changed in this message. SS starts to monitor the uplink RACH after approximately 4087 frames from step 2.
4		←	PAGING TYPE 1	SS starts to transmit this message continuously on the PCCH according to the new value of "DRx Cycle Length Coefficient", at the next paging occasion immediately following step 3.
5		→	RRC CONNECTION REQUEST	UE transmits a request due to answer to the PAGING TYPE 1 received in step 4. The IE "Establishment Cause" should be set to "Terminating Call" supported by the UE and the "Initial UE Identity" set to UE's IMSI.
6		←	RRC CONNECTION REJECT	UE shall return to idle mode after receiving this message

Specific Message Contents

Redirection info	Not Present

8.1.1.4.5 Test requirement

After step 5 ~~-~~the UE shall transmit RRC CONNECTION REQUEST message in response to the PAGING TYPE 1 messages sent ~~starting from~~in step 4.

8.1.1.5 Paging for Notification in connected mode (CELL_PCH)

8.1.1.5.1 Definition

8.1.1.5.2 Conformance requirement

When a system information block on the BCCH is modified, the message PAGING TYPE_1 can be sent on the PCCH to inform the UE about this change in the CELL_PCH state. This message includes the IE_"BCCH Modification Information". Upon receiving this notification from the UTRAN, the UE shall read the relevant MIB and/or SIB(s) subsequently while in CELL_PCH state.

Reference

3GPP TS 25.331 clause 8.1.1.2

8.1.1.5.3 Test purpose

To confirm that the UE enters the CELL_FACH state, checks the new value tag of the master information block, and read the SYSTEM INFORMATION messages after it receives a PAGING TYPE_1 message which includes the IE_"BCCH Modification Information"

8.1.1.5.4 Method of test

Initial Condition

System Simulator-: 1 cell

UE-: CELL_PCH state (state 6-15) as specified in clause 7.4 of TS 34.108 –with valid a U-RNTI assigned to it.

Test Procedure

Identical test steps 1 to 5 in Clause 8.1.1.4 are applied to this test. However, the PAGING TYPE 1 messages used in step 2 and step 4 are altered. The changes are indicated in the specific message content paragraph under this clause. At step 6, UE shall send the CELL UPDATE message indicating the "cell update cause" to be "paging response". SS then replies with a CELL UPDATE CONFIRM message to allow the UE to transit to CELL_FACH state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE 1 or SYSTEM INFORMATION BLOCK TYPE 13	SS transmits information on BCCH in order for UE to listen to one of the S-CCPCH physical channel, which carries PAGING TYPE 1 or 13 messages on PCCH. Relevant paging parameters are also broadcasted.
2		←	PAGING TYPE 1	SS transmits the paging message which comprises IE "BCCH Modification Information", with the "Value Tag" changed from the "MIB Value Tag" of the current Master Information Block. Also the modification time is set to 4088 radio frame from the current SFN. SS continuously broadcast the same MASTER INFORMATION BLOCK and various types of SYSTEM INFORMATION BLOCK on BCCH for a period stretching 4087 frames.
3		← ←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE 1 or SYSTEM INFORMATION BLOCK TYPE 13	SS starts to transmit the MIB with the "MIB Value Tag" IE different from the original setting. At the same time, SS starts to transmit the affected SIB TYPE 1 or TYPE 13 messages continuously. The value of IE "DRx Cycle Length Coefficient" is changed in this message. SS starts to monitor the uplink RACH after approximately 4087 SFN from step 2.
4		←	PAGING TYPE 1	SS transmits this message continuously on the PCCH according to the new value of "DRx Cycle Length Coefficient", at the next paging occasion immediately following step 3. This message shall page the UE with its U-RNTI and setting the UTRAN as the paging originator.
5		→	CELL UPDATE	The IE "Cell Update Cause" should be set to "Paging Response" and the IE "U-RNTI" shall be similar to the UE's U-RNTI value. The "Protocol Error Indicator" IE shall be set to FALSE.
6		←	CELL UPDATE CONFIRM	UE shall transit to CELL_FACH state after receiving this message.

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 1 or TYPE 13 (Step 1)

The content of this message is the same in the message used in step 1 specified in Clause 8.1.1.4.3.

PAGING TYPE 1 (Step 2)

Information Element	Value/remark
Paging record list Paging record - CHOICE Paging originator - U-RNTI - SRNC Identity - S-RNTI BCCH modification info - MIB Value Tag - BCCH Modification time	Only 1 entry UTRAN originator Equal to the U-RNTI assigned earlier. ~~Set to a different string from currently allocated SRNC identity~~ ~~Set to an arbitrary 20-bits string~~ 2 4088

MASTER INFORMATION BLOCK (Step 3) and

SYSTEM INFORMATION BLOCK TYPE 1 or TYPE 13 (Step 3)

The content of these messages is the same in the message used in step 3 specified in Clause 8.1.1.4.4.

PAGING TYPE 1 (Step 4)

Information Element	Value/remark
Paging record list Paging record - CHOICE Paging originator - U-RNTI - SRNC Identity - S-RNTI BCCH modification info	Only 1 entry UTRAN originator Equal to the U-RNTI assigned earlier. Same as the current SRNC allocated Same as the current S-RNTI allocated Not Present

CELL UPDATE CONFIRM (Step 6)

Information Element	Value/remark
DRX Indicator	DRx with Cell Updating

8.1.1.5.5 Test requirement

After step 5 the UE shall transmit a CELL UPDATE message with “cell update cause” IE set to “paging response”. Upon receiving CELL UPDATE CONFIRM message, the UE shall enter the CELL_FACH state.

8.1.1.6 ~~Paging for Notification in connected mode (URA_PCH)~~

8.1.1.6.1 ~~Definition~~

8.1.1.6.2 Conformance requirement

When a system information block on the BCCH is modified, the UTRAN can send a PAGING TYPE 1 message on the PCCH to inform UE about the changes while the UE is in the URA_PCH state. This message includes the IE ”BCCH Modification Information”. When receiving this message in URA_PCH state, the UE shall read the relevant MIB and/or SIB(s).

Reference

3GPP TS 25.331 clause 8.1.1.2

8.1.1.6.3 Test purpose

To confirm that the UE enters the CELL_FACH state, checks the included new value tag of the master information block and reads the relevant SYSTEM INFORMATION block(s) after it receives a PAGING TYPE 1 message which includes the IE "BCCH Modification Information".

8.1.1.6.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: URA_PCH state (state 6-16) as specified in clause 7.4 of TS 34.108 with a valid U-RNTI assigned.

Test Procedure

The UE is in the URA_PCH state before the SS starts changing SYSTEM INFORMATION BLOCK messages. SS modifies its SYSTEM INFORMATION and updates the "value tag" of both the SYSTEM INFORMATION BLOCK TYPE 1 and of the MASTER INFORMATION BLOCK. After a while, the SS transmits a PAGING TYPE 1 message, which includes the IE "BCCH Modification Information". The UE enters the CELL_FACH state and reads the modified SYSTEM INFORMATION BLOCK. The UE shall act according to the modified message. In this test case, the UE shall adjust it paging occasions and read the new PCCH blocks newly assigned to it under DRX mode.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	MASTER INFORMATION BLOCK SYSTEM INFORMATION	The SS changes the SYSTEM INFORMATION when the UE is in the connected state (URA_PCH).
2		←	PAGING TYPE 1	SS transmits the message includes the IE "BCCH Modification Information".
3				The UE enters the CELL_FACH state and reads the SYSTEM INFORMATION and then the UE follows this message.

Specific Message Contents

None

8.1.1.6.5 Test requirement

After step 2 the UE shall enter the CELL_FACH state and read the SYSTEM INFORMATION message and follow it.

8.1.1.7 Paging for Connection in connected mode (CELL_DCH)

8.1.1.7.1 Definition

8.1.1.7.2 Conformance requirement

This procedure is used to transmit a PAGING TYPE 2 message from the network to selected UEs in CELL_DCH state using the dedicated control channel (DCCH). The UE listens to it and responds to this message accordingly.

Reference

3GPP TS 25.331 clause 8.1.~~9~~11

8.1.1.7.3 Test purpose

To confirm that the UE responds this message after it receives a PAGING TYPE 2 message which includes IE "Paging Record Type Identifier" for the UE.

8.1.1.7.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell.

UE~~-~~: CELL_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108–, after executing a location registration or attach procedure followed by the release of the TMSI of P-TMSI allocated.~~but neither a valid TMSI nor P-TMSI is assigned to the UE~~

Test Procedure

The SS transmits a PAGING TYPE 2 message which includes an unmatched Paging Record Type Identifier in CELL_DCH state. The UE shall not respond to this message. SS pages the UE again, this time with a matched Paging Record Type Identifier but with the IE "paging cause" set to one of the spare values. UE shall respond by transmitting a RRC STATUS message on the DCCH using RLC-AM mode. Finally, SS transmits a PAGING TYPE 2 message, which includes a matched Paging Record Type Identifier. Then the UE shall responds to this message by the transmission of an upper layer message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PAGING TYPE 2	The SS transmits the message includes an unmatched identifier, then the UE does not respond.
2		←	PAGING TYPE 2	The SS transmits the message includes a matched identifier. In the paging message, IE "paging cause" is set to one of the spare values.
3		→	RRC STATUS	The UE shall respond by reporting the protocol error to the SS.
4		←	PAGING TYPE 2	SS pages the UE with a matched identifier and with a valid "paging cause" IE.
5		→	UPLINK DIRECT TRANSFER	The UE shall respond to the paging message sent in step 4.

Specific Message Contents

PAGING TYPE 2 (Step 1)

Information Element	Value/remark
Paging cause	Terminating Call supported by the UE
CN domain identity	Domain supported by the UE
Paging Record Type Identifier	Set to "TMSI" or "P-TMSI" allocated during the execution of location registration or attach procedure respectively

PAGING ~~-~~TYPE 2 (Step 2)

Information Element	Value/remark
Paging cause CN domain identity Paging Record Type Identifier	Use one of the spare values Domain supported by the UE Set to “IMSI (GSM-MAP)” for UEs supporting GSM-MAP core network type or “IMSI (DS-41)” for UEs supporting ANSI-41 core network type.

RRC -STATUS (Step 3)

Information Element	Value/remark
Protocol error information	Checked to see if set to “Information element value not comprehended”

PAGING -TYPE 2 (Step 4)

Information Element	Values/Remarks
Paging cause CN domain identity Paging Record Type Identifier	Terminating Call supported by the UE Domain supported by the UE Set to “IMSI (GSM-MAP)” for UEs supporting GSM-MAP core network type or “IMSI (DS-41)” for UEs supporting ANSI-41 core network type.

UPLINK DIRECT TRANSFER (Step 5)

Only the message type IE for this message is checked.

8.1.1.7.5 Test requirement

After step 1 the UE shall not respond to the paging message on the DCCH.

After step 2 the UE shall respond to the paging message by transmitting RRC STATUS on the DCCH, stating the protocol error as “Information element value not comprehended”.

After step 4 the UE shall respond to the paging message by transmitting an UPLINK DIRECT TRANSFER message on the uplink DCCH.

8.1.1.8 Paging for Connection in connected mode (CELL_FACH)

8.1.1.8.1 Definition

8.1.1.8.2 Conformance requirement

This procedure is used to transmit a PAGING TYPE 2 message from the network to selected UEs in CELL_FACH state using the dedicated control channel (DCCH). The UE shall listen to it and responds to this message accordingly.

Reference

3GPP TS 25.331 clause 8.1.911

8.1.1.8.3 Test purpose

To confirm that the UE responds to a PAGING TYPE 2 message, which includes a matching value for IE ”Paging Record Type Identifier”.

8.1.1.8.4 Method of test

Initial Condition

System Simulator-: 1 cell

UE-: CELL_FACH state (state 6-11) as specified in clause 7.4 of TS 34.108 –.

Test Procedure

The SS transmits a PAGING TYPE 2 message, which includes an unmatched Paging Record Type Identifier in CELL_FACH state. The UE shall not respond to this message. The SS transmits a PAGING TYPE 2 message, which includes a matched Paging Record Type Identifier. Then the UE shall respond by transmitting an upper layer message to answer this page.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		PAGING TYPE2	The SS transmits the message includes an unmatched identifier, then the UE does not respond.
2	←		PAGING TYPE2	The SS transmits the message includes a matched identifier.
3	→		UPLINK DIRECT TRANSFER	The UE responds by sending an upper layer message.

Specific Message Content

PAGING -TYPE 2 (Step 1)

Use the same message content as in step 1 from 8.1.1.7.4

PAGING -TYPE 2 (Step 2)

Use the same message content as in step 4 from 8.1.1.7.4

8.1.1.8.5 Test requirement

After step 1 the UE shall not respond.

After step 2 the UE shall respond to the second PAGING TYPE 2 message by transmitting an UPLINK DIRECT TRANSFER message on the uplink DCCH.

8.1.2 RRC Connection Establishment

8.1.2.1 RRC Connection Establishment in CELL_DCH state: Success

8.1.2.1.1 ——————Definition

8.1.2.1.2 Conformance requirement

1. The RRC connection establishment is initiated by the UE, which leaves the idle mode and transmits an RRC CONNECTION REQUEST message. This message shall include the IE "Initial UE identity" and is to be transmitted on the uplink CCCH.
2. After the UE receives an RRC CONNECTION SETUP message which includes the same value of the IE "Initial UE identity", radio resource parameters(i.e. Signalling link type and multiplexing info) and U-RNTI ~~The~~, UE then configures the layer 2 and layer 1 processing so as to support the DCCH according to the radio resource parameters specified. The procedure successfully ends when the network receives an RRC CONNECTION SETUP COMPLETE message on the uplink DCCH.

Reference

3GPP TS 25.331 clause 8.1.3

8.1.2.1.3 Test purpose

To confirm that the UE leaves the Idle Mode and correctly establishes a signalling link on the DCCH.

8.1.2.1.4 Method of test

Initial Condition

System Simulator-: -1 cell

UE: Idle state (state 2 or state 3) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH by attempting to make an outgoing -call-. After SS receives this message, it assigns the necessary radio resources and U-RNTI to be used by the UE. -SS- and then transmits an RRC CONNECTION SETUP message containing an IE "Initial UE Identity" that does not match the IE "Initial UE Identity" in the most recent RRC CONNECTION REQUEST message sent by the UE. UE receives the RRC CONNECTION SETUP message ~~to the UE~~ within timer T300 but discards it due to the IE "Initial UE Identity" mismatch. UE shall wait for timer T300 to time out before re-transmitting a RRC CONNECTION REQUEST message to the SS. SS again assigns the necessary radio resources and U-RNTI. SS then follows by transmitting a RRC CONNECTION SETUP message containing an IE "Initial UE Identity" that matches the IE "Initial UE Identity" in the most recent RRC CONNECTION REQUEST sent by the UE. SS then waits for the UE to transmit an RRC CONNECTION SETUP COMPLETE message on the DCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	→		RRC CONNECTION REQUEST	By outgoing call operation
2	←		RRC CONNECTION SETUP	This message is not addressed to the UE.
3	→		RRC CONNECTION REQUEST	UE shall re-transmit the request message again after a time out of T300 from step 1~~receiving a setup message not addressed to itself.~~
4	←		RRC CONNECTION SETUP	
5				The UE configures the layer 2 and layer 1-.
6	→		RRC CONNECTION SETUP COMPLETE	

Specific Message Content

RRC CONNECTION SETUP (Step 2)-:

Information Element	Value/remark
Initial UE Identity CHOICE UE id type IMSI	 IMSI Set to an arbitrary octet string of length 7 which different from the IMSI -value stored in the USIM~~I~~ card.

8.1.2.1.5 Test requirement

After step 2 the UE shall re-transmit the RRC CONNECTION REQUEST message again in order to continue the RRC connection establishment procedure.

After step 6 the UE shall establish an RRC connection and continue the procedure of the outgoing call on the DCCH.

8.1.2.2 RRC Connection Establishment: Success after T300 timeout

8.1.2.2.1 Definition

8.1.2.2.2 Conformance requirement

1. The RRC connection establishment is initiated by the UE, which leaves the idle mode. The UE shall transmit an RRC CONNECTION REQUEST message which includes the IE "Initial UE identity". This message shall be sent on the uplink CCCH.

2. In the case of a failure to establish the RRC connection at the expiry of timer T300, the UE retries to establish the RRC connection until V300 is greater than N300.

When the UE receives a RRC CONNECTION SETUP message, which contains a protocol error and causing the internal variable PROTOCOL_ERROR_REJECT set to TRUE, it shall perform the appropriate error handling procedure.

Reference

3GPP TS 25.331 clause 8.1.3

8.1.2.2.3 Test purpose

To confirm that the UE retries to establish the RRC connection until V300 is greater than N300 after the expiry of timer T300 when the SS transmits no response for an RRC CONNECTION REQUEST message.

8.1.2.2.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: Idle state (state 2 or state 3) as specified in clause 7.4 of TS 34.108

Test Procedure

Before the test starts, an internal counter K in SS is initialized to a value = 1. Following this, the UE shall transmit an RRC CONNECTION REQUEST message to the SS on the uplink CCCH, after the operator attempts to make an outgoing call. SS ignores this message, increments K every time such a message is received and waits for T300 timer to expire. This cycle is repeated until K reaches N300. When K is equal to N300, the SS transmits the RRC CONNECTION SETUP message specified in step 5 to the UE and wait until T300 expires. The UE shall send another RRC CONNECTION REQUEST message on the uplink CCCH. SS verifies that the UE does not access the radio resource allocated in step 5. After confirming this restriction is observed, SS replies with a valid RRC CONNECTION SETUP message. The UE shall then acknowledge the establishment of RRC connection by sending the RRC CONNECTION SETUP COMPLETE ~~messsage~~message on uplink DCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				SS initializes counter K to 1-. Operator is asked to make an outgoing call and SS starts to wait for RRC CONNECTION REQUEST on uplink CCCH.
2	→		RRC CONNECTION REQUEST	
3				SS checks to see if K is equal to N300. If so, goes to step 5. Else, continues to execute step 4.
4				SS increments K. The next step is step 2.
5	←		RRC CONNECTION SETUP	The message contains a protocol error, see specific message content. SS waits for T300 to expire again.
6	→		RRC CONNECTION REQUEST	UE shall not access the radio resource indicated in RRC CONNECTION SETUP message sent in step 5.
7	←		RRC CONNECTION SETUP	This is a legal message. See the clause 6.1 in TS 34.108 on default message content for RRC.
8				The UE configures the layer 2.
9	→		RRC CONNECTION SETUP COMPLETE	

Specific Message Contents

RRC CONNECTION SETUP (Step 5)

Information Element	Value/remark
Uplink Radio Resource CHOICE *channel requirement*	Neither PRACH Info (for RACH) nor Uplink DPCH info is chosen. One of the spare value is used.

8.1.2.2.5 Test requirement

After step 5 the UE shall re-send another RRC CONNECTION REQUEST message and not access any radio resources specified in RRC CONNECTION SETUP message sent in step 5.

After step 8 the UE shall transmit an RRC CONNECTION SETUP COMPLETE message and establish an RRC connection on the DCCH logical channel.

8.1.2.3 RRC Connection Establishment: Failure (V300 is greater than N300)

8.1.2.3.1 Definition

8.1.2.3.2 Conformance requirement

1. The RRC connection establishment is initiated by the UE, which leaves the idle mode and transmits an RRC CONNECTION REQUEST message. This message shall include the IE "Initial UE identity" on the uplink CCCH.

2. In the case of a failure to establish the RRC connection after (N300+1) attempts, the UE goes back to idle mode.

Reference

3GPP TS 25.331 clause 8.1.3

8.1.2.3.3 Test purpose

To confirm that the UE stops retrying to establish the RRC connection if V300 is greater than N300 and goes back to idle mode.

8.1.2.3.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: Idle state (state 2 or state 3) as specified in clause 7.4 of TS 34.108

Test Procedure

Before the test starts, SS initializes an internal counter K to 1. The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH by an outgoing call operation. SS shall not respond to any RRC CONNECTION REQUEST message, instead the counter K is increased by 1 every time such a message is received. To arrive at the verdict, the SS checks that a total of (N300+1) such messages are received.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				SS initializes counter K to 1and then prompts the operator to make an outgoing call.
2		→	RRC CONNECTION REQUEST	
3				SS increments K by 1.
4				If K is greater than N300, goes to step 5 else proceed to step 2.
5				SS monitor the uplink CCCH for a time period enough for UE to goes back to normal service. The exact amount of time to wait shall be derived from TS related to cell selection. If any uplink transmission is detected, the test fails.

Specific Message Contents

None

8.1.2.3.5 Test requirement

?After step 5, counter K shall be equals to (N300+1) and there shall be no uplink transmission in the monitoring period specified in step 5.

8.1.2.4 RRC Connection Establishment: Reject (“wait time” is not equal to 0)

8.1.2.4.1 ——————Definition

8.1.2.4.2 Conformance requirement

1. The RRC connection establishment is initiated by the UE, which leaves the idle mode and transmits an RRC CONNECTION REQUEST message. This message shall include the IE "Initial UE identity" and is to be sent on the uplink CCCH.

2. After the UE receives an RRC CONNECTION REJECT message which includes IE "wait time" not set to 0, and neither IE "frequency info" nor IE "system info" is present, the UE shall wait for a period specified in the IE "wait time". Thereafter re-transmit an RRC CONNECTION REQUEST message to attempt to establish the RRC connection again. However, either IE "frequency info" or IE "system info" is available in the message, the UE shall attempt to perform cell reselection using these information.

Reference

3GPP TS 25.331 clause 8.1.3

8.1.2.4.3 Test purpose

To confirm that the UE retries to establish the RRC connection after the "wait time" if the UE receives an RRC CONNECTION REJECT message which includes the IE "wait time" not set to 0.

To confirm that the UE perform a cell reselection when receiving an RRC CONNECTION REJECT message, containing relevant frequency information of the target cell to be re-selected.

8.1.2.4.4 Method of test

Initial Condition

System Simulator: 2 cells – both cell 1 and cell 2 are active and suitable for camping, but cell 1 is transmitted using a larger power. Cell 1 and cell 2 are being transmitted from different 2 UARFCNs.

UE: Idle state (state 2 or state 3) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH by an outgoing call operation in cell 1. SS rejects the first request by transmitting an RRC CONNECTION REJECT message which indicates a non-zero wait time. In this message, frequency information for cell 2 is available. SS then waits for RRC CONNECTION REQUEST message on the uplink CCCH of cell 2. SS will also monitor the uplink of cell 1 simultaneously to ensure that all transmission activities from cell 1 have ceased. When the UE has successfully camp onto cell 2, it shall send an RRC CONNECTION REQUEST with the same establishment cause as its previous attempt in cell 1. SS responds with an RRC CONNECTION REJECT message, indicating a non-zero "wait time" and omitting the IE "Redirection Info". The UE shall observe the wait time period indicated. After the wait time has elapsed, the UE shall re-transmit RRC CONNECTION REEQUEST again. Finally, SS transmits an RRC CONNECTION SETUP message to establish an RRC connection with the UE, and the UE replies with an RRC CONNECTION SETUP COMPLETE message and enters CELL_DCH state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		→	RRC CONNECTION REQUEST	SS prompts the operator to make an outgoing call in cell 1.
2		←	RRC CONNECTION REJECT	This message shall includes the IE "wait time" set to 15 seconds and IE "frequency info" set to the UARFCN of cell 2.
3				SS waits for a period of time sufficient for UE to reselect to cell 2. At the same time, it ~~monitor~~monitors the uplink of cell 1 to make sure that all transmissions have ceased.
4		→	RRC CONNECTION REQUEST	UE shall attempt to re-start an RRC connection establishment procedure in cell 2. The establishment cause shall ~~remained~~remain unchanged.
5		←	RRC CONNECTION REJECT	This message shall includes the IE "wait time" set to 15 seconds, but with IE "Redirection Info" absent.
6		→	RRC CONNECTION REQUEST	SS waits until the duration specified in IE "wait time" has elapsed and then listens to the uplink CCCH for a second RRC CONNECTION REQUEST message.
7		←	RRC CONNECTION SETUP	SS sends the message to UE, to setup an RRC connection with the UE.
8				The UE shall configure the layer 2 and layer 1 in order to access the uplink and downlink DCCH assigned~~.~~.
9		→	RRC CONNECTION SETUP COMPLETE	

Specific Message Contents

RRC CONNECTION REQUEST (Step 1)

Information Element	Value/remark
Initial UE Identity	Must be equal to U-RNTI assigned ~~preeviously~~previously
Initial UE Capability	Must be compatible with UE settings in TS 25.926
Establishment Cause	Must be "Originating Call"

RRC CONNECTION REJECT (Step 2)

Information Element	Value/remark
Wait time	15 seconds
Redirection Info	
Frequency Info	
UARFCN uplink (Nu)	Set to a different UARFCN from uplink carrier of cell 1
UARFCN uplink (Nd)	Not present – assuming a duplex distance of 190MHz.

RRC CONNECTION REQUEST (Step 4 and step 6)

Same requirement as in step 1.

RRC CONNECTION REJECT (Step 5)

Information Element	Value/remark
Wait time	15 seconds
Redirection Info	Not present

8.1.2.4.5 Test requirement

After step 3 the UE shall have successfully re-selected to cell 2, using information transmitted in IE "frequency info" of RRC CONNECTION REJECT message. UE shall trigger the start of RRC connection establishment by transmitting RRC CONNECTION REQUEST. The establishment cause shall be similar to the message sent in step 1.

After step 5 the UE shall observe the period specified in IE "wait time" of an RRC CONNECTION REJECT message and not transmit an RRC CONNECTION REQUEST message in this period.

After step7 the UE shall ~~transmsit~~transmit an RRC CONNECTION SETUP COMPLETE message to SS on uplink DCCH and then establish an RRC connection.

8.1.2.5 RRC Connection Establishment: Reject ("wait time" is not equal to 0 and V300 is greater than N300)

8.1.2.5.1 ~~———————~~Definition

8.1.2.5.2 Conformance requirement

The RRC connection establishment is initiated by the UE, which leaves the idle mode and transmits an RRC CONNECTION REQUEST message~~.~~. This message shall include the IE "Initial UE identity" and is to be sent on the uplink CCCH.

2. After the UE receives an RRC CONNECTION REJECT message which includes IE "wait time" not set to 0, and neither IE "frequency info" nor IE "system info" is present, the UE shall wait for a period specified in the IE "wait time". Thereafter it re-transmits an RRC CONNECTION REQUEST message to attempt to establish the RRC connection again. In the case of a failure to establish the RRC connection after (N300+1) attempts, the UE goes back to idle mode.

Reference

3GPP TS 25.331 ~~-~~clause 8.1.3

8.1.2.5.3 Test purpose

To confirm that the UE retries to establish the RRC connection after the "wait time" if the UE receives an RRC CONNECTION REJECT message which specifies a non-zero IE "wait time".

To confirm that the UE stops retrying to establish the RRC connection if V300 is greater than N300 and goes back to idle mode.

8.1.2.5.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE: Idle state (state 2 or state 3) as specified in clause 7.4 of TS 34.108

Test Procedure

Before the test starts, SS initializes an internal counter K to 0. The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH, triggered by an outgoing data call operation. SS rejects all requests by transmitting an RRC CONNECTION REJECT message which indicates a non-zero wait time and the counter K is increased by 1 every time such a message is received. To arrive at the verdict, the SS checks that a total of (N300+1) such messages are received.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				SS initializes counter K to 0 and then prompts the operator to make an outgoing data call.
2	→		RRC CONNECTION REQUEST	Shall be sent on CCCH and contain the correct establishment cause.
3	←		RRC CONNECTION REJECT	This message includes the IE "wait time" set to 15 seconds.
4				SS increments K by 1.
5				If K is greater than N300, goes to step 6. Else SS waits for 15 sec before proceeding to step 2.
6				SS monitor the uplink CCCH for a time period enough for UE to goes back to normal service. The exact amount of time to wait shall be derived from TS related to cell selection. If any uplink transmission is detected, the test fails.

Specific Message Contents

RRC CONNECTION REQUEST (Step 2)

Information Element	Value/remark
Initial UE Identity	Must be equal to U-RNTI assigned ~~preeviously~~previously
Initial UE Capability	Must be compatible with UE settings in TR25.926
Establishment Cause	Must be "Originating CS Data Call" or "Originating PS Data Call"

RRC CONNECTION REJECT (Step 3)

Information Element	Value/remark
Wait time	15 seconds

8.1.2.5.5 Test requirement

After step 6, counter K shall be equals to (N300+1) and there shall be no uplink transmission in the monitoring period specified in step 6.

8.1.2.6 RRC Connection Establishment: Reject ("wait time" is set to 0)

8.1.2.6.1 ——————Definition

8.1.2.6.2 Conformance requirement

1. The RRC connection establishment is initiated by the UE, which leaves the idle mode and transmits an RRC CONNECTION REQUEST message on the uplink CCCH.
2. In the case of a failure to establish the RRC connection by the reception of a RRC CONNECTION REJECT message which contains IE "wait time" equals to 0, the UE shall go back to idle mode immediately.

Reference

3GPP TS 25.331 clause 8.1.3

8.1.2.6.3 Test purpose

To confirm that the UE goes back to idle mode, if the SS transmits an RRC CONNECTION REJECT message which includes IE "wait time" set to 0. To confirm that the UE ignores an RRC CONNECT REJECT message not addressed to it. To confirm that the UE is capable of handling an erroneous RRC CONNECTION REJECT message correctly.

8.1.2.6.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: Idle state (state 2 or state 3) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH by making an outgoing call. After the SS receives this message, it transmits an RRC CONNECTION REJECT message which is not addressed to the UE. The UE shall disregard this message and proceed to re-transmit RRC CONNECTION REQUES message upon T300 timer expiry. SS answers the second RRC CONNECTION REQUEST message by transmitting an RRC CONNECTION REJECT message with IE "wait time" set to 15 seconds, but without the mandatory IE "rejection cause". The UE shall continue to send the third RRC CONNECTION REQUEST message after a 15 second lapse. Next, the SS sends a legal RRC CONNECTION REJECT message which is expected to cause the UE to move to idle mode spontaneously. To confirm that finally the UE goes back to idle mode immediately after receiving the reject message, SS shall monitor the uplink CCCH for the next 60 second and verify that there is no further transmission in the uplink direction.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	→		RRC CONNECTION REQUEST	Test operator is prompted to make an out-going call,
2	←		RRC CONNECTION REJECT	IE "Initial UE identity" contains an identity different from any of the UE identities available.
3	→		RRC CONNECTION REQUEST	UE shall continue to send this message after T300 time-out.
4	←		RRC CONNECTION REJECT	IE "Reject Cause" is omitted, IE "wait time" is set to 15 seconds (maximum).
5	→		RRC CONNECTION REQUEST	UE shall continue to send this message after ~~T300 time-out, but before~~ the expiry of "wait time" IE indicated in RRC CONNECTION REJECT message in step 4.
6	←		RRC CONNECTION REJECT	IE "wait time" is set to 0.
7				The UE goes back to idle mode.~~.~~

Specific Message Contents

RRC CONNECTION REQUEST (Step 1)

Information Element	Value/remark
Initial UE Identity	Checked to see if it is set to IMSI stored in the test USIM card.
Initial UE Capability	Checked to see if it is compatible to ICS/IXIT statements.
Establishment Cause	Checked to see if set to one of the supported originating call types
Protocol Error Indicator	Checked to see if set to "FALSE"
Measured Results on RACH	Checked to see if it is absent

RRC CONNECTION REJECT (Step 2)

Information Element	Value/remark
Initial UE Identity IMSI	Set to an arbitrary octet string of length 7 bytes, which is different from the IMSI stored in USIM.
Wait time	15 seconds
Redirection Info	Not present

RRC CONNECTION REQUEST (Step 3)

Information Element	Value/remark
Initial UE Identity	Checked to see if it is set to IMSI stored in the test USIM card.
Initial UE Capability	Checked to see if it is compatible to ICS/IXIT statements.
Establishment Cause	Checked to see if set to one of the supported originating call types
Protocol Error Indicator	Checked to see if set to "TRUE"
Measured Results on RACH	Checked to see if it is absent

RRC CONNECTION REJECT (Step 4)

Information Element	Value/remark
Initial UE Identity IMSI	Set to the identical octet string as the IMSI stored in the USIM card.
Reject Cause	Not Present
Wait time	15 seconds (Maximum)
Redirection Info	Not Present

RRC CONNECTION REQUEST (Step 5)

The contents of this message must be identical to those specified for the message in step 3.

RRC CONNECTION REJECT (Step 6)

Information Element	Value/remark
Initial UE Identity	
IMSI	Set to the identical octet string as the IMSI stored in the USIM card.
Reject Cause	Congestion
Wait time	0 second
Redirection Info	Not present

Note: T300 is set to 5 seconds and N300 is arbitrarily selected from 4 to 8 in SYSTEM INFORMATION BLOCK TYPE 1 message on BCCH.

8.1.2.6.5 Test requirement

After step 2 ~~and step 4~~ the UE shall ~~continue to re-~~transmit an RRC CONNECTION REQUEST message on uplink CCCH~~, at an interval of 5 seconds (T300)~~.

After step 4 the UE shall re-transmit an RRC CONNECTION REQUEST message on the uplink CCCH 15 seconds after the transmission of the second downlink RRC CONNECTION REJECT message. In this message, the "protocol error indicator" IE shall be set to "TRUE".

After step 6 the UE shall stop sending an RRC CONNECTION REQUEST message, go back to idle mode immediately and not transmit in the uplink direction again.

8.1.2.7 RRC Connection Establishment in CELL_FACH state: Success

8.1.2.7.1 ~~———————~~Definition

8.1.2.7.2 Conformance requirement

During the RRC connection establishment, the UTRAN might assign common physical resource to the UE using an RRC CONNECTION SETUP message. When no information about the physical channels accessible ~~are~~ is available from the message, the UE shall utilize the PRACH and S-CCPCH information transmitted on the BCCH and then enter the CELL_FACH. Subsequently, the UE shall establish the required signalling links with the UTRAN using common physical resources.

Reference

3GPP TS 25.331 clause 8.1.3

8.1.2.7.3 Test Purpose

To confirm that the UE is able to enter CELL_FACH state and setup signalling links using common physical channels.

8.1.2.7.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE: Idle state (state 2 or state 3) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH by attempting to make an outgoing call. After the SS receives this message, it assigns the necessary radio resources and U-RNTI to be used by the UE, and then transmits an RRC CONNECTION SETUP message to the UE within timer T300. SS then waits for the UE to transmit an RRC CONNECTION SETUP COMPLETE message on the DCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		→	RRC CONNECTION REQUEST	Test operator is requested to make an outgoing call. The UE shall transmit this message, indicating the correct establishment cause.
2		←	RRC CONNECTION SETUP	SS omits both IE "Uplink DPCH Info" and IE "Downlink DPCH Info" from the message.
3				The UE shall configure the layer 2 and layer 1.
4		→	RRC CONNECTION SETUP COMPLETE	UE shall send this message on the DCCH, carried by the assigned PRACH resources.

Specific Message Content

RRC CONNECTION REQUEST

Information Element	Value/remark
Establishment Cause	Originating PS Data Call

RRC CONNECTION SETUP

For this message, the contents of the message to be used are basically identical to the message sub-type entitled "RRC CONNECTION SETUP message (Transition to CELL_FACH)" found in the default message content part. The following exceptions are applicable in this test:

Information Element	Value/remark
Uplink DPCH Info	Not Present
Downlink information common for all radio links	Not Present
Downlink information per radio link list	Not Present

RRC CONNECTION SETUP COMPLETE

Information Element	Value/remark
UE Radio Access Capability	Checked to see if compatible with the stated capability in PIXIT/PICS statements.

8.1.2.7.5 Test requirements

After step 3 the UE shall establish the RRC connection, and transmit RRC CONNECTION SETUP COMPLETE message on the DCCH using PRACH physical resource specified in system information block messages.

8.1.2.8 RRC Connection Establishment: Invalid system information message reception

8.1.2.8.1 Definition

8.1.2.8.2 Conformance requirement

The UE shall ignore the message and shall not select the cell, if the associated a SYSTEM INFORMATION message on the BCCH which includes the unknown value in the mandatory information element which criticality is set to "reject" in the master information block is broadcasting.

Reference

3GPP TS 25.331 clause 8.1.1 clause 16

8.1.2.8.3 Test purpose

To confirm that the UE does not select the cell if the transmitted SYSTEM INFORMATION message on the BCCH which includes the unknown value in the mandatory information element whose criticality is set to "reject" value in the master information block is broadcasting

8.1.2.8.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: Power off (state 1) as specified in clause 7.4 of TS 34.108

Test Procedure

The SS broadcasts the SYSEM INFORMATION message on the BCCH which includes the PLMN Type information element having "spare value" in the master information block. When the UE is supplied the power, it finds that the SYSTEM INFORMATION message on the BCCH includes the unknown value in the mandatory information element and the UE shall ignore this message. When an outgoing call is attempted, the test operator shall be informed that the UE is in a "No Service" state. The UE shall not transmit an RRC CONNECTION REQUEST message on the uplink CCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION	The SS broadcasts the SYSTEM INFORMATION message on the BCCH which includes an unknown value in the mandatory information element whose criticality is set to "reject" in the master information block.
2				The UE is supplied the power.
3				SS waits for 1 minute and then asks the test operator to attempt to make an outgoing call.
4				SS checks that no uplink transmission on CCCH is detected.

Specific Message Contents

SYSTEM INFORMATION(master information block)

The contents of a SYSTEM INFORMATION message in this test case is identical to the corresponding message found in the default contents of layer 3 messages for RRC tests, with the following exceptions:

Information Element	Value/remark
PLMN Type	spare value

8.1.2.8.5 Test requirement

After step 3 the UE shall not transmit an RRC CONNECTION REQUEST message on the uplink CCCH.

8.1.3 RRC Connection Release

8.1.3.1 RRC Connection Release in CELL_DCH state: Success

8.1.3.1.1 Definition

8.1.3.1.2 Conformance requirement

In case of an RRC connection release from CELL_DCH state, the UTRAN transmits an RRC CONNECTION RELEASE message to the UE using unacknowledged mode on the DCCH. The UE then responds by transmitting an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode to UTRAN for N308 times, each time at the expiry of T308 timer. Then the UE leaves the RRC connected mode and initiates release of the layer 2 signalling link. The RRC Connection Release procedure ends when all UE dedicated resources (such as radio resources and radio access bearers) associated with the RRC connection are released and the UE returns to idle mode.

Reference

3GPP TS 25.331 clause 8.1.4

8.1.3.1.3 Test purpose

To confirm that the UE releases the L2 signalling link and dedicated resources and goes back to the idle state after it receives an RRC CONNECTION RELEASE message from the SS and transmits an RRC CONNECTON RELEASE COMPLETE message to the SS for N308 times at the interval specified by the value of T308 timer.

8.1.3.1.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_DCH state (state 6-1 or state 6-3) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to the CELL_DCH state by prompting the operator to initiate an outgoing call. After the DCCH is established, SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection. SS then waits for the UE to transmit an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode. SS checks to see if P such messages has been received at each expiry of T308 timer. P is equal to the value of IE "Number of RRC Message Transmissions" in an RRC CONNECTION RELEASE message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state after a successful RRC connection establishment by virtue of the operator making an outgoing call.
2	←		RRC CONNECTION RELEASE	SS disconnect- the connection established. The value in IE "Number of RRC Message Transmissions" is arbitrarily chosen from 4 to 8 and denoted by P.
3	→		RRC CONNECTION RELEASE COMPLETE	SS waits for the arrival of N308 such message at the expiry of each T308 timer, using unacknowledged mode.
4				The UE releases L2 signalling link and dedicated resources. ~~then~~Then the UE goes to idle mode.

Specific Message Content

RRC CONNECTION RELEASE (Step 2)

Information Element	Value/remark
Number of RRC Message Transmission	Arbitrarily chosen between 4 and 8

8.1.3.1.5 Test requirement

After step 2 the UE shall start to transmit P times RRC CONNECTION RELEASE COMPLETE messages at the expiry of each T308 timer.

After step 3 the UE shall initiate the release L2 signalling link and dedicated resources, then it shall go to idle mode.

8.1.3.2 RRC Connection Release in CELL_FACH state: Success

8.1.3.2.1 ——————Definition

8.1.3.2.2 Conformance requirement

In case of RRC connection release from CELL_FACH state, the RRC layer entity in the network may issues an RRC CONNECTION RELEASE message using unacknowledged mode on the DCCH. Upon the reception of this message, the UE-RRC transmits an RRC RELEASE COMPLETE message using acknowledged mode to UTRAN on the DCCH and goes back to idle mode after it receives a response from the UTRAN-RLC. If an invalid RRC CONNECTION RELEASE is received, the UE shall perform the appropriate error-handling mechanism and report the error to the UTRAN.

Reference

3GPP TS 25.331 clause 8.1.4

8.1.3.2.3 Test purpose

To confirm that the UE releases the L2 signalling link and resources and goes back to the idle state after it receives an RRC CONNECTION RELEASE message from the SS. It shall transmit an RRC CONNECTON RELEASE COMPLETE message using acknowledged mode to the SS (e.g. the UE-RLC confirms the transmission of the RRC CONNECTION RELEASE COMPLETE message.). If the UE receives an invalid release message, it shall ignore the message and report this event to the SS.

8.1.3.2.4 Method of test

Initial Condition

System Simulator-: 1 cell

UE-: CELL_FACH state (state 6-2 or state 6-4) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to an initial state of CELL_FACH. After the successful establishment of the RRC connection, the SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the radio link. However, the message contains an error in one of the mandatory IE. As a result, the UE shall not release the RRC connection and reply with RRC STATUS message indicating the error type. Then the SS transmits a second RRC CONNECTION RELEASE message with valid content. When the UE receives this message the UE transmits an RRC CONNECTION RELEASE COMPLETE message using acknowledged mode to the SS. Finally, SS checks that the UE performs proper layer 2 release.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to the CELL_FACH state.
2	←		RRC CONNECTION RELEASE	The message contains an error in one of the conditional IE.
3	→		RRC STATUS	IE "Protocol Error Information" shall be set to "Message Extension Not Comprehended"
4	←		RRC CONNECTION RELEASE	SS sends this message using unacknowledged mode RLC operations on the uplink DCCH.
5	→		RRC CONNECTION RELEASE COMPLETE	The UE transmits this message using acknowledged mode.
6				The UE releases L2 ~~signaling~~signalling link and radio resources. ~~then~~Then the UE goes to idle mode.

Specific Message Contents

RRC CONNECTION RELEASE (Step 2)

Information Element	Value/remark
Number of RRC Message Transmissions	Arbitrarily selected from 1 to 8

RRC STATUS

Information Element	Value/remark
Protocol Error Information	Checked to see if set to "Message Extension Not Comprehended"

RRC CONNECTION RELEASE (Step 4)

Information Element	Value/remark
Number of RRC Message Transmissions	Not Present

8.1.3.2.5 Test requirement

After step 2 the UE shall maintain the RRC connection and respond to the RRC CONNECTION RELEASE message by sending RRC STATUS message. This message shall specify the cause "Message Extension Not Comprehended" in the IE "Protocol Error Information".

After step 4 the UE shall transmit an RRC CONNECTION RELEASE COMPLETE message~~s~~ using acknowledged mode then it shall receive a response for this ~~massage~~ message from the SS-RLC.

After step 5 the UE shall release its L2 signalling link and radio resources, then it shall go back to idle mode.

8.1.3.3 RRC Connection Release in CELL_FACH state: Failure

8.1.3.3.1 Definition

8.1.3.3.2 Conformance requirement

In case of RRC connection release from CELL_FACH state, the RRC layer entity in the network issues an RRC CONNECTION RELEASE message using unacknowledged mode on the DCCH. When the UE does not succeed to transmit the RRC CONNECTION RELEASE COMPLETE message using acknowledged mode, it shall release all its radio resources, enter idle mode and the procedure ends on the UE side.

Reference

3GPP TS 25.331 clause 8.1.4

8.1.3.3.3 Test purpose

To confirm that the UE releases all its radio resources and enters idle mode when the UE does not succeed in transmitting the RRC CONNECTION RELEASE COMPLETE message using acknowledged mode to the SS (i.e. the UE-RLC cannot receive acknowledgement for the transmission of the RRC CONNECTION RELEASE COMPLETE message from SS.).

8.1.3.3.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_FACH state (state 6-2 or state 6-4) as specified in clause 7.4 of TS 34.108

Test Procedure

At the start of the test, the UE is brought to CELL_FACH state. When the RRC connection has been established, the SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the radio link. When the UE receives this message the UE transmits an RRC CONNECTION RELEASE COMPLETE message using acknowledged mode to the SS. The SS ignores the message and does not transmit a STATUS PDU of RLC for this message. SS checks to see that UE continues to release all its radio resources and then enters idle mode.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought into CELL_FACH state by asking the operator to perform an outgoing call attempt. Clause
2	←		RRC CONNECTION RELEASE	SS ask to disconnect the radio link
3	→		RRC CONNECTION RELEASE COMPLETE	The UE transmits this message using acknowledged mode. The SS ignores this message and shall not transmit a STATUS PDU of RLC for this message.
4				SS checks to make sure that UE releases its all radio resources and enter idle mode.

Specific Message Contents

None

8.1.3.3.5 Test requirement

After step 3 the UE shall release its L2 signalling link and radio resources then it shall go to idle mode.

8.1.4 RRC Connection Re-Establishment

8.1.4.1 RRC Connection Re-Establishment : Success

8.1.4.1.1 Definition

8.1.4.1.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. After a successful cell re-selection and transiting to CELL_FACH state, the UE transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH to request for the re-establishment of an RRC connection. The UTRAN transmits an RRC CONNECTION RE-ESTABLISHMENT message on the downlink DCCH, which includes the new configuration information. Then the UE transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.1.3 Test purpose

To confirm that the UE tries to find a new cell by transiting to CELL_FACH state, after detecting that a radio link failure has occurred. The UE shall then attempt to establish a new RRC connection using an RRC CONNNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI". Finally when the SS allocates a new configuration to the UE using RRC CONNECTION ESTABLISHMENT message, the UE shall establish a new RRC connection link.

8.1.4.1.4 Method of test

Initial Condition

System Simulator: 2 cells? Cell 1 is active, Cell 2 is inactive?

UE: CELL_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is brought to CELL_DCH state in a cell 1 after a successful outgoing call attempt. After the call has been established, the SS stops transmitting and receiving in a cell No.1 and begins to broadcast the BCCH in cell 2, the UE should detect a radio link failure in cell 1 and attempts to re-select to cell 2. It should then enter CELL_FACH state and transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH to SS. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message which includes a new configuration information. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state in a cell 1, after making a successful outgoing call.
2	←		BCCH	The SS starts transmitting the BCCH in a cell 2 using the same contents (except for cell identity which is set to "0000 0000 0000 0010") for system information sent on cell 1. SS starts to listen to the uplink CCCH of cell 2.
3				The SS stops transmitting and receiving in a cell .1.
4	→		RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE should find a new cell 2 and then transmits this message which includes the IE "U-RNTI" assigned previously.
5	←		RRC CONNECTION RE-ESTABLISHMENT	Including the new configuration information.
6	→		RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

Cell 1: SYSTEM INFORMATION TYPE 2

Information Element	Value/remark
UE Timers and constants in connected mode	
T301	8 seconds
T313	15 seconds
T314	20 seconds
T315	30 seconds
N313	50

8.1.4.1.5 Test requirement

After step 3, the UE shall detect the presence of cell 2 and attempts to re-established the lost RRC connection by transmitting RRC CONNECTION RE-ESTABLISHMENT REQUEST in the new cell.

After step 5, the UE shall re-establish an RRC connection and observe the new configuration information specified in an RRC CONNECTION RE-ESTABLISHMENT message.

8.1.4.2 RRC Connection Re-Establishment: Success after T301 timeout (T314 and T315 are running)

8.1.4.2.1 Definition

8.1.4.2.2 Conformance requirement

1. RRC connection re-establishment is needed when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. After a cell re-selection to a new cell, the UE transits to CELL_FACH state. In this state, the UE transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH to request the re-establishment of an RRC connection.

2. In the case of a failure to re-establish the RRC connection after the expiry of timer T301, the UE retries to re-establish the RRC connection. Finally when the UTRAN allocates a new configuration to the UE using RRC CONNECTION ESTABLISHMENT message, the UE shall establish a new RRC connection link.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.2.3 Test purpose

To confirm that the UE retries to re-establish a new RRC connection after the expiry of timer T301. This occurs after the UE loses the radio connection and starts to transmit an RRC CONNECTION RE-ESTABLISHMENT REQUEST message.

8.1.4.2.4 Method of test

Initial Condition

System Simulator: 2 cells?Cell 1 is active, Cell 2 is inactive?

UE: CELL_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1, after making a successful outgoing call attempt. SS begins to broadcast the BCCH in cell 2 and then stops transmitting and receiving in cell 1. The UE shall detect a radio link failure and the presence of cell 2. It then enters CELL_FACH state and transmits to SS an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH. The SS does not transmit an RRC CONNECTION RE-ESTABLISHMENT to answer to the request. This causes T301 timer to expire and the UE re-transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message again. Then the SS transmits an RRC CONNECTION RE-ESTABLISHMENT message and the UE reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				SS prompts the operator to make an outgoing call. The UE is in the CELL_DCH state in cell 1.
2	←		BCCH	The SS starts to transmit BCCH in a cell 2, with the SYSTEM INFORMATION message similar (with the exception of cell identity IE) to that transmitted in cell 1.
3				The SS stops transmitting and receiving in cell 1.
4	→		RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE finds cell 2 and transmits this message which includes the IE "U-RNTI".
5				The SS does not transmit a response.
6	→		RRC CONNECTION RE-ESTABLISHMENT REQUEST	After the expiry of T301 the UE re-~~ransmits~~transmits this message.
7	←		RRC CONNECTION RE-ESTABLISHMENT	Including the new configuration information.
8	→		RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

None

8.1.4.2.5 Test requirement

~~?~~After step 3, the UE shall detect presence of cell 2 and starts to transmit an RRC CONNECTION RE-ESTABLISHMENT REQUEST message to setup the radio link again.

After step 5, the UE shall re-transmit an RRC CONNECTION RE-ESTABLISHMENT REQUEST message on the uplink CCCH after the expiry of timer T301.

After step 7 the UE shall re-establish an RRC connection in cell 2, using the new configuration commanded by the SS.

8.1.4.3 RRC Connection Re-Establishment: Success after reception of invalid message(V301 is not greater than N301)

8.1.4.3.1 ~~————————~~Definition

8.1.4.3.2 Conformance requirement

1. RRC connection re-establishment is needed when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. After a cell re-selection to a new cell, the UE transits to CELL_FACH state. In this state, the UE transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH to request the re-establishment of an RRC connection.

2. In the case of a reception of an invalid RRC CONNECTION RE-ESTABLISHMENT message, the UE retries to re-establish the RRC connection until up to a maximum of N301 attempts~~ after the expiry of timer T301~~.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.3.3 Test purpose

To confirm that the UE retries to re-establish a new RRC connection until its internal variable V301 is greater than N301 after the expiry of timer T301 when the UE receives an invalid RRC CONNECTION RE-ESTABLISHMENT message.

8.1.4.3.4 Method of test

Initial Condition

System Simulator: 2 cells?Cell 1 is active, Cell 2 is inactive?

UE: CELL_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

Before the test starts, a an SS internal counter K is initialized to 1. The UE is in the CELL_DCH state in cell 1, after making a successful outgoing call attempt. SS begins to broadcast the BCCH in cell 2 and then stops transmitting and receiving in cell 1. The UE shall detect a radio link failure and the presence of cell 2. It then enters CELL_FACH state and transmits to SS an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message to answer to the request which includes the "DRX Indicateor" IE set to "spare value". SS increments internal counter K. After T301 timer expires receiving this invalid message, the UE shall re-transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message again. After the reception of each RRC CONNECTION RE-ESTABLISHMENT REQUEST message on the uplink CCCH, SS checks the value of K. If K is less than (N301+1), SS re-sends the same invalid RRC CONNECTION RE-ESTABLISHMENT message again on the downlink DCCH and then increments the internal counter K. When K is equal to N301+1 then the SS transmits an valid RRC CONNECTION RE-ESTABLISHMENT message and the UE shall reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				SS sets internal counter K to 1 and prompts the operator to make an outgoing call. The UE is in the CELL_DCH state in cell 1.
2	←		BCCH	The SS starts to transmit BCCH in a cell 2, with the SYSTEM INFORMATION message similar (with the exception of cell identity IE) to that transmitted in cell 1.
3				The SS stops transmitting and receiving in ~~-~~cell 1.
4	→		RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE finds ~~-~~cell 2 and transmits this message which includes the IE ”U-RNTI”.
~~5~~				~~If K is equal to N301-1 then next step is 7.~~
~~6~~5	←		RRC CONNECTION RE-ESTABLISHMENT	The SS transmits a response which includes the “DRX i~~I~~ndicator” IE set to “spare value” ~~but~~ and increments K ~~and moves to step 4 to wait for another uplink message~~.
6	→		RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE transmits this message which includes the IE ”U-RNTI”.
7				If K is less than or equal to N301 then jump back to Step 5, otherwise proceed with step 8.
~~7~~8	←		RRC CONNECTION RE-ESTABLISHMENT	Including the new configuration information.
~~8~~9	→		RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

~~None~~

RRC CONNECTION RE-ESTABLISHMENT REQUEST (Step 4)

The content of this message shall be identical to the expected default message specified in Annex A.

RRC CONNECTION RE-ESTABLISHMENT (Step 5)

The content of this message is identical to the message sub-type titled “Speech in CS”, specified in Annex A with the following exceptions.

"DRX Indicator"	'spare value'

RRC CONNECTION RE-ESTABLISHMENT REQUEST (Step 6)

Information Element	Value/remark
"Protocol error indicator" "Protocol error information"	TRUE 'Information element value not comprehended'

RRC CONNECTION RE-ESTABLISHMENT (Step 8)

The content of this message is identical to the message sub-type titled “Speech in CS”, specified in Annex A.

8.1.4.3.5 Test requirement

After step 3, the UE shall detect presence of cell 2 and starts to transmit RRC CONNECTION RE-ESTABLISHMENT REQUEST message to setup the radio link again.

After step 45, the UE shall re-transmit an RRC CONNECTION RE-ESTABLISHMENT REQUEST message on the uplink CCCH ~~after the expiry of timer T301~~. The total number of RRC CONNECTION RE-ESTABLISHMENT messages received by SS shall be equal to N301~~-~~+1 ~~at an time interval equivalent to T301 timer value~~.

After step ~~7~~ 8 the UE shall re-establish an RRC connection in cell 2, using the new configuration commanded by the SS.

8.1.4.4 RRC Connection Re-Establishment: Failure after reception of invalid message (V301 is greater than N301)

8.1.4.4.1 ~~——————~~Definition

8.1.4.4.2 Conformance requirement

1. RRC connection re-establishment is needed when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. After cell re-selection and then transiting to CELL_FACH state, the UE RRC transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE ”U-RNTI” on the uplink CCCH to request for re-establishment of an RRC connection.
2. In the case of a reception of an invalid RRC CONNECTION RE-ESTABLISHMENT message, if the UE retries to re-establish the RRC connection until up to a maximum of N301 attempts ~~after the expiry of timer T301~~ and receives the invalid message, the UE goes back to idle mode.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.4.3 Test purpose

To confirm that the UE stops retrying to re-establish the RRC connection if its internal counter V301 is greater than N301 and then goes back to idle state.

8.1.4.4.4 Method of test

Initial Condition

System Simulator: 2 cells? Cell 1 is active, Cell 2 is inactive?

UE: CELL_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_DCH state in a cell 1. SS begins to broadcast the BCCH in cell 2, and then stops transmitting and receiving in cell 1. The UE shall detect a radio link failure and the presence of cell 2. It then enters CELL_FACH state and transmits to SS an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE ”U-RNTI” on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message to answer to the request which includes the “DRX Indicat~~e~~or” IE set to “spare value”, resulting in ~~T301 timer to expire~~a protocol error and the UE shall re-transmit~~s~~ an RRC CONNECTION RE-ESTABLISHMENT REQUEST message again. The SS keeps a count of the number of RRC CONNECTION RE-ESTABLISHMENT REQUEST messages received. The UE shall go~~es~~ back to idle mode after making exactly N301 retransmission attempts.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				SS set counter K to 1. The UE is in CELL_DCH state in a cell 1 after establishing an outgoing call.
2		←	BCCH	The SS starts to transmit BCCH in a cell 2.
3				The SS stops transmitting and receiving in a cell 1.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE finds new cell 2 and transmits this message which includes the IE "U-RNTI".
5		←	RRC CONNECTION RE-ESTABLISHMENT	The SS transmits a response which includes the "DRX ~~i~~Indicator" IE set to "spare value" and increments K ~~If K is greater than N301, then the next step is step 6 else go to step 4.~~
6		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE transmits this message which includes the IE "U-RNTI".
7				If K is less than or equal to N301 then jump back to Step 5, otherwise proceed with step 8.
8		←	RRC CONNECTION RE-ESTABLISHMENT	The SS transmits a response which includes the "DRX Indicator" IE set to "spare value"
~~6~~9				SS waits for a period equivalent to time T301 time-out value. The UE shall not transmit RRC CONNECTION RE-ESTABLISHMENT REQUEST message on the uplink CCCH during this period. The UE shall go~~es~~ back to idle mode.

Specific Message Contents

~~None~~

RRC CONNECTION RE-ESTABLISHMENT REQUEST (Step 4)

The content of this message shall be identical to the expected default message specified in Annex A.

RRC CONNECTION RE-ESTABLISHMENT (Steps 5 and 8)

DRX Indicator	spare value

RRC CONNECTION RE-ESTABLISHMENT REQUEST (Step 6)

Information Element	Value/remark
Protocol error indicator Protocol error information	TRUE Information element value not comprehended

8.1.4.4.5 Test requirement

After step 3 the UE shall find the presence of cell 2, enters CELL_FACH state, and starts to transmit RRC CONNECTION RE-ESTABLISHMENT REQUEST message to setup the radio link again.

After step 5 the UE shall transmit an RRC CONNECTION RE-ESTABLISHMENT REQUEST message on the uplink CCCH ~~after the expiry of timer T301~~ until V301 is greater than N301.

~~If~~After step 8, when V301 is greater than N301 ~~then~~ the UE shall stop sending RRC CONNECTION RE-ESTABLISHMENT REQUEST on the uplink CCCH and then go back to idle mode.

8.1.4.5 RRC Connection Re-Establishment: Failure (Release)

8.1.4.5.1 ~~———————~~Definition

8.1.4.5.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. After the completion of cell re-selection and transiting to CELL_FACH state, the UE transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH to request for re-establishment of an RRC connection. The UTRAN transmits an RRC CONNECTION RELEASE message signifying that it is not able to accept the request, so the UE shall transmit an RRC CONNECTION RELEASE COMPLETE message to the UTRAN and goes back to idle mode.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.5.3 Test purpose

To confirm that the UE transmits an RRC CONNECTION RELEASE COMPLETE message and goes back to idle mode after its request to re-establish an RRC connection was rejected by the SS in the new cell. The request to re-establish should be made with an RRC CONNNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI".

8.1.4.5.4 Method of test

Initial Condition

System Simulator: 2 cells Cell 1 is active, Cell 2 is inactive

UE: CELL_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE starts from CELL_DCH state in cell 1 after making a successful outgoing call. When the SS stops transmitting and receiving in cell 1 and begins to broadcast the BCCH in cell 2, the UE should detect radio link failure and the presence of cell 2. It then enters CELL_FACH state and transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message, which includes the IE "U-RNTI" on the uplink CCCH. The SS replies with a RRC CONNECTION RELEASE message on the downlink CCCH using transport mode operation. After the UE receives the RRC CONNECTION RELEASE message, it shall transmit an RRC CONNECTION RELEASE COMPLETE message on the uplink CCCH using RLC-TM. Finally, it goes back to idle mode.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state in cell 1 after completing a successful outgoing call setup.
2	←		BCCH	The SS transmits BCCH in cell 2
3				The SS stops transmitting and receiving in cell 1.
4	→		RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE finds new cell 2 and- transmits this message which includes the IE "U-RNTI".
5	←		RRC CONNECTION RELEASE	SS rejects the re-establishment request. Sent on downlink CCCH using RLC-TM.
6	→		RRC CONNECTION RELEASE COMPLETE	This message shall be received on the uplink CCCH using RLC-TM. The UE goes back to idle mode after sending this message.

Specific Message Contents

8.1.4.5.5 Test requirement

After step 3 the UE shall find- the new cell 2 and transmits RRC CONNECTION RE-ESTABLISHMENT REQUEST to ask for re-connection of the radio link.

After step 5 the UE shall not transmit RRC CONNECTION RE-ESTABLISHMENT REQUEST message, instead it sends RRC CONNECTION RELEASE COMPLETE message on the uplink CCCH (transparent mode) and goes back to idle mode.

8.1.4.6 RRC Connection Re-Establishment: Failure(T315=0,T314=0)

8.1.4.6.1 Definition

8.1.4.6.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. However the UE must enter to idle mode when T314 is set to 0 in RADIO BEARER SETUP message ~~-~~and also T315 is set to 0 in SYSTEM INFORMATION message.

Reference

3GPP TS 25.331 ~~-~~clause 8.1.5

8.1.4.6.3 Test purpose

To confirm that the UE enters to idle mode, after detecting that a radio link failure has occurred.

8.1.4.6.4 Method of test

Initial Condition

System Simulator~~-~~: ~~-~~1 cell

UE: idle~~CELL_DCH~~ state (state 2 or state 3) as specified in clause 7.4 of TS 34.108

Test Procedure

The MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK TYPE 2 messages on the downlink BCCH are modified with respect to the default settings. The UE is brought to CELL_DCH state, after successfully executing the mobile-originated~~terminated~~ RRC connection establishment procedure (-i.e. P3+P7 or P2+P5) as outlined in clause ~~7.1.2~~7.4 in TS 34.108.~~The MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK TYPE 2 messages on the downlink BCCH is modified with respect to the default setting.~~ Next, SS transmits RADIO BEARER SETUP message on the downlink DCCH in order to establish radio bearers for user-data on DTCH. In this message, the re-establishment timers T314 and T315 are both set to 0. The UE shall respond by sending a RADIO BEARER SETUP COMPLETE message on the uplink DCCH. After the DTCH has been established, the SS stops transmitting and receiving on the radio link except P-CCPCH, the UE should detect a radio link failure~~.~~. Then the UE shall enter to idle mode as both T314 and T315 are set to 0.The SS transmits a PAGING ~~TYPE1~~TYPE 1 message on the PCCH to confirm that the UE is in idle state~~.~~, the UE transmits an RRC CONNECTION REQUEST message on the uplink CCCH. SS replies with an RRC CONNECTION SETUP message and allocates dedicated channels to the UE. Then, the UE shall complete this test by transmitting RRC CONNECTION SETUP COMPLETE message on the uplink DCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE 2	T315=0
2				RRC connection establishment procedure (i.e. P3+P7 or P5+P9) as outlined in clause 7.4 in TS 34.108.
~~2~~3	←		RADIO BEARER SETUP	T314=0
~~3~~4	→		RADIO BEARER SETUP COMPLETE	
~~4~~5				The UE is brought to CELL_DCH state, after making a successful outgoing call.
~~5~~6				The SS stops transmitting and receiving on the radio link except the PCCPCH.
~~6~~7				The UE should enter to idle mode after it detects the radio link failure and SS confirms that the UE does not transmit any RRC CONNECTION RE-ESTABLISHMENT REQUEST messages for 20 seconds.
~~7~~8	←		PAGING ~~TYPE1~~TYPE 1	SS resumes transmission and reception on radio links suspended in step 4. SS pages the UE using a matched identity (test-SIM IMSI).
~~8~~9	→		RRC CONNECTION REQUEST	SS checks the following IEs : "Initial UE identity" – must be the same as test-SIM IMSI. "Establishment Cause – must "Terminating Call" "Protocol Indicator" – must be FALSE
~~9~~10	←		RRC CONNECTION SETUP	SS assigns DPCH resources to allow UE to establish a RRC connection.
~~10~~11	→		RRC CONNECTION SETUP COMPLETE	UE shall acknowledge the completion of RRC connection establishment procedure.

Specific Message Contents

- IMSI	Set to the same octet string as in the IMSI stored in the USIM card

8.1.4.6.5 Test requirement

After step ~~5~~6 the UE shall not transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message.

After step ~~9~~10 the UE shall have an RRC connection based on dedicated physical channel resources. SS verifies that the UE transmits RRC CONNECTION SETUP COMPLETE on the uplink DCCH.

8.1.4.7 RRC Connection Re-Establishment: Success(T314=0, T315>0 and radio link failure)

8.1.4.7.1 ~~———————~~Definition

8.1.4.7.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. But ~~-~~the UE must release the radio bearer which is associated with ~~-~~T314 if T314 is set to 0. After a successful cell re-selection ~~-~~and a subsequent transition to CELL_FACH state, the UE transmits ~~–~~an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE ~~_~~"U-RNTI" on the uplink CCCH to request for the re-establishment of an RRC connection. The UTRAN transmits an RRC CONNECTION RE-ESTABLISHMENT message on the downlink DCCH, ~~-~~which includes the new

configuration information assigned. Then the UE transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.7.3 Test purpose

To confirm that the UE indicates to the non-access stratum the release of radio access bearer which is associated with T314 and ~~try~~ tries to find a new cell by transiting to CELL_FACH state, after detecting that a radio link failure has occurred. The UE shall then attempt to establish a new RRC connection using an RRC CONNNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI". Finally when the UTRAN allocates a new configuration to the UE using RRC CONNECTION ESTABLISHMENT message, the UE shall establish a new RRC connection link.

8.1.4.7.4 Method of test

Initial Condition

System Simulator: 2 cells? Cell 1 is active, Cell 2 is inactive?

UE: CELL_DCH state (state 6-5 or state 6-7) as specified in clause 7.4 of TS 34.108 in cell 1~~, after executing a generic call set-up procedure for mobile originating CS or PS call (clauses 7.2.3.2 and 7.2.4.2 in TS 34.108). The exact procedure to apply depends on the CN domain(s) supported by the UE.~~

Test Procedure

The UE is brought to CELL_DCH state in a cell 1 after making an successful outgoing call attempt. After the call has been established, SS begins to broadcast the BCCH in cell 2, and then stops transmitting and receiving in cell 1. The UE shall detect a radio link failure in cell 1 and indicate to the non-access stratum the release of the radio bearer which is associated with T314. It shall attempt to re-select to cell 2. It should then enter CELL_FACH state and transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH to SS. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message which includes a new configuration. After the UE receives an RRC CONNNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER SETUP	T314=0
2	→		RADIO BEARER SETUP COMPLETE	
3				The UE is brought to CELL_DCH state in a cell 1, after making a successful outgoing call.
4	←		BCCH	The SS starts transmitting the BCCH in a cell 2 using the same contents (except for cell identity which is set to "0000 0000 0000 0010") for system information sent on cell 1. SS starts to listen to the uplink CCCH of cell 2.
5				The SS stops transmitting and receiving in a cell .1.
6				The UE detects the radio link failure which is associated with T314. The UE -indicates to the non-access stratum the release of the affected radio bearer-.
7	→		RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE should find a new cell 2 and then transmits this message which includes the IE "U-RNTI" assigned previously.
8	←		RRC CONNECTION RE-ESTABLISHMENT	Including the new configuration information.
9	→		RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

RADIO BEARER SETUP

~~The contents of RADIO BEARER SETUP message in this test case is identical to those in default contents of layer 3 messages for RRC tests with the following exceptions:~~ For circuit-switched only UEs that do not support speech service, use the same message sub-type titled "Non-speech in CS" in Annex A, with the following exceptions:

For circuit-switched only UEs that support speech service, use the same message sub-type titled "Speech in CS" in clause 9 of TS 34.108, with the following exceptions:

Information Element	Value/remark
RAB information to setup list - RAB information to setup - RAB info - T314	 0

8.1.4.7.5 Test requirement

After ~~step5~~step 5, the UE shall indicate to the non-access stratum the release of the radio bearer which is associated with T314. SS checks that no further data transmission from the affected radio bearer is received from the UE.

After step 6, the UE shall detect the presence of cell 2 and attempts to re-established the lost RRC connection by transmitting RRC CONNECTION RE-ESTABLISHMENT REQUEST in the new cell.

After step 8, the UE shall re-establish an RRC connection.

8.1.4.8 RRC Connection Re-Establishment: Success(T314>0, T315=0 and radio link failure)

8.1.4.8.1 Definition

8.1.4.8.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. But the UE must release the radio bearer which is associated with T315 if T315 is set to 0. After a successful cell re-selection and subsequent transition to CELL_FACH state, the UE transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH to request for the re-establishment of an RRC connection. The UTRAN transmits an RRC CONNECTION RE-ESTABLISHMENT message on the downlink DCCH, which includes the new configuration information assigned. Then the UE transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.8.3 Test purpose

To confirm that the UE shall indicate to the non-access stratum the release of radio access bearer which is associated with T315 and try to find a new cell by transiting to CELL_FACH state, after detecting that a radio link failure has occurred. The UE shall then attempt to establish a new RRC connection using an RRC CONNNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI". Finally when the SS allocates a new configuration to the UE using RRC CONNECTION ESTABLISHMENT message, the UE shall establish a new RRC connection link.

8.1.4.8.4 Method of test

Initial Condition

System Simulator: 2 cells? Cell 1 is active, Cell 2 is inactive?

UE: CELL_DCH state (state 6-5 or state 6-7) as specified in clause 7.4 of TS 34.108 in cell 1~~, after executing a generic call set-up procedure for mobile originating CS or PS call (clauses 7.2.3.2 and 7.2.4.2 in TS 34.108). 8.1.4.8.5 Test requirement

After step 5, the UE shall indicate to the non-access stratum the release of the radio bearer which is associated with T314.

After step 6, the UE shall detect the presence of cell 2 and attempts to re-established the lost RRC connection by transmitting RRC CONNECTION RE-ESTABLISHMENT REQUEST to the new cell.

After step 8, the UE shall re-establish an RRC connection.

8.1.4.9 RRC Connection Re-Establishment: Failure (T314 is timeout and T315=0)

8.1.4.9.1 Definition

8.1.4.9.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. When the UE could not find a new cell before timer T314 expires, the UE shall enter idle mode.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.9.3 Test purpose

To confirm that the UE enters idle mode, after T314 timeout following a radio link failure.

8.1.4.9.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_DCH state (state 6-5 or state 6-7) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to CELL_DCH state after a successful RRC connection establishment. After the DTCH has been established using radio bearer establishment procedure, the SS stops transmitting and receiving the DPCCH and DPDCH on the radio link. The UE shall detect a radio link failure. Before T314 is timeout, the UE shall continue to search for a new cell. During this period, SS transmits a PAGING TYPE 1 message on the PCCH to confirm that the UE has not entered the idle state. This is confirmed when no response from UE is received before T314 timeout. After T314 timeout, the UE shall enter idle mode. The SS transmits a PAGING TYPE 1 message on the PCCH again to confirm that the UE is in idle state. The UE shall respond by transmitting an RRC CONNECTION REQUEST message on the uplink CCCH.

RRC CONNECTION SETUP (Step 9)

Use the default message found in clause 9 of TS 34.108.

8.1.4.10.5 Test requirement

After step 5 the UE shall not transmits an RRC CONNECTION REQUEST message.

After step 9 the UE shall have an RRC connection based on dedicated physical channel resources.

8.1.4.11 RRC Connection Re-Establishment: Success(~~Unrecoverble~~Unrecoverable error in RLC)

8.1.4.11.1 ~~———————~~Definition

8.1.4.11.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. detection of RLC ~~unrecoverble~~unrecoverable error (~~-~~amount of the retransmission of RESET_PDU reaches the value of Max_DAT and receives no ACK~~-~~) in CELL_DCH state. After a successful cell re-selection and transition to CELL_FACH state, the UE transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE_"U-RNTI" on the uplink CCCH to request for the re-establishment of an RRC connection. The UTRAN transmits an RRC CONNECTION RE-ESTABLISHMENT message on the downlink DCCH, which includes the new configuration information assigned. Then the UE transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.11.3 Test purpose

To confirm that the UE tries to find a new cell by transiting to CELL_FACH state, after detecting that a RLC ~~unrecoverble~~unrecoverable error has occurred. The UE shall then attempt to establish a new RRC connection using an RRC CONNNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI". Finally when the SS allocates a new configuration to the UE using RRC CONNECTION ESTABLISHMENT message, the UE shall establish a new RRC connection link.

8.1.4.11.4 Method of test

Initial Condition

System Simulator: 2 cells? Cell 1 is active, Cell 2 is inactive?

UE: CELL_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is brought to CELL_DCH state in a cell 1 after a successful outgoing call attempt. After the call has been established, the SS transmits a PAGING TYPE 2 message on the downlink DCCH. Then the UE transmits an UPLINK DIRECT TRANSFER message on the uplink using AM-RLC for the response and the SS does not transmit a STATUS PDU for the response to AM-RLC PDU. ~~and~~ SS begins to broadcast the BCCH in cell 2. The UE should detect an ~~unrecoverble~~unrecoverable error in cell 1 and attempts to re-select to cell 2. It should then enter CELL_FACH state and transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH to SS. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message which includes "TRUE" in RLC reset indicator(for C-plane) IE and a new TFCS setting according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the RLC and the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state in a cell 1, after making a successful outgoing call.
2	←		PAGING TYPE_2	The SS transmits a PAGING TYPE 2 message to the UE on the downlink DCCH in cell 1.
3	→		UPLINK DIRECT TRANSFER	The UE responds to the PAGING TYPE 2 message using AM-RLC but the SS does not transmit a STATUS PDU as an acknowledgement.
4	←		BCCH	The SS starts transmitting the BCCH in a cell 2 using the same contents (except for cell identity which is set to "0000 0000 0000 0010") for system information sent on cell 1. SS starts to listen to the uplink CCCH of cell 2.
5				The UE detects an unrecoverable error in the RLC level.
6	→		RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE should find a new cell 2 and then transmits this message which includes the IE "U-RNTI" assigned previously.
7	←		RRC CONNECTION RE-ESTABLISHMENT	Including the new configuration information.
8	→		RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

Cell 1: SYSTEM INFORMATION TYPE 2

Information Element	Value/remark
UE Timers and constants in connected mode	
T301	8 seconds
T313	15 seconds
T314	30 seconds
T315	30 seconds
N313	16

8.1.4.11.5 Test requirement

After step 5, the UE shall detect the presence of cell 2 and attempt to re-established the RRC connection by transmitting RRC CONNECTION RE-ESTABLISHMENT REQUEST in the new cell.

After step 7, the UE shall re-establish an RRC connection.

8.1.5 UE capability

8.1.5.1 UE Capability in CELL_DCH state: Success

8.1.5.1.1 Definition

8.1.5.1.2 Conformance requirement

1. The UE CAPABILITY ENQUIRY message is sent by the UTRAN to request the UE to transmit its capability information related to any radio access network that is supported by the UE or if the UTRAN needs an update of the UE's UMTS capability information or of its inter-system classmark.

When the UE receives a UE CAPABILITY ENQUIRY message, the UE transmits a UE CAPABILITY INFORMATION message on the uplink DCCH. Then the UTRAN transmits a UE CAPABILITY INFORMATION CONFIRM message.

If during the execution of UE capability update procedure, an invalid UE CAPABILITY INFORMATION CONFIRM is received, the UE shall respond with RRC STATUS message and decide whether to re-transmit UE CAPABILITY INFORMATION message by comparing its internal counter against N304.

Reference

3GPP TS 25.331 clause 8.1.6, 8.1.7

8.1.5.1.3 Test purpose

To confirm that the UE transmits a UE CAPABILITY INFORMATION message after it receives a UE CAPABILITY ENQUIRY message from the SS. To confirm that the UE indicate an invalid message reception when ~~errorneous~~erroneous downlink UE CAPABILITY ENQUIRY and UE CAPABILITY INFORMATION CONFIRM messages are received. The UE shall transmit RRC STATUS message with the correct error cause value to SS.

8.1.5.1.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_DCH state (state 6-1 or state 6-3) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to the CELL_DCH state after a successful outgoing call attempt. The SS transmits an erroneous UE CAPABILITY ENQUIRY message containing spare value in the IE "Capability update requirement". After receiving such a message, the UE should report the error using RRC STATUS message with the appropriate error cause specified. Then SS transmits a UE CAPABILITY ENQUIRY message which includes the IE "Capability update requirement", the UE receives this message and transmits a UE CAPABILITY INFORMATION message on the uplink DCCH which includes the "Inter-system message" IE. The SS transmits a UE CAPABILITY INFORMATION CONFIRM message to the UE to complete the test. Then SS initiates another UE capability update procedure by transmitting the same UE CAPABILITY ENQUIRY using as in step 4. The UE shall reply with a UE CAPABILITY INFORMATION message on the uplink DCCH. When SS receives this message, it transmit an erroneous UE CAPABILITY INFORMATION CONFIRM message. The content of this message is a ~~concatentation~~concatenation of the message type IE and an arbitrary 32-bits string. The UE shall detect a protocol error and send RRC STATUS message to report this event. After receiving RLC acknowledgement for this message, the UE shall re-transmit UE CAPABILITY INFORMATION message on the uplink DCCH. SS completes this test by an error-free UE CAPABILITY INFORMATION CONFIRM message similar to the message sent in step 6.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state after an outgoing call has been established successfully.
2	←		UE CAPABILITY ENQUIRY	See specific message contents for this message
3	→		RRC STATUS	The IE "Protocol error cause" found in IE "Protocol error information" should be set to "Information element value not comprehended"
4	←		UE CAPABILITY ENQUIRY	Use default message.
5	→		UE CAPABILITY INFORMATION	The message shall include the IE "Inter-system message", which carries the GSM classmark information requested.
6	←		UE CAPABILITY INFORMATION CONFIRM	Use default message.
7	←		UE CAPABILITY ENQUIRY	Same as in step 4.
8	→		UE CAPABILITY INFORMATION	Shall be the same message content as in step 5.
9	←		UE CAPABILITY INFORMATION CONFIRM	This message contains an arbitrary 32-bits patterns, following the IE "Message Type"
10	→		RRC STATUS	UE shall detect an error and then transmit this message.
11	→		UE CAPABILITY INFORMATION	UE shall re-transmit this message after receiving acknowledgement from the SS for RRC STATUS message.
12	←		UE CAPABILITY INFORMATION CONFIRM	SS sends an error-free message to acknowledge the receipt of the uplink message.

Specific Message Contents

UE CAPABILITY ENQUIRY (Step 2~~ and 7~~)

Information Element	Value/remark
Capability update requirement - UE radio access capability update requirement - System specific capability update requirement list - System specific capability update requirement	 TRUE Contains a spare value in this IE

RRC STATUS (Step 3)

Information Element	Value/remark
Protocol Error Information - Protocol Error Cause	 Checked to see if set to "Information element not comprehended"

UE CAPABILITY INFORMATION CONFIRM (Step 9)

Information Element	Value/remark
Unknown bit pattern	An arbitrary 32 bits

RRC STATUS (Step ~~3~~10)

Information Element	Value/remark
Protocol Error Information - Protocol Error Cause	Checked to see if set to “ASN.1 violation or encoding” or “conditional information element error”

8.1.5.1.5 Test requirement

After step 2, the UE shall transmit a RRC STATUS message on the uplink DCCH, reporting the error with protocol error cause set to “Information element value not comprehended”.

After step 4 the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH to respond to the UE CAPABILITY ENQUIRY message.

After step 9, the UE shall transmit a RRC STATUS message on the uplink DCCH. The protocol error cause shall be set to “ASN.1 violation or encoding” or “conditional information element error”.

After step 10, the UE shall re-transmit the UE CAPABILITY INFORMATION message with a similar content as in step 8.

8.1.5.2 UE Capability in CELL_DCH state: Success after T304 timeout

8.1.5.2.1 Definition

8.1.5.2.2 Conformance requirement

1. The UE CAPABILITY ENQUIRY message is sent by the UTRAN to request the UE to transmit its capability information related to any radio access network that is supported by the UE, if the UTRAN needs an update of the UE’s UMTS capability information or of its inter-system classmark.
2. After the UE receives a UE CAPABILITY ENQUIRY message, it transmits a UE CAPABILITY INFORMATION message on the uplink DCCH. If it fails to receive a UE CAPABILITY INFORMATION CONFIRM message, the UE re-transmits another UE CAPABILITY INFORMATION message until V304 is greater than N304.

Reference

3GPP TS 25.331 clause 8.1.6, 7

8.1.5.2.3 Test purpose

To confirm that the UE re-transmits a UE CAPABILITY INFORMATION message until V304 is greater than N304, after the expiry of timer T304 when the UE cannot receive a UE CAPABILITY INFORMATION CONFIRM message in response to a UE CAPABILITY INFORMATION message.

8.1.5.2.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_DCH state (state 6-1 or state 6-3) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to CELL_DCH state. When the SS transmits a UE CACAPABILITY ENQUIRY message which includes the “Capability update requirement” IE, the UE shall reply with a UE CAPABILITY INFORMATION message on the uplink DCCH which includes the “Inter-system message” IE. The SS does not transmits a UE CAPABILITY INFORMATION CONFIRM message to the UE, resulting in the T304 timer to expire. SS shall observe that the UE attempts to transmit a UE CAPABILITY INFORMATION message again. The UE shall re-transmit N304 times, and SS transmits a UE CAPABILITY INFORMATION CONFIRM message to answer the last request and completes this test procedure.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state. SS sets internal counter K =1
2	←		UE CAPABILITY ENQUIRY	Including the "Capability update requirement" IE.
3	→		UE CAPABILITY INFORMATION	Including the "Inter-system message" IE, which indicated the radio access network supported by the UE.
4				If K is greater to N304, then proceed to step 6.
5				The SS does not transmit a response and wait for T304 timer to expire. K=K+1 and goes to step 3.
6	←		UE CAPABILITY INFORMATION CONFIRM	Use default message contents

Specific Message Contents

None

8.1.5.2.5 Test requirement

After step 3 the UE shall re-transmits a UE CAPABILITY INFORMATION message on the uplink DCCH, after each expiry of timer T304. The UE CAPABILITY INFORMATION message shall contain IE "UE radio access capability" indicating the settings found in PIC/PIXIT statements. IE "UE system specific capability" shall carry relevant GSM classmark information. After (N304+1) re-transmissions, the UE shall receive a UE CAPABILITY INFORMATION CONFIRM message.

8.1.5.3 UE Capability in CELL_DCH state: Failure (After N304 re-transmissions)

8.1.5.3.1 Definition

8.1.5.3.2 Conformance requirement

1. The UE CAPABILITY ENQUIRY message is sent by the UTRAN to request the UE to transmit its capability information related to any radio access network that is supported by the UE if the UTRAN needs an update of the UE's UMTS capability information or of its inter-system classmark.

2. In the case of a failure to transmit a UE CAPABILITY INFORMATION in excess of N304 times, the UE initiates the RRC connection re-establishment procedure.

Reference

3GPP TS 25.331 clause 8.1.6, 8.1.7

8.1.5.3.3 Test purpose

To confirm that the UE stops retrying to transmit a UE CAPABILITY INFORMATION message if V304 is greater than N304. It then initiates the RRC re-establishment procedure.

8.1.5.3.4 Method of test

Initial Condition

System Simulator-: 1 cell

UE: CELL_DCH state (state 6-1 or state 6-3) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to CELL_DCH state. When the SS transmits a UE CAPABILITY ENQUIRY message which includes the "Capability update requirement" IE, the UE receives this message and transmits a UE CAPABILITY INFORMATION message on the uplink DCCH which includes the "Inter-system message" IE. The SS does not respond with a UE CAPABILITY INFORMATION CONFIRM message but keeps a count on the number of messages received When the T304 timer expires, the UE shall transmit a UE CAPABILITY INFORMATION message again. After sending (N304+1) messages, the UE shall stop sending UE CAPABILITY INFORMATION messages and initiates the RRC connection re-establishment procedure. This is verified in SS by the reception of RRC CONNECTION RE-ESTABLISHMENT REQUEST. SS allows UE to return to "connected state" by issuing RRC CONNECTION RE-ESTABLISHMENT message on the downlink CCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE starts from CELL_DCH state. SS sets counter K to 1
2	←		UE CAPABILITY ENQUIRY	Including the "Capability update requirement" IE.
3	→		UE CAPABILITY INFORMATION	Including the "Inter-system message" IE.
4				The SS does not transmit a response and allows T304 timer to expire. SS increments counter K If K is greater than N304, proceeds to step 5 else returns to 3.
5	→		RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE assumes that radio link failure has occurred and transmits this message which includes the IE "U-RNTI" containing the U-RNTI allocated to the UE earlier.
6	←		RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
7	→		RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

None

8.1.5.3.5 Test requirement

After step 3 the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH. The UE shall re-transmit this message for N304 times. Thereafter, the UE shall initiate the RRC re-establishment procedure by sending the message RRC CONNECTION RE-ESTALISHMENT REQUEST.

After step_7 the UE shall have a new RRC connection, using the new transport format dictated in the RRC CONNECTION RE-ESTABLISHMENT message.

8.1.5.4 UE Capability in CELL_FACH state: Success

8.1.5.4.1 Definition

8.1.5.4.2 Conformance requirement

1. The UE CAPABILITY ENQUIRY message is sent by the UTRAN to request the UE to transmit its capability information related to any radio access network(s) supported by the UE. UTRAN initiates this procedure when it needs an update of the UE's UMTS capability information or of its inter-system classmark.

2. When the UE receives a UE CAPABILITY ENQUIRY message, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH.

3. If during the execution of UE capability update procedure, an invalid UE CAPABILITY INFORMATION CONFIRM is received, the UE shall respond with RRC STATUS message and decide whether to re-transmit UE CAPABILITY INFORMATION message by comparing its internal counter against N304.

Reference

3GPP TS 25.331 clause 8.1.6, 8.1.7

8.1.5.4.3 Test purpose

To confirm that the UE transmits an UE CAPABILITY INFORMATION message after it receives a UE CAPABILITY ENQUIRY message from the SS. To confirm that the UE indicates an invalid message reception when erroneous downlink UE CAPABILITY ENQUIRY and UE CAPABILITY INFORMATION CONFIRM messages are received. The UE shall transmit RRC STATUS message with the correct error cause value to SS.

8.1.5.4.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_FACH state (state 6-2 or state 6-4) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to the CELL_FACH state after a successful outgoing call attempt. The SS transmits an erroneous UE CAPABILITY ENQUIRY message containing spare value in the IE "Capability update requirement". After receiving such a message, the UE shall report an error using RRC STATUS message with the appropriate error cause specified. Then SS transmits a UE CAPABILITY ENQUIRY message which includes the IE "-Capability update requirement", the UE receives this message and transmits a UE CAPABILITY INFORMATION message on the uplink DCCH, which includes the IE "Inter-system message". The SS transmits a UE CAPABILITY INFORMATION CONFIRM message to the UE to complete the UE capability enquiry procedure. Then SS initiates another UE capability enquiry procedure by transmitting the same UE CAPABILITY ENQUIRY message as in step 4. The UE shall reply with a UE CAPABILITY INFORMATION message on the uplink DCCH. When SS receives this message, it transmits an erroneous UE CAPABILITY INFORMATION CONFIRM message. The content of this message is a concatenation of the message type IE and an arbitrary 32-bits string. The UE shall detect a protocol error and send RRC STATUS message to report this event. After receiving the RLC layer acknowledgement PDU for this message, the UE shall re-transmit UE CAPABILITY INFORMATION message on the uplink DCCH. SS completes this test by sending an error-free UE CAPABILITY INFORMATION CONFIRM message similar to the message sent in step 6.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_FACH state after an outgoing call has been established successfully.
2	←		UE CAPABILITY ENQUIRY	See specific message contents for this message
3	→		RRC STATUS	The IE "Protocol error cause" found in IE "Protocol error information" should be set to "Information element value not comprehended"
4	←		UE CAPABILITY ENQUIRY	Use default message.
5	→		UE CAPABILITY INFORMATION	The message shall include the IE "Inter-system message", which carries the GSM classmark information requested.
6	←		UE CAPABILITY INFORMATION CONFIRM	Use default message.
7	←		UE CAPABILITY ENQUIRY	Same as in step 4.
8	→		UE CAPABILITY INFORMATION	The message content shall be the same as in step 5.
9	←		UE CAPABILITY INFORMATION CONFIRM	This message contains an arbitrary 32-bits patterns, following the IE "Message Type"
10	→		RRC STATUS	UE shall detect an error and then transmit this message on uplink DCCH.
11	→		UE CAPABILITY INFORMATION	UE shall re-transmit this message after receiving the RLC acknowledge-ment PDU for RRC STATUS message from SS.
12	←		UE CAPABILITY INFORMATION CONFIRM	SS sends an error-free message to acknowledge the receipt of the uplink message.

Specific Message Contents

UE CAPABILITY ENQUIRY (Step 2 and 7)

Information Element	Value/remark
Capability update requirement - UE radio access capability update requirement - System specific capability update requirement list - System specific capability update requirement	 TRUE Contains a spare value in this IE

RRC STATUS (Step 3)

Information Element	Value/remark
Protocol Error Information - Protocol Error Cause	 Checked to see if set to "Information element not comprehended"

Information Element	Value/remark
Protocol Error Information - Protocol Error Cause	Checked to see if set to "ASN.1 violation or encoding" or "conditional information element error"

8.1.5.4.5 Test requirement

After step 2, the UE shall transmit a RRC STATUS message on the uplink DCCH, reporting the error with protocol error cause set to "Information element value not comprehended".

After step 4 the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH to respond to the downlink UE CAPABILITY ENQUIRY message.

After step 9, the UE shall transmit a RRC STATUS message on the uplink DCCH. The protocol error cause shall be set to "ASN.1 violation or encoding" or "conditional information element error".

After step 10, the UE shall re-transmit the UE CAPABILITY INFORMATION message with a similar content as in step 8.

8.1.5.5 UE Capability in CELL_FACH state: Success after T304 timeout

8.1.5.5.1 Definition

8.1.5.5.2 Conformance requirement

1. The UE CAPABILITY ENQUIRY message is sent by the UTRAN to request the UE to transmit its capability information related to any radio access network(s) supported by the UE. UTRAN initiates this action when it needs an update of the UE's UMTS capability information or of its inter-system classmark.
2. After the UE receives a UE CAPABILITY ENQUIRY message, it transmits a UE CAPABILITY INFORMATION message on the uplink DCCH. If it fails to receive a UE CAPABILITY INFORMATION CONFIRM message, the UE re-transmits another UE CAPABILITY INFORMATION message until its internal counter V304 is greater than N304.

Reference

3GPP TS 25.331 clause 8.1.6, 7

8.1.5.5.3 Test purpose

To confirm that the UE re-transmits a UE CAPABILITY INFORMATION message until V304 is greater than N304, after the expiry of timer T304 when it fail to receive a downlink UE CAPABILITY INFORMATION CONFIRM message in response to the uplink UE CAPABILITY INFORMATION message sent.

8.1.5.5.4 Method of test

Initial Condition

System Simulator-:- 1 cell

UE: CELL_FACH state (state 6-2 or state 6-4) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to CELL_FACH state. When the SS transmits a UE CAPABILITY ENQUIRY message which includes the IE "Capability update requirement", the UE shall reply with a UE CAPABILITY INFORMATION message on the uplink DCCH that contains the IE "Inter-system message". The SS waits and does not transmit a UE CAPABILITY INFORMATION CONFIRM message to the UE, resulting in the T304 timer to expire. SS shall observe that the UE attempts to transmit a UE CAPABILITY INFORMATION message again. The UE shall re-transmit N304 times, and SS transmits a UE CAPABILITY INFORMATION CONFIRM message to answer the last request and completes this test procedure.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_FACH state. SS sets internal counter K =1
2	←		UE CAPABILITY ENQUIRY	Including the IE "Capability update requirement".
3	→		UE CAPABILITY INFORMATION	Including the IE "Inter-system capability", which indicated the radio access network supported by the UE.
4				If K is greater to N304, then proceeds to step 6. Else, continue with step 5.
5				The SS does not transmit a response and wait for T304 timer to expire. K=K+1 and goes to step 3.
6	←		UE CAPABILITY INFORMATION CONFIRM	Use default message contents

Specific Message Contents

None

8.1.5.5.5 Test requirement

After step 3 the UE shall re-transmit a UE CAPABILITY INFORMATION message on the uplink DCCH, after each expiry of timer T304. The UE CAPABILITY INFORMATION message shall contain IE "UE radio access capability" with the value matching those stated in the ICS/IXIT statements. In the same message, IE "UE system specific capability" shall be present and it carries relevant GSM classmark information. After (N304+1) re-transmissions, the UE shall receive a UE CAPABILITY INFORMATION CONFIRM message.

8.1.6 Direct Transfer

8.1.6.1 Direct Transfer in CELL DCH state(invalid message reception)

8.1.6.1.1 ——————Definition

8.1.6.1.2 Conformance requirement

The UE shall transmit an RRC STATUS message stating the reason "protocol error" in IE "-failure cause" and also set value "Information element value not comprehended" in IE "-Protocol error cause-" when the UE receives a DOWNLINK DIRECT TRANFER message, which includes a spare value for the mandatory IE "-CN domain identity" having criticality defined as "Reject".

Reference

3GPP TS 25.331 -clause 8.1.9

8.1.6.1.3 Test purpose

To confirm that the UE transmits an RRC STATUS message on the DCCH using AM RLC if it receives a DOWNLINK DIRECT TRANSFER message specifying a spare value in the mandatory IE "-CN domain identity"

8.1.6.1.4 Method of test

Initial Condition

System Simulator-: 1 cell

UE-: CELL_DCH (state 6-1 or state 6-3) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a DOWNLINK DIRECT TRANSFER message to the UE and includes the spare value in the mandatory IE "CN domain identity". The UE shall transmit an RRC STATUS message on the DCCH using AM RLC, setting the value "protocol error" in IE "failure cause". The error type "Information element value not comprehended" shall also be indicated in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	DOWNLINK DIRECT TRANSFER	
2		→	RRC STATUS	

Specific Message Contents

DOWNLINK DIRECT TRANSFER

The contents of DOWNLINK DIRECT TRANSFER message in this test case is identical to those in default contents of layer 3 messages for RRC tests with the following exceptions:.

Information Element	Value/remark
CN domain identity	Spare value

RRC STATUS

Information Element	Value/remark
Message Type	
Protocol error information	Information element value not comprehended
Other information element	Not checked

8.1.6.1.5 Test requirement

After step 1 the UE shall transmit a-n RRC STATUS message on the DCCH using AM RLC setting "protocol error" in IE "failure cause" and setting "Information element value not comprehended" in IE "Protocol error cause".

8.1.6.2 Direct Transfer in CELL FACH state(invalid message reception)

8.1.6.2.1 ——————Definition

8.1.6.2.2 Conformance requirement

The UE shall transmit an RRC STATUS message stating the reason "protocol error" in IE "failure cause" and also set value "Information element value not comprehended" in IE "Protocol error cause-" when the UE receives a DOWNLINK DIRECT TRANFER message, which includes a spare value for the mandatory IE "CN domain identity" having criticality defined as "Reject".

Reference

3GPP TS 25.331 clause 8.1.9

8.1.6.2.3 Test purpose

To confirm that the UE transmits an RRC STATUS message on the DCCH using AM RLC if it receives a DOWNLINK DIRECT TRANSFER message specifying a spare value in the mandatory IE "CN domain identity"

8.1.6.2.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_FACH(state 6-2 or state 6-4) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a DOWNLINK DIRECT TRANSFER message to the UE and includes the spare value in the mandatory IE "CN domain identity". The UE shall transmit an RRC STATUS message on the DCCH using AM RLC, setting the value "protocol error" in IE "failure cause". The error type "Information element value not comprehended" shall also be indicated in IE "Protocol error cause".

	UE	SS		
1		←	DOWNLINK DIRECT TRANSFER	
2		→	RRC STATUS	

Specific Message Contents

DOWNLINK DIRECT TRANSFER

The contents of DOWNLINK DIRECT TRANSFER message in this test case is identical to those in default contents of layer 3 messages for RRC tests with the following exceptions:.

Information Element	Value/remark
CN domain identity	Spare value

RRC STATUS

Information Element	Value/remark
Message Type	
Protocol error information	Information element value not comprehended
Other information element	Not checked

8.1.6.2.5 Test requirement

After step 1 the UE shall transmit a n RRC STATUS message on the DCCH using AM RLC setting "protocol error" in IE "failure cause" and setting "Information element value not comprehended" in IE "Protocol error cause".

8.1.7 Security mode control

8.1.7.1 Security mode control in CELL_DCH state

8.1.7.1.1 Definition

8.1.7.1.2 Conformance requirement

1. This procedure is used to trigger the start of ciphering or to command a change of the cipher key, both for the signalling link and for a user plane connection.

2. The SRNC transmits a SECURITY MODE COMMAND message to the UE, which indicates the downlink activation time. The UE shall apply the old ciphering configuration before the stated downlink activation time. It shall start to decipher using the new ciphering configuration at the downlink activation time.

3. After the UE transmit the SECURITY MODE COMPLETE message, it starts to cipher transmission in the uplink using the new configuration at the uplink activation time. It shall transmit a SECURITY MODE COMPLETE message, which includes uplink activation time, and configure the downlink reception using new ciphering configuration at the beginning of downlink activation time.

Reference

3GPP TS 25.331 clause 8.1.12

8.1.7.1.3 Test purpose

To confirm that the UE correctly communicates to the UTRAN and activates the new ciphering configurations after the stated activation time. To confirm that after the UE receives a SECURITY MODE COMMAND message, it transmits a SECURITY MODE COMPLETE message to the UTRAN using the old ciphering configuration.

8.1.7.1.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_DCH(state 6-1 or state 6-3) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the RRC connected state CELL_DCH. The SS transmits a SECURITY MODE COMMAND message in which ciphering is requested to be activated, but the IE "Ciphering algorithm" is set to an unknown value. The UE shall not trigger any ciphering algorithm and it shall respond by sending SECURITY MODE FAILURE message on the DCCH. Next, SS transmits a valid SECURITY MODE COMMAND message which includes the downlink activation time for RB 3 and RB 4. Then the UE shall start to configure ciphering in downlink and transmits a SECURITY MODE COMPLETE message which contains the uplink activation time for RB 3 and RB 4. The UE shall be able to communicate with the SS in the downlink direction after the downlink activation time has passed. Moreover, it shall apply the ciphering algorithm in the uplink direction.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				RRC connected state on DCCH
2		←	SECURITY MODE COMMAND	IE ”Ciphering Algorithm” is set to an invalid value
3		→	SECURITY MODE FAILURE	IE “Failure Cause” should be set to “Protocol Error” and IE “Protocol Error Information” should be set to “Information element value not comprehended”.
4		←	SECURITY MODE COMMAND	See specific message contents.
5		→	SECURITY MODE COMPLETE	SS verifies that this message is sent unciphered.
6				In uplink direction, SS checks that all data from RB 3 and RB 4 are ciphered. In the downlink direction, SS verifies that data are ciphered only after the RLC sequence numbers indicated in step 4 have elapsed.

Specific Message Contents

SECURITY MODE COMMAND (Step 2)

Information Element	Value/remark
Ciphering mode info	
Ciphering mode command	Start
Security capability	1 of the 15 spare values
Activation time for DPCH	Not Present
Activation Time	
Radio bearer downlink ciphering activation time info	
Radio bearer activation time	2 RBs
RB identity$_1$	3
RLC sequence number$_1$	Current RLC SN + 2
RB identity$_2$	4
RLC sequence number$_2$	Current RLC SN + 2

SECURITY MODE COMMAND (Step 4)

Information Element	Value/remark
Ciphering mode command	Start
Security capability	
Ciphering algorithm capability	0000000000000001B(UEA1)
Integrity protection algorithm capability	0000000000000001B(UEA1)
Activation time for DPCH	Not present
Activation time	
Radio bearer downlink ciphering activation time info	
Radio bearer activation time	2 RBs
RB identity$_1$	3
RLC sequence number$_1$	Current RLC SN+2
RB identity$_2$	4
RLC sequence number$_2$	Current RLC SN+2

8.1.7.1.5 Test requirement

After step 2 the UE shall transmit a SECURITY MODE FAILURE message to report protocol error detected in the earlier SECURITY MODE COMMAND message. The UE shall be able to communicate normally with the SS, with all control data unciphered.

After step 4 the UE shall RLC-acknowledge the receipt of the SECRUITY MODE COMMAND message using unciphered mode. SS checks that the SECURITY MODE COMPLETE message is received unciphered.

After step 5 SS verifies that downlink control data from RB 3 and RB 4 are ciphered using UEA1 algorithm, after the RLC sequence numbers as a downlink activation time stated in step 4 have elapsed. In the uplink direction, the UE shall start to cipher on the uplink after the RLC sequence number as an uplink activation time stated in step 5 has elapsed.

8.1.7.2 Security mode control in CELL_FACH state

8.1.7.2.1 ————Definition

8.1.7.2.2 Conformance requirement

1. This procedure is used to trigger the stop or start of ciphering, or to command the restart of ciphering with the new ciphering configuration. It is also used to start integrity protection or modify integrity protection configuration, both for signalling link(s) and any radio access bearer(s).

2. When the UE receives a SECURITY MODE COMMAND message from the UTRAN, which indicates the downlink activation time and new integrity protection configuration, the UE shall apply the old ciphering configuration before the stated downlink activation time. It shall start to decipher using the new ciphering configuration at the downlink activation time.

3. The UE shall transmit SECURITY MODE COMPLETE message using the new integrity protection configuration stated in the received SECURITY MODE COMMAND message. The SECURITY MODE COMPLETE message shall include the ciphering uplink activation time. The UE shall start to apply the new ciphering configuration on the uplink direction, after the uplink activation time has elapsed.

Reference

3GPP TS 25.331 clause 8.1.12

8.1.7.2.3 Test purpose

To confirm that after the UE receives a SECURITY MODE COMMAND message, it transmits a SECURITY MODE COMPLETE message to the UTRAN using the old ciphering configuration together with the application of the new integrity protection configuration. To confirm that the UE applies the old ciphering configuration in the downlink prior to the activation time; and uses the new ciphering configuration on and after the activation time. To confirm that the UE starts to cipher its uplink transmissions after the uplink activation time stated in SECURITY MODE COMPLETE message is reached.

8.1.7.2.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_FACH (state 6-2 or state 6-4) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the RRC connected state CELL_FACH. The SS transmits a SECURITY MODE COMMAND message in which ciphering is requested to be activated, but the IE "Ciphering algorithm" is set to an unknown value. The UE shall not trigger any ciphering algorithm and it shall respond by sending SECURITY MODE FAILURE message on the DCCH. Next, SS transmits a valid SECURITY MODE COMMAND message which includes IE "Downlink activation time" for RB2 and IE "Integrity check info". The UE shall check the integrity check info. It shall start to configure ciphering in downlink and transmit a SECURITY MODE COMPLETE message, which contains the uplink activation time for RB2. This message shall contain the IE "Integrity check info". SS records the uplink ciphering activation time for RB 2. Next, SS transmits COUNTER CHECK message repeated on the downlink DCCH using RLC-AM mode. The UE shall respond to each downlink message with a COUNTER CHECK RESPONSE message on the uplink DCCH using RLC-AM. SS confirms that the uplink COUNTER CHECK RESPONSE messages are not ciphered. SS also checks all uplink messages are integrity-protected by UIA1 algorithm, and that the messages contain the

correct values for “Integrity mode info” IE. This cycle repeats itself until both the uplink and downlink ciphering activation time for RB 2 have elapsed. After both the uplink and downlink ciphering activation time for RB 2 have passed, the UE shall be able to communicate with the SS using the new ciphering configurations. This can be verified in SS through the reception of a correctly ciphered and integrity-protected COUNTER CHECK RESPONSE message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in CELL_FACH state.
2	←		SECURITY MODE COMMAND	IE ”Ciphering Algorithm” is set to an invalid value
3	→		SECURITY MODE FAILURE	IE “Failure Cause” shall be set to “Protocol Error” and IE “Protocol Error Information” shall be set to “Information element value not comprehended”.
4	←		SECURITY MODE COMMAND	See specific message contents.
5	→		SECURITY MODE COMPLETE	SS verifies that this message is sent unciphered. SS records the uplink ciphering activation time for RB 2.
6	←		COUNTER CHECK	SS repeats step 6 and step 7 until its internal uplink and downlink RLC sequence numbers have both surpassed the uplink and downlink ciphering activation times specified for RB2. This message is sent on the downlink DCCH using RLC-AM. See specific message content.
7	→		COUNTER CHECK RESPONSE	UE shall send this message on the uplink DCCH using RLC-AM. See specific message content.
8				SS verifies that the last COUNTER CHECK RESPONSE message is both integrity-protected and ciphered correctly.

Specific Message Contents

SECURITY MODE COMMAND (Step 2)

See notes below for the value of Y.

Information Element	Value/remark
Integrity check info	
Message authentication code	Calculated result in SS
RRC Message sequence number	0
Security Capability	
Ciphering algorithm capability	Spare value
Integrity protection algorithm capability	Spare value
Ciphering mode info	
Ciphering mode command	Start
Activation time for DPCH	Not Present
Radio bearer downlink ciphering activation time info	
RB Identity	2
RLC sequence number	Current RLC SN + Y
Integrity protection mode info	
Integrity protection mode command	Start
Downlink integrity protection activation info	Not Present
Integrity protection algorithm	If integrity is indicated to be active on IXIT statements in TS 34.123-2, use one of the supported integrity algorithms
Integrity protection initialisation number	0000 0000 0000 0000 H (FRESH)
CN domain identity	Supported domain

SECURITY MODE COMMAND (Step 4)

See notes below for the value of Y.

Information Element	Value/remark
Integrity check info	
Message authentication code	Calculated result in SS
RRC Message sequence number	0
Security Capability	
Ciphering algorithm capability	If ciphering is indicated to be active on IXIT statements in TS 34.123-2, use one of the supported ciphering algorithms
Integrity protection algorithm capability	0000000000000010B(UIA1)
Ciphering mode info	Start
Ciphering mode command	Not Present
Activation time for DPCH	
Radio bearer downlink ciphering activation time info	2
RB Identity	Current RLC SN + Y
RLC sequence number	Start
Integrity protection mode info	Not Present
Integrity protection mode command	If integrity is indicated to be active on IXIT statements in TS 34.123-2, use one of the supported integrity algorithms
Downlink integrity protection activation info	
Integrity protection algorithm	
Integrity protection initialisation number	0000 0000 0000 0000 H (FRESH)
CN domain identity	Supported domain

SECURITY MODE COMPLETE (Step 5)

Information Element	Value/remark
Integrity check info	
- Message Authentication code	Checked to see if present
- RRC Message sequence number	Checked to see if present
Uplink integrity protection activation info	
- RRC message sequence number list	Check to see if it the RRC SN for RB 0 to RB 4 are present
Radio bearer uplink ciphering activation info	
- RB Identity	2
- RLC sequence number	SS records this value. See step 8 in 'expected sequence'

COUNTER CHECK (Step 6)

Information Element	Value/remark
Integrity check info	Calculated value
RB COUNT-C MSB information	
- RB identity	2
- COUNT-C MSB uplink	Current COUNT-C MSB for RB#2 in uplink
- COUNT-C MSB downlink	Current COUNT-C MSB for RB#2 in downlink

COUNTER CHECK RESPONSE (Step 7)

Information Element	Value/remark
Integrity check info RB COUNT-C information - RB identity - COUNT-C uplink - COUNT-C downlink	Checked to see if the MAC code match Check to if this IE is absent

Note:

Y = 2 * (size of COUNTER CHECK message, after PER encoding). The unit of Y is the number of RLC-AM PDU.

8.1.7.2.5 Test requirement

After step 2 the UE shall transmit a SECURITY MODE FAILURE message to report the protocol error detected in the first SECURITY MODE COMMAND message. The UE shall be able to communicate normally with the SS, with all control data on the signalling radio bearers unciphered.

After step 4 the UE shall RLC-acknowledge the receipt of the SECRUITY MODE COMMAND message using unciphered mode and which includes calculated integrity check info. SS checks that the SECURITY MODE COMPLETE message is received unciphered and that the calculated MAC-I values in "integrity check info" IE is correct.

After step 5 SS verifies that all uplink signalling messages on RB1, RB2, RB3 and RB4 are integrity protected with UIA1 algorithm.

After step 7 SS verifies that the last COUNTER CHECK RESPONSE message received is integrity protected with UIA1 algorithm and ciphered with the algorithm indicated in the second SECURITY MODE COMMAND (Step 4) message.

8.1.8 Counter check

8.1.8.1 Counter check in CELL_DCH state

8.1.8.1.1 Definition

8.1.8.1.2 Conformance requirement

When the UE receives a COUNTER CHECK message that includes matched COUNT-C MSB values, the UE shall transmit a COUNTER CHECK RESPONSE message on the uplink DCCH and omitting "RB COUNT-C information" IE in this message.

When the UE receives a COUNTER CHECK message that includes any mismatched COUNT-C MSB values, the UE shall transmit a COUNTER CHECK RESPONSE message on the uplink DCCH and specifies the current COUNT-C information of the RAB(s) with mismatched values.

Reference

3GPP TS 25.331 clause 8.1.15

8.1.8.1.3 Test purpose

To confirm that the UE transmits a COUNTER CHECK RESPONSE message after it receives a COUNTER CHECK message from the SS. To confirm that the UE responds to the reception of an invalid downlink COUNTER CHECK message by transmitting a RRC STATUS message on the uplink DCCH, stating the correct error cause value in message.

8.1.8.1.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to the CELL_DCH state after a successful outgoing call attempt. The SS transmits an erroneous COUNTER CHECK message. The content of this message is a concatenation of the message type IE and an arbitrary 32-bits string. The UE shall detect a protocol error and send RRC STATUS message to report this event. Next, the SS transmits a COUNTER CHECK message that includes the current COUNT-C MSB information in each radio access bearer. The UE shall react by sending a COUNTER CHECK RESPONSE message on the uplink DCCH, which does not include "RB COUNT-C information" IE. The SS transmits a COUNTER CHECK message which includes the current COUNT-C MSB information reversed all the bits in each radio bearer. The UE shall send a COUNTER CHECK RESPONSE message on the uplink DCCH, specifying the current COUNT-C information for each radio access bearer established.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state after an outgoing call has been established successfully.
2	←		COUNTER CHECK	This message contains an arbitrary 32-bits pattern, following the IE "Message Type"
3	→		RRC STATUS	UE shall detect a protocol error and then transmit this message.
4	←		COUNTER CHECK	See specific message content.
5	→		COUNTER CHECK RESPONSE	The message shall not include the IE "RB COUNT-C information".
6	←		COUNTER CHECK	See specific message content.
7	→		COUNTER CHECK RESPONSE	The message shall include the IE "RB COUNT-C information".

Specific Message Contents

COUNTER CHECK (Step 2)

Information Element	Value/remark
Unknown bit pattern	An arbitrary 32-bits string

RRC STATUS (Step 3)

Information Element	Value/remark
Protocol Error Information - Protocol Error Cause	Checked to see if set to "ASN.1 violation or encoding" or "conditional information element error"

COUNTER CHECK (Step 4)

Information Element	Value/remark
Integrity check info	Calculated value
RB COUNT-C MSB information	
- RB identity	5
- COUNT-C MSB uplink	Current COUNT-C MSB for RB#5 in uplink
- COUNT-C MSB downlink	Current COUNT-C MSB for RB#5 in downlink

COUNTER CHECK RESPONSE (Step 5)

Information Element	Value/remark
Integrity check info	Not checked
RB COUNT-C information	Check to if this IE is absent
- RB identity	
- COUNT-C uplink	
- COUNT-C downlink	

COUNTER CHECK (Step 6)

Information Element	Value/remark
RB COUNT-C MSB information	
- RB identity	Check to see if set to 4
- COUNT-C MSB uplink	Toggle all bits of the current COUNT-C MSB in uplink for RB#5
- COUNT-C MSB downlink	Toggle all bits of the current COUNT-C MSB in downlink for RB#5

COUNTER CHECK RESPONSE (Step 7)

Information Element	Value/remark
Integrity check info	Not checked
RB COUNT-C information	
- RB identity	Check to see if set to 5
- COUNT-C uplink	Check to see if set to Current COUNT-C for RB#5 in uplink
- COUNT-C downlink	Check to see if set to COUNT-C for RB#5 in downlink

8.1.8.1.5 Test requirement

After step 2, the UE shall transmit a RRC STATUS message on the uplink DCCH. The protocol error cause shall be set to “ASN.1 violation or encoding” or “conditional information element error”.

After step 4 the UE shall transmit a COUNTER CHECK RESPONSE message which does not includes the IE ”RB COUNT-C information” to indicates that a matched comparison result is obtained.

After step 6, the UE shall transmit a COUNTER CHECK RESPONSE message which includes the IE ”RB COUNT-C information” to report that a mismatch in COUNT-C value is detected in RB#5.

8.1.8.2 Counter check in CELL_FACH state

8.1.8.2.1 Definition

8.1.8.2.2 Conformance requirement

When the UE receives a COUNTER CHECK message that includes matched COUNT-C MSB values, the UE shall transmit a COUNTER CHECK RESPONSE message on the uplink DCCH and omitting “RB COUNT-C information” IE in this message.

When the UE receives a COUNTER CHECK message that includes any mismatched COUNT-C MSB values, the UE shall transmit a COUNTER CHECK RESPONSE message on the uplink DCCH and specifies the current COUNT-C information of the RAB(s) with mismatched values.

Reference

3GPP TS 25.331 clause 8.1.15

8.1.8.2.3 Test purpose

To confirm that the UE transmits a COUNTER CHECK RESPONSE message after it receives a COUNTER CHECK message from the SS. To confirm that the UE responds to the reception of an invalid downlink COUNTER CHECK message by transmitting a RRC STATUS message on the uplink DCCH, stating the correct error cause value in message.

8.1.8.2.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_FACH state (state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to the CELL_FACH state after a successful outgoing call attempt. The SS transmits an erroneous COUNTER CHECK message. The content of this message is a concatenation of the message type IE and an arbitrary 32-bits string. The UE shall detect a protocol error and send RRC STATUS message to report this event. Next, the SS transmits a COUNTER CHECK message that includes the current COUNT-C MSB information in each radio access bearer. The UE shall react by sending a COUNTER CHECK RESPONSE message on the uplink DCCH, which does not include "RB COUNT-C information" IE. The SS transmits a COUNTER CHECK message, which includes the current COUNT-C MSB information for each radio bearer but with all the bits reversed. The UE shall send a COUNTER CHECK RESPONSE message on the uplink DCCH, specifying the current COUNT-C information for each radio access bearer established.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_FACH state after an outgoing call has been established successfully.
2	←		COUNTER CHECK	This message contains an arbitrary 32-bits pattern, following the IE "Message Type"
3	→		RRC STATUS	UE shall detect a protocol error and then transmit this message.
4	←		COUNTER CHECK	See specific message content.
5	→		COUNTER CHECK RESPONSE	The message shall not include the IE "RB COUNT-C information".
6	←		COUNTER CHECK	See specific message content.
7	→		COUNTER CHECK RESPONSE	The message shall include the IE "RB COUNT-C information".

Specific Message Contents

COUNTER CHECK (Step 2)

Information Element	Value/remark
Unknown bit pattern	An arbitrary 32-bits string

RRC STATUS (Step 3)

Information Element	Value/remark
Protocol Error Information - Protocol Error Cause	Checked to see if set to “ASN.1 violation or encoding” or “conditional information element error”

COUNTER CHECK (Step 4)

Information Element	Value/remark
Integrity check info	Calculated value
RB COUNT-C MSB information	
- RB identity	5
- COUNT-C MSB uplink	Current COUNT-C MSB for RB#5 in uplink
- COUNT-C MSB downlink	Current COUNT-C MSB for RB#5 in downlink

COUNTER CHECK RESPONSE (Step 5)

Information Element	Value/remark
Integrity check info	Not checked
RB COUNT-C information	Check to if this IE is absent
- RB identity	
- COUNT-C uplink	
- COUNT-C downlink	

COUNTER CHECK (Step 6)

Information Element	Value/remark
RB COUNT-C MSB information	
- RB identity	Check to see if set to 4
- COUNT-C MSB uplink	Toggle all bits of the current COUNT-C MSB in uplink for RB#5
- COUNT-C MSB downlink	Toggle all bits of the current COUNT-C MSB in downlink for RB#5

COUNTER CHECK RESPONSE (Step 7)

Information Element	Value/remark
Integrity check info	Not checked
RB COUNT-C information	
- RB identity	Check to see if set to 5
- COUNT-C uplink	Check to see if set to Current COUNT-C for RB#5 in uplink
- COUNT-C downlink	Check to see if set to COUNT-C for RB#5 in downlink

8.1.8.2.5 Test requirement

After step 2, the UE shall transmit a RRC STATUS message on the uplink DCCH. The protocol error cause shall be set to “ASN.1 violation or encoding” or “conditional information element error”.

After step 4 the UE shall transmit a COUNTER CHECK RESPONSE message which does not includes the IE ”RB COUNT-C information” to indicates that a matched comparison result is obtained.

After step 6, the UE shall transmit a COUNTER CHECK RESPONSE message which includes the IE ”RB COUNT-C information” to report that a mismatch in COUNT-C value is detected in RB#5.

8.1.9 Signalling Connection Release Request

8.1.9.1 Definition

8.1.9.2 Conformance requirement

The UE shall initiate the signalling connection release procedure when the higher layer entities in the UE request to release one or more signalling session (one example of such case is location update failure). In this case, the UE shall transmit a SIGNALLING CONNECTION RELEASE REQUEST message, which includes the flow identifier of the signalling flow to be released.

Reference

3GPP TS 25.331 clause 8.1.14

8.1.9.3 Test purpose

To confirm that the UE transmits a SIGNALLING CONNECTION RELEASE REQUEST message after it fails to receive a response for the LOCATION UPDATING REQUEST message.

8.1.9.4 Method of test

Initial Condition

System Simulator-: 1 cell

UE-: Switched off(state 1) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is turned on and it shall find a suitable cell to camp on. The UE shall initiate a location updating procedure. The UE shall establish an RRC connection and transmits a LOCATION UPDATING REQUEST message using the INITIAL DIRECT TRANSFER message. The SS does not respond to this message, and the UE shall send a SIGNALLING CONNECTION RELEASE REQUEST message which includes the flow identifier with the same value as that in the INITIAL DIRECT TRANSFER message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is powered on.
2	→		RRC CONNECTION REQUEST	UE shall initiate the location updating procedure.
3	←		RRC CONNECTION SETUP	
4				The UE configures the layer 2 and layer 1.
5	→		RRC CONNECTION SETUP COMPLETE	
6	→		INITIAL DIRECT TRANSFER (LOCATION UPDATING REQUEST)	LOCATION UPDATE REQUEST is embedded in this message transmission.
7				The SS does not respond and waits until the timer for location update procedure expires.
8	→		SIGNALLING CONNECTION RELEASE REQUEST	

Specific Message Content

SIGNALLING CONNECTION RELEASE REQUEST (Step 8)

Information Element	Value/remark
Flow Identifier	Check to see if this value is the as same as in the uplink INITIAL DIRECT TRANSFER message.

8.1.9.5 Test requirement

After step 1 the UE shall initiate the LOCATION UPDATING procedure and establish an RRC connection.

After step 7 the UE shall transmit a SIGNALLING CONNECTION RELEASE REQUEST message which includes the same flow identifier as that found in the INITIAL DIRECT TRANSFER message.

8.2 Radio Bearer control procedure

8.2.1 Radio Bearer Establishment

8.2.1.1 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success(Data integrity protection algorithm is not applied)

8.2.1.1.1 Definition

8.2.1.1.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message and communicate with the UTRAN for its implementation.

(This is the case where data integrity protection algorithm is not applied.)

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.1.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message received from the SS.

8.2.1.1.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH~~CELL~~_DCH(state 6-5) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state, after the test operator is prompted to make an out-going call. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE after it sets up L1 including the start of tx/rx. This message requests the establishment of RABs for carrying the traffic of the speech call. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER SETUP	This message do not contain IE "integrity check info" and "integrity protection mode info"
2	→		RADIO BEARER SETUP COMPLETE	This message do not contain "integrity check info" and "Uplink integrity activation info
3				To confirm the communication.

Specific Message Contents

For RADIO BEARER SETUP in step 1, using the message sub-type indicated as "Speech in CS" or " Non-speech in CS" ~~or "Packet to CELL_DCH from CELL_DCH in PS"~~ found in default message content clause 9 of TS 34.108 and Annex A of TS 34.123-1, respectively.

8.2.1.1.5 Test requirement

After step 2 the UE shall communicate with the SS on the radio bearer for its implementation.

8.2.1.2 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success(Effected Data integrity protection algorithm)

8.2.1.2.1 Definition

8.2.1.2.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message, which applies data integrity function, and then communicate with the UTRAN for its implementation.

Reference

3GPP TS 25.331 clause 8.2.1, 8.5.11.

8.2.1.2.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message which contains IE "Integrity check info" and IE "Integrity protection mode info" received from the SS.

8.2.1.2.4 Method of test

Initial Condition

System Simulator : 1 cell

UE: CS-DCCH~~CELL~~_DCH(state 6-5) as specified in clause 7.4 of TS 34.108 and data integrity algorithm is not applied

Test Procedure

The UE is in the CELL_DCH state, after the test operator is prompted to make an out-going data call. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message which is including IE "integrity check info" and "integrity protection mode info" to the UE after it sets up L1 including the start of tx/rx. This message requests the establishment of RABs for carrying the traffic of the call. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message which is including IE "integrity check info" using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER SETUP	This message contain IE "integrity check info" and "integrity protection mode info"
2	→		RADIO BEARER SETUP COMPLETE	This message contain "integrity check info"
3				To confirm the communication.

Specific Message Contents

For RADIO BEARER SETUP in step 1, using the message sub-types indicated as "Speech in CS" or "Non-speech in CS" ~~Packet to CELL_DCH from CELL_DCH in PS"~~ as found in default message content clause 9 of TS 34.108 and Annex A, respectively.

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical ~~to identical message sub-type found in TS 34.108 Clause 8,~~ with the following exceptions:

Information Element	Value/remark
Integrity check info	
- Message authentication code	Bit string (32) MAC-I See TS 33.102
- RRC Message sequence number	0
Integrity protection mode info	Present
- Integrity protection mode command	"Start"
- Downlink integrity protection activation info	Not present (It is needed only when the IE "Integrity protection mode command" has the value "modify" .)
- integrity protection algorithm	~~"0001$_2$";~~ UIA1~~, Kasumi~~
- integrity protection initialisation number	Bit string (32) FRESH See TS 33.102

RADIO BEARER SETUP COMPLETE

Information Element	Value/remark
Integrity check info	
- Message authentication code	Not checked(MAC-I See TS 33.102)
- RRC Message sequence number	Not checked
Uplink Integrity protection activation info	Not checked
Hyper Frame Number	Not checked

8.~~.~~2.1.2.5 Test requirement

After step 2 the UE shall communicate with the SS on the radio bearer for its implementation. This can be verified by the correct reproduction of the u-plane data transmitted and received between the test operator and SS.

8.~~.~~2.1.3 Radio Bearer Establishment for transition ~~-~~from CELL_DCH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.1.3.1 ~~————————~~Definition

8.~~.~~2.1.3.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message which includes ~~-~~unsupported configuration parameters and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE "~~-~~failure cause".

Reference

3GPP TS 25.331 ~~-~~clause 8.2.1

8.~~.~~2.1.3.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER SETUP FAILURE message in case of receiving a RADIO BEARER SETUP message which includes parameters of its unsupported configuration.

8.~~.~~2.1.3.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: CS-DCCH~~CELL~~_DCH(state 6-5) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER SETUP message as the frequency cannot be supported ~~-~~by the UE. After the UE receives this message, it transmits a RADIO BEARER SETUP

FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE ”failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER SETUP	Including the unsupported configuration for the UE.
2	→		RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is indicated as “Speech in CS” or “Non-speech in CS“ as found in default message content clause 9 of TS 34.108 and Annex A respectively ~~identical to those in default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	 16383. Not Present.

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	 Configuration unacceptable Not checked

8.2.1.3.5 Test requirement

~~?~~After step 1 the UE shall keep its configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE ”failure cause”.

8.2.1.4 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Physical channel Failure and successful reversion to old configuration)

8.2.1.4.1 Definition

8.2.2.1.4.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to configure the new radio bearer by the T312 expiry and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “physical channel failure” in IE ”failure cause”.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.4.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER SETUP FAILURE message when the UE fails to configure the new radio bearer following detection of physical channel failure after T312 expiry.

8.2.1.4.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH~~CELL~~_DCH(state 6-5) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER SETUP message to the UE and does not configure the new radio bearer. Then after T312 expiry, the UE reverts to the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	The SS does not configure the new radio bearer stated in the message.
2				The UE does not configure the new radio bearer and reverts to the old configuration.
3		→	RADIO BEARER SETUP FAILURE	UE shall transmit this message using the old RRC signalling bearer operating in RLC-AM mode.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is indicated as "Speech in CS" or "Non-speech in CS" as found in default message content clause 9 of TS 34.108 and Annex A, ~~respectivery~~respectively.

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.1.4.5 Test requirement

~~?~~After step 2 the UE shall revert to the old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

8.2.1.5 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Physical channel Failure and reversion failure)

8.2.1.5.1 Definition

8.2.1.5.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer establishment procedure.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.5.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot establish the new radio bearer for the L1 configuration and cannot revert to the old configuration.

8.2.1.5.4 Method of test

Initial Condition

System Simulator: 2 cells- Cell 1 is active, Cell 2 is inactive

UE: CS-DCCH~~CELL~~_DCH(state 6-5) as specified in clause 7.4 of TS 34.108 in cell No.1

Test Procedure

The UE is in the CELL_DCH state in cell 1.The SS begins to broadcast the BCCH in cell 2, with a power level suitable for camping but lower than that of cell 1. Next, SS transmits a RADIO BEARER SETUP message to the UE. As the SS does not configure the new radio bearer and deletes the old configuration the UE fails to configure L1 and fails to revert to the old configuration. Then the UE shall find cell 2 and transmits to it an RRC CONNECTION RE-ESTABLISHMENT REQUEST message, which includes the IE "U-RNTI" on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message, which includes a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS transmits a BCCH in cell 2 but with a lower power level than in cell 1.
2		←	RADIO BEARER SETUP	The SS does not configure the new radio bearer and delete the old configuration.
3				The UE shall detect a failure to configure the new radio bearers and also subsequently, cannot revert to old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall detect the presence of cell 2 and transmits this message which includes the IE "U-RNTI" it has been assigned to.
5		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

~~None~~

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is indicated as "Speech in CS" or "Non-speech in CS" as found in default message content clause 9 of TS 34.108 and Annex A

8.2.1.5.5 Test requirement

After step 3 the UE shall find a new cell 2, enter CELL_FACH state, and transmit RRC CONNECTION RE-ESTABLISHMENT REQUEST message.

After step 6 the UE shall re-establish an RRC connection in cell 2.

8.2.1.6 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.1.6.1 Definition

8.2.1.6.2 Conformance requirement

If the UE is reconfiguring itself after receiving a radio bearer message other than RADIO BEARER SETUP message, and when the UE subsequently receive a RADIO BEARER SETUP message, The UE shall keep its old configuration when the UE receives another RADIO BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER SETUP message and the UE shall transmit an RRC STATUSRADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "incompatible simultaneous reconfiguration" in IE "failure case".

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.6.3 Test purpose

To confirm that the UE keeps its configuration and transmits an RRC STATUS RADIO BEARER SETUP FAILURE message when the UE receives another a RADIO BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER SETUP message.

8.2.1.6.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCHCELL DCH(state 6-9) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a RADIO BEARER SETUP message to the UE before the UE configures the radio bearer the UE keeps the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "incompatible simultaneous reconfiguration in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER SETUPRECONFIGURATION	Including IE "Uplink DPCH info"
2	←		RADIO BEARER SETUP	The SS send this message before the expiry of activation time specified in RADIO BEARER SETUPthe message of step 1.
3	→		RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

For RADIO BEARER SETUP RECONFIGURATION in step 1, use the message sub-type indicated as "Speech in CS" found in Annex A, with the exception of the following Information Elements:

RADIO BEARER SETUP RECONFIGURATION (Step 1)

Information Element	Value/remark
Activation Time	[256+Current CFN-[current CFN mod 8 + 8]]MOD 256

RADIO BEARER SETUP (Step 2)

The contents of RADIO BEARER SETUP message in this test case is indicated as “Speech in CS” or “Non-speech in CS“ as found in default message content clause 9 of TS 34.108 and Annex A respectively with the following exceptions:~~For RADIO BEARER SETUP in step 2, use the message sub-type indicated as “Packet to CELL_DCH from CELL_DCH in PS” found in Annex A, with the exception of the following Information Elements:~~

Information Element	Value/remark
Activation Time	Not Present

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure case	Incompatible ~~simultaneous~~simultaneous ~~reconfigration~~reconfiguration
Other information element	Not checked

8.~~.~~2.1.6.5 Test requirement

After step 2 the UE shall keep its configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “Incompatible simultaneous reconfiguration” in IE ”failure cause”.

8.~~.~~2.1.7 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Invalid message reception)

8.2.1.7.1 ~~————————~~Definition

8.~~.~~2.1.7.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message, which includes the spare value in the mandatory IE ”~~-~~DRX indicator” and criticality is defined as “Reject”. Then it transmits a RADIO BEARER SETUP FAILURE message which is set to “protocol error” in IE ”~~-~~failure cause” and is set to “Information element value not comprehended” in IE ”~~-~~Protocol error cause”.

Reference

3GPP TS 25.331 ~~-~~clause 8.2.1

8.~~.~~2.1.7.3 Test purpose

To confirm that the UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER SETUP message which indicates the spare value in the mandatory IE ” DRX indicator” whose criticality is defined as “Reject”.

8.~~.~~2.1.7.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: CS-DCCH~~CELL~~ _DCH(state 6-5) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER SETUP message to the UE which indicates a spare value in the mandatory IE "DRX indicator" whose criticality is defined as "Reject". The UE keeps the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "protocol error" in IE "failure cause", and is set to "Information element value not comprehended" in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	
2		→	RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical as "Speech in CS" or "Non-speech in CS" as found in default message content clause 9 of TS 34.108 and Annex A respectively, ~~to that of default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.1.7.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "protocol error" in IE "failure cause" and set to "Information element value not comprehended" in IE "Protocol error cause".

8.2.1.8 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Success

8.2.1.8.1 Definition

8.2.1.8.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message and communicate with the UTRAN for its implementation.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.8.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message received from the SS.

8.~~.~~2.1.8.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: PS-DCCH~~CELL~~_DCH(state 6-7) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state, after the test operator is asked to initiate a packet-switched data call. The SS transmits a RADIO BEARER SETUP message ~~-~~to the UE after it sets up L1. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER SETUP	SS requests test operator to make an outgoing packet-switched data call.
2	→		RADIO BEARER SETUP COMPLETE	
3				To confirm the communication between UE and SS, based on the exchange of packets.

Specific Message Contents

For RADIO BEARER SETUP message in step 1, use the message sub-type indicated as “Packet to CELL_FACH~~DCH~~ from CELL_DCH~~FACH~~ in PS” found in ~~default message content clause.~~ Annex A.

8.~~.~~2.1.8.5 Test requirement

After step 2 the UE shall communicate with the SS on the radio bearer for its implementation.

~~8..2.1.9 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)~~

~~8.2.1.9.1 Definition~~

~~8..2.1.9.2 Conformance requirement~~

~~The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message, which indicates an unsupported configuration parameters and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE_” failure cause”.~~

~~Reference~~

~~3GPP TS 25.331 clause 8.2.1~~

~~8..2.1.9.3 Test purpose~~

~~To confirm that the UE keeps its configuration and transmits a RADIO BEARER SETUP FAILURE message in case of receiving a RADIO BEARER SETUP message which includes parameters of unsupported configuration.~~

~~8..2.1.9.4 Method of test~~

~~Initial Condition~~

~~System Simulator : 1 cell~~

~~UE : PS-DCCHCELL_DCH(state 6-7) as specified in clause 7.4 of TS 34.108~~

~~Test Procedure~~

~~The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER SETUP message specifying a frequency that cannot be supported by the UE. After the UE receives this message, it transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE " failure cause".~~

~~Expected sequence~~

~~Step~~	~~Direction~~		~~Message~~	~~Comment~~
	~~UE~~	~~SS~~		
~~1~~	~~←~~		~~RADIO BEARER SETUP~~	~~Including the unsupported configuration for the UE.~~
~~2~~	~~→~~		~~RADIO BEARER SETUP FAILURE~~	~~The UE does not change the configuration.~~

~~Specific Message Contents~~

~~RADIO BEARER SETUP~~

~~The contents of RADIO BEARER SETUP message in this test case is identical to as "Packet to CELL_FACH from CELL_DCH in PS" as found in Annex A that of default contents of layer 3 messages for RRC tests with the following exceptions:~~

~~Information Element~~	~~Value/remark~~
~~Frequency info~~ ~~- UARFCN uplink(Nu)~~ ~~- UARFCN downlink(Nd)~~	 ~~16384.~~ ~~Not present~~

8.~~.~~2.1.9~~10~~ Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Failure (Physical channel Failure)

8.2.1.9~~10~~.1 ~~—~~Definition

8.~~.~~2.1.9~~10~~.2 Conformance requirement

The UE shall initiate the cell update procedure when the UE failed to access the assigned physical channel according to a RADIO BEARER SETUP message when transiting from CELL_DCH state to CELL_FACH state.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.910.3 Test purpose

To confirm that the UE perform a cell update procedure when the UE cannot use the assigned physical channel according to a RADIO BEARER SETUP message as it transits from CELL_DCH to CELL_FACH.

8.2.1.910.4 Method of test

Initial Condition

System Simulator: 2 cells- Cell 1 is active, Cell 2 is inactive

UE: PS-DCCH~~CELL~~_DCH(state 6-7) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and transmits a RADIO BEARER SETUP message as the transition occurs from CELL_DCH to CELL_FACH. The UE cannot access the assigned physical channel, as the SS does not transmit any data on the downlink common channel in cell 1. Then the UE shall initiate the cell update procedure in cell 2.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS broadcasts BCCH in cell No. 2.
2		←	RADIO BEARER SETUP	Assigned the transition from CELL_DCH to CELL_FACH
3				The UE cannot use the assigned the physical channel.
4		→	CELL UPDATE	The UE finds a new cell 2and begins a cell update procedure.
5		←	CELL UPDATE CONFIRM	In the CELL_FACH state

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical as “Packet to CELL_FACH from CELL_DCH in PS“ as found in Annex A

~~None~~

8.2.1.910.5 Test requirement

After step 3 the UE shall find a new cell No.2 and enter to CELL_FACH state. Then the UE shall initiate a cell update procedure in cell No.2.

~~8..2.1.11 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)~~

~~8.2.1.11.1 Definition~~

~~8..2.1.11.2 Conformance requirement~~

~~If the UE is reconfiguring itself after receiving a message, and when the UE subsequently receive a RADIO BEARER SETUP message,The UE shall keep its old configuration when the UE receives another RADIO~~

BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER SETUP message. The the UE shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "Incompatible simultaneous reconfiguration" in IE "failure cause".

Reference

3GPP TS 25.331 clause 8.2.1

8..2.1.11.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER SETUP FAILURE message when the UE receives another RADIO BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER SETUP message.

8..2.1.11.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : PS-DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS sends a RADIO BEARER RECONFIGURATION any RADIO BEARER SETUP message to request the UE to perform radio bearer reconfigurationestablishment procedure. Before the UE can complete the configuration of the radio bearer, the SS transmits another RADIO BEARER SETUP message. The UE shall keep the old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER SETUP	Message includes IE "PRACH info (for RACH)"
2	←		RADIO BEARER SETUP	Message includes the IE "Uplink DPCH info" The SS send this message before the expiry of activation time specified in the message of step 1.
3	→		RADIO BEARER SETUP FAILURE	The UE does not change the configuration. UE shall not have access to the DTCH channel indicated in the RADIO BEARER SETUP messages of step 1 and step 2.

Specific Message Contents

RADIO BEARER SETUP (Step 1)

For this message, use the message sub-type entitled "Packet to CELL_FACH from CELL_DCH in PS" in the default message content. areisas "Packet to CELL_FACH from CELL_DCH in PS" as found in Annex A with the following exceptions:to those in the default contents of layer 3 messages for RRC tests. Information element(s) to be changed are listed below:

Information Element	Value/remark
Activation Time	Current CFN [current CFN mod 8 + 8]

RADIO BEARER SETUP (Step 2)

For this message, use the message sub-type entitled "Packet to CELL_DCH from CELL_DCH in PS" in the default message content. Information element(s) to be changed are listed below:

Information Element	Value/remark
Activation Time	Not Present.

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8..2.1.11.5 Test requirement

After step 2 the UE shall keep its configuration and not access any of the DTCH traffic channels specified in either of the RADIO BEARER SETUP message. It shall transmit an RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "Incompatible simultaneous reconfiguration" in IE "failure cause".

8..2.1.12 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Failure (Invalid message reception)

8.2.1.12.1 Definition

8..2.1.12.2 Conformance requirement

The UE shall keep its old configuration when it receives a RADIO BEARER SETUP message, which includes the spare value in the mandatory IE " DRX indicator" with criticality defined as "Reject". It shall then transmit a RADIO BEARER SETUP FAILURE message which is set to "protocol error" in IE " failure cause" and also contains value "Information element value not comprehended" in IE " Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.1

8..2.1.12.3 Test purpose

To confirm that the UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC if the received a RADIO BEARER SETUP message, which includes the spare value in the mandatory IE " DRX indicator" with criticality defined as "Reject".

8..2.1.12.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : PS-DCCHCELL_DCH(state 6-7) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state, after the test operator makes an outgoing packet-switched data call. The SS transmits a RADIO BEARER SETUP message to the UE which includes the spare value in the mandatory IE " DRX indicator" with criticality defined as "Reject". The UE shall keep the old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. The value "protocol error" shall be set in IE " failure cause" and also value "Information element value not comprehended" set in IE " Protocol error cause".

~~Expected sequence~~

8.2.1.1~~4~~5 Test requirement

After step 1 the UE shall keep its configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE "failure cause".

8.2.1.1~~5~~ Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Physical channel Failure and successful reversion to old configuration)

8.2.1.1~~5~~.1 ~~Definition~~

8.2.1.1~~5~~.2 Conformance requirement

The UE shall attempt to revert to the old configuration when the UE fails to configure the new radio bearer by the T312 expiry. It shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC containing value "physical channel failure" in IE "failure cause".

Reference

3GPP TS 25.331 clause 8.2.1

8.~~.~~2.1.12~~5~~.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER SETUP FAILURE message when the UE fails to configure the new radio bearer when it detects physical channel failure, followed by the T312 expiry.

8.~~.~~2.1.12~~5~~.4 Method of test

Initial Condition

System Simulator~~.~~: 1 cell

UE~~.~~: PS-DCCH~~CELL~~_FACH(state 6-8) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER SETUP message to the UE and does not configure the new radio bearer. After T312 expiry, ~~-~~the UE shall revert to the old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. The content of the message shall indicate "physical channel failure" in IE_"~~-~~failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	The SS does not configure a new radio bearer.
2				The UE does not configure a new radio bearer but reverts to the old configuration.
3		→	RADIO BEARER SETUP FAILURE	

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical the message sub-type indicated by "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.~~.~~2.1.12~~5~~.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE_"~~-~~failure cause".

8.~~.~~2.1.13~~6~~ Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Physical channel Failure and reversion failure)

8.2.1.13~~6~~.1 ~~————~~Definition

8.~~.~~2.1.13~~6~~.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer establishment procedure.

Reference

3GPP TS 25.331- clause 8.2.1

8.~~.~~2.1.13~~6~~.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot establish the new radio bearer for the L1 configuration and subsequently fail to revert to the old configuration.

8.~~.~~2.1.13~~6~~.4 Method of test

Initial Condition

System Simulator~~-~~: 2 cells- Cell 1 is active, Cell 2 is inactive

UE~~-~~: PS-DCCH~~CELL~~_FACH(state 6-8) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_FACH state in cell 1.The SS begins to broadcast the BCCH in cell 2 but with a transmission level lower than that for cell 1. It then transmits a RADIO BEARER SETUP message to the UE from cell 1.Then the SS deletes the old downlink channel configuration after sending this message. This causes the UE to fail to configure L1 and could not revert to the old configuration. The UE shall find the presence of cell 2 and transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message. The message shall include the IE_"U-RNTI" and sent on the uplink CCCH. The SS responds with an RRC CONNECTION RE-ESTABLISHMENT message, which includes a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS transmits the BCCH in cell 2, but with a power level lower that that in cell 1.
2		←	RADIO BEARER SETUP	The SS does not configure the new radio bearer and instead delete the old configuration.
3				The UE cannot configure a new radio bearer and cannot revert to old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall find the presence of cell2It shall then transmit this message including its assigned U-RNTI in the IE_"U-RNTI".
5		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type "Packet to CELL_DCH from CELL_FACH in PS" found in Annex A.~~the default contents of layer 3 messages for RRC tests.~~

RRC CONNECTION RE-ESTABLISHMENT REQUEST

Information Element	Value/remark
U-RNTI	Set to assigned UE U-RNTI in RRC CONNECTION SETUP message.
Protocol error indication	FALSE

RRC CONNECTION RE-ESTABLISHMENT COMPLETE

Information Element	Value/remark
Radio bearer uplink ciphering activation time info	Not Present
RB with PDCP information list - RB with PDCP information list	Not Present

8.~~.~~2.1.13~~6~~.5 Test requirement

After step 3 the UE shall find ~~the~~ presence of ~~cell~~ 2, which is suitable for camping. It shall then enter CELL_FACH state and transmit a RRC CONNECTION RE-ESTABALISHMENT REQUEST message to prevent the RRC connection from being lost.

After step 6 the UE shall re-establish an RRC connection, using the new TFCS settings specified in RRC CONNECTION RE-ESTABLISHMENT message

8.~~.~~2.1.14~~7~~ Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

~~8.2.1.17~~8.2.1.14.1 ~~———————~~Definition

8.~~.~~2.1.14~~7~~.2 Conformance requirement

~~The UE shall keep its old configuration, when it receives another RADIO BEARER SETUP message before it can complete the configuration of the radio bearer according to the first RADIO BEARER SETUP message.~~ If the UE is reconfiguring itself after receiving a radio bearer message other than RADIO BEARER SETUP message, and when the UE subsequently receive a RADIO BEARER SETUP message, ~~T~~the UE shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC with value "Incompatible simultaneous reconfiguration" set in IE "failure cause".

Reference

3GPP TS 25.331 ~~clause~~ 8.2.1

8.~~.~~2.1.14~~7~~.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER SETUP FAILURE message when the UE receives ~~another~~ a RADIO BEARER SETUP message, before the UE configures the radio bearer according to an earlier ~~RADIO BEARER SETUP~~ message.

8.~~.~~2.1.14~~7~~.4 Method of test

Initial Condition

System Simulator~~:~~: 1 cell

UE~~:~~: PS-DCCT+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits ~~a RADIO BEARER SETUP~~a ~~message~~, RADIO BEARER RECONFIGURATION message~~requesting the UE to setup radio bearers using DPCH physical channels~~. The activation time of this event is specified to be 255 frames from the SS's current CFN. However, SS sends ~~another~~ a RADIO BEARER SETUP message before 255 frames has passed. The UE shall then abandon its current reconfiguration operation, and keep the old configuration. ~~, and~~Finally, the UE

transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. This message shall contain the value “Incompatible simultaneous reconfiguration” in IE ”failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION~~SETUP~~	Including IE ”Uplink DPCH info”
2		←	RADIO BEARER SETUP	The SS send this message before the expiry of activation time specified in the message of step 1.
3		→	RADIO BEAER SETUP FAILURE	The UE does not change the configuration and transmit this message on its uplink DCCH using the same RLC-AM mode radio bearer before step 1.

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

The contents of RADIO BEARER RECONFIGURATION message in this test case are~~is~~ identical as “Packet to CELL_DCH from CELL_FACH in PS“ as found in Annex A with the following exceptions:~~to those in the default contents of layer 3 messages for RRC tests. Information element(s) to be changed are listed below:~~

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

~~RADIO BEARER SETUP (for Step 2)~~x

For this message, use the message sub-type entitled “Packet to CELL_DCH from CELL_FACH in PS” in the default message content. Information element(s) to be changed are listed below:

Information Element	Value/remark
Activation Time	~~Current CFN-[current CFN mod 8 + 8]~~Not present

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.~~.~~2.1.1~~4~~7.5 Test requirement

After step 2 the UE shall keep its configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “Incompatible simultaneous reconfiguration” in IE ”failure cause”.

8.~~.~~2.1.1~~5~~8 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Invalid message reception)

8.2.1.1~~5~~8.1 ~~————————~~Definition

8.~~.~~2.1.1~~5~~8.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message, which includes the spare value in the mandatory IE ”~~-~~DRX indicator” having criticality defined as “Reject”. It shall transmit a RADIO BEARER SETUP FAILURE message which set value “protocol error” in IE ”~~-~~failure cause” and also value “Information element value not comprehended” in IE ”~~-~~Protocol error cause”.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.158.3 Test purpose

To confirm that the UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER SETUP message, with a spare value in the mandatory IE "DRX indicator" and having criticality defined as "Reject".

8.2.1.158.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH~~CELL~~_FACH(state 6-8) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER SETUP message to the UE which includes a spare value in the mandatory IE "DRX indicator" with criticality defined as "Reject". The UE keeps the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. This message shall specify "protocol error" in IE "failure cause" and also set the value "Information element value not comprehended" in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	
2		→	RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical as "Packet to CELL_DCH from CELL_FACH in PS" as found in Annex ~~to those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.1.158.5 Test requirement

After step 1 the UE shall keep its old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. The message shall indicate the reason of failure as "protocol error" in IE "failure cause" and set the value "Information element value not comprehended" in IE "Protocol error cause".

8.~~.~~2.1.16~~9~~ Radio Bearer Establishment for transition from CELL_FACH to CELL_FACH: Success

8.2.1.16~~9~~.1 ~~————————~~Definition

8.~~.~~2.1.16~~9~~.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message and communicate with the UTRAN for its implementation.

Reference

3GPP TS 25.331 ~~-~~clause 8.2.1

8.~~.~~2.1.16~~9~~.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message received from the SS.

8.~~.~~2.1.16~~9~~.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: PS-DCCH~~CELL~~_FACH(state 6-8) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state, after the test operator is being prompted to make an outgoing packet-switched call. The SS transmits a RADIO BEARER SETUP message to the UE after it sets up L1 including the start of tx/rx. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	**SS**		
1	←		RADIO BEARER SETUP	
2	→		RADIO BEARER SETUP COMPLETE	
3				To confirm the proper establishment of the new radio bearer by checking the packet data exchanged between the SS and a TE attached to the UE.

Specific Message Contents

RADIO BEARER SETUP

For this message, use the message sub-type entitled “Packet to CELL_FACH from CELL_FACH in PS” in Annex A ~~the default message content~~.

8.~~.~~2.1.16~~9~~.5 Test requirement

After step 2 the UE shall communicate with the SS using the new radio bearer~~-~~, this can be confirmed by the exchange of packet data between a terminal equipment (TE) attached to the UE and the SS,

8..2.1.20 Radio Bearer Establishment for transition from CELL_FACH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.1.20.1 Definition

8..2.1.20.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message which includes an unsupported configuration and it shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC setting the value "configuration unacceptable" into IE " failure cause".

Reference

3GPP TS 25.331 clause 8.2.1

8..2.1.20.3 Test purpose

To confirm that the UE keeps its original configuration and transmits a RADIO BEARER SETUP FAILURE message when it receives a RADIO BEARER SETUP message indicating an unsupported configuration.

8..2.1.20.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : PS-DCCHCELL_FACH(state 6-8) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER SETUP message specifying a frequency which is not supported by the UE. After the UE receives this message, it transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE " failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	Including the unsupported configuration for the UE.
2		→	RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical as "Packet to CELL_FACH from CELL_FACH in PS" as found in Annexto those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63947
- UARFCN downlink(Nd)	Not present

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8..2.1.20.5 Test requirement

After step 1 the UE shall keep its configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC and set value "configuration unacceptable" in IE " failure cause".

8..2.1.21 Radio Bearer Establishment for transition from CELL_FACH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.1.21.1 Definition

8..2.1.21.2 Conformance requirement

If the UE is reconfiguring itself after receiving a message, and when the UE subsequently receive a RADIO BEARER SETUP message, the The UE shall keep its old configuration when the UE receives another RADIO BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER SETUP message and the UE shall transmit a RADIO BEAER SETUP FAILURE message on the DCCH using AM RLC which is set to "Incompatible simultaneous reconfiguration" in IE"failure cause".

Reference

3GPP TS 25.331 clause 8.2.1

8..2.1.21.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER SETUP FAILURE message when the UE receives another RADIO BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER RECONFIGURATION SETUP message.

8..2.1.21.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : PS-DCCH+DTCHCELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a RADIO BEARER SETUP message to the UE before the UE configures the radio bearer the UE keeps the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "Incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	Including IE "Uplink DPCH info"
2		←	RADIO BEARER SETUP	The SS send this message before the expiry of activation time specified in the message of step 1.Message includes IE "PRACH info (for RACH)"
3		→	RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

areisas "Packet to CELL_FACH from CELL_FACH in PS" as found in Annex with the following exceptions:to those in the default contents of layer 3 messages for RRC tests. Information element(s) to be changed are listed below:RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8..2.1.21.5 Test requirement

After step 2 the UE shall keep its configuration and transmit an RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "Incompatible simultaneous reconfiguration" in IE "failure cause".

8.2.1.17 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: success (Subsequently received)

8.2.1.17.1 Definition

8.2.1.17.2 Conformance requirement

If the UE receives a RADIO BEARER SETUP message before the UE configures the radio bearer according to the previous RADIO BEARER SETUP message, the UE shall ignore the new RADIO BEARER SETUP message and configure according to the previous RADIO BEARER SETUP message. Finally, the UE shall transmit RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.17.3 Test purpose

To confirm that if the UE receives a new RADIO BEARER SETUP message before the UE configures the radio bearer according to a previous RADIO BEARER SETUP message, it ignore the new RADIO BEARER SETUP message and configures according to the previous RADIO BEARER SETUP message received.

8.2.1.17.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH~~CELL~~_DCH(state 6-5) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. SS transmits a RADIO BEARER SETUP message to the UE before the UE configures the radio bearer according to the RADIO BEARER SETUP message prior to this new message. The UE ignores the new RADIO BEARER SETUP message and configures according to the former RADIO BEARER SETUP message. On completion of radio bearer configuration, the UE shall transmit RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO- BEARER SETUP	Including IE "Uplink DPCH info"
2		←	RADIO- BEARER SETUP	SS send this message before the expiry of activation time specified in RADIO BEARER SETUP message of step 1.
3		→	RADIO BEARER SETUP COMPLETE	The UE ignores the- RADIO BEARER SETUP message in step 2 and confirms configuration according to the -RADIO BEARER SETUP message in step 1.

Specific Message Contents

For RADIO BEARER SETUP in step 1, use the message sub-type indicated as "The other of ~~S~~speech in CS" found in Annex A, with the exception of the following Information Elements:

RADIO BEARER SETUP (Step 1)

Information Element	Value/remark
Activation Time	[256+Current CFN-[current CFN mod 8 + 8]]MOD 256

RADIO BEARER SETUP (Step 2)

For RADIO BEARER SETUP in step 2, use the message sub-type indicated as "The other of speech in CS~~Packet to CELL_DCH from CELL_DCH in PS~~" found in Annex A, with the exception of the following

Information Element	Value/remark
Activation Time	Not Present

8.2.1.17.5 Test requirement

After step 3 the UE shall communicate with the SS on the radio bearer specified in the RADIO BEARER SETUP message in step 1.

8.2.1.24 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Success (Subsequently received)

8.2.1.24.1 Definition

8.2.1.24.2 Conformance requirement

If the UE receives a RADIO BEARER SETUP message before the UE configures the radio bearer according to the previous RADIO BEARER SETUP message, the UE shall ignore the new RADIO BEARER SETUP message and configure according to the previous RADIO BEARER SETUP message. Finally, the UE shall transmit RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.24.3 Test purpose

To confirm that if the UE receives a new RADIO BEARER SETUP message before the UE configures the radio bearer according to a previous RADIO BEARER SETUP message, it ignore the new RADIO BEARER SETUP message and configures according to the previous RADIO BEARER SETUP message received.

8.2.1.24.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH_DCH(state 6-7) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. SS transmits a RADIO BEARER SETUP message to the UE before the UE configures the radio bearer according to the RADIO BEARER SETUP message prior to this new message. The UE ignores the new RADIO BEARER SETUP message and configures according to the former RADIO BEARER SETUP message. On completion of radio bearer configuration, the UE shall transmit RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←—	RADIO BEARER SETUP	Message includes IE "PRACH info (for RACH)"
2		←—	RADIO BEARER SETUP	SS send this message before the expiry of activation time specified in RADIO BEARER SETUP message of step 1.
3		—→	RADIO BEARER SETUP COMPLETE	The UE ignores the RADIO BEARER SETUP message in step 2 and confirms configuration according to the RADIO BEARER SETUP message in step 1.

Specific Message Contents

RADIO BEARER SETUP (Step 1)

For this message, use the message sub-type entitled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A. Information element(s) to be changed are listed below:

8.2.1.26.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH_FACH(state 6-8) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. SS transmits a RADIO BEARER SETUP message to the UE before the UE configures the radio bearer according to the RADIO BEARER SETUP message prior to this new message. The UE ignores the new RADIO BEARER SETUP message and configures according to the former RADIO BEARER SETUP message. On completion of radio bearer configuration, the UE shall transmit RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	Message includes IE "PRACH info (for RACH)"
2		←	RADIO BEARER SETUP	SS send this message before the expiry of activation time specified in RADIO BEARER SETUP message of step 1.
3		→	RADIO BEARER SETUP COMPLETE	The UE ignores the second RADIO BEARER SETUP message and confirms configuration according to the first RADIO BEARER SETUP message.

Specific Message Contents

RADIO BEARER SETUP (Step 1)

For this message, use the message sub-type entitled "Packet to CELL_FACH from CELL_FACH in PS" in Annex A

RADIO BEARER SETUP (Step 2)

For this message, use the message sub-type entitled "Packet to CELL_FACH from CELL_FACH in PS" in Annex A.

8.2.1.26.5 Test requirement

After step 3 the UE shall communicate with the SS on the radio bearer specified in the RADIO BEARER SETUP message in step 1.

8.2.2 Radio Bearer Reconfiguration

8.2.2.1 Radio Bearer Reconfiguration (Hard handover) from CELL_DCH to CELL_DCH: Success

8.2.2.1.1 Definition

8.2.2.1.2 Conformance requirement

The UE shall correctly reconfigure a radio bearer and L1 according to the RADIO BEARER RECONFIGURATION message, which specifies a hard handover to another radio frequency. After executing the reconfiguration, the UE shall be able to communicate with the UTRAN on the newly ~~configred~~configured radio bearer.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.1.3 Test purpose

To confirm that the UE reconfigures a new radio bearer by following a RADIO BEARER RECONFIGURATION message, which indicates a hard handover to another radio frequency.

8.2.2.1.4 Method of test

Initial Condition

System Simulator: 2 cells – cell 1 and cell 6 are active. The CPICH_Ec/No and CPICH RSCP of cell 4 are improved to –15dB and –70dBm respectively. The $Q_{rxlevmin}$ and $Q_{rxqualmin}$ values in SYSTEM INFORMATION BLOCK TYPE 3 and 4 messages of cell 6 is changed to –90dBm and –20dB respectively

UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-11) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which commands that hard handover to cell 6 be performed. The UE reconfigures the new physical channel parameters and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RECONFIGURATION	Hard handover to cell 6,
2				UE shall suspend all uplink transmissions to cell 1 and shall commence the reconfiguration of the affected physical channel parameters to that of cell 6.
3	→		RADIO BEARER RECONFIGURATION COMPLETE	

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type titled “Packet to CELL_DCH from CELL_DCH in PS“ in Annex A, with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	Same uplink UARFCN as used for cell 6
- UARFCN downlink(Nd)	Same downlink UARFCN as used for cell 6
Downlink information for each radio links	Same downlink UARFCN as used for cell 6
- Primary CPICH info	
- Primary Scrambling Code	350

8.2.2.1.5 Test requirement

After step 1 the UE shall reconfigure the radio links with the SS.

After step 3 the UE shall change its physical channel configuration and communicate with the SS on the DCCH and DTCH of cell 6.

8.2.2.2 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.2.2.1 Definition

8.2.2.2.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message which includes unsupported configuration parameters and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE "failure cause

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.2.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RECONFIGURATION message includes unsupported configuration parameters.

8.2.2.2.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-7) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes unsupported configuration parameters for the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Including unsupported configuration by the UE
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the radio bearer.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_DCH in PS" as found in Annex~~to those in the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	 63984. Not Present

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	"RADIO BEARER RECONFIGURATION FAILURE" Configuration unacceptable Not checked

8.2.2.2.5 Test requirement

After step 2 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with the value "configuration unacceptable" set in IE "failure cause".

8.2.2.3 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

8.2.2.3.1 Definition

8.2.2.3.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel by received RADIO BEARER RECONFIGURATION ~~massage~~message and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.3.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer according to the RADIO BEARER RECONFIGURATION message received previously.

8.2.2.3.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-7) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the new radio bearer parameters but it does not reconfigure L1 according to the settings found in the message. The UE shall revert to the old configuration. Then the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting value "physical channel failure" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2				SS does not reconfigure L1 parameters to reflect the radio bearer reconfigurations specified in the message.
3		→	RADIO BEARER RECONFIGURATION FAILURE	The UE shall detect a failure to reconfigure the new radio bearer, and send this message using the old radio bearer ~~conflguration~~configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as “Packet to CELL_DCH from CELL_DCH in PS“ as found in Annex A.

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	“RADIO BEARER RECONFIGURATION FAILURE”
Failure cause	Physical channel failure
Other information element	Not checked

8.~~.~~2.2.3.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC setting value “physical channel failure” in IE ”~~-~~failure cause”.

8.~~.~~2.2.4 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH~~-~~: Failure (Physical channel failure and reversion failure)

8.2.2.4.1 ~~————————~~Definition

8.~~.~~2.2.4.2 Conformance requirement

~~-~~The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer reconfiguration procedure.

Reference

3GPP TS 25.331~~-~~ clause 8.2.2

8.~~.~~2.2.4.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot reconfigure the new radio bearer, and a subsequent failure to revert to the old configuration.

8.~~.~~2.2.4.4 Method of test

Initial Condition

System Simulator~~-~~: 2 cells - Cell 1 is active, Cell 2 is inactive

UE-: PS-DCCH+DTCH~~CELL~~_DCH(state 6-7) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_DCH state in a cell 1. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes the new radio bearer parameters. The SS does not reconfigure L1 in accordance to the settings in the message and delete all radio bearer related contexts in cell 1. At the same time, SS begins to broadcast the BCCH in a cell 2. The UE discovers that it cannot reconfigure the new radio bearer and wants to revert to the old configuration. The UE shall find cell 2 and transmit to it an RRC CONNECTION RE-ESTABLISHMENT REQUEST message ~~-~~which includes the IE_"U-RNTI" on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message which specifies a new TFCS according to the new transport channel allocated. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2				The SS does not reconfigure the new radio bearer and delete the old configuration in cell 1.
3				The UE fails to reconfigure a new radio bearer.
4		←	BCCH	The SS transmits a BCCH in a cell 2 and delete the old radio bearer.
5		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE finds cell ~~-~~2 and transmits this message which includes the IE_"U-RNTI" it was previously assigned.
6		←	RRC CONNECTION RE-ESTABLISHMENT	This message includes a new TFCS according to the new transport channel indicated in RRC CONNECTION RE-ESTABLISHMENT message.
7		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as “Packet to CELL_DCH from CELL_DCH in PS“ as found in Annex.~~None~~

8.~~-~~2.2.4.5 Test requirement

After step 4 the UE shall detect the presence of cell ~~-~~2, enters CELL_FACH state, and transmit RRC CONNECTION RE-ESTABLISHMENT to attempt to keep the current RRC connection.

After step 7 the UE shall successfully re-establish an RRC connection.

8.~~-~~2.2.5 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.2.5.1 ~~————————~~Definition

8.2.2.5.2 Conformance requirement

If the UE is configuring itself after receiving a radio bearer message other than RADIO BEARER RECONFIGURATION message, and when the UE subsequently receive a RADIO BEARER RECONFIGURATION message, the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE

message on the DCCH using AM RLC which is set to “Incompatible simultaneous reconfiguration” in IE ”failure cause”.

~~The UE shall keep its old configuration when the UE receives another RADIO BEARER RECONFIGURATION message before the UE can configure the radio bearer according to an earlier RADIO BEARER RECONFIGURATION message. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC setting “Incompatible simultaneous reconfiguration” in IE”failure cause”.~~

Reference

3GPP TS 25.331 clause 8.2.2

8.2.5.3 Test purpose

To confirm that the UE keeps its configuration and transmits an RADIO BEARER RECONFIGURATION FAILURE message when the UE receives ~~another~~ A RADIO BEARER RECONFIGURATION message before the UE can complete the configuration of the radio bearer indicated in an earlier ~~RADIO BEARER RECONFIGURATION~~ message.

8.2.5.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-7) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a RADIO BEARER RECONFIGURATION message to the UE before the UE configures the requested radio bearer(s), the UE keeps the old configuration and transmits an RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC. This message shall set value “Incompatible simultaneous reconfiguration” in IE ”failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER ~~RECONFIGURATION~~SETUP	Including IE ”Uplink DPCH info”
2		←	~~RADIO BEARER~~RADIO BEARER RECONFIGURATION	Sent before the “activation time” in step 1 has elapsed
3		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER ~~RECONFIGURATION~~ SETUP (Step 1)

~~The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:~~For RADIO BEARER SETUP in step 1, use the message sub-type indicated as “Packet to CELL_DCH from CELL_DCH in PS” found in Annex A.

~~Information Element~~	~~Value/remark~~
~~Activation Time~~	~~Current CFN [current CFN mod 8 + 8]~~

RADIO BEARER RECONFIGURATION (Step 2)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions as “Packet to CELL_DCH from CELL_DCH in PS” found in Annex A with following exceptions:

Information Element	Value/remark
Activation Time	Not Present.

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.2.5.5 Test requirement

After step 2 the UE shall keep its configuration and transmit an RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which contains the value "Incompatible simultaneous reconfiguration" set in IE "failure cause".

8.2.2.6 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Invalid message reception)

8.2.2.6.1 Definition

8.2.2.6.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message, which includes the spare value in the mandatory IE "DRX indicator" having criticality defined as "Reject". The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message which is set to "protocol error" in IE "failure cause" and is set to "Information element value not comprehended" in IE " Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.6.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGRATION FAILURE message on the DCCH using AM RLC, if it receives a RADIO BEARER RECONFIGURATION message containing a spare value in the mandatory IE "DRX indicator" with criticality defined as "Reject".

8.2.2.6.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-7) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the spare value in the mandatory IE "DRX indicator" which criticality is defined as "Reject". The UE keeps the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "protocol error" in IE "failure cause" and is set to "Information element value not comprehended" in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RECONFIGURATION	The message contains ~~a~~an illegal error in a mandatory IE.
2	→		RADIO BEARER RECONFIGRATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGRATION message in this test case is identical as "Packet to CELL_DCH from CELL_DCH in PS" found in Annex A with following exceptions~~to the corresponding message found in the default contents of layer 3 messages for RRC tests~~, with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.2.6.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGRATION FAILURE message on the DCCH using AM RLC stating the reason "protocol error" in IE "~~failure cause~~". The message shall contain the value "Information element value not comprehended" in IE "~~Protocol error cause~~".

8.2.2.7 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH~~:~~ Failure (Suspension of signalling bearer)

8.2.2.7.1 ~~————————~~Definition

8.2.2.7.2 Conformance requirement

The UE shall revert to the old configuration prior to the reception of RADIO BEARER RECONFIGURATION message, which includes IE "RB suspend/resume" specified as "Suspend", and transmit a RADIO BEARER RECONFIGURATION FAILURE message to UTRAN

Reference

3GPP TS 25.331 ~~clause~~ 8.2.2

8.2.2.7.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer according to a ~~RADIO BEARER RECONFIGURATION~~ message.

8.2.2.7.4 Method of test

Initial Condition

System Simulator-: 1 cell

UE-: PS-DCCH+DTCH~~CELL~~_DCH(state 6-7) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE ~~-~~which specifies the suspension of a signalling radio bearer to be reconfigured. The UE shall revert to the old configuration. Then the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with the IE_"~~-~~failure cause" set to "configuration unacceptable".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RECONFIGURATION	Specifies a signalling radio bearer to be suspended.
2	→		RADIO BEARER RECONFIGURATION FAILURE	The UE shall revert to the old configuration

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_DCH in PS" found in Annex A ~~to those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
RB information to reconfigure list RB information to reconfigure l -RB identity -RB suspend/resume	 3 "Suspend"

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	"RADIO BEARER RECONFIGURATION FAILURE" Configuration unacceptable Not checked

8.2.2.7.5 Test requirement

After step_2 the UE shall revert to the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC specifying the reason "configuration unacceptable~~-~~" in IE_"~~-~~failure cause".

8.2.2.8 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Success

8.2.2.8.1 ~~———————~~Definition

8.2.2.8.2 Conformance requirement

The UE shall correctly reconfigure a radio bearer according to a RADIO BEARER RECONFIGURATION message which is communicate with the UTRAN on the new radio bearer in case of a transition from CELL_DCH to CELL_FACH in the same cell.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.8.3 Test purpose

To confirm that the UE establishes the reconfigured radio bearer(s) using common physical channel, after a RADIO BEARER RECONFIGURATION message has been received from the SS.

8.2.2.8.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes the new radio bearer parameters and sets up L1 including the start of tx/rx. The UE reconfigures the new radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	**SS**		
1	←		RADIO BEARER RECONFIGURATION	
2				Reconfiguration of radio bearer
3	→		RADIO BEARER RECONFIGURATION COMPLETE	

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled “Packet to CELL_DCH from CELL_FACH in PS” in Annex A.

8.2.2.8.5 Test requirement

After step 1 the UE shall reconfigure the radio links with the SS.

After step 3 the UE shall change its radio bearer configuration and communicate with the SS on the DCCH and DTCH, using the common physical channel allocated in RADIO BEARER RECONFIGURTION message.

~~8.2.2.9 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)~~

~~8.2.2.9.1 Definition~~

~~8.2.2.9.2 Conformance requirement~~

~~The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message which includes unsupported configuration parameters and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE “failure cause~~

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.9.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RECONFIGURATION message indicates an unsupported configuration parameters.

8.2.2.9.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : PS-DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes unsupported configuration parameters for the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE " failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RECONFIGURATION	Including unsupported configuration by the UE
2	→		RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the radio bearer.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_FACH from CELL_DCH in PS" found in Annex A to the corresponding message found in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	 63984. Not Present

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	"RADIO BEARER RECONFIGURATION FAILURE" Configuration unacceptable Not checked

8.2.2.9.5 Test requirement

After step 2 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, stating the reason "configuration unacceptable" in IE " failure cause".

8.2.2.~~10~~9 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Failure (Physical channel failure~~-~~)

8.2.2.~~10~~9.1 ~~————————~~Definition

8.2.2.~~10~~9.2 Conformance requirement

The UE shall initiate the cell reselection procedure when the UE cannot use the assigned physical channel according to a RADIO BEARER CHANNEL RECONFIGURATION message, during the transition from CELL_DCH to CELL_FACH.

Reference

3GPP TS 25.331 ~~-~~clause 8.2.2

8.2.2.~~10~~9.3 Test purpose

To confirm that the UE initiate a cell reselection after encountering a physical channel failure, when attempting to transit from CELL_DCH to CELL_FACH state during the execution of radio bearer reconfiguration procedure. The UE is first instructed to select the cell implied in the RADIO BEARER RECONFIGURATION message, but discover a failure as the indicated cell is not present.

8.2.2.~~10~~9.4 Method of test

Initial Condition

System Simulator~~-~~: 2 cells – Cell 1 is active and cell 2 is inactive

UE~~-~~: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. SS starts to transmit the BCCH for cell 2, but with a power level lower that of cell 1. Following this, the SS send a RADIO BEARER RECONFIGURATION message to the UE, which includes relevant information about the target cell's P-CPICH. SS selects an unused primary scrambling code for P-CPICH, which neither matches the code used by cell 1 nor cell 2. This should lead to the detection of a physical channel failure in the UE. The UE shall trigger a cell reselection and initiate a cell update procedure if it is able to access cell 2. When SS receives a CELL UPDATE message in cell 2 on uplink CCCH, it replies with CELL UPDATE CONFIRM message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				SS begin to broadcast the BCCH data in cell 2, but with a power level lower than in cell 1.
2	←		RADIO BEARER RECONFIGURATION	The message includes IE "Primary CPICH Info" and set the IE "Primary Scrambling Code" to an unknown value (not used by cell 1 or cell 2).
3				UE shall detect a "physical channel failure" condition and then trigger a cell reselection procedure.
4	→		CELL UPDATE	After successfully camping onto cell 2, UE shall initiate a cell update procedure. The updating cause shall be set to "cell reselection"
5	←		CELL UPDATE CONFIRM	Contains cell

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_FACH from CELL_DCH in PS" found in Annex A ~~to those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Downlink information for each radio link - Primary CPICH Info - Primary Scrambling Code	 Set to an unused code different from the 3 cells defined.

CELL UPDATE

Information Element	Value/remark
U-RNTI Cell Update Cause	The assigned U-RNTI indicated In RRC CONNECTION SETUP message Cell Reselection

8.2.2.~~10~~9.5 Test requirement

After step 3, the UE shall discover the presence of cell 2, enter CELL_FACH and then perform a cell updating procedure by the transmission of CELL UPDATE using RLC-TM mode on CCCH. The UE shall transit to CELL_PCH state to monitor the PCCH channel after the reception of CELL UPDATE CONFIRM message.

~~8.2.2.11 Radio Bearer Reconfigure from CELL_DCH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)~~

~~8.2.2.11.1 Definition~~

~~8.2.2.11.2 Conformance requirement~~

~~If the UE is configuring itself after receiving a message, and when the UE subsequently receive a RADIO BEARER message,the The UE shall keep its old configuration when the UE receives another RADIO BEARER RECONFIGURATION message before it completes the re-configuring the radio bearer according to an earlier RADIO BEARER RECONFIGURATION message. The UE shall transmit an RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "incompatible simultaneous reconfiguration" in IE"failure cause".~~

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.11.3 Test purpose

To confirm that the UE keeps its current radio bearer configurations and transmits an RADIO BEARER RECONFIGURATION FAILURE message when the UE receives another RADIO BEARER RECONFIGURATION message before it is able to complete an earlier reconfiguration request.

8.2.2.11.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : PS-DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a RADIO BEARER RECONFIGURATION message to the UE before the UE configures the radio bearer the UE keeps the old configuration and transmits an RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Including IE "Uplink DPCH info"
2		←	RADIO BEARER RECONFIGURATION	
3		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

The contents of RADIO BEARER RECONFIGURATION messages in this test case is identical to the corresponding message found in the default contents of layer 3 messages for RRC tests with the following exceptions:

RADIO BEARER RECONFIGURATION (Step 1)DFA

Information Element	Value/remark
Activation Time	Current CFN [current CFN mod 8 + 8]

RADIO BEARER RECONFIGURATION (Step 2)as "Packet to CELL_FACH from CELL_DCH in PS" found in Annex A the corresponding message found in the default contents of layer 3 messages for RRC tests

Information Element	Value/remark
Activation Time	Not Present

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RRC STATUS"
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.2.11.5 Test requirement

After step 2 the UE shall keep its exiting radio bearer configuration and transmit an RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RL, with the value "incompatible simultaneous reconfiguration" in IE "failure cause".

8.2.2.12 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Failure (Invalid message reception)

8.2.2.12.1 Definition

8.2.2.12.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message which includes the spare value in the mandatory IE " DRX indicator", possessing a criticality level defined as "Reject". It shall transmit a RADIO BEARER RECONFIGURATION FAILURE message which is set to "protocol error" in IE " failure cause" and is also set to "Information element value not comprehended" in IE " Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.12.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGRATION FAILURE message on the DCCH using AM RLC to respond to an earlier RADIO BEARER RECONFIGURATION message, which applies a spare value in the mandatory IE " DRX indicator" having criticality defined as "Reject".

8.2.2.12.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : PS-DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes a spare value in the mandatory IE " DRX indicator". The UE keeps the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "protocol error" in IE " failure cause" and setting "Information element value not comprehended" in IE " Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RECONFIGURATION	
2	→		RADIO BEARER RECONFIGRATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGRATION message in this test case is identical as "Packet to CELL_FACH from CELL_DCH in PS" found in Annex A to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.2.12.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGRATION FAILURE message on the DCCH using AM RLC with "protocol error" specified in IE " failure cause" and also "Information element value not comprehended" specified in IE " Protocol error cause".

8.2.2.13 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Failure (Suspension of signalling bearer)

8.2.2.13.1 Definition

8.2.2.13.2 Conformance requirement

The UE shall revert to the configuration prior to the reception of the RADIO BEARER RECONFIGURATION message which indicates suspension for an existing signalling radio bearer in IE "RB suspend/resume". It shall transmit a RADIO BEARER RECONFIGURATION FAILURE message to UTRAN

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.13.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE receives RADIO BEARER RECONFIGURATION message asking for the suspension of an existing signalling radio bearer.

8.2.2.13.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : PS-DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the IE "RB suspend/resume" set to "Suspend" for one signalling radio bearer. The UE shall revert to the old configuration. Then the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE " failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	The message requests for the suspension of a current available signalling radio bearer
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE shall revert to the old configuration

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_FACH from CELL_DCH in PS" found in Annex A to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
RB information to reconfigure list RB information to reconfigure I -RB Identity -RB suspend/resume	 3 "Suspend"

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	"RADIO BEARER RECONFIGURATION FAILURE" configuration unacceptable Not checked

8.2.2.13.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC specifying "configuration unacceptable " in IE " failure cause".

8.2.2.1410 Radio Bearer Reconfiguration: from CELL_FACH to CELL_DCH: Success

8.2.2.1410.1 Definition

8.2.2.1410.2 Conformance requirement

The UE shall correctly reconfigure a radio bearer according to a RADIO BEARER RECONFIGURATION message which is communicate with the UTRAN on the new radio bearer in case of a transition from CELL_FACH to CELL_DCH in the same cell.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.1410.3 Test purpose

To confirm that the UE establishes a new radio bearer by following a RADIO BEARER RECONFIGURATION message received from the SS.

8.2.2.1410.4 Method of test

Initial Condition

System Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the new radio bearer parameters and sets up L1 including the start of tx/rx. The UE reconfigures the new radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RECONFIGURATION	This message includes IE "Uplink DPCH Info"
2				Reconfiguration of radio bearer
3	→		RADIO BEARER RECONFIGURATION COMPLETE	

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL_DCH~~FACH~~ from CELL_FACH~~DCH~~ in PS" in Annex A.

8.2.2.~~14~~10.5 Test requirement

After step 2 the UE shall change its radio bearer configuration and communicate with the SS on the DCCH and DTCH which are being carried by the DPCH physical channel resources.

8.2.2.~~15~~11 Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.2.~~15~~11.1 ~~———————~~Definition

8.2.2.~~15~~11.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message which includes unsupported configuration parameters and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE "failure cause

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.~~15~~11.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the RADIO BEARER RECONFIGURATION message received includes unsupported configuration parameters.

8.2.2.~~15~~11.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes unsupported configuration parameters of the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC and set "configuration unacceptable" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	The message includes an unsupported configuration for the UE
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the radio bearer.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_FACH in PS" found in Annex A ~~to those in the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	 63984 Not Present

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	 Configuration unacceptable Not checked

8.2.2.~~15~~11.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC stating "configuration unacceptable" in IE "failure cause".

8.2.2.~~16~~12 Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

8.2.2.~~16~~12.1 ~~———————~~Definition

8.2.2.~~16~~12.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel by received RADIO BEARER RECONFIGURATION ~~massage~~message and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.~~16~~12.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer according to a -RADIO BEARER RECONFIGURATION message.

8.2.2.~~16~~12.4 Method of test

Initial Condition

System Simulator-: 1 cell

UE-: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, -which includes the new radio bearer parameters and does not reconfigure L1. Therefore, the UE cannot reconfigure the new radio bearer and shall attempt to revert to the old configuration. Then the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the value "physical channel failure" in IE_"-failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2				The SS does not reconfigures L1 including the start of tx/rx
3		→	RADIO BEARER RECONFIGURATION FAILURE	The UE fails to reconfigure a new radio bearer.

Specific Message Contents

RADIO BEARER RECONFIGURATION

Use the same message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.2.~~16~~12.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "physical channel failure" in IE_"-failure cause".

8.2.2.~~17~~13 Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion failure)

8.2.2.~~17~~13.1 ~~———————~~Definition

8.2.2.~~17~~13.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer reconfiguration procedure.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.~~17~~3.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure, when the UE cannot reconfigure the new radio bearer following a failure to configure L1 parameters for the new radio bearer settings and also a reversion failure to the old configuration.

8.2.2.~~17~~13.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 is active, Cell 2 is inactive

UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes the new radio bearer parameters but does not reconfigure L1 to cater to the new radio bearer settings. The UE cannot reconfigure the new radio bearer and wants to revert to the old configuration. But the SS does not configure the old radio bearer and begins to broadcast the BCCH in a cell 2 and stops broadcasting the BCCH in cell 1. Then the UE finds a new cell 2 and transmits to it an RRC CONNECTION RE-ESTABLISHMENT REQUEST message, which includes the IE "U-RNTI" on the uplink CCCH. The SS replies with an RRC CONNECTION RE-ESTABLISHMENT message, specifying a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2				The SS does not reconfigure the new radio bearer and delete the old configuration.
3				The UE shall detect a failure to reconfigure a new radio bearer, and start to revert to old configuration.
4		←	BCCH	The SS starts to transmit the BCCH in cell 2 and delete the old radio bearer settings in cell 1.
5		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall find cell 2 and transmits this message which includes the IE "U-RNTI" it possesses.
6		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
7		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

~~None~~ RADIO BEARER RECONFIGURATION

Use the same message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.

8.2.2.~~17~~13.5 Test requirement

After step 4 the UE shall detect the presence of cell 2, enter CELL_FACH state, and attempt to perform RRC connection re-establishment procedure.

After step 7 the UE shall successfully re-establish an RRC connection, and be able to access the dedicated physical resources in cell 2.

8.2.2.~~18~~14 Radio Bearer Reconfigure from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.2.~~18~~14.1 ~~————————~~Definition

8.2.2.~~18~~4.2 Conformance requirement

If the UE is configuring itself after receiving a radio bearer message other than RADIO BEARER RECONFIGURATION message, and when the UE subsequently receive a RADIO BEARER RECONFIGURATION message, the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “Incompatible simultaneous reconfiguration” in IE ”failure cause”.

~~The UE shall keep its old configuration when the UE receives another RADIO BEARER RECONFIGURATION message before it completes the reconfiguration of the new radio bearers specified in RADIO BEARER RECONFIGURATION message. Following this, the UE shall transmit an RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with value “incompatible simultaneous reconfiguration” set in IE” failure cause”.~~

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.~~18~~14.3 Test purpose

To confirm that the UE keeps its configuration and transmits ~~an~~ a RADIO BEARER RECONFIGURATION FAILURE message when the UE receives ~~another~~ a RADIO BEARER RECONFIGURATION message before the UE configures the radio bearer according to a previous ~~RADIO BEARER RECONFIGURATION~~ message.

8.2.2.~~18~~14.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL_~~FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a RADIO BEARER RECONFIGURATION message to the UE before the completion of a radio bearer reconfiguration commanded earlier, the UE keeps the old configuration. The UE shall also transmit ~~an~~ a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “incompatible simultaneous reconfiguration” in IE ”failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER ~~RECONFIGURATION~~SETUP	Including IE "Uplink DPCH info"
2		←	RADIO BEARER RECONFIGURATION	Sent before the elapse of the "Activation Time" indicated in the previous ~~RADIO BEARER RECONFIGURATION~~ message.
3		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP (Step 1)

For RADIO BEARER SETUP in step 1, use the message sub-type indicated as "Packet to CELL_DCH from CELL_FACH in PS" found in Annex A.

RADIO BEARER RECONFIGURATION (step 2)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_DCH from CELL_FACH in PS" found in Annex A ~~to those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

RADIO BEARER RECONFIGURATION FAILURE

8.2.2.2318.1 Definition

8.2.2.2318.2 Conformance requirement

The UE shall initiate the cell reselection procedure when the UE cannot use the assigned physical channel according to a RADIO BEARER RECONFIGURATION message, during the transition from CELL_FACH to CELL_FACH in the another cell.

Reference

3GPP TS 25.331 clause25.331 clause 8.2.2

8.2.2.2318.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer according to the RADIO BEARER RECONFIGURATION message received previously.

8.2.2.2318.4 Method of test

Initial Condition

System Simulator :Simulator: 3 cells Cell 1 is active, Cell 2 is inactive, Cell 3 is inactive

UE :UE: PS-DCCH+DTCHCELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a RADIO BEARER RECONFIGURATION message, resulting in the UE to attempt to transit from CELL_FACH in cell 1 to CELL_FACH in cell 3. The UE is expected to fail to access the assigned physical channel as the SS ceases downlink transmission in cell 3. After the UE successfully camp onto cell 2, it shall initiate the cell update procedure in cell 2. The procedure completes when the SS confirms UE's cell update request.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to broadcast the BCCH in cell 2.
2		←	RADIO BEARER RECONFIGURATION	The message assigns common resources so that the UE is expected to execute a transition from CELL_FACH in cell 1 to CELL_FACH in cell 3
3				The UE shall detect a failure to use the assigned common physical channel and try to perform a cell reselection.
4		→	CELL UPDATE	The UE discover the presence of cell 2 and triggers a cell update procedure.
5		←	CELL UPDATE CONFIRM	SS sends this message so that the UE moves to CELL_PCH state.

Specific Message Contents

Use the same message sub-type titled “Packet to CELL_FACH from CELL_FACH in PS” in Annex A, with the following exceptions:

Information Element	Value/remark
Downlink information for each radio links - Primary CPICH Info - Primary ~~scrambling~~scrambling code	 200

8.2.~~23~~18.5 Test requirement

After step 3 the UE shall discover the presence of cell 2, enter CELL_FACH state, and initiate a cell update procedure in that cell.

~~8.2.2.24 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)~~

~~8.2.2.24.1 Definition~~

~~8.2.2.24.2 Conformance requirement~~

~~If the UE is configuring itself after receiving a message and when the UE subsequently receive a RADIO BEARER message,the The UE shall keep its old configuration when the UE receives another RADIO BEARER RECONFIGURATION message before the UE can configure the radio bearer according to an earlier RADIO BEARER RECONFIGURATION message. The UE shall transmit an RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC setting “incompatible simultaneous reconfiguration” in IE”failure cause”.~~

~~Reference~~

~~3GPP TS 25.331 clause25.331 clause 8.2.2~~

~~8.2.2.24.3 Test purpose~~

~~To confirm that the UE keeps its configuration and transmits an RADIO BEARER RECONFIGURATION FAILURE message when the UE receives another RADIO BEARER RECONFIGURATION message before the UE can complete the configuration of the radio bearer indicated in an earlier RADIO BEARER RECONFIGURATION message.~~

8.2.2.24.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS-DCCH+DTCHCELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a RADIO BEARER RECONFIGURATION message to the UE before the UE configures the requested radio bearer(s), the UE keeps the old configuration and transmits an RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC. This message shall set value "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Including IE "Uplink DPCH info"
2		←	RADIO BEARER RECONFIGURATION	Sent before the "Aactivation time" in step 1 has elapsed
3		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_FACH from CELL_FACH in PS" found in Annex A to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

RC STATUS

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.2.24.5 Test requirement

After step 2 the UE shall keep its configuration and transmit ana RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which contains the value "incompatible simultaneous reconfiguration" set in IE "failure cause".

8.2.2.25 Radio Bearer ReconfigurationBearer Reconfiguration from CELL_FACH to CELL_FACH: Failure (Invalid message reception)

8.2.2.25.1 Definition

8.2.2.25.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message, which includes the spare value in the mandatory IE " DRX indicator" having criticality defined as "Reject". The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message which is set to "protocol error" in IE " failure cause" and is set to "Information element value not comprehended" in IE " Protocol error cause".

Reference

3GPP TS 25.331 clause25.331 clause 8.2.2

8.2.2.25.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGRATION FAILURERECONFIGRATION FAILURE message on the DCCH using AM RLC, if it receives a RADIO BEARER RECONFIGURATION messageRECONFIGURATION message containing a spare value in the mandatory IE " DRX indicator" with criticality defined as "Reject".

8..2.2.25.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS-DCCH+DTCHCELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the spare value in the mandatory IE " DRX indicator" which criticality is defined as "Reject". The UE keeps the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "protocol error" in IE " failure cause" and is set to "Information element value not comprehended" in IE " Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	The message contains aan illegal error in a mandatory IE.
2		→	RADIO BEARER RECONFIGRATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGRATION message in this test case is identical as "Packet to CELL_FACH from CELL_FACH in PS" found in Annex Ato the corresponding message found in the default contents of layer 3 messages for RRC tests, with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.2.25.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGRATION FAILURERECONFIGRATION FAILURE message on the DCCH using AM RLC stating the reason "protocol error" in IE " failure cause". The message shall contain the value "Information element value not comprehended" in IE " Protocol error cause".

8.2.2.26 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH :FailureFACH: Failure (Suspension of signalling bearer)

8.2.2.26.1 Definition

8.2.2.26.2 Conformance requirement

The UE shall revert to the old configuration prior to the reception of RADIO BEARER RECONFIGURATION message, which includes IE "RB suspend/resume" specified as "Suspend", and transmit a RADIO BEARER RECONFIGURATION FAILURE message to UTRAN

Reference

3GPP TS 25.331 clause25.331 clause 8.2.2

8.2.2.26.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer according to a RADIOa RADIO BEARER RECONFIGURATION message.

8.2.2.26.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: CELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE whichUE which specifies the suspension of a signalling radio bearer to be reconfigured. The UE shall revert to the old configuration. Then the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with the IE " failure cause" set to "configuration unacceptable".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RECONFIGURATION	Specifies a signalling radio bearer to be suspended.
2	→		RADIO BEARER RECONFIGURATION FAILURE	The UE shall revert to the old configuration

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL_FACH from CELL_FACH in PS" found in Annex A to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
RB information to reconfigure list	
RB information to reconfigure l	
RB identity	3
RB suspend/resume	"Suspend"

RADIO BEARER RECONFIGURATION FAILURE

~~Information Element~~	~~Value/remark~~
~~Message Type~~ ~~Failure cause~~ ~~Other information element~~	~~"RADIO BEARER RECONFIGURATION FAILURE"~~ ~~Configuration unacceptable~~ ~~Not checked~~

~~8.2.2.26.5 Test requirement~~

~~After step 2 the UE shall revert to the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC specifying the reason "configuration unacceptable " in IE " failure cause".~~

8.2.2.19 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Subsequently received)

8.2.2.19.1 ~~Definition~~

8.2.2.19.2 Conformance requirement

If the UE receives a RADIO BEARER RECONFIGURATION message before the UE configures the radio bearer according to the previous RADIO BEARER RECONFIGURATION message, the UE shall ignore the new RADIO BEARER RECONFIGURATION message and configure according to the previous RADIO BEARER RECONFIGURATION message. Finally, the UE shall transmit RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.2

8.2.2.19.3 Test purpose

If the UE receives another RADIO BEARER RECONFIGURATION message before the UE configures the radio bearer according to a previous RADIO BEARER RECONFIGURATION message, the UE shall ignore the new RADIO BEARER RECONFIGURATION message and configure according to the previous RADIO BEARER RECONFIGURATION message. Finally, the UE shall transmit RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

8.2.2.19.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. SS transmits a RADIO BEARER RECONFIGURATION message to the UE before the UE configures the radio bearer according to the RADIO BEARER RECONFIGURATION message prior to this new message. The UE ignores the new RADIO BEARER RECONFIGURATION message and configures according to the former RADIO BEARER RECONFIGURATION message. On completion of radio bearer configuration, the UE shall transmit RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Including IE "Uplink DPCH info"
2		←	RADIO BEARER RECONFIGURATION	Sent before the "activation time" in step 1 has elapsed
3		→	RADIO BEARER RECONFIGURATION COMPLETE	The UE ignores the RADIO BEARER RECONFIGURATION message in step 2 and confirms configuration according to the RADIO BEARER RECONFIGURATION message in step 1.

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical ~~to~~ as "Packet to CELL_DCH from CELL_DCH in PS" found in Annex A~~those in the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Activation Time	[256+Current CFN-[current CFN mod 8 + 8]]MOD 256

8.2.2.19.5 Test requirement

After step 3 the UE shall communicate with the SS on the radio bearer specified in the RADIO BEARER RECONFIGURATION message in step 1.

~~8.2.2.30.5 Test requirement~~

~~After step 3 the UE shall communicate with the SS on the radio bearer specified in the RADIO BEARER RECONFIGURATION message in step 1.~~

8.2.3 Radio Bearer Release

8.2.3.1 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success

8.2.3.1.1 ~~———————~~Definition

8.2.3.1.2 Conformance requirement

The UE shall correctly release a radio bearer according to a RADIO BEARER RELEASE message.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.1.3 Test purpose

To confirm that the UE release the existing radio bearer according to a RADIO BEARER RELEASE message received from the SS.

8.2.3.1.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: CS-DCCH+DTCH~~CELL~~ _DCH(state 6-9) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE release the radio bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RELEASE	
2				Release the radio bearer
3	→		RADIO BEARER RELEASE COMPLETE	

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message are indicated as "Speech in CS" found in default message content clause 9 of TS 34.108.

~~None~~

8.2.3.1.5 Test requirement

After step 1 the UE shall release its radio bearers.

After step 3 the UE shall stop communicating on the released radio bearers, no uplink transmission shall be observed originating from the released link. The remaining radio bearers shall continue to be operational.

8.2.3.2 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.3.2.1 ~~————————~~Definition

8.2.3.2.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message which ~~includes unsupported~~includes unsupported configuration parameters and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting value “configuration unacceptable” in IE ”~~-~~failure cause”.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.2.3 Test purpose

To confirm that the UE keeps its current configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, if the received RADIO BEARER RELEASE message indicates an unsupported configuration parameters for the UE.

8.2.3.2.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: CS-DCCH+DTCH~~CELL~~ _DCH(state 6-9) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELAESE message to the UE specifying a frequency which is not supported by the UE. The UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC indicating “configuration unacceptable” in IE ”~~-~~failure cause”~~.~~.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RELEASE	Including unsupported configuration by the UE
2	→		RADIO BEARER RELAESE FAILURE	The UE does not change the radio bearer.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical as “Speech in CS” found in default message content clause 9 of TS 34.108 ~~to those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	 63984 Not Present

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	 Configuration unacceptable Not checked

8.2.3.2.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC with ~~the IE~~the IE ”~~-~~failure cause” set to “configuration unacceptable”. The UE shall able to continue receiving and sending user data.

8.2.3.3 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

8.2.3.3.1 ~~————————~~Definition

8.2.3.3.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to configure the new radio bearer by timer T312 expiry and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to “physical channel failure” in IE ”~~-~~failure cause”.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.3.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the UE fails to release the radio bearer according to ~~a RADIO~~a RADIO BEARER RELEASE message by timer T312 expiry.

8.2.3.3.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: CS-DCCH+DTCH~~CELL~~ DCH(state 6-9) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message but it does not configure L1 correspondingly. This causes the UE to fail to release the radio bearer, and after T312 expiry the UE reverts to the old configuration. The UE then transmits a RADIO BEARER ~~RELEASE FAILURE~~RELEASE FAILURE message on the DCCH using AM RLC which specifies “~~-~~physical channel failure” in IE ”~~-~~failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2				The SS does not configure L1 to reflect the release of the indicated bearer.
3		→	RADIO BEARER RELEASE FAILURE	After T312 expiry, the UE finds that it fails to release a radio bearer and reverts to the old configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical as “Speech in CS” found in default message content clause 9 of TS 34.108

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.3.3.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which includes the value “physical channel failure” in IE ”failure cause”.

8.2.3.4 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure(Physical channel failure and reversion failure)

8.2.3.4.1 Definition

8.2.3.4.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer release procedure.

Reference

3GPP TS 25.331 clause 25.331 clause 8.2.3

8.2.3.4.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot revert to the old configuration after encountering a physical channel failure during the execution of a radio bearer release procedure.

8.2.3.4.4 Method of test

Initial Condition

System Simulator :Simulator: 2 cells - Cell 1 is active, Cell.2 is inactive

UE :UE: CS-DCCH+DTCHCELL_DCH(state 6-9) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS begins to broadcast the BCCH in cell 2 with a lower power level than for cell 1. At the same time, it transmits a RADIO BEARER RELAESE message to the UE but does not configure L1. As a result, the UE fails to release the radio bearer properly and tries to revert to the old configuration after T312 expiry. But the SS ~~deletes the~~deletes the old radio bearer so the UE shall find the availability of cell 2 and transmits to it an RRC CONNECTION RE-ESTABLISHMENT REQUEST message~~, which~~, which includes the IE "U-RNTI" and sent on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message, which includes a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to transmit the BCCH for cell 2 but at a lower power level than cell 1.
2		←	RADIO BEARER RELEASE	
3				The SS does not configure L1 and deletes the old configuration. This is expected to cause the UE to fail in the release the radio bearer and can not revert to the old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall find cell 2 ~~and then~~and then transmit this message which includes the IE "U-RNTI" set to its assigned connected mode identity.
5		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

~~None.~~ RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case are identical as "Speech in CS" found in default message content clause 9 of TS 34.108.

8.2.3.4.5 Test requirement

After step 3 the UE shall find the presence of cell 2, enter CELL_FACH state, and transmits RRC CONNECTION RE-ESTABLISHMENT REQUEST message on the uplink CCCH of cell 2.

After step 6 the UE shall successfully re-establish an RRC connection, after sending RRC CONNECTION RE-RESTABLISHMENT COMPLETE message.

8.2.3.5 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.3.5.1 ~~————————~~Definition

8.2.3.5.2 Conformance requirement

If the UE is configuring itself after receiving a radio bearer message other than RADIO BEARER RELEASE message, and when the UE subsequently receive a RADIO BEARER RELEASE message the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to "Incompatible simultaneous reconfiguration" in IE "failure cause".

~~The UE shall keep its old configuration when the UE receives another RADIO BEARER RELEASE message before the UE is able to release the indicated radio bearer according to a RADIO BEARER RELEASE message. The UE shall transmit an RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to "incompatible simultaneous reconfiguration" in IE"failure cause".~~

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.5.3 Test purpose

To confirm that the UE keeps its configuration when the UE receives ~~another~~ A RADIO BEARER RELEASE message before the UE releases the radio bearer according to the earlier ~~RADIO BEARER RELEASE~~ message.

8.2.3.5.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ _DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. SS transmits a RADIO BEARER RELEASE message on the downlink DCCH, requesting the UE to release all radio bearers mapped to dedicated transport channels. Next, the SS transmits another RADIO BEARER RELEASE message to the UE before the UE is able to release the radio bearers requested in the earlier message. The UE shall keep the old configuration. It shall transmit ~~an~~a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO -BEARER ~~RELEASE~~SETUP	
2		←	RADIO -BEARER RELEASE	Message sent before the "A~~a~~ctivation time" indicated in the message of step 1 has elapsed.
3		→	RADIO BEARER RELEASE FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER ~~RELEASE~~ SETUP (Step 1)

The contents of RADIO BEARER SETUP ~~RELEASE~~ message in this test case is identical to the message sub-type title "Packet to CELL_~~FACH~~ DCH from CELL_DCH in PS" found in Annex A, with the following exceptions:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

RADIO BEARER RELEASE (Step 2)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_DCH in PS" found in Annex A. Information element(s) to be changed are listed below:

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.3.5.5 Test requirement

After step 2 the UE shall keep its old configuration and transmit ~~an~~a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to “incompatible simultaneous reconfiguration” in IE ”failure cause”.

8.2.3.6 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Invalid message reception)

8.2.3.6.1 ~~————————~~Definition

8.2.3.6.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message which ~~includes the~~includes the spare value in the mandatory IE ”-DRX indicator”. It shall transmit a RADIO BEARER RELEASE FAILURE message which contains value “protocol error” in IE ”-failure cause” and value “Information element value not comprehended” in IE ”-Protocol error cause”.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.6.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER RELEASE message, which uses a spare value in the mandatory IE ” DRX indicator”.

8.2.3.6.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: CS-DCCH+DTCH~~CELL~~ DCH(state 6-9) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELAESE message to the UE which includes the spare value in the mandatory IE ”-DRX indicator”. The UE keeps the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC. This message shall indicate “protocol error” in IE ”-failure cause” and also “Information element value not comprehended” in IE ”-Protocol error cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2		→	RADIO BEARER RELEASE FAILURE	The UE shall not change the configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical as "Speech in CS" found in default message content clause 9 of TS 34.108~~to that found in default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
DRX indicator	Spare value

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.3.6.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, which is set to "protocol error" in IE "~~-~~failure cause" and is set to "Information element value not comprehended" in IE "~~-~~Protocol error cause".

8.2.3.7 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success

8.2.3.7.1 ~~————————~~Definition

8.2.3.7.2 Conformance requirement

The UE shall correctly release a radio bearer according to a RADIO BEARER RELEASE message, when the common physical channel are requested to be used for the remaining radio bearers.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.7.3 Test purpose

To confirm that the UE release the existing the radio bearer according to a RADIO BEARER RELEASE message received from the SS.

8.2.3.7.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DTCH+DCCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE release the radio bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	SS releases the radio bearer in the fashion specified in the message and allocate common channel resources to carry the remaining radio bearers.
2				UE shall release radio bearers on dedicated transport channels, and reconfigure the remaining radio bearers using the given common control channel.
3		→	RADIO -BEARER RELEASE COMPLETE	UE shall be able to continue communication over the remaining radio bearers using the allocated common control channels.

Specific Message Contents

RADIO BEARER RELEASE (Step 1)

Use the same message sub-type titled “Packet to CELL_FACH from CELL_DCH in PS” in Annex A.

8.2.3.7.5 Test requirement

After step 3 the UE shall release the specified radio bearer(s) and cease any further uplink transmission from these radio bearer(s). At the same time, it shall resume the transmission or reception of data for the previously suspended radio bearers.

~~8.2.3.8 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)~~

~~8.2.3.8.1 Definition~~

~~8.2.3.8.2 Conformance requirement~~

~~The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message, which includes an unsupported configuration parameters and then transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting “configuration unacceptable” in IE “failure cause”.~~

~~Reference~~

~~3GPP TS 25.331 clause 25.331 clause 8.2.3~~

~~8.2.3.8.3 Test purpose~~

~~To confirm that the UE keeps its configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RELEASE message includes unsupported configuration parameters for the UE.~~

8.2.3.8.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS-DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELAESE message to the UE as the frequency cannot be supported by the UE. The UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC and set value "configuration unacceptable" in IE " failure cause"..

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RELEASE	The message Includes a configuration unsupported by the UE.
2	→		RADIO BEARER RELAESE FAILURE	The UE does not alter the current radio bearer configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_FACH from CELL_DCH in PS" found in Annex A those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	 63984 Not present

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	 Configuration unacceptable Not checked

8.2.3.8.5 Test requirement

After step 2 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE " failure cause".

8.2.3.98 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Failure (Physical channel failure)

8.2.3.98.1 Definition

8.2.3.98.2 Conformance requirement

The UE shall initiate the cell update procedure when the UE cannot use the assigned physical channel according to a RADIO BEARER RELEASE message as the transition from CELL_DCH to CELL_FACH.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.~~9~~8.3 Test purpose

To confirm that the UE perform a cell update ~~procedure when~~procedure when the UE cannot use the assigned physical channel according to a RADIO BEARER RELEASE message as the transition from CELL_DCH to CELL_FACH.

8.2.3.~~9~~8.4 Method of test

Initial Condition

System Simulator~~-~~: 2 cells? No.1 is active, No.2 is inactive?

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ _DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state in cell No.1. The SS begins to broadcast the BCCH in cell No.2 and transmits a RADIO BEARER RELEASE message as the transition from CELL_DCH to CELL_FACH. The UE cannot use the assigned physical channel as the SS does not transmit any data on the DL common channel in cell No.1. Then the UE initiate the cell update procedure in cell No.2.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS broadcasts BCCH in cell No.2.
2		←	RADIO BEARER RELEASE	Assigned the transition from CELL_DCH to CELL_FACH
3				The UE cannot use the assigned the physical channel.
4		→	CELL UPDATE	The UE finds a new cell?No.2? and begins a cell update procedure.
5		←	CELL UPDATE CONFIRM	In the CELL_FACH state

Specific Message Contents

RADIO BEARER RELEASE

Use the same message sub-type titled “Packet to CELL_FACH from CELL_DCH in PS” in Annex A.

~~None~~

8.2.3.~~9~~8.5 Test requirement

After step 3 the UE shall find a new cell No.2 and enter to CELL_FACH state. Then the UE shall initiate a cell update procedure in cell No.2.

~~8.2.3.10 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)~~

~~8.2.3.10.1 Definition~~

8.2.3.10.1 Conformance requirement

If the UE is configuration itself after receiving a message and when the UE subsequently receive a RADIO BEARER RELEASE messagethe The UE shall keep its old configuration when the UE receives another RADIO BEARER RELEASE message, before the UE manages to release the radio bearer specified in the RADIO BEARER RELEASE message. The UE shall transmit an RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC and set value "incompatible simultaneous reconfiguration" in IE"failure cause".

Reference

3GPP TS 25.331 clause25.331 clause 8.2.3

8.2.3.10.2 Test purpose

To confirm that the UE keeps its configuration when the UE receives another RADIO BEARER RELEASE message before the UE has completed the configuration release of the radio bearer according to a previous RADIO BEARER RELEASE message.

8.2.3.10.3 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS-DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the it UE completes the releases of the requested radio bearer, the UE keeps the old configuration. Thereafter, it transmits ana RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC and set "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2		←	RADIO BEARER RELEASE	Sent before the passing of the "activation time" indicated in RADIO BEARER RELEASE message in step 1.
3		→	RADIO BEARER RELEASE FAILURE	The UE shall not change the radio bearer configuration.

Specific Message Contents

RADIO BEARER RELEASE (Step 1)

The contents of RADIO BEARER RELEASE message in this test case is identical to those found in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time	Current CFN [current CFN mod 8 + 8]

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.3.10.4 Test requirement

After step 2 the UE shall keep its old configuration and transmit an RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting "incompatible simultaneous reconfiguration" in IE "failure cause".

8.2.3.11 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Failure (Invalid message reception)

8.2.3.11.1 Definition

8.2.3.11.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message. The message uses a spare value for the mandatory IE " DRX indicator". Upon receiving this message, the UE shall transmit a RADIO BEARER RELEASE FAILURE message containing the value "protocol error" in IE " failure cause" and also the value "Information element value not comprehended" in IE " Protocol error cause".

Reference

3GPP TS 25.331 clause25.331 clause 8.2.3

8.2.3.11.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if it receivesit receives a RADIO BEARER RELEASE message which uses a spare value in the mandatory IE " DRX indicator".

8.2.3.11.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS-DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELAESE message to the UE which indicates a spare value in the mandatory IE " DRX indicator". The UE shall keeps the old configuration and then transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC. The content of this message shall indicatesindicate "protocol error" in IE " failure cause" and also "Information element value not comprehended" in IE " Protocol error cause".

~~Expected sequence~~

~~Step~~	~~Direction~~		~~Message~~	~~Comment~~
	~~UE~~	~~SS~~		
~~1~~	~~—←~~		~~RADIO BEARER RELEASE~~	~~This message uses a spare value for a mandatory IE.~~
~~2~~	~~—→~~		~~RADIO BEARER RELEASE FAILURE~~	~~The UE does not change the configuration.~~

~~Specific Message Contents~~

~~RADIO BEARER RELEASE~~

~~The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_FACH from CELL_DCH in PS" found in Annex A those found in the default contents of layer 3 messages for RRC tests with the following exceptions:~~

~~Information Element~~	~~Value/remark~~
~~DRX indicator~~	~~Spare value~~

~~RADIO BEARER RELEASE FAILURE~~

~~Information Element~~	~~Value/remark~~

~~8.2.3.11.5 Test requirement~~

~~After step 1 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which set "protocol error" in IE " failure cause" and also set "Information element value not comprehended" in IE " Protocol error cause".~~

8.2.3.~~11~~9 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Success

8.2.3.~~11~~9.1 ~~———~~Definition

8.2.3.~~11~~9.2 Conformance requirement

The UE shall correctly release a radio bearer according to a RADIO BEARER RELEASE message.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.~~11~~9.3 Test purpose

To confirm that an UE, in state CELL_FACH, releases the radio access bearers on RACH and FACH transport channels. After the release, it shall access the affected radio bearers on the newly allocated DCH transport channel.

8.2.3.~~11~~9.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE. In this message, SS commands the UE to release radio bearers on RACH and FACH. At the same time, SS allocates DCH to support the affected radio bearers. The UE shall release the indicated radio bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2				UE shall release the radio access bearers carried by RACH and FACH transport channels.
3		→	RADIO BEARER RELEASE COMPLETE	

Specific Message Contents

RADIO BEARER RELEASE (Step 1)

Use the same message sub-type titled “Packet to CELL_DCH from CELL_FACH in PS” in Annex A.

8.2.3.~~12~~9.5 Test requirement

After step 3 the UE shall stop communicating on the released radio bearers, and resume all suspended radio bearer using the dedicated physical channel allocated.

8.2.3.~~13~~10 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.3.~~13~~10.1 ~~———————~~Definition

8.2.3.~~13~~10.2 Conformance requirement

The UE shall keep its old configuration when it receives a RADIO BEARER RELEASE message which specifies unsupported configuration parameters for the UE. Then the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which, setting value “configuration unacceptable” in IE ”~~-~~failure cause”.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.~~.~~2.3.~~13~~10.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RELEASE message requests for unsupported configuration parameters for the UE.

8.2.3.~~13~~10.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ _FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELAESE message to the UE, referring to a frequency which cannot be supported by the UE. The UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC and set "configuration unacceptable" in IE " failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RELEASE	The message contains a configuration not supported by the UE
2	→		RADIO BEARER RELAESE FAILURE	The UE shall not change the radio bearer configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in Annex A ~~those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	 63984 Not Present

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	 Configuration unacceptable Not checked

8.2.3.~~13~~10.5 Test requirement

After step 2 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, stating the reason "configuration unacceptable" in IE "failure cause".

8.2.3.~~14~~11 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

8.2.3.~~14~~11.1 ~~Definition~~

8.2.3.~~14~~11.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to configure the new radio bearer before T312 timer expiry. Then it shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" in IE "failure cause".

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.~~14~~11.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the UE fails to release the radio bearer in accordance the specified settings in RADIO BEARER RELEASE message by T312 timer expiry.

8.2.3.~~14~~11.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message and does not configure L1. The UE is expected to encounter a failure while releasing the radio bearer. After T312 timer expiry, the UE shall revert to the old radio bearer configuration, so the UE transmits a RADIO BEARER ~~RELEASE FAILURE~~RELEASE FAILURE message on the DCCH using AM RLC which is set to "~~-~~physical channel failure" in IE_"~~-~~failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RELEASE	
2				The SS does not configure L1.
3	→		RADIO BEARER RELEASE FAILURE	After T312 expiry the UE fails to release a radio bearer and reverts to the old configuration.

Specific Message Contents

RADIO BEARER RELEASE

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.3.~~14~~11.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" in IE_"~~-~~failure cause".

8.2.3.~~15~~12 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure(Physical channel failure and reversion failure)

8.2.3.~~15~~12.1 ~~————————~~Definition

8.2.3.~~15~~2.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer release procedure.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.~~15~~12.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot revert to the old configuration, following a physical channel failure during the radio bearer release.

8.2.3.~~15~~12.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 2 cells - Cell.1 is active, Cell 2 is inactive

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108 in cell No.1

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a RADIO BEARER RELAESE message to the UE, but it does not configure L1. This is expected to cause the UE to experience a failure to release the radio bearer and it subsequently tries to revert to the old configuration after T312 expiry. The SS ~~deletes the~~deletes the old radio bearer, so the UE shall find cell 2 and transmits to it an RRC CONNECTION RE-ESTABLISHMENT REQUEST message~~, which~~, which includes the IE "U-RNTI" on the uplink CCCH. After receiving this message, the SS transmits an RRC CONNECTION RE-ESTABLISHMENT message which includes a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to transmit the BCCH in a cell 2.
2		←	RADIO BEARER RELEASE	
3				The SS does not configure L1 and deletes the old configuration so the UE cannot release the radio bearer and also fails revert to the old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE finds a new cell 2 and then transmits this message which includes the IE "U-RNTI" it has been assigned to.
5		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

~~None.~~ RADIO BEARER RELEASE

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.

8.2.3.~~15~~12.5 Test requirement

After step 3 the UE shall find the presence of cell 2, enter CELL_FACH state, and transmit a RRC CONNECTION RE-ESTABLISHMENT REQUEST on the uplink CCCH.

After step 6 the UE shall successfully re-establish an RRC connection and access the dedicated physical channels assigned.

8.2.3.~~16~~13 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.3.~~16~~13.1 ~~————————~~Definition

8.2.3.~~16~~13.2 Conformance requirement

If the UE is configuring itself after receiving a radio bearer message other than RADIO BEARER RELEASE message, and when the UE subsequently receive a RADIO BEARER RELEASE message the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to "Incompatible simultaneous reconfiguration" in IE "failure cause". ~~The UE shall keep its old configuration when the UE receives another RADIO BEARER RELEASE message before the UE is able to release the radio bearer according to an earlier RADIO BEARER RELEASE message. The UE shall then transmit an RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting value "incompatible simultaneous reconfiguration" in IE"failure cause".~~

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.~~16~~3.3 Test purpose

To confirm that the UE keeps its old configuration when it receives a~~nother~~ RADIO BEARER RELEASE message before it releases the radio bearer according to an earlier ~~RADIO BEARER RELEASE~~ message.

8.2.3.~~16~~13.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the UE completes the release of the radio bearer, it shall keep the old configuration and transmit an RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC. This message shall specify the reason "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER ~~RELEASE~~SETUP	The UE receive any message other than RADIO BEARER RELEASE. (e.g. RADIO BEARER SETUP)
2		←	RADIO BEARER RELEASE	Sent before the expiry stated in IE "Activation Time" of ~~RADIO BEARER RELEASE~~ message in step 1.
3		→	RADIO BEARER RELEASE FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP (Step 1)

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in Annex A. Information element(s) to be changed are listed below:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

RADIO BEARER RELEASE (Step ~~1~~2)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title “Packet to CELL_DCH from CELL_FACH in PS” found in Annex A ~~those found in default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.3.~~16~~13.5 Test requirement

After step 2 the UE shall keep its old configuration and transmit an RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, and set the value “incompatible simultaneous reconfiguration” in IE ”failure cause”.

8.2.3.~~17~~14 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Invalid message reception)

8.2.3.~~17~~14.1 ~~————————~~Definition

~~.~~

8.2.3.~~17~~14.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message which uses a spare value in the mandatory IE ”-DRX indicator”. It shall transmit a RADIO BEARER RELEASE FAILURE message which indicate the value “protocol error” in IE ”-failure cause” and setting “Information element value not comprehended” in IE ”-Protocol error cause”.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.~~17~~14.3 Test purpose

To confirm that the UE transmits RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER RELEASE message which uses a spare value in the mandatory IE ” DRX indicator”.

8.~~.~~2.3.~~17~~14.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELAESE message to the UE containing a spare value in the mandatory IE ”-DRX indicator”. The UE keeps the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, which shall

indicate the reason “protocol error” in IE ”-failure cause” and also “Information element value not comprehended” in IE ”-Protocol error cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RELEASE	
2	→		RADIO BEARER RELEASE FAILURE	The UE shall not change its current configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title “Packet to CELL_DCH from CELL_FACH in PS” found in Annex A ~~those for the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.3.~~17~~14.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting “protocol error” in IE ”-failure cause” and also indicating “Information element value not comprehended” in IE ”-Protocol error cause”.

8.2.3.~~18~~15 Radio Bearer Release for transition from CELL_FACH to CELL_FACH: Success

8.2.3.~~18~~15.1 ~~———————~~Definition

~~.~~

8.2.3.~~18~~15.2 Conformance requirement

The UE shall correctly release a radio bearer according to the RADIO BEARER RELEASE message received.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.~~18~~15.3 Test purpose

To confirm that the UE release the existing the radio bearer(s) according to the RADIO BEARER RELEASE message received from the SS.

~~3GPP TS 25.331 clause~~25.331 clause ~~8.2.3~~

~~8.2.3.19.3 Test purpose~~

~~To confirm that the UE keeps its configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, if the received RADIO BEARER RELEASE message includes unsupported configuration parameters.~~

8.2.3.19.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: CELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELAESE message to the UE specifying a frequency, which cannot be supported by the UE. The UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, indicating "configuration unacceptable" in IE_" failure cause"..

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RELEASE	Including an unsupported configuration for the UE
2	→		RADIO BEARER RELAESE FAILURE	The UE shall not change the radio bearer.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_FACH from CELL_FACH in PS" found in Annex A those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	 63984 Not Present

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	 Configuration unacceptable Not checked

8.2.3.19.5 Test requirement

After step 2 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, and set "configuration unacceptable" in IE_" failure cause".

8.2.3.20 Radio Bearer Release for transition from CELL_FACH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.3.20.1 Definition

.

8.2.3.20.2 Conformance requirement

If the UE is configuring itself after receiving a messageP and when the UE subsequently receive a RADIO BEARER RELEASE messagethe The UE shall keep its old configuration when the UE receives another RADIO BEARER RELEASE message, before the UE releases the radio bearer according to an earlier RADIO BEARER RELEASE message. The UE shall transmit an RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, indicating "incompatible simultaneous reconfiguration" in IE"failure cause".

Reference

3GPP TS 25.331 clause25.331 clause 8.2.3

8.2.3.20.3 Test purpose

To confirm that the UE keeps its configuration when it receives another RADIO BEARER RELEASE message before it manage to release the radio bearer according to a previous RADIO BEARER RELEASE message.

8.2.3.20.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS-DCCH+DTCHCELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. SS transmits a RADIO BEARER RELEASE message on the downlink DCCH, requesting the UE to release all radio access bearers established. Next, SS transmits another RADIO BEARER RELEASE message to the UE before it completes the release of the radio bearers specified in the earlier message. The UE shall keep the old configuration. It then transmits an RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		RADIO BEARER RELEASE	
2	←		RADIO BEARER RELEASE	Sent before the passing of the time indicated in "Activation Time Info" in the RADIO BEARER RELEASE message of step 1.
3	→		RADIO BEARER RELEASE FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RELEASE (Step 1)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in Annex A with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]

RADIO BEARER RELEASE (Step 2)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in Annex A.

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.3.20.5 Test requirement

After step 2 the UE shall keep its old configuration and transmit an RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, and setting "incompatible simultaneous reconfiguration" in IE "failure cause".

8.2.3.21 Radio Bearer Release for transition from CELL_FACH to CELL_FACH: Failure (Invalid message reception)

8.2.3.21.1 Definition

.

8.2.3.21.2 Conformance requirement

The UE shall keep its old configuration when it receives a RADIO BEARER RELEASE message, including a spare value in the mandatory IE " DRX indicator". It shall transmit a RADIO BEARER RELEASE FAILURE message with the cause "protocol error" in IE " failure cause" and also the cause "Information element value not comprehended" set in IE " Protocol error cause".

Reference

3GPP TS 25.331 clause25.331 clause 8.2.3

8.2.3.21.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, if it receives a RADIO BEARER RELEASE message using a spare value in the mandatory IE " DRX indicator".

8.2.3.21.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS-DCCH+DTCHCELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELAESE message to the UE which includes the use of a spare value in the mandatory IE " DRX indicator". The UE shall keep the old configuration intact and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC. The message shall state "protocol error" in IE " failure cause", and also indicate "Information element value not comprehended" in IE " Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	This message contains a mandatory IE errrorerror.
2		→	RADIO BEARER RELEASE FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL_FACH from CELL_FACH in PS" found in Annex Athose found in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.3.21.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC. This uplink message shall state the reason "protocol error" in IE "failure cause" and also indicate "Information element value not comprehended" in IE "Protocol error cause".

8.2.3.16 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (Subsequently received)

8.2.3.16.1 ~~————————~~Definition

8.2.3.16.2 Conformance requirement

If the UE receives a RADIO BEARER RELEASE message before the UE releases the radio bearer according to the previous RADIO BEARER RELEASE message, the UE shall ignore the new RADIO BEARER RELEASE message and releases according to the previous RADIO BEARER RELEASE message. Finally, the UE shall transmit RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.3

8.2.3.16.3 Test purpose

To confirm that if the UE receives a new RADIO BEARER RELEASE message before the UE releases the radio bearer according to a previous RADIO BEARER RELEASE message it ignore the new RADIO BEARER RELEASE message and configures according to the previous RADIO BEARER RELEASE message received.

8.2.3.16.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the UE releases the radio bearer, the UE ignores the second RADIO BEARER RELEASE message and releases according to the previous RADIO BEARER RELEASE message received. Finally, the UE shall transmit RADIO BEARER ~~RELEASE COMPLETE~~RELEASE COMPLETE message on the DCCH using AM RLC.

Expected sequence

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes new transport channel parameters but it does not reconfigure the new transport channel. Therefore, the UE cannot reconfigure them and have to revert to the old configuration. Then the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "physical channel failure" in IE "~~failure cause~~".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	Specifies a change in the TFS of the dedicated transport channel used.
2				The SS does not reconfigure the transport channel, leading to the UE unable to reconfigure the new transport channel.
3		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE reverts to the old configuration and transmits this message.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_DCH from CELL_DCH in PS" in Annex A.

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"TRANSPORT CHANNEL RECONFIGURATION FAILURE"
Failure cause	Physical channel failure
Other information element	Not checked

8.2.4.3.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a TRANPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, and it shall set the value "physical channel failure" in IE "~~failure cause~~".

8.2.4.4 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion failure)

8.2.4.4.1 ~~———————~~Definition

8.2.4.4.2 Conformance requirement

This procedure is used to failure of reconfiguration for a transport channel because of physical channel failure and reversion failure for the transition from CELL_FACH to CELL_FACH in the same cell.~~.~~

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.4

8.2.4.4.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot reconfigure the new transport channel due to a failure of L1 configuration, and subsequently fail to revert to the old configuration after T312 expiry.

8.2.4.4.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 2 cells – Cell 1 is active, Cell 2 is inactive

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ _DCH(state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. SS begins to broadcast the BCCH of cell 2 using a power level lower than that applied for cell 1. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE. The message specifies a new set of transport channel parameters but the SS does not reconfigure L1 correspondingly. At the same time, SS deletes its current contexts for cell 1. As a result, the UE cannot reconfigure the new transport channel and shall attempt to revert to the old configuration. The UE shall find the presence of cell 2 and then transmit an RRC CONNECTION RE-ESTABLISHMENT REQUEST ~~message which~~message which includes the IE "U-RNTI" on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message, which includes a new TFCS according to the new transport channel assigned. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	SS begins to transmit the BCCH for cell 2,
2		←	TRANSPORT CHANNEL RECONGURATION	Specifies the use of a new setting for transport channel.
3				The SS does not reconfigure L1 and deletes the old configuration present in cell 1.~~.~~
4				The UE fails to reconfigure a new transport channel.
5		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE detects the presence of cell.2, and then transmits this message which includes the IE "U-RNTI".
6		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
7		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_DCH from CELL_DCH in PS" in Annex A.~~None~~

8.2.4.4.5 Test requirement

After step 4 the UE shall discover cell 2, enter CELL_FACH state, and then transmit a RRC CONNECTION RE-ESTABLISHMENT REQUEST message.

After step 7 the UE shall successfully re-establish an RRC connection in cell 2.

8.2.4.5 Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.4.5.1 ~~———————~~Definition

8.2.4.5.2 Conformance requirement

If the UE is reconfiguring itself after receiving a radio bearer message other than TRANSPORT CHANNEL RECONFIGURATION, and when the UE subsequently receive a TRANSPORT CHANNEL RECONFIGURATION message ~~and UE~~and UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "Incompatible simultaneous reconfiguration" in IE "failure cause".~~The UE shall keep its old configuration when the UE receives another TRANSPORT CHANNEL RECONFIGURATION message, before the UE completes the configuration of the transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message received earlier. The UE shall transmit an TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "incompatible simultaneous reconfiguration" in IE"failure cause".~~

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.4

8.2.4.5.3 Test purpose

To confirm that the UE keeps its current configuration~~,~~ and transmits ~~an~~a TRANSPORT CHANNEL RECONFIGURATION FAILURE message when it receives ~~another~~ a TRANSPORT ~~CHANNEL RECONFIGURATION~~CHANNEL RECONFIGURATION message before the completion of an earlier reconfiguration request.

8.2.4.5.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before the UE has successfully configured the transport channel specified in ~~an earliera~~ previous message, the UE keeps the old configuration. After that, the UE shall transmit ~~an~~a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	~~TRANSPORT CHANNEL~~RADIO BEARER- RECONFIGURATION	Including IE "Uplink DPCH info"
2		←	TRANSPORT CHANNEL RECONFIGURATION	Sent before the time specified in IE "Activation Time Info" of message in step 1 has elapsed.
3		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE shall not change the configuration.

Specific Message Contents

~~The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the corresponding message found in the default contents of layer 3 messages for RRC tests with the following exceptions:~~

RADIO BEARER RECONFIGURATION (Step 1)

For RADIO BEARER RECONFIGURATION in step 1, use the message sub-type indicated as "Packet to CELL_DCH from CELL_DCH in PS" found in Annex A.

TRANSPORT CHANNEL RECONFIGURATION (Step ~~1~~2)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the corresponding message found in Annex A~~the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"TRANSPORT CHANNEL RECONFIGURATION FAILURE"
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.~~.~~2.4.5.5 Test requirement

After step 2 the UE shall keep its configuration and transmit an TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC~~, stating~~, stating the reason "incompatible simultaneous reconfiguration" in IE "failure cause".

8.2.4.6 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Invalid message reception)

8.2.4.6.1 ~~———————~~Definition

8.2.4.6.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which makes use of a spare value in the mandatory IE "~~-~~DRX indicator". Then it shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message with the value "protocol error" set in IE "~~-~~failure cause" and also "Information element value not comprehended" in IE " Protocol error cause".

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.4

8.2.4.6.3 Test purpose

To confirm that the UE transmits TRANSPORT CHANNEL RECONFIGRATION FAILURE message on the DCCH using AM RLC, if the received TRANSPORT CHANNEL RECONFIGURATION message comprises a spare value in the mandatory IE "DRX indicator".

8.2.4.6.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes a spare value in the mandatory IE "DRX indicator". The UE shall keep the old configuration and transmit a TRANSPORT ~~CHANNEL RECONFIGURATION~~CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, specifying "protocol error" in IE " failure cause" and also indicating "Information element value not comprehended" in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	Contains an illegal value for a mandatory IE
2		→	TRANSPORT CHANNEL RECONFIGRATION FAILURE	The UE does not change the configuration.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical ~~to those~~ in Annex A~~the default contents of layer 3 messages~~ for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	" TRANSPORT CHANNEL RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.4.6.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit ~~a TRANSPORT~~a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The message shall specify "protocol error" in IE "~~failure cause~~" and set value "Information element value not comprehended" in IE " Protocol error cause".

8.2.4.7 Transport channel reconfiguration from CELL_DCH to CELL_FACH: Success

8.2.4.7.1 ~~————————~~Definition

8.2.4.7.2 Conformance requirement

The UE shall correctly reconfigure the transport channels according to TRANSPORT CHANNEL RECONFIGURATION ~~massage~~message, after it is requested to perform a transition from CELL_DCH to CELL_FACH in the same cell in conjunction with the transport channel reconfiguration.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.4

8.2.4.7.3 Test purpose

To confirm that the UE reconfigures a new ~~Transport channel~~Transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message received from the SS.

8.2.4.7.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits TRANSPORT CHANNEL RECONFIGURATION message to the ~~UE which~~UE ~~omits~~which omits IE "~~-~~Uplink DPCH info" and IE "~~-~~Downlink DPCH info~~" :~~". This should cause the UE to perform a state transition from CELL_DCH to CELL_FACH in the same cell. The UE then reconfigures the new transport channel according to this message and reconfigure the new physical channel according to the system information messages. Finally, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified.
2				UE shall perform the reconfiguration of transport channel
3		→	TRANSPORT CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A.~~None.~~

8.2.4.7.5 Test requirement

After step 3 the UE shall transit from CELL_DCH to CELL_FACH in the same cell, and then continue to communicate with SS on the new transport channel and common physical channels.

8.2.4.8 Transport channel reconfiguration from CELL_DCH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.4.8.1 Definition

8.2.4.8.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which includes unsupportedincludes unsupported configuration parameters and transmit a TRANSPORTa TRANSPORT CHANNEL RECONFIGURATIONCHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE " failure cause".

Reference

3GPP TS 25.331 clause25.331 clause 8.2.4

8.2.4.8.3 Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received TRANSPORT CHANNEL RECONFIGURATION message includes unsupported configuration parameters.

8.2.4.8.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes unsupported configuration parameters for the UE. The UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE " failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		TRANSPORT CHANNEL RECONGURATION	Including an unsupported transport channel configuration for the UE
2	→		TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE does not change the transport channel.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_FACH from CELL_DCH in PS" found in Annex A to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

~~Information Element~~	~~Value/remark~~
~~TrCH Information Elements~~ ~~-Uplink transport Channels~~ ~~>Added or Reconfigured TrCH information list~~ ~~-Downlink transport Channels~~ ~~>Added or Reconfigured TrCH information list~~	 ~~Number of transport blocks = 4096~~ ~~Number of transport blocks = 4096~~

~~8.2.4.8.5 Test requirement~~

~~After step 1 the UE shall keep its old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, which shall contains cause "configuration unacceptable" in IE " failure cause".~~

8.2.4.~~9~~8 Transport channel reconfiguration from CELL_DCH to CELL_FACH: Failure (Physical channel failure and reversion to old configuration)

8.2.4.~~9~~8.1 Definition

8.2.4.~~9~~8.2 Conformance requirement

The UE shall revert the old configuration when it fails to reconfigure the new transport channel requested. When reversion is successful, it shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE ~~massage~~message to UTRAN.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.4

8.2.4.~~9~~8.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the UE fails to reconfigure the new transport channel according to the TRANSPORT CHANNEL RECONFIGURATION message received.

8.2.4.~~9~~8.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the ~~UE which~~UE which includes the new transport channel parameters. However, it does not reconfigure the new transport channel to reflect change. As a result, the UE should encounter difficulties in the reconfigure process and after T312 expiry, it shall revert to its stored old configuration. When the UE manages to return to the old configuration, it transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC and set the reason "physical channel failure" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	
2				The SS does not reconfigure the transport channel hence the UE could not access the new transport channel.
3		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	After T312 expiry, the UE reverts to the old configuration and transmits this message using the original transport channel settings.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

Use the message sub-type titled “Packet to CELL_FACH from CELL_DCH in PS” in Annex A.

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	TRNSPORT CHANNEL RECONFIGURATION FAILURE
Failure cause	Physical channel failure
Other information element	Not checked

8.2.4.~~9~~8.5 Test requirement

After step2 the UE shall attempt revert to the old configuration and transmit a TRANPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The failure message shall contain the reason “physical channel failure” in IE ”~~-~~failure cause”.

8.2.4.~~10~~9 Transport channel reconfiguration from CELL_DCH to CELL_FACH: Failure (Physical channel failure and reversion failure)

8.2.4.~~10~~9.1 ~~———————~~Definition

8.2.4.~~10~~9.2 Conformance requirement

The UE shall initiate a RRC connection re-establishment procedure, after it encounters a physical channel failure followed by an inability to revert to the old transport channel configuration.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.4

8.2.4.~~10~~9.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE fails successively in the following actions: (a) configure the new transport channel according to TRANSPORT CHANNEL RECONFIGGURATION message received and (b) revert to the old channel configuration after timer T312 expiry.

8.2.4.~~10~~9.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 2 cells - Cell 1 is active, Cell 2 is inactive

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. SS begins to transmit the BCCH for cell 2. The SS then transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which specifies the new transport channel parameters on common physical channel. But the SS does not reconfigure the L1 parameters and the new transport channel to reflect this change. Consequently, the UE discovers that it cannot reconfigure the new transport channel and try to revert to the old configuration. At this time, SS deletes all context related to the old configuration in cell 1. Then the UE should find cell 2 and transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE_"U-RNTI" on the uplink CCCH. After the reception of such a message, the SS transmits an RRC CONNECTION RE-ESTABLISHMENT message and includes a new TFCS for the new transport channel in cell 2. After receiving this message, the UE reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	**SS**		
1		←	BCCH	The SS starts to transmit the BCCH cell 2.
2		←	TRANSPORT CHANNEL RECONGURATION	
3				The SS does not reconfigure L1. At the same time, it deletes the old channel configuration.
4				The UE fails to reconfigure a new transport channel.
5		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall discover the presence of cell 2 and transmits this message, which includes the IE_"U-RNTI".
6		←	RRC CONNECTION RE-ESTABLISHMENT	A new TFCS is commanded according to the new transport channel.
7		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A.~~None~~

8.2.4.~~10~~9.5 Test requirement

After step 4 the UE shall find cell 2, enter CELL_FACH state and then initiate RRC ~~connection re~~connection re-establishment procedure in cell 2.

After step 7 the UE shall successfully re-establish an RRC connection in cell 2.

~~8.2.4.11 Transport Channel Reconfiguration from CELL_DCH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)~~

~~8.2.4.11.1 Definition~~

~~8.2.4.11.2 Conformance requirement~~

~~If the UE is reconfiguring itself after receiving a message and when the UE subsequently receive a TRANSPORT CHANNEL RECONFIGURATION messageand The UE shall keep its old configuration when the UE receives another TRANSPORT CHANNEL RECONFIGURATION message before the UE configures~~

the transport channel, according to an earlier TRANSPORT CHANNEL RECONFIGURATION message. The UE shall transmit an TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which specifies “incompatible simultaneous reconfiguration” in IE”failure cause”.

Reference

3GPP TS 25.331 clause25.331 clause 8.2.4

8.2.4.11.3 Test purpose

To confirm that the UE keeps its configuration and transmits an TRANSPORT CHANNEL RECONFIGURATION FAILURE message when the UE receives another TRANSPORT CHANNEL RECONFIGURATION message, before the UE had completed the configuration of the transport channel originating from an earlier TRANSPORT CHANNEL RECONFIGURATION message.

8.2.4.11.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS-DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to request for a reconfiguration of the transport channel, leading to a state transition to CELL_FACH. However, before the completion of this process, SS sends a second TRANSPORT CHANNEL RECONFIGURATION message. The UE shall keep the old configuration as if no reconfiguration has occurred and then transmit an TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The status message shall indicate “incompatible simultaneous reconfiguration” in IE ”failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	—←		TRANSPORT CHANNEL RECONFIGURATION	IE “Activation Time Info” is included
2	—←		TRANSPORT CHANNEL RECONFIGURATION	Sent before the activation time requested in step 1 has passed.
3	—→		TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE does not change the configuration.

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes unsupported configuration parameters for the UE. The UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "configuration unacceptable" in IE_"~~ failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	The message includes unsupported configuration by the UE
2		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE shall not change the transport channel.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in Annex A~~those in the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
TrCH Information Elements -Uplink transport Channels -Added or Reconfigured TrCH information list -Downlink transport Channels -Added or Reconfigured TrCH information list	 Number of transport channels = 4096 Number of transport channels = 4096

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	"TRANSPORT CHANNEL RECONFIGURATION FAILURE" Configuration unacceptable Not checked

8.2.4.~~14~~11.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The UE shall set "configuration unacceptable" in IE_"~~ failure cause" of the message.

8.2.4.~~15~~12 Transport channel reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion to old channel)

8.2.4.~~15~~12.1 ~~———————~~Definition

8.2.4.~~15~~12.2 Conformance requirement

The UE shall revert to the old configuration when the UE has failed to reconfigure the new transport channel requested, and then transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE ~~massage~~message to UTRAN.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.4

8.2.4.~~15~~12.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the UE fails to reconfigure the new transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message.

8.2.4.~~15~~12.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes the new transport channel parameters. However, SS does not reconfigure the new transport channel accordingly. Hence, the UE shall experience a failure in the reconfiguration process. After T312 expiry, the UE shall revert to the old channel configuration. Then the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, stating the reason "physical channel failure" in IE "~~failure cause~~".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	Message includes IE "Downlink DPCH Info" and IE "Uplink DPCH Info"
2				SS does not reconfigure the transport channel causing the UE to detect a physical channel failure.
3		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	After T312 expiry the UE shall revert to the old configuration and transmit this message.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	TRNSPORT CHANNEL RECONFIGURATION FAILURE
Failure cause	Physical channel failure
Other information element	Not checked

8.2.4.~~15~~12.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a TRANPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" in IE "~~failure cause~~".

8.2.4.~~16~~13 Transport channel reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion failure)

8.2.4.~~16~~13.1 ~~————————~~Definition

8.2.4.~~16~~13.2 Conformance requirement

The UE shall initiate a RRC re-establishment procedure when it fails to revert to the old channel configuration, following a physical channel failure in the transport channel reconfiguration procedure.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.4

8.2.4.~~16~~13.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure, when the UE cannot reconfigure the new transport channel for the failure of L1 configuration and subsequently fails to revert to the old configuration after T312 expiry.

8.2.4.~~16~~13.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 2 cells - Cell 1 is active, Cell 2 is inactive

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_FACH state in a cell 1. SS begins to broadcast the BCCH of cell 2 at a power level lower than in cell 1, and then it transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE in cell 1. The message includes a new set of transport channel parameters. However, the SS does not reconfigure L1 and the new transport channel accordingly. At the same time, it deletes the current channel configurations in cell 1. As a result, the UE cannot reconfigure the new transport channel and an attempt to revert to the old configuration fails. The UE shall then find that cell 2 is available, camp onto it, and transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message. This message shall include the IE "U-RNTI" on the uplink CCCH. When the SS receives this message, it transmits an RRC CONNECTION RE-ESTABLISHMENT message, which specifies a new TFCS according to the new transport channel used. After the UE receives this message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to transmit BCCH in cell 2
2		←	TRANSPORT CHANNEL RECONGURATION	
3				The SS does not reconfigure L1 and transport channel, it also deletes its current contexts for cell 1.
4				The UE shall experience a failure to reconfigure a new transport channel and also fails to revert to old configuration.
5		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall find cell 2, camp onto it, and then transmits this message which includes the IE "U-RNTI".
6		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
7		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.~~None~~

8.2.4.~~16~~13.5 Test requirement

After step 4 the UE shall find the presence of cell 2, enter CELL_FACH state, and transmit RRC RE-ESTABLISHMENT REQUEST message to attempt to setup the RRC connection in cell 2.

After step 7 the UE shall successfully re-establish the RRC connection in cell 2.

8.2.4.~~17~~14 Transport Channel Reconfiguration from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.4.~~17~~14.1 ~~————————~~Definition

8.2.4.~~17~~14.2 Conformance requirement

If the UE is reconfiguring itself after receiving a radio bearer message other than TRANSPORT CHANNEL RECONFIGURATION, and when the UE subsequently receive a TRANSPORT CHANNEL RECONFIGURATION message and UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "Incompatible simultaneous reconfiguration" in IE "failure cause".~~The UE shall keep its old configuration when it receives another TRANSPORT CHANNEL RECONFIGURATION message before it can configure the transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message received earlier. The UE shall transmit an TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "incompatible simultaneous reconfiguration" in IE" failure cause".~~

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.~~17~~14.3 Test purpose

To confirm that the UE keeps its configuration and transmits ~~an~~a TRANSPORT CHANNEL RECONFIGURATION FAILURE message when it receives ~~another~~ a TRANSPORT CHANNEL RECONFIGURATION message before the completion of configuration from an earlier request ~~for transport channel reconfiguration~~.

8.2.4.~~17~~14.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before it has ~~successfully~~ configured ~~the transport channel~~ based on an earlier request. It shall ~~respond by keeping~~ keep the old configuration and then transmitting ~~an~~a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The content of the failure message shall indicate "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER ~~TRANSPORT CHANNEL~~ RECONFIGURATION	Includes the IE "Uplink DPCH info"
2		←	TRANSPORT CHANNEL RECONFIGURATION	Sent before the elapse of the ~~activation~~ Activation time specified in step 1.
3		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

For RADIO BEARER RECONFIGURATION in step 1, use the message sub-type indicated as "Packet to CELL_DCH from CELL_FACH in PS" found in Annex A.

TRANSPORT CHANNEL RECONFIGURATION (Step ~~1~~2)

For TRANSPORT CHANNEL RECONFIGURATION in step 2, use the message sub-type indicated as "Packet to CELL_DCH from CELL_FACH in PS" found in Annex A.~~The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"TRANSPORT CHANNEL RECONFIGURATION FAILURE"
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.4.~~17~~14.5 Test requirement

After step 2 the UE shall keep its configuration and transmit an TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value to "incompatible simultaneous reconfiguration" in IE "failure cause".

8.2.4.~~18~~15 Transport channel reconfiguration from CELL_FACH to CELL_DCH: Failure (Invalid message reception)

8.2.4.~~18~~15.1 ~~————————~~Definition

8.2.4.~~18~~15.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which includes a spare value in the mandatory IE "~~-~~DRX indicator". The UE shall then transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message, specifying "protocol error" in IE "~~-~~failure cause" and also "Information element value not comprehended" in IE " Protocol error cause".

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.4

8.2.4.~~18~~15.3 Test purpose

To confirm that the UE transmits TRANSPORT CHANNEL RECONFIGRATION FAILURE message on the DCCH using AM RLC, if it receives a TRANSPORT CHANNEL RECONFIGURATION message which uses a spare value in the mandatory IE "~~-~~DRX indicator".

8.2.4.~~18~~15.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

8.2.4.~~21~~17 Transport channel reconfiguration from CELL_FACH to CELL_FACH: Failure (Physical channel failure)

8.2.4.~~21~~17.1 ~~Definition~~

8.2.4.~~21~~17.2 Conformance requirement

The UE shall initiate the cell reselection procedure when the UE cannot use the assigned physical channel according to a TRANSPORT CHANNEL RECONFIGURATION message, during the transition from CELL_FACH to CELL_FACH in the another cell.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.4

8.2.4.~~21~~17.3 Test purpose

To confirm that the UE perform a cell reselection and cell update procedure when the it fail to access the assigned physical channel, according to a TRANSPORT CHANNEL RECONFIGURATION message, during the transition from CELL_FACH to CELL_FACH in the another cell.

8.2.4.~~21~~17.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 3 cells Cell 1 is active, Cell 2 is inactive, Cell 3 is inactive

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ _FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a TRANSPORT CHANNEL RECONFIGURATION message, resulting in the UE to attempt to transit from CELL_FACH in cell 1 to CELL_FACH in cell 3. The UE is expected to fail to access the assigned physical channel as the SS ceases downlink transmission in cell 3. After the UE successfully camp onto cell 2, it shall initiate the cell update procedure in cell 2. The procedure completes when the SS confirms UE's cell update request.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to broadcast the BCCH in cell 2.
2		←	TRANSPORT CHANNEL RECONFIGURATION	The message assigns common resources so that the UE is expected to execute a transition from CELL_FACH in cell 1 to CELL_FACH in cell 3
3				The UE shall detect a failure to use the assigned common physical channel and try to perform a cell reselection.
4		→	CELL UPDATE	The UE discover the presence of cell 2 and triggers a cell update procedure.
5		←	CELL UPDATE CONFIRM	SS sends this message so that the UE moves to CELL_PCH state.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in Annex A.~~None~~

8.2.4.~~21~~17.5 Test requirement

After step 3 the UE shall discover the presence of cell 2, enter CELL_FACH state, and initiate a cell update procedure in that cell.

~~8.2.4.22 Transport Channel Reconfiguration from CELL_FACH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)~~

~~8.2.4.22.1 Definition~~

8.2.4.22.2 Conformance requirement

If the UE is reconfiguring itself after receiving a message and when the UE subsequently receive a TRANSPORT CHANNEL RECONFIGURATION message The UE shall keep its old configuration when the UE receives another TRANSPORT CHANNEL RECONFIGURATION message, before the UE completes the configuration of the transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message received earlier. The UE shall transmit an TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "incompatible simultaneous reconfiguration" in IE"failure cause".

Reference

3GPP TS 25.331 clause25.331 clause 8.2.4

8.2.4.22.3 Test purpose

To confirm that the UE keeps its current configuration, transmits an TRANSPORT CHANNEL RECONFIGURATION FAILURE message when it receives another TRANSPORT CHANNEL RECONFIGURATIONCHANNEL RECONFIGURATION message before the completion of an earlier reconfiguration request.

8.2.4.22.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS-DCCH+DTCHCELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before the UE has successfully configured the transport channel specified in an earlier message, the UE keeps the old configuration. After that, the UE shall transmit an TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		TRANSPORT CHANNEL RECONFIGURATION	Including IE "Uplink DPCH info"
2	←		TRANSPORT CHANNEL RECONFIGURATION	Sent before the time specified in IE "Activation Time Info" of message in step 1 has elapsed.
3	→		TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE shall not change the configuration.

Specific Message Contents

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the message sub-type title "Packet to CELL_FACH from CELL_FACH in PS" found in Annex A.to the corresponding message found in the default contents of layer 3 messages for RRC tests with the following exceptions:

~~After step 3 the UE shall communicate with the SS on the radio bearer specified in the TRANSPORT CHANNEL RECONFIGURATION message in step 1.~~

8.2.5 Transport format combination control

8.2.5.1 Transport format combination control in ~~-~~CELL_DCH~~-~~: restriction

8.2.5.1.1 ~~Definition~~

8.2.5.1.2 Conformance requirement

The UE shall change the subset of allowed transport format combination of uplink when the UE receives TRANSPORT FORMAT COMBINATION CONTROL message.

Reference

3GPP TS 25.331 clause 8.2.5

8.2.5.1.3 Test purpose

To confirm that the UE do not transmit data on the DTCH in the uplink direction, following the reception of TRANSPORT FORMAT COMBINATION CONTROL message sent from the SS, which is set to "zero" in IE " Minimum allowed Transport format combination index".

8.2.5.1.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1cell

~~UE :~~UE: DCCH+DTCH~~CELL~~ _DCH(state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE establishes a radio access bearer on the DCH for a communication. The SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message, which indicates that only TFC_0 is allowed on the uplink for DCH transport channel. The UE shall reconfigure the TFCS, stop any transmission on DTCH logical channel and then continues the communication on DCCH only.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE s in CELL_DCH state with a DTCH logical channel allocated for communication between UE and SS
2	←		TRANSPORT FORMAT COMBINATION CONTROL	Set to “zero” in IE ”-Minimum allowed Transport format combination index”.
3				The UE shall not transmit any data on the DTCH.

Specific Message Contents

TRANSPORT FORMAT COMBINATION CONTROL

Information Element	Value/remark
TrCH information elements -Minimum allowed Transport format combination index	Set to “zero”

8.2.5.1.5 Test requirement

After step 2 the UE shall stop transmitting data on the DTCH in the uplink.

8.2.5.2 Transport format combination control in CELL_DCH: release a restriction

8.2.5.2.1 ~~———————~~Definition

8.2.5.2.2 Conformance requirement

The UE shall change the subset of allowed transport format combination of uplink when it receives TRANSPORT FORMAT COMBINATION CONTROL message, specifying that an existing restriction for the usage of TFCS be removed.

Reference

3GPP TS 25.331 clause 8.2.5

8.2.5.2.3 Test purpose

To confirm that the UE resume transmission of data on the DTCH on the uplink, following the reception of TRANSPORT FORMAT COMBINATION CONTROL message which is set to “one” as the prior used transport format combination number in IE ”-Minimum allowed Transport format combination index”.

8.2.5.2.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1cell

~~UE :~~UE: DCCH+DTCH~~CELL~~ DCH(state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108~~ with DTCH allocated but fully restricted~~.

Test Procedure

The UE is in CELL_DCH state with DTCH allocated but fully restricted. The UE cannot transmit the data on the DTCH, as a result of the restriction on the transport format combination. Next, the SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message which is set to “one” in IE ”-Minimum allowed Transport format combination index”

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				No data transmission on the DTCH with a restriction in the uplink direction, following the execution of test 8.1.2.5.1.
2	←		TRANSPORT FORMAT COMBINATION CONTROL	Set to "one" IE "Minimum allowed Transport format combination index".
3				The UE begins to transmit the data on the DTCH.

Specific Message Contents

TRANSPORT FORMAT COMBINATION CNTROL

Information Element	Value/remark
TrCH information elements -Minimum allowed Transport format combination index	Set to "one"

8.2.5.2.5 Test requirement

After step 2 the UE shall begin to transmit the data on the DTCH in the uplink.

8.2.5.3 Transport format combination control in CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.5.3.1 Definition

8.2.5.3.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another TRANSPORT FORMAT COMBINATION CONTROL message before the UE reconfigures the transport channel completely according to a similar message received earlier. The UE shall transmit ~~an~~a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC indicating "incompatible simultaneous reconfiguration" in IE "failure cause".

Reference

3GPP TS 25.331 clause 8.2.5

8.2.5.3.3 Test purpose

To confirm that after the UE receives TRANSPORT FORMAT COMBINATION CONTROL ~~massage~~message, it transmits TRANSPORT FORMAT COMBINATION CONTROL FAILURE message and keeps the TFC subset as before the TRANSPORT FORMAT COMBINATION CONTROL ~~massage~~message is received.

8.2.5.3.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE establishes a radio access bearer on the DCH for to be used for user-data exchange. SS sends a TRANSPORT CHANNEL RECONFIGURATION message on the downlink DCCH, to request that the channel coding scheme for a DCH be changed. After this message has been acknowledged by the UE RLC-AM entity, the SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message, which includes a full restriction of the TFCS used in the uplink. The UE shall detect a failure to reconfigure the TFCS, then it transmits TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the uplink DCCH. After the activation time specified in the TRANSPORT CHANNEL RECONFIGURATION message has elapsed, the UE shall send TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH. SS verifies that reconfiguration is completed by checking that the user-data exchange is resumed on DTCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is in CELL_DCH connected state, with a DTCH logical channel for user-data communication
2	←		TRANSPORT CHANNEL RECONFIGURATION	Requesting for a change in semi-static transport format for DCH carrying the DTCH. The dynamic part remains unchanged.
3	←		TRANSPORT FORMAT COMBINATION CONTROL	Requesting for a full restriction on TFCS for the DCH carrying DTCH.
4	→		TRANSPORT FORMAT COMBINATION CONTROL FAILURE	The UE shall keep the TFC subset as before the TRANSPORT FORMAT COMBINATION CONTROL message was received
5				The UE does not change the configuration of TFC and the UE continues reconfigure the affected transport channel.
6			TRANSPORT CHANNEL RECONFIGURATION COMPLETE	UE shall resume exchange of data over the DTCH logical channel.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_DCH in PS" found in Annex A ~~those in the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
TrCH Information Elements - Uplink transport channels - Added or reconfigured TrCH information list - Transport channel identity - Semi-Static Transport Format Information - Type of channel coding	 2 Select a different coding scheme from default message content

TRANSPORT FORMAT COMBINATION CONTROL

Information Element	Value/remark
DPCH TFCS in Uplink - Subset Representation - Allowed TFIs	Restricted TrCH information Not Present (All TFCs are restricted)

TRANSPORT FORMAT COMBINATION CONTROL FAILURE

Information Element	Value/remark
Message Type	"TRNSPORT FORMAT COMBINATION CNTROL FAILURE"
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.5.3.5 Test requirement

After step 3 the UE continue the transport channel reconfiguration as if no TRANSPORT FORMAT COMBINATION CONTROL message was received. Then it shall transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC, stating the reason "Incompatible simultaneous reconfiguration" in IE "Failure cause".

After step 6 the UE shall resume communication with SS on DTCH using the requested channel coding scheme on the transport blocks.

8.2.5.4 Transport format combination control in CELL_DCH: Failure (Invalid message reception)

8.2.5.4.1 Definition

8.2.5.4.2 Conformance requirement

The UE shall keep old configuration when it receives a TRANSPORT FORMAT COMBINATION CONTROL message which using a spare value in the mandatory IE "Minimum allowed Transport format combination index". It shall then transmits a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message, indicating "protocol error" in IE "failure cause" and "Information element value not comprehended" in IE "Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.5

8.2.5.4.3 Test purpose

To confirm after the UE receives an invalid TRANSPORT FORMAT COMBINATION CONTROL ~~massage~~message, it transmits TRANSPORT FORMAT COMBINATION CONTROL FAILURE message and keep the TFC subset as if no TRANSPORT FORMAT COMBINATION CONTROL ~~massage~~message has been received.

8.2.5.4.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: DCCH+DTCH~~CELL~~ DCH(state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE establishes a radio access bearer on the DCH for a communication. The SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message, which uses a spare value in the mandatory IE "Minimum allowed Transport format combination index". The UE shall then transmit TRANSPORT FORMAT COMBINATION CONTROL FAILURE message and continues the communication using the radio access bearer.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				RRC connected state on the DTCH for a communication
2	←		TRANSPORT FORMAT COMBINATION CONTROL	Contains an error in a mandatory IE.
3	→		TRANSPORT FORMAT COMBINATION CONTROL FAILURE	The UE shall not change the configuration

Specific Message Contents

TRANSPORT FORMAT COMBINATION CONTROL

Information Element	Value/remark
DPCH TFCS in uplink - Minimum allowed Transport format combination index	Set to the value "MaxTFCValue"

TRANSPORT FORMAT COMBINATION CNTROL FAILURE

Information Element	Value/remark
Message Type Failure cause Protocol error information -Protocol error case Other information element	"TRNSPORT FORMAT COMBINATION CNTROL FAILURE" "protocol error" Information element value not comprehended Not checked

8.2.5.4.5 Test requirement

After step 3 the UE shall keep its configuration before the TRANSPORT FORMAT COMBINATION CONTROL message was received and transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC. The UE shall set the value "protocol error" in IE "Failure cause" and the value "information element not comprehended" in IE "protocol error information". The UE shall continue communicate with SS using the radio access bearer.

8.2.6 Physical channel reconfiguration

8.2.6.1 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Success

8.2.6.1.1 Definition

8.2.6.1.2 Conformance requirement

The UE shall correctly reconfigure a physical channel according to the PHYSICAL CHANNEL RECONFIGURATION message received, which is used for hard handover purposes. It shall be able to communicate with the UTRAN on the new frequency subsequently.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.6

8.2.6.1.3 Test purpose

To confirm that the UE reconfigures the physical channel parameters according to a PHYSICAL CHANNEL RECONFIGURATION message received from the SS. After the reconfiguration, the UE shall resume normal transmission and reception operations.

8.2.6.1.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 2 cells - cell 1 and cell 6 are active. The $Q_{rxlevmin}$ and $Q_{rxqualmin}$ ~~-~~values in SYSTEM INFORMATION BLOCK TYPE 3 and 4 messages of cell 6 is changed to –90dBm and –20dB respectively

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ _DCH(state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes a new physical channel parameter specified in the “Frequency Info” IE. The UE shall reconfigure itself and tune to the new physical channel and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH of cell 6 using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		PHYSICAL CHANNEL RECONFIGURATION	Including new frequency information.
2				UE shall suspend uplink activities to cell 1 and begin to reconfigure the physical channel parameters.
3	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled “Packet to CELL_DCH from CELL_DCH in PS“ in Annex A, with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	Same uplink UARFCN as used for cell 6
- UARFCN downlink(Nd)	Same downlink UARFCN as used for cell 6
Downlink information for each radio links	Same downlink UARFCN as used for cell 6
- Primary CPICH info	
- Primary Scrambling Code	350

8.2.6.1.5 Test requirement

After step 2 the UE shall send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH of cell 6, and then continue to communicate with SS on the new physical channel.

8.2.6.2 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency-): Failure (Unsupported or Unacceptable configuration)

8.2.6.2.1 ~~————————~~Definition

8.2.6.2.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a PHYSICAL CHANNEL RECONFIGURATION message which includes an unsupported configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the reason “configuration unacceptable” in IE ”-failure cause”.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.6

8.2.6.2.3 Test purpose

To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters for the UE.

8.2.6.2.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ _DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which includes unsupported configuration parameters as the frequency cannot be supported by the UE. The UE transmits a PHYSICAL -CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE_"-failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		PHYSICAL CHANNEL RECONFIGURATION	Includes an unsupported configuration as the frequency cannot be supported by the UE
2	→		PHYISICAL CHANNEL RECONFIGURATION FAILURE	The UE shall not change the physical channel and continue to communicate using the old configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_DCH in PS" found in Annex A ~~those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	 63984 Not Present

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	 Configuration unacceptable Not checked

8.2.6.2.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC and set "configuration unacceptable" in IE_"-failure cause".

8.2.6.3 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency-): Failure (Physical channel failure and reversion to old channel)

8.2.6.3.1 ~~———————————~~Definition

8.2.6.3.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel by the expiry of timer T312, and then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC indicating "physical channel failure" in IE "~~-~~failure cause".

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.6

8.2.6.3.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message by timer T312 expiry.

8.2.6.3.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ _DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the ~~UE which~~UE which includes new frequency parameters. However, the ~~SS does~~SS does not reconfigure the new physical channel. The UE is expected to encounter a failure to reconfigure the new physical channel and after T312 timer expiry the UE shall revert to the old configuration. Finally, the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC specifies "physical channel failure" in IE "~~-~~failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	Including a new frequency information
2				The SS does not reconfigure the physical channel so that the UE fails to reconfigure to the new physical channel.
3		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	After T312 expiry, the UE shall revert to the old configuration and transmits this message.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_DCH from CELL_DCH in PS" in Annex A.

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.6.3.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the value "physical channel failure" in IE "failure cause".

8.2.6.4 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Failure (Physical channel failure and reversion failure)

8.2.6.4.1 Definition

8.2.6.4.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration, after the detection of physical channel failure during the course of executing a physical channel reconfiguration procedure.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.6

8.2.6.4.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot reconfigure the new physical channel for the failure of L1 configuration and for the failure of the reversion to the old configuration.

8.2.6.4.4 Method of test

Initial Condition

System Simulator: 2 cells- Cell 1 is active, Cell 2 is inactive

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes new uplink and downlink frequency parameters and does not reconfigure L1. The UE is expected to fail to reconfigure the new physical channel and tries to revert to the old configuration after T312 expiry. The SS then deletes the old physical channel so that the UE would perform cell reselection and finds cell 2. It shall then transmit an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message which includes a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS transmits the BCCH in cell 2.
2		←	PHYSICAL CHANNEL RECONFIGURATION	The message includes new frequency information
3				SS does not reconfigure the physical channel to reflect the changes in step 2, at the same time, it deletes the old configuration so the UE cannot reconfigure the new physical channel and cannot revert to the old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE finds a new cell.2 and then transmits this message which includes the IE "U-RNTI".
5		←	RRC CONNECTION RE-ESTABLISHMENT	This message indicates a new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_DCH from CELL_DCH in PS" in Annex A.~~None.~~

8.2.6.4.5 Test requirement

After step 3 the UE shall find the availability of cell 2, enter CELL_FACH state, and transmits RRC CONNECTION RE-ESTABLISHMENT message using RLC-TM mode on the uplink DCCH.

After step 6 the UE shall be able to successfully re-establish an RRC connection in cell 2.

8.2.6.5 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Failure (Incompatible simultaneous reconfiguration)

8.2.6.5.1 ~~Definition~~

8.2.6.5.2 Conformance requirement

If the UE is reconfiguring itself after receiving a radio bearer message other than PHYSICAL CHANNEL RECONFIGURATION message, and when the UE subsequently receive a PHYSICAL CHANNEL RECONFIGURATION message and the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "Incompatible simultaneous reconfiguration" in IE "failure cause".~~The UE shall keep its old configuration when the UE receives another PHYSICAL CHANNEL RECONFIGURATION message before it completes the current reconfiguration according to an earlier PHYSICAL CHANNEL RECONFIGURATION message. The UE shall transmit an PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "incompatible simultaneous reconfiguration" in IE"failure cause".~~

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.5.3 Test purpose

To confirm that the UE keeps its current configuration when it receives ~~another~~ a PHYSICAL CHANNEL RECONFIGURATION message before the completion of an existing ~~physical channel reconfiguration .~~ configuration.

8.2.6.5.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before it reconfigures the physical channel, the UE keeps the old configuration and transmits an PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. This message shall indicate "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER ~~PHYSICAL CHANNEL~~ RECONFIGURATION	
2		←	PHYSICAL CHANNEL RECONFIGURATION	Sent before the "Activation Time Info" specified in the message in step 1 has elapsed.
3		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

For RADIO BEARER RECONFIGURATION in step 1, use the message sub-type indicated as "Packet to CELL_DCH from CELL_DCH in PS" found in Annex A.

PHYSICAL CHANNEL RECONFIGURATION (step 2)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_DCH in PS" found in Annex A ~~those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]

PHYSICAL CHANNEL RECONFIGURATION FAILURE (step 3)

Information Element	Value/remark
Message Type	
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.6.5.5 Test requirement

After step 2 the UE shall keep its old configuration and transmit ~~an~~a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, which shall be set to "incompatible simultaneous reconfiguration" in IE "failure cause".

8.2.6.6 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Failure (Invalid message reception)

8.2.6.6.1 ~~Definition~~

8.2.6.6.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a PHYSICAL CHANNEL RECONFIGURATION message, which includes the spare value in the mandatory IE "DRX indicator". It shall then transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message which contains the value "protocol error" in IE "failure cause" and also "Information element value not comprehended" in IE " Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.6.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a PHYSICAL CHANNEL RECONFIGURATION message which uses a spare value in the mandatory IE "DRX indicator".

8.2.6.6.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~ _DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, with a spare value in the mandatory IE "DRX indicator". The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with a value "protocol error" in IE "failure cause" and also a value "Information element value not comprehended" in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	This message contains an error in one of the mandatory IEs.
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_DCH in PS" found in Annex A ~~those found in the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.6.6.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting value "protocol error" in IE " failure cause" and also setting value "Information element value not comprehended" in IE "-Protocol error cause".

8.2.6.7 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Success

8.2.6.7.1 ~~———————~~Definition

8.2.6.7.2 Conformance requirement

The UE shall correctly reconfigure a physical channel according to a PHYSICAL CHANNEL RECONFIGURATION ~~-~~message when asked to perform a transition from CELL_DCH to CELL_FACH.

Reference

3GPP TS 25.331 ~~-~~clause 8.2.6

8.2.6.7.3 Test purpose

To confirm that the UE reconfigures a new physical channel according to the PHYSICAL CHANNEL RECONFIGURATION message received from the SS.

8.2.6.7.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. The UE shall then reconfigure the new physical channel according to this message. Following this, it shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC on the RACH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2				Reconfiguration of physical channel
3		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled “Packet to CELL_FACH from CELL_DCH in PS” in Annex A.~~None.~~

8.2.6.7.5 Test requirement

After step 3 the UE shall transit from CELL_DCH to CELL_FACH and continue to communicate with SS on the common physical channel.

~~8.2.6.8 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)~~

~~8.2.6.8.1 Definition~~

~~8.2.6.8.2 Conformance requirement~~

~~The UE shall keep its old configuration when it receives a PHYSICAL CHANNEL RECONFIGURATION message which includes unsupported configuration parameters. It shall then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the reason “configuration unacceptable” indicated in IE_” failure cause”.~~

~~Reference~~

~~3GPP TS 25.331 clause 8.2.6~~

~~8.2.6.8.3 Test purpose~~

~~To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters.~~

~~8.2.6.8.4 Method of test~~

~~Initial Condition~~

~~System Simulator : 1 cell~~

~~UE : PS-DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108~~

~~Test Procedure~~

~~The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes unsupported configuration parameters. Specifically, the frequency cannot be supported by the UE. The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which and indicating “configuration unacceptable” in IE_” failure cause”.~~

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	The message specifies the usage of an unsupported configuration for the UE
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE does not change the physical channel and continue to communicate with the SS using the original configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_FACH from CELL_DCH in PS" found in Annex A those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	 63984 Not Present

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	 Configuration unacceptable Not checked

8.2.6.8.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the reason "configuration unacceptable" specified in IE " failure cause".

8.2.6.98 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Failure (Physical channel failure)

8.2.6.98.1 Definition

8.2.6.98.2 Conformance requirement

The UE shall initiate the cell reselection procedure when the UE cannot use the assigned physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, during the transition from CELL_DCH to CELL_FACH.

Reference

3GPP TS 25.331 clause25.331 clause 8.2.6

8.2.6.98.3 Test purpose

To confirm that the UE perform a cell reselection and cell update procedure when the it fail to access the assigned physical channel, according to a PHYSICAL CHANNEL RECONFIGURATION message, during the transition from CELL_DCH to CELL_FACH.

8.2.6.~~9~~8.4 Method of test

Initial Condition

System Simulator-: 2 cells Cell 1 is active, Cell 2 is inactive

UE-: PS-DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a PHYSICAL CHANNEL RECONFIGURATION message, resulting in the UE to attempt to transit from CELL_DCH to CELL_FACH. The UE is expected to fail to access the assigned physical channel as the SS ceases downlink transmission in cell 1. After the UE successfully camp onto cell 2, it shall initiate the cell update procedure in cell 2. The procedure completes when the SS confirms UE's cell update request.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to broadcast the BCCH in cell 2.
2		←	PHYSICAL CHANNEL RECONFIGURATION	The message assigns common resources so that the UE is expected to execute a transition from CELL_DCH to CELL_FACH
3				The UE shall detect a failure to use the assigned common physical channel and try to perform a cell reselection.
4		→	CELL UPDATE	The UE discover the presence of cell 2 and triggers a cell update procedure.
5		←	CELL UPDATE CONFIRM	SS sends this message so that the UE moves to CELL_PCH state.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_FACH from CELL_DCH in PS" in Annex A.~~None~~

8.2.6.~~9~~8.5 Test requirement

After step 3 the UE shall discover the presence of cell 2, enter CELL_FACH state, and initiate a cell update procedure in that cell.

~~8.2.6.10 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)~~

~~8.2.6.10.1 Definition~~

~~8.2.6.10.2 Conformance requirement~~

~~If the UE is configuring itself after receiving a message and when the UE subsequently receive a PHYSICAL CHANNEL RECONFIGURATION messageand the The UE shall keep its old configuration when it receives another PHYSICAL CHANNEL RECONFIGURATION message before the existing reconfiguration request has been completed. The UE shall transmit an PHYSICAL CHANNEL RECONFIGURATION FAILURE~~

message on the DCCH using AM RLC, indicating the reason “incompatible simultaneous reconfiguration” in IE”failure cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.10.3 Test purpose

To confirm that the UE keeps its original configuration when the UE receives a second PHYSICAL CHANNEL RECONFIGURATION message before it reconfigures the physical channel according to an earlier PHYSICAL CHANNEL RECONFIGURATION message.

8.2.6.10.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : PS-DCCH+DTCHCELL_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before the UE reconfigures the physical channel, the UE shall keep the old configuration and transmits an PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. This message shall specify value “incompatible simultaneous reconfiguration” in IE_”failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2		←	PHYSICAL CHANNEL RECONFIGURATION	Sent before the elapse of the time specified in “Activation Time Info” in the message of step 1.
3		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE shall not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN [current CFN mod 8 + 8]

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type

~~8.2.6.11.5 Test requirement~~

~~After step 1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The failure message shall specify "protocol error" in IE " failure cause" and include "Information element value not comprehended" in IE " Protocol error cause".~~

8.2.6.~~12~~9 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Success

8.2.6.~~12~~9.1 ~~Definition~~

8.2.6.~~12~~9.2 Conformance requirement

The UE shall correctly reconfigure a physical channel according to a PHYSICAL CHANNEL ~~RECONFIGURATION message~~RECONFIGURATION message, which triggers a transition from CELL_FACH to CELL_DCH.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.6

8.2.6.~~12~~9.3 Test purpose

To confirm that the UE reconfigures a new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message received from the UTRAN, in the case of an assignment of dedicated physical resource from the common physical channels used previously by the UE.

8.2.6.~~12~~9.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to start a transition from CELL_FACH to CELL_DCH. The UE shall reconfigure the new physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2				The UE shall reconfigure the physical channel in order to start using the dedicated channels allocated.
3		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled “Packet to CELL_DCH from CELL_FACH in PS” in Annex A.~~None.~~

8.2.6.~~12~~9.5 Test requirement

After step 3 the UE shall transit from CELL_FACH to CELL_DCH and continue to communicate with SS on the dedicated physical channel.

8.2.6.~~13~~10 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.6.~~13~~10.1 ~~——————~~Definition

8.2.6.~~13~~10.2 Conformance requirement

The UE shall keep its old configuration when the it receives a PHYSICAL CHANNEL RECONFIGURATION message, which specifies unsupported configuration parameters for the UE. It shall then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, reporting the cause “configuration unacceptable” in IE ”~~-~~failure cause”.

Reference

3GPP TS ~~25.331 clause~~25.331 clause 8.2.6

8.2.6.~~13~~10.3 Test purpose

To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters.

8.2.6.~~13~~10.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes unsupported frequencies for the UE. The PHYSICAL CHANNEL RECONFIGURATION is structured in such a manner as to trigger a transition from CELL_FACH to

CELL_DCH in the UE. The UE shall responds with a PHYSICAL CHANNEL RECONFIGURATION FAILURE message sent on the DCCH using AM RLC, setting "configuration unacceptable" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	Includes unsupported frequencies for the UE
2		→	PHYISICAL CHANNEL RECONFIGURATION FAILURE	The UE shall not change the physical channel configuration, this message shall be sent using the original allocated physical resource.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in Annex A ~~those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	 Configuration unacceptable Not checked

8.2.6.~~13~~10.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, the IE "failure cause" shall be set to "configuration unacceptable".

8.2.6.~~14~~11 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

8.2.6.~~14~~11.1 ~~———————~~Definition

8.2.6.~~14~~11.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel by timer T312 expiry. It shall report the failure by transmitting a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating "physical channel failure" in IE "failure cause".

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.~~14~~11.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message by the T312 expiry.

8.2.6.~~14~~11.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, requesting it to transit from CELL_FACH to CELL_DCH due to a switch in physical resource reallocation. However, it does not reconfigure the new physical channel accordingly but continue to use the old configuration. Consequently, the UE shall fail to reconfigure the new physical channel, and after T312 expiry the UE attempt to revert to the old configuration. Then the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which reports "physical channel failure" in IE "~~-~~failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2				The SS does not reconfigure the physical channel, hence the UE shall detect a failure to reconfigure to the new physical channel.
3		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	After T312 expiry the UE reverts to the old configuration and transmits this message.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in Annex A.

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.6.~~14~~11.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, specifying "physical channel failure" in IE "~~-~~failure cause".

8.2.6.~~15~~12 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion failure)

8.2.6.~~15~~12.1 ~~————————~~Definition

8.2.6.~~15~~12.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the physical channel reconfiguration procedure.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.~~15~~12.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure after it fails to reconfigure the new physical channel and experiences a subsequent failure to revert to the old configuration.

8.2.6.~~15~~12.4 Method of test

Initial Condition

System Simulator: 2 cells- Cell 1 is active, Cell 2 is inactive

UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108 in cell 1

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, but it does not reconfigure L1 accordingly. This is expected to cause the UE to fail to reconfigure to the new physical channel. As a result, the UE shall try to revert to the old configuration after timer T312 expiry. However, the SS deletes the old physical channel before timer T312 has expired. Therefore, UE shall reselect to cell 2 and sends an RRC CONNECTION RE-ESTABLISHMENT REQUEST message, which includes its previously assigned U-RNTI on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message, which includes a new TFCS according to the new transport channel used. After the UE receives this message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS begins to transmit the BCCH in a cell 2.
2		←	PHYSICAL CHANNEL RECONFIGURATION	
3				The SS does not reconfigure the physical channel and deletes the old configuration. As a result, UE should encounter a failure to reconfigure the new physical channel, then attempt to revert to the old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall find cell 2 and then transmit this message with its U-RNTI included.
5		←	RRC CONNECTION RE-ESTABLISHMENT	This message specifies a new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	UE shall send this message in the cell 2.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled “Packet to CELL_DCH from CELL_FACH in PS” in Annex A.~~None.~~

8.2.6.~~15~~12.5 Test requirement

After step 3 the UE shall detect the presence of cell 2, camp onto it, and transmit a RRC CONNECTION RE-ESTABLISHMENT REQUEST message.

After step 6 the UE shall successfully re-establish the RRC connection in cell 2.

8.2.6.~~16~~13 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.6.~~16~~13.1 ~~————————~~Definition

8.2.6.~~16~~13.2 Conformance requirement

If the UE is reconfiguring itself after receiving a radio bearer message other than PHYSICAL CHANNEL RECONFIGURATION message, and when the UE subsequently receive a PHYSICAL CHANNEL RECONFIGURATION message and the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "Incompatible simultaneous reconfiguration" in IE "failure cause". ~~The UE shall keep its old configuration when it receives another PHYSICAL CHANNEL RECONFIGURATION message before the completion of an earlier physical channel reconfiguration procedure. Then the UE shall transmit an PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC and indicate "incompatible simultaneous reconfiguration" in IE "failure cause".~~

Reference

3GPP TS 25.331 ~~-~~clause 8.2.6

8.2.6.~~16~~13.3 Test purpose

To confirm that the UE keeps its old configuration, if receives ~~another~~ a PHYSICAL CHANNEL RECONFIGURATION message before it manages to complete ~~re~~configuring ~~the physical channel~~ according to an earlier ~~PHYSICAL CHANNEL RECONFIGURATION~~ message.

8.2.6.~~16~~13.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a ~~PHYSICAL CHANNEL RECONFIGURATION~~ message to ~~command the~~ UE ~~to perform a physical channel reconfiguration~~. ~~The starting time for this action is specified. However, before the passing of the indicated starting time~~Before UE completes configuration due to the latter message, SS sends ~~another~~ a PHYSICAL CHANNEL RECONFIGURATION message. The UE shall ~~stop the existing reconfiguration~~ignore the new message, maintains the old configuration, and transmits ~~an~~a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC indicating "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS

3GPP TS ~~25.331 clause~~25.331 clause 8.2.6

8.2.6.~~17~~14.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received message uses a spare value in the mandatory IE "DRX indicator".

8.2.6.~~17~~14.4 Method of test

Initial Condition

System ~~Simulator :~~Simulator: 1 cell

~~UE :~~UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which comprises a spare value in the mandatory IE "DRX indicator". The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "protocol error" in IE "failure cause" and also setting "Information element value not comprehended" in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	Contains a mandatory error due to illegal use of spare value
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_DCH from CELL_FACH in PS" found in Annex A ~~those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.6.~~17~~14.5 Test requirement

After step 1 the UE shall keep its old configuration, transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with "protocol error" in IE "failure cause" and also "Information element value not comprehended" in IE "Protocol error cause".

8.2.6.~~18~~15 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH: Success

8.2.6.~~18~~15.1 ~~————~~Definition

8.2.6.~~18~~15.2 Conformance requirement

The UE shall correctly reconfigure a physical channel according to a PHYSICAL CHANNEL RECONFIGURATION ~~-~~message when asked to perform a transition from CELL_FACH to CELL_FACH in the another cell.

Reference

3GPP TS 25.331 ~~-~~clause 8.2.6

8.2.6.~~18~~15.3 Test purpose

To confirm that the UE reconfigures a new physical channel according to the PHYSICAL CHANNEL RECONFIGURATION message received from the SS.

8.2.6.~~18~~15.4 Method of test

Initial Condition

System Simulator~~-~~: 2 cells Cell 1 is active, Cell 2 is inactive

UE~~-~~: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS starts to broadcast the BCCH in cell 2 and transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. The UE shall then reconfigure the new physical channel according to this message. Following this, it shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC on the RACH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to broadcast the BCCH in cell 2.
2		←	PHYSICAL CHANNEL RECONFIGURATION	
3				Reconfiguration of physical channel
4		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled “Packet to CELL_FACH from CELL_FACH in PS” in Annex A.~~None.~~

8.2.6.~~18~~15.5 Test requirement

After step 3 the UE shall transit from CELL_FACH to CELL_FACH in the another cell and continue to communicate with SS on the common physical channel.

~~8.2.6.19 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)~~

~~8.2.6.19.1 Definition~~

8.2.6.19.2 Conformance requirement

The UE shall keep its old configuration when it receives a PHYSICAL CHANNEL RECONFIGURATION message which includes unsupported configuration parameters. It shall then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the reason "configuration unacceptable" indicated in IE " failure cause".

Reference

3GPP TS 25.331 clause 25.331 clause 8.2.6

8.2.6.19.3 Test purpose

To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters.

8.2.6.19.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS-DCCH+DTCHCELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes unsupported configuration parameters. Specifically, the frequency cannot be supported by the UE. The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which and indicating "configuration unacceptable" in IE " failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	The message specifies the usage of an unsupported configuration for the UE
2		→	PHYISICAL CHANNEL RECONFIGURATION FAILURE	The UE does not change the physical channel and continue to communicate with the SS using the original configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_FACH from CELL_FACH in PS" found in Annex A those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	 63984 Not Present

PHYSICAL CHANNEL RECONFIGURATION FAILURE

~~Information Element~~	~~Value/remark~~
~~Message Type~~ ~~Failure cause~~ ~~Other information element~~	 ~~Configuration unacceptable~~ ~~Not checked~~

~~8.2.6.19.5 Test requirement~~

~~After step 1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the reason "configuration unacceptable" specified in IE " failure cause".~~

8.2.6.~~20~~16 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH: Failure (Physical channel failure)

8.2.6.~~20~~16.1 ~~Definition~~

8.2.6.~~20~~16.2 Conformance requirement

The UE shall initiate the cell reselection procedure when the UE cannot use the assigned physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, during the transition from CELL_FACH to CELL_FACH in the another cell.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.~~20~~16.3 Test purpose

To confirm that the UE perform a cell reselection and cell update procedure when the it fail to access the assigned physical channel, according to a PHYSICAL CHANNEL RECONFIGURATION message, during the transition from CELL_FACH to CELL_FACH in the another cell.

8.2.6.~~20~~16.4 Method of test

Initial Condition

System Simulator: 3 cells Cell 1 is active, Cell 2 is inactive, Cell 3 is inactive

UE: PS-DCCH+DTCH~~CELL~~_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a PHYSICAL CHANNEL RECONFIGURATION message, resulting in the UE to attempt to transit from CELL_FACH in cell 1 to CELL_FACH in cell 3. The UE is expected to fail to access the assigned physical channel as the SS ceases downlink transmission in cell 3. After the UE successfully camp onto cell 2, it shall initiate the cell update procedure in cell 2. The procedure completes when the SS confirms UE's cell update request.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to broadcast the BCCH in cell 2.
2		←	PHYSICAL CHANNEL RECONFIGURATION	The message assigns common resources so that the UE is expected to execute a transition from CELL_FACH in cell 1 to CELL_FACH in cell 3
3				The UE shall detect a failure to use the assigned common physical channel and try to perform a cell reselection.
4		→	CELL UPDATE	The UE discover the presence of cell 2 and triggers a cell update procedure.
5		←	CELL UPDATE CONFIRM	SS sends this message so that the UE moves to CELL_FACH state.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled “Packet to CELL_FACH from CELL_FACH in PS” in Annex A.~~None~~

8.2.6.~~20~~16.5 Test requirement

After step 3 the UE shall discover the presence of cell 2, enter CELL_FACH state, and initiate a cell update procedure in that cell.

~~8.2.6.21 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)~~

~~8.2.6.21.1 Definition~~

~~8.2.6.21.2 Conformance requirement~~

~~If the UE is reconfiguring itself after receiving a message and when the UE subsequently receive a PHYSICAL CHANNEL RECONFIGURATION message~~The UE shall keep its old configuration when it receives another PHYSICAL CHANNEL RECONFIGURATION message before the existing reconfiguration request has been completed. The UE shall transmit an PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating the reason “incompatible simultaneous reconfiguration” in IE”failure cause”.

~~Reference~~

~~3GPP TS 25.331 clause 8.2.6~~

~~8.2.6.21.3 Test purpose~~

~~To confirm that the UE keeps its original configuration when the UE receives a second PHYSICAL CHANNEL RECONFIGURATION message before it reconfigures the physical channel according to an earlier PHYSICAL CHANNEL RECONFIGURATION message.~~

8.2.6.21.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : PS-DCCH+DTCHCELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before the UE reconfigures the physical channel, the UE shall keep the old configuration and transmits an PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. This message shall specify value "incompatible simultaneous reconfiguration" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2		←	PHYSICAL CHANNEL RECONFIGURATION	Sent before the elapse of the time specified in "Activation Time Info" in the message of step 1.
3		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE shall not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.6.21.5 Test requirement

After step 2 the UE shall keep its old configuration, transmit ana PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, and set the cause "incompatible simultaneous reconfiguration" in IE "failure cause".

8.2.6.22 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH: Failure (Invalid message reception)

8.2.6.22.1 Definition

8.2.6.22.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a PHYSICAL CHANNEL RECONFIGURATION message which includes the spare value in the mandatory IE " DRX indicator" . It shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message, indicating "protocol error" in IE " failure cause" and indicating "Information element value not comprehended" in IE " Protocol error cause".

Reference

3GPP TS 25.331 clause25.331 clause 8.2.6

8.2.6.22.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received a PHYSICAL CHANNEL RECONFIGURATION message uses a spare value in the mandatory IE " DRX indicator".

8.2.6.22.4 Method of test

Initial Condition

System Simulator :Simulator: 1 cell

UE :UE: PS-DCCH+DTCHCELL_FACH(state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which contains a spare value in the mandatory IE " DRX indicator". The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, which comprises the reason "protocol error" in IE " failure cause" and reason "Information element value not comprehended" in IE " Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	The message contains a error in one of the mandatory IE.
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE shall not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL_FACH from CELL_FACH in PS" found in Annex A those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.6.22.5 Test requirement

After step 1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The failure message shall specify "protocol error" in IE " failure cause" and include "Information element value not comprehended" in IE " Protocol error cause".

8.2.6.17 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Success (Subsequently received)

8.2.6.17.1 ~~————————~~Definition

8.2.6.17.2 Conformance requirement

If the UE receives a PHYSICAL CHANNEL RECONFIGURATION message before the UE reconfigures the radio bearer according to the previous PHYSICAL CHANNEL RECONFIGURATION message, the UE shall ignore the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigure according to the previous PHYSICAL CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 ~~-~~clause 8.2.6

8.2.6.17.3 Test purpose

To confirm that if the UE receives a PHYSICAL CHANNEL RECONFIGURATION message before the UE reconfigures the radio bearer according to the previous PHYSICAL CHANNEL RECONFIGURATION message it ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message.

8.2.6.17.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: PS=DCCH+DTCH~~CELL~~_DCH(state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before the UE reconfigures the radio bearer, the UE ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2		←	PHYSICAL CHANNEL RECONFIGURATION	SS send this message before the expiry of “activation time” specified in PHYSICAL CHANNEL RECONFIGURATION message of step 1.
3		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	The UE ignores the PHYSICAL CHANNEL RECONFIGURATION message in step 2 and confirms configuration according to the PHYSICAL CHANNEL RECONFIGURATION message in step 1.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title “Packet to CELL_DCH from CELL_DCH in PS” found in Annex A ~~those of the default contents of layer 3 messages for RRC tests~~ with the following exceptions:

[Editor's note: This message is not included in Release99 so this is FFS.]

8.2.9 Downlink outer loop control

For all following sub-clauses, all references to RRC CONNECTION SETUP messages shall use the default settings provided in clause 9 of TS 34.108, unless otherwise stated.

8.2.9.1 Downlink outer loop control: Increase is Disallowed

8.2.9.1.1 Definition

8.2.9.1.2 Conformance requirement

The UE shall maintain its existing internal target SIR value after it has received DOWNLINK OUTER LOOP CONTROL message which forbids further adjustment of SIR target. This restriction shall be observed even if the UE has detect that the current SIR target is not sufficient to achieve the downlink quality demanded by the UTRAN.

Reference

3GPP TS 25.331 clause 8.2.9

8.2.9.1.3 Test purpose

To confirm that the UE keeps its target SIR value after it receives a DOWNLINK OUTER LOOP CONTROL message with the IE "Downlink Outer Loop Control" set to "TRUE".

8.2.9.1.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: DCCH+DTCH~~CELL~~_DCH(state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108 state with the no restriction by the DL outer loop power control

Test Procedure

The UE is in the CELL_DCH state and the SS adjusts its transmission power as the current SIR estimation by the UE has reached the same target SIR value determined autonomously by the UE. This condition can be observed when the TPC command bits on the DPCCH physical channel has stabilized (consistently alternating between values 0 and 1). The SS transmits the DOWNLINK OUTER LOOP CONTROL message, which is set to "TRUE" in IE "Downlink Outer Loop Control". Then the SS generates erroneous frames such that the measured BLER in the UE falls below the value specified in IE "BLER Quality Value" of the RRC CONNECTION SETUP message received during the mobile-terminated RRC connection establishment procedure (described in clause 7.1.2 of TS 34.108). The UE shall detect this change but it maintains the current SIR target value and does not request that SS increases downlink transmission power by ~~setttingsetting~~ TPC in DPCCH to "1".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The SS adjusts its transmission power as such that the measured value of SIR in the UE is the same as the SIR target value determined by the UE. The target SIR value is chosen by the UE in order that the target BLER value requested by SS is achieved.
2		←	DOWNLINK OUTER LOOP CONTROL	Set value "TRUE" in IE "Downlink Outer Loop Control".
3				The SS starts to generate some error frames. The current SIR target in the UE cannot guarantee target BLER value specified earlier.
4				The UE shall keeps the existing SIR target value and it shall not request that the DL transmission power be increased using TPC bits in DPCCH physical channel.

Specific Message Content

DOWNLINK OUTER POWER CONTROL

Information Element	Value/remark
Integrity check info	Not Present
Downlink Outer Loop Control	
- DL Outer loop control	Increased not allowed
Downlink DPCH power control information	
- DPC Mode	Single

8.2.9.1.5 Test requirement

After step 3 the SS shall keep the target SIR value as same as step1 and it shall not request for the downlink transmission power be increased by setting TPC bits to "1".

8.2.9.2 Downlink outer loop control: Increase is Allowed

8.2.9.2.1 ~~———————~~Definition

8.2.9.2.2 Conformance requirement

The downlink power control procedure is used to control the downlink outer loop power control running in the UE. If the UE receives the DOWNLINK OUTER LOOP CONTROL message with value "FALSE" in IE "Downlink Outer Loop Control", it shall remove any ~~exisiting~~existing restriction of DL outer loop power control. The UE shall begin to increase its DL target SIR value and make the DL transmission power increase until the desired BLER value for the DPCH transport channel has been attained.

Reference

3GPP TS 25.331 clause 8.2.9

8.1.2.9.2.3 Test purpose

To confirm that the UE begins to exercise DL outer loop power control, in order to increase the target SIR value, after it had received a DOWNLINK OUTER LOOP CONTROL message specifying “FALSE” in IE “Downlink Outer Loop Control”.

8.2.9.2.4 Method of test

Initial Condition

System Simulator-: 1 cell

UE-: DCCH+DTCH~~CELL~~_DCH state(state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108 with the restriction by the DL outer loop power control Test Procedure

Test Procedure

The UE is in the CELL_DCH state with the -restriction by the DL outer loop power control. The internal SIR target value determined by the UE is expected to be insufficient to allow the UE to achieve target BLER figure. The SS transmits the DOWNLINK OUTER LOOP CONTROL message, setting the value “FALSE” in IE “Downlink Outer Loop Control”. Then the UE shall update its SIR target value and make the DL transmission power increase.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to the same state as the end of step 4 in Clause 8.1.2.9.1.3.
2	←		DOWNLINK OUTER LOOP CONTROL	Set the value “FALSE” in IE “Downlink Outer Loop Control”.
3				The UE shall begin to request that the DL transmission power be increased. This is done by setting the TPC field to “1” in DPCCH.

8.2.9.2.5 Test requirement

After step 3 the SS shall increase the DL transmission power more than step 1.

8.2.9.3 Downlink outer loop control: Failure (Invalid message reception)

8.2.9.3.1 ~~———————~~Definition

8.2.9.3.2 Conformance requirement

The UE shall correctly handle an erroneous DOWNLINK OUTER LOOP CONTROL message, and perform the appropriate error-handling procedure. Specifically, it shall not alter the downlink power control mechanism, which is currently being applied. It shall also transmit a RRC STATUS message using RLC-AM mode on the DCCH channel, state the appropriate failure cause.

Reference

3GPP TS 25.331 -clause 8.2.9

8.2.9.3.3 Test purpose

To confirm that the UE transmits an RRC STATUS message on the DCCH using AM RLC when it receives a DOWNLINK OUTER LOOP CONTROL message, containing an invalid conditional IE with respect to the state of the UE.

8.2.9.3.4 Method of test

Initial Condition

System Simulator-: 1 cell

UE-: DCCH+DTCH~~CELL~~_DCH(state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108 and the integrity protection algorithm is not applied.

Test Procedure

The UE is in CELL_DCH state. Test steps 1 to 3 described in clause 8.2.9.1.4 are repeated. Next, the SS transmits another DOWNLINK OUTER LOOP CONTROL message, removing the power increase restriction, and at the same time includes the conditional IE "Integrity Check Info". The UE shall not request for an increase in the downlink transmission power through the TPC command field in DPCCH. It shall transmit RRC STATUS message stating the value "Message extension not comprehended" in IE "protocol cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				Executes step 1 to step 3 in clause 8. 2.9.1.4.
2		←	DOWNLINK OUTER LOOP CONTROL	Contains an unexpected information element "Integrity Check Info" in the message. See specific message content.
3		→	RRC STATUS	The UE shall not request for an increase in downlink transmission power. SS verifies this by checking the TPC command field in uplink DPCCH. The RRC STATUS message shall specify cause "Message extension is not comprehended" in IE "Protocol Error Information"
4				~~The UE shall not request for an increase in downlink transmission power. SS verifies the value of TPC field in DPCCH.~~

Specific Message Content

DOWNLINK OUTER LOOP CONTROL (Step 2)

The contents of DOWNLINK OUTER LOOP CONTROL message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Integrity Check Info - Message authentication code - RRC Message Sequence	Present An arbitrary 32-bits string An arbitrarily chosen integer from range (0….15)

RRC STATUS

Information Element	Value/remark
Message Type	
Protocol error information	Information element value not comprehended
Other information element	Not checked

8.2.9.3.5 Test requirement

After ~~step4~~ step 3 the UE shall keep its restriction for increase in downlink transmission power and not set TPC command fields in uplink DPCCH to "1". It shall transmit an RRC STATUS message on the DCCH using AM RLC, indicating "Information element value not comprehended" in IE "Protocol error cause".

8.3 RRC connection mobility procedure

8.3.1 Cell Update

8.3.1.1 Cell Update: cell reselection in CELL_FACH

8.3.1.1.1 Definition

8.3.1.1.2 Conformance requirement

This procedure is used to update UTRAN with the current cell of the UE after it has ~~perform~~performed a cell reselection in CELL_FACH -state.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.1.3 Test purpose

To confirm that the UE executes a cell update procedure after the successful reselection of another UTRA cell. To confirm that the UE send the correct uplink respond message when executing cell update procedure due to cell reselection.

8.3.1.1.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 is active, Cell 2 is inactive

UE: CS-CELL_FACH_Initial (state 6-2) or PS-CELL_FACH_Initial (state 6-4) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_FACH in cell 1~~

Test Procedure

The UE is in the CELL_FACH state, camping onto cell 1. The SS starts to broadcast BCCH on the primary CPICH in cell 2 with a power level greater than that in cell 1. The UE shall find cell 2 to be more suitable for service and hence perform a cell reselection. After the completion of cell reselection, the UE shall transmits a CELL UPDATE message to the SS on the uplink CCCH of cell 2 and set IE "Cell update cause" to "Cell Reselection". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message, which includes the IE "DRX Indicator" set to "DRX with Cell updating", to the UE on the downlink DCCH. SS verifies that the UE does not send any response to this message. UE shall move to CELL_PCH state. SS then reverses the transmission power of cell 1 and cell 2. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS replies with CELL UPDATE CONFIRM message and allocates new C-RNTI and U-RNTI identities to the UE. The IE "DRX Indicator" is set to "No DRX" in this message. The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message. Following this, SS reverses

the transmission power settings for cell 1 and cell 2 again. The UE shall initiate a cell update procedure by transmitting a CELL UPDATE message and stating the cause as 'cell re-selection'. SS replies with a CELL UPDATE CONFIRM message which contains IE "PRACH Info" and IE "Secondary CCPCH Info". The UE shall send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to acknowledge the assignment of the new physical resources.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_FACH state in cell 1
2	←		BCCH	The SS starts to broadcast BCCH on the primary CPICH in cell 2 with a power level that is higher than that in cell 1. The UE shall find that the cell 2 is better for service and perform a reselection. SS waits for the maximum duration required for the UE to camp to cell 2.
3	→		CELL UPDATE	Value "cell reselection" should be indicated in IE "-Cell update cause"
4	←		CELL UPDATE CONFIRM	IE "DRX Indicator" is set to "DRX with cell updating"
5				SS checks the uplink PRACH channel to verify that no response is sent by UE. SS reverses the transmission power level of cell 1 and cell 2.
6	→		CELL UPDATE	UE shall revert to normal service in cell 1 and set the cause to "cell reselection".
7	←		CELL UPDATE CONFIRM	IE "DRX Indicator" is set to "No DRX". New C-RNTI and U-RNTI identities are assigned to the UE.
8	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE moves to CELL_FACH state and sends this message.
9				SS reverses the transmission power level of cell 1 and cell 2.
10	→		CELL UPDATE	UE shall detect that cell 2 has become stronger.
11	←		CELL UPDATE CONFIRM	IE "DRX Indicator" is set to "No DRX". At the same time, IE "PRACH Info" and IE "Secondary CCPCH Info" are also indicated.
12	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE moves to CELL_FACH state and sends this message on the new PRACH assigned in step 11.

Specific Message Contents

CELL UPDATE (Steps 3 and 6)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A.

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0000 0001'
Integrity check info	Not checked
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'FALSE'
Hyper frame number	Check to see if it is present
Cell Update Cause	Check to see if set to 'Cell Re-selection'
Protocol error indicator	Check to see if it is absent or set to 'FALSE'
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM (Step 4)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A, with the following exceptions:

Information Element	Value/remark
DRX Indicator	DRX with cell updating

CELL UPDATE CONFIRM (Step 7)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A, with the following exceptions:

Information Element	Value/remark
New U-RNTI	
- SRNC Identity	'0000 0000 0000 0001'
- S-RNTI	An arbitrary 20-bits string which is different from original S-RNTI
New C-RNTI	An arbitrary 16-bits string which is different from original C-RNTI.

CELL UPDATE (Step 10)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A.

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0000 0001'
- S-RNTI	Check to see if set to same string in IE "S-RNTI" in IE "New U-RNTI" of CELL UPDATE CONFIRM message in step 7.
Integrity check info	Not checked
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'FALSE'
Hyper frame number	Check to see if it is present
Cell Update Cause	Check to see if set to 'Cell Re-selection'
Protocol error indicator	Check to see if it is absent or set to 'FALSE'
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM (Step 11)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A, with the following exceptions:

Information Element	Value/remark
PRACH Info (for RACH)	
- Available Signature	
- Signature	0 and 1
- Available SF	Refer to the parameter set for TS 34.108
- Scrambling code number	0
- Puncturing Limit	Refer to the parameter set for TS 34.108
- Available Sub-Channel number	
- Sub-Channel number	0 and 1
Downlink DPCH info for one radio link	
- Primary CPICH Info	
- Primary Scrambling Code	Set to the scrambling code for cell 1's P-CPICH.
- PDSCH with SHO DCH Info	Not Present.
- PDSCH code mapping	Not Present.
- Secondary CCPCH Info	
- Selection Indicator	Not Present
- Primary CPICH usage for channel estimation	TRUE
- Secondary CPICH Info	
- Secondary scrambling code	Not Present. Use default (Scrambling code of P-CPICH)
- Channelization code	1
- Secondary scrambling code	Not Present. Use default (Scrambling code of P-CPICH)
- STTD indicator	FALSE
- Spreading factor	256
- Code number	255
- Pilot symbol existence	TRUE
- TFCI existence	TRUE
- Fixed or Flexible Position	Flexible
- Timing Offset	0 chips

8.3.1.1.5 Test requirement

After step 2 the UE shall reselect to cell 2 and then it shall transmit a CELL UPDATE message which, sets the value "cell reselection" in IE "Cell update cause".

After step 4 the UE shall not transmit any uplink message in response to the CELL UPDATE CONFIRMATION message received in step 4.

After step 5 the UE shall sent CELL UPDATE message to cell ~~2~~1, in order to indicate that a cell reselection has taken place.

After step 7 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to acknowledge that it has started to use the new RNTI identities allocated.

After step 9 the UE shall sent CELL UPDATE message to cell ~~1~~2, in order to indicate that a cell reselection has taken place.

After step 11 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the new PRACH physical channel assigned previously in CELL UPDATE CONFIRM message sent in step 11.

8.3.1.2 Cell Update: cell reselection in CELL_PCH

8.3.1.2.1 ~~———————~~Definition

8.3.1.2.2 Conformance requirement

This procedure is to update UTRAN with information of the current cell, after a cell reselection has occurred in CELL_PCH state.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.2.3 Test purpose

To confirm that the UE, in CELL_PCH state, executes a cell update procedure after the successful reselection of another UTRA cell. To confirm that the UE replies with an appropriate uplink message after receiving CELL UPDATE CONFIRM message during the cell update procedure.

8.3.1.2.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active, Cell 2 is inactive

UE: CELL_PCH (state 6-15) in cell 1 as specified in clause 7.4 of TS 34.108~~CELL_PCH in cell 1~~

Test Procedure

The UE is brought to CELL_PCH state and is camped onto cell 1. The SS starts to broadcast system information on the BCCH on the primary CPICH in cell 2. The transmission level of cell 2 is raised to be higher than in cell 1. When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a CELL UPDATE message on the uplink CCCH. The value “cell reselection” shall be set in IE ” Cell update cause” in CELL UPDATE message. Upon reception of CELL_UPDATE message, the SS transmits a CELL UPDATE CONFIRM message which includes the IEs” PRACH info”, ”Secondary CCPCH info” to the UE on the downlink DCCH. In this message, the IE ”DRX Indicator” is set to ”No DRX”. Then the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH and enters CELL_FACH state. SS exchanges the transmission power of cell 1 and cell 2, so that cell 1 becomes the stronger cell. UE shall initiate a cell update procedure again by transmitting CELL UPDATE message. SS replies with a CELL UPDATE CONFIRM message with the IE ”DRX Indicator” set to “DRX with cell updating”. After receiving this message, the UE returns to CELL_PCH state without transmitting any uplink message. Finally, SS reverses the transmission strengths of cell 1 and cell 2 again. This will cause the UE to send CELL UPDATE message on the uplink PRACH of cell 2. SS then sends CELL UPDATE CONFIRM message with the assignment of new C-RNTI and U-RNTI identities. The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message as a response.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_PCH state in cell 1
2		←	BCCH	The SS starts to broadcast system information message on BCCH on the primary CPICH from cell 2. The transmission level of cell 2 is set to be higher than that in cell 1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.
3		→	CELL UPDATE	The UE moves to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "cell reselection"
4		←	CELL UPDATE CONFIRM	The message includes IEs" PRACH info", "Secondary CCPCH info" and set IE "DRX Indicator" to "No DRX".
5		→	PHYSICAL CHANNEL RECONFIGURATION CONFIRM	UE stays in CELL_FACH state.
6				SS swaps the transmission power of cell 1 and cell 2, making cell 1 the stronger cell.
7		→	CELL UPDATE	
8		←	CELL UPDATE CONFIRM	IE "DRX Indicator" is set to "DRX with cell updating".
9				UE moves to CELL_PCH state. SS exchanges the transmission power of cell 1 and cell 2.
10		→	CELL UPDATE	UE shall re-select to cell 2 and transmit this message.
11		←	CELL UPDATE CONFIRM	Includes IE "new U-RNTI" and IE "new C-RNTI"
12		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

CELL UPDATE (Steps 3, 7 and 10)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A.

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0000 0001'
Integrity check info	Not checked
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'FALSE'
Hyper frame number	Check to see if it is present

Protocol error indicator	Check to see if it is absent or set to 'FALSE'
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM (Step 4)

Use the same message found in step 11 of Clause 8.~~1.~~3.1.1.3

CELL UPDATE CONFIRM (Step 8)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A, with the following exceptions:

Information Element	Value/remark
DRX Indicator	DRX with cell updating

CELL UPDATE CONFIRM (Step 11)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A, with the following exceptions:

Information Element	Value/remark
New U-RNTI - SRNC Identity - S-RNTI New C-RNTI	 '0000 0000 0000 0001' An arbitrary 20-bits string which is different from original S-RNTI An arbitrary 16-bits string which is different from original C-RNTI.

8.3.1.2.5 Test requirement

After step 2 the UE shall reselect to cell 2 and transmit a CELL UPDATE message, containing the IE "Cell update cause" set to "cell reselection".

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

After step 9 the UE shall detect that cell 2 has become the stronger cell. It shall send a CELL UPDATE message on cell 2' PRACH channel with the cause set to "cell reselection".

After step 11 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

8.3.1.3 Cell Update: periodical cell update in CELL_FACH

8.3.1.3.1 ~~————————~~Definition

8.3.1.3.2 Conformance requirement

This procedure is to update UTRAN with the current cell information, after the UE has remained in the service area in the CELL_FACH state for a period exceeding the timer value T305.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.3.3 Test purpose

To confirm that the UE executes a periodic cell update procedure following the expiry of timer T305. To confirm that the UE sends a correct response to the CELL UPDATE CONFIRM message. To confirm that the UE listens to the system information messages and then responds to a change in the setting for timer T305.

8.3.1.3.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-CELL_FACH_Initial (state 6-2) or PS-CELL_FACH_Initial (state 6-4) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_FACH~~

Test Procedure

The UE is in CELL_FACH state. When the UE detects the expiry of timer T305 according to the settings in system information, the UE transmits a CELL UPDATE message to the SS on the uplink CCCH with a cause indicating periodic cell updating. SS replies with a CELL UPDATE CONFIRM message, omitting the IEs "new C-RNTI", "new U-RNTI", "PRACH Info" and "Secondary CCPCH Info". The IE_"DRX Indicator", however, is specified and set to "No DRX". SS verifies that the UE does not transmit any uplink message. SS then waits for T305 to expire again. The UE shall send another CELL UPDATE message to report periodic cell updating. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message which includes the IEs "new C-RNTI", "new U-RNTI" to the UE on the downlink DCCH. Then the UE shall transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH to acknowledge the receipt of the new UE identities. SS once again allows T305 timer to expire, the UE shall transmit CELL UPDATE message for the third time. The new U-RNTI shall be indicated in this message together with the correct updating cause. In this sequence, SS replies with a CELL UPDATE CONFIRM message containing new channel parameters in IEs "PRACH Info" and "Secondary CCPCH Info". The UE shall then send a PHYSICAL CHANNEL RECONFIGURTION COMPLETE message by using the newly allocated PRACH resources. Finally, the content of the SYSTEM INFORMATION BLOCK TYPE 2 is changed to disable periodic cell updating. SS then monitors the uplink DCCH for a period up to the maximum possible value for timer T305 (720minutes) and verifies that no CELL_UPDATE message is received. After this, the SS changes the timer T305 value to 5 minutes. UE shall resume periodic cell updating procedure and transmit CELL_UPDATE message 5 minutes after this modification.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_FACH state. SS waits until T305 has expired.
2		→	CELL UPDATE	IE "Cell update cause" shall be set to "Periodic cell updating"
3		←	CELL UPDATE CONFIRM	No RNTI identities are given. No information on PRACH and S-CCPCH are provided.
4				SS verifies that no uplink message is received from UE. SS waits for another period to allow T305 to expire.
5		→	CELL UPDATE	Which is set to "periodic cell update" in IE_"-Cell update cause" for the expiry of timer T305.
6		←	CELL UPDATE CONFIRM	Including IEs" new C-RNTI" , "new U-RNTI" and IE_"DRX Indicator" is set to "No DRX"
7		→	RNTI REALLOCATION COMPLETE	
8				SS waits for a duration to allow timer T305 in the UE to expire.
9		→	CELL UPDATE	
10		←	CELL UPDATE CONFIRM	IEs "PRACH Info" and "Secondary CCPCH Info" are included.
11		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	
12		←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE 2	SS changes the contents of MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK (see specific message contents). It waits for 720 minutes and checks that no CELL UPDATE message is transmitted on uplink PRACH channel.

13	←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE 2	SS modified the contents of MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK (see specific message contents) again.
14	→	CELL UPDATE	UE shall transmit this message 5 minutes after step 13, with “cell update cause” set to “periodic cell updating”
15	←	CELL UPDATE CONFIRM

8.3.1.3.5 Test requirement

After step 1 the UE shall detect the expiry of timer T305 then transmits a CELL UPDATE message setting value "periodic cell update" into IE "Cell update cause".

After step 3 the UE shall not send any uplink message as a response to CELL UPDATE CONFIRM message sent in step 3.

After step 4 the UE shall send CELL UPDATE message, specifying the cell updating cause to be "periodic cell update".

After step 6 the UE shall transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH.

After step 8 the UE shall send CELL UPDATE message, specifying the cell updating cause to be "periodic cell update".

After step 10 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using the PRACH radio resources allocated.

Between step 12 and step 13 the UE shall cease periodic cell updating activity and not transmit any CELL UPDATE messages.

After step 13 the UE shall transmit a CELL UPDATE message stating the cell update cause to be periodic updating, 5 minutes after the SS has modified the BCCH data.

8.3.1.4 Cell Update: periodical cell update in CELL_PCH

8.3.1.4.1 ~~———————~~Definition

8.3.1.4.2 Conformance requirement

This procedure is to update UTRAN with the information of the current cell when the UE detects that it is still in the service area, while residing in the CELL_PCH state, after the expiry of timer T305.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.4.3 Test purpose

To confirm that the UE, in CELL_PCH state, executes a cell update procedure after the expiry of timer T305. To confirm that the UE sends an appropriate response message after receiving the CELL UPDATE CONFIRM message.

8.3.1.4.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_PCH (state 6-15) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE starts from CELL_PCH state. When the UE detects the expiry of periodic cell updating timer T305 according to the system information, the UE moves to CELL_FACH state. It shall transmit a CELL UPDATE message on the uplink CCCH and set the value “periodic cell update” into IE ”-Cell update cause”. SS answers with a CELL UPDATE CONFIRM message, with IE ”DRX Indicator” set to “No DRX”. IEs related to RNTI, PRACH and S-CCPCH are omitted from this message. SS checks to confirm that the UE does not send a response. SS sends a RNTI REALLOCATION message to the UE, stating the new C-RNTI identity to be used and also setting IE ”DRX Indicator” to “DRX with cell updating”. The UE shall reply with RNTI REALLOCATION COMPLETE message and transit to CELL_PCH state. Next, SS stays idle until timer T305 is once again expired. The UE shall transmit CELL UPDATE message in order to initiate cell updating procedure. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message which includes the ~~les~~IEs ”new C-RNTI” and “new U-RNTI”. Then the UE shall transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH and before entering CELL_PCH state. In the next sequence, SS assigns a new U-RNTI identity to the UE by transmitting RNTI REALLOCATION message again. Once again, the IE ”DRX Indicator” is set to “DRX with cell updating”. After reception of this message, the UE moves to CELL_PCH state and start to listen to the paging sub-channels derived based on the value of new U-RNTI given. Finally, SS waits until T305 has expired once more, the UE shall send CELL UPDATE message again on uplink CCCH. SS replies with CELL UPDATE CONFIRM which includes IEs “PRACH Info” and “Secondary CCPCH Info”. The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using PRACH indicated in CELL UPDATE CONFIRM message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_PCH state. SS waits until T305 has expired.
2	→		CELL UPDATE	The UE shall move to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "periodic cell update".
3	←		CELL UPDATE CONFIRM	Does not include IEs "PRACH Info", "Secondary CCPCH Info", "new C-RNTI" or "new U-RNTI".
4				SS verifies that no response message is received.
5	←		RNTI REALLOCATION	Allocates a new C-RNTI identity to UE and set IE "DRX Indicator" to " DRX with Cell updating".
6	→		RNTI REALLOCATION COMPLETE	UE shall move to CELL_PCH state
7				SS remains idle for a period sufficient for T305 timer to expire.
8	→		CELL UPDATE	This message shall contain the new U-RNTI identity assigned in step 5.
9	←		CELL UPDATE CONFIRM	New C-RNTI and U-RNTI identities are assigned.
10	→		RNTI REALLOCATION COMPLETE	
11	←		RNTI REALLOCATION	SS assigns a new U-RNTI identity to the UE. At the same time, it sets IE "DRX Indicator" to "DRX with cell updating".
12	→		RNTI REALLOCATION COMPLETE	UE shall move to CELL_PCH state after sending this message.
13				SS waits for T305 to expire.
14			CELL UPDATE	
15			CELL UPDATE CONFIRM	Allocates new common physical resources by specifying ~~Ies~~IEs "PRACH Info" and "Secondary CCPCH Info".
16			PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

CELL UPDATE (Step 2)

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'

- Sub-Channel number	0 and 1
Downlink DPCH info for one radio link	
- Primary CPICH Info	
- Primary Scrambling Code	Set to the scrambling code for cell 1's P-CPICH.
- PDSCH with SHO DCH Info	Not Present.
- PDSCH code mapping	Not Present.
- Secondary CCPCH Info	
- Selection Indicator	Not Present
- Primary CPICH usage for channel estimation	TRUE
- Secondary CPICH Info	
- Secondary scrambling code	Not Present. Use default (Scrambling code of P-CPICH)
- Channelization code	1
- Secondary scrambling code	Not Present. Use default (Scrambling code of P-CPICH)
- STTD indicator	FALSE
- Spreading factor	256
- Code number	255
- Pilot symbol existence	TRUE
- TFCI existence	TRUE
- Fixed or Flexible Position	Flexible
- Timing Offset	0 chips

8.3.1.4.5 Test requirement

After step 2 the UE shall detect the expiry of timer T305, it shall then move to CELL_FACH state and transmits a CELL UPDATE message with the IE "Cell update cause" set to "periodic cell update".

After step 5 the UE shall reply with RNTI REALLOCATION COMPLETE message. It shall subsequently move to CELL_PCH state.

After step 7 the UE shall initiate a cell updating procedure by the transmission of a CELL UPDATE message. In this message, it shall indicate the new U-RNTI value assigned in step 5 and also set IE "Cell Updating Cause" to "Periodic Cell Updating".

After step 11 the UE shall reply with RNTI REALLOCATION COMPLETE message. It shall subsequently move to CELL_PCH state.

After step 13 the UE shall send a CELL UPDATE message. After step 15 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the new PRACH channel assigned by the received CELL UPDATE CONFIRM message in step 15.

8.3.1.5 Cell Update: UL data transmission in URA_PCH

8.3.1.5.1 Definition

8.3.1.5.2 Conformance requirement

This procedure is to update UTRAN with the current cell information if the UE wants to transmit UL data while in URA_PCH state.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.5.3 Test purpose

To confirm that the UE executes a cell update procedure when the UE transmits UL data if the UE is in URA_PCH state. To confirm that the UE sends the correct response to CELL UPDATE CONFIRM message, after it has taken into consideration the current TFS and/or TFCS settings.

8.3.1.5.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: URA_PCH (state 6-16) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE starts from URA_PCH state, after the operator initiates an outgoing packet data transmission. The UE then moves to CELL_FACH state and transmits a CELL UPDATE message to the SS on the uplink CCCH, with the IE "Cell update cause" set to value "UL data transmission". After receiving such a message, SS transmits CELL UPDATE CONFIRM message without specifying any of the following IEs: "new C-RNTI", "new U-RNTI", "PRACH Info" and "Secondary CCPCH Info". The UE shall stay in CELL_FACH state and transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH. SS waits until uplink data transmission is completed and sends a RNTI REALLOCATION message. The UE shall reply with RNTI REALLOCATION COMPLETE message. Since the IE "DRX Indicator" is set to "DRX with URA updating" in the downlink message, the UE shall move to URA_PCH state. Next SS modifies the contents of SYSTEM INFORMATION BLOCK TYPE 5 and 6 messages. See specific message contents for further details. SS then prompts the test operator to transmit packet data. The UE shall send CELL UPDATE message and specifies the cause to be "UL data transmission". SS replies with the default CELL UPDATE CONFIRM message defined in TS 34.108. After receiving this message, the UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message and remains in CELL_FACH state. SS again waits for the transmission of user packet data to complete and then sends RNTI REALLOCATION message on the downlink DCCH. The IE "DRX Indicator" is set to "DRX with URA updating". The UE shall move to URA_PCH state and acknowledges that it starts using the new RNTI identity provided. Finally, SS prompts the test operator to transmit packet data. The UE shall send CELL UPDATE message once more. After the SS receives this message, it replies with a CELL UPDATE CONFIRM message including the ~~les~~IEs "PRACH info~~",""~~ and "Secondary CCPCH info". The IE "DRX Indicator" is set to "No DRX" in this message. The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink PRACH specified in the CELL UPDATE CONFIRM message. Then the UE shall enter CELL_FACH state and proceed to transmit packet data.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to URA_PCH state. SS prompts the test operator to begin a packet data transmission.
2	→		CELL UPDATE	The UE shall move to CELL FACH state with the message set to "UL data transmission" in IE "Cell update cause".
3	←		CELL UPDATE CONFIRM	Use default message content.
4	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	
5				SS waits until transmission of uplink data has been completed.
6	←		RNTI REALLOCATION	IE "DRX Indicator" set to "DRX with URA update"
7	→		RNTI REALLOCATION COMPLETE	UE moves to URA_PCH state.
8				SS modifies MASTER INFORMATION BLOCK, SYSTEM INFORMATION BLOCK TYPE 5 and 6 messages. SS prompts test operator to initiate a packet data transmission.
9	→		CELL UPDATE	Should be same as in step 2
10	←		CELL UPDATE CONFIRM	Use default message content.
11	→		TRANSPORT CHANNEL RECONFIGURATION COMPLETE	
12				SS waits until transmission of uplink data has been completed.
13	←		RNTI REALLOCATION	IE "DRX Indicator" set to "DRX with URA update"
14	→		RNTI REALLOCATION COMPLETE	UE moves to URA_PCH state.
15				SS prompts test operator to initiate a packet data transmission.
16	→		CELL UPDATE	Should be same as in step 2
17	←		CELL UPDATE CONFIRM	Including the IEs" PRACH info"," Secondary CCPCH"
18	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	SS verifies that this message is received from PRACH physical channel using the configurations set in IE "PRACH Info" in CELL UPDATE CONFIRM message.

Specific Message Contents

CELL UPDATE (Step 2, 9 and 16)

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 1111'
Integrity check info	Not checked
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'FALSE'
Hyper frame number	Check to see if it is present
Cell Update Cause	Check to see if set to 'UL Data Transmission'
Protocol error indicator	Check to see if it is absent or set to 'FALSE'
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM (Step 3 and 10)

Use the same message sub-type found in Annex A.

CELL UPDATE CONFIRM (Step 17)

Use the same message sub-type found in Annex A, with the following exceptions:

Information Element	Value/remark
PRACH Info (for RACH)	
- Available Signature	
- Signature	0
- Available SF	Refer to the parameter set for TS 34.108

- Secondary CCPCH Info	
- Selection Indicator	Not Present
- Primary CPICH usage for channel estimation	TRUE
- Secondary CPICH Info	
- Secondary scrambling code	Not Present. Use default (Scrambling code of P-CPICH)
- Channelization code	1
- Secondary scrambling code	Not Present. Use default (Scrambling code of P-CPICH)
- STTD indicator	FALSE
- Spreading factor	256
- Code number	255
- Pilot symbol existence	TRUE
- TFCI existence	TRUE
- Fixed or Flexible Position	Flexible
- Timing Offset	0 chips

RNTI REALLOCATION (Step 6)

Use the same message sub-type found in Annex A, with the following exceptions:

Information Element	Value/remark
New C-RNTI	'0000 0000 0000 1111'
DRX Indicator	DRX with URA updating

RNTI REALLOCATION (Step 13)

Use the same message sub-type found in Annex A, with the following exceptions:

Information Element	Value/remark
New C-RNTI	'0000 0000 1111 1111'
DRX Indicator	DRX with URA updating

PHYSICAL CHANNEL RECONFIGURATION COMPLETE (Step 4 and 18)

Only the message type IE in this message will be checked.

TRANSPORT CHANNEL RECONFIGURATION COMPLETE (Step 12)

Only the message type IE in this message will be checked.

MASTER INFORMATION BLOCK (Step 8)

Use the same message sub-type found in Clause 6.1 of TS 34.108, with the following exceptions:

Information Element	Value/remark
MIB Tag	2

SYSTEM INFORMATION BLOCK TYPE 5 and TYPE 6 (Step 8)

Use the same message sub-type found in Clause 6.1 of TS 34.108, with the following exceptions:

Information Element	Value/remark
PRACH system information	
- RACH TFS	
- CHOICE Transport channel type	Common transport channels
- Dynamic Transport Format Information	
- Number of Transport blocks	1
- RLC Size	296 bits
- Semi-static Transport Format	
- Transmission time interval	80 msec
- Type of channel coding	No coding
- Coding Rate	No Present
- Rate matching attribute	1
- CRC Size	16 bits

8.3.1.5.5 Test requirement

After step 1 the UE shall move to CELL_FACH state to initiate a cell update procedure and transmits a CELL UPDATE message which is set to “UL data transmission” in IE ”-Cell update cause”.

After step 3 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

After step 8 the UE shall initiate cell update procedure and transmit CELL UPDATE message on the uplink CCCH. The IE ”Cell update cause” shall be set to “UL data transmission”.

After step 10 the UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

After step 15 the UE shall initiate cell update procedure and transmit CELL UPDATE message on the uplink CCCH. The IE ”Cell update cause” shall be set to “UL data transmission”.

After step 17 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using the PRACH resources assigned in CELL UPDATE CONFIRM, which is sent in step 17.

8.3.1.6 Cell Update: UL data transmission in CELL_PCH

8.3.1.6.1 ——————Definition

8.3.1.6.2 Conformance requirement

This procedure is to update UTRAN with the current cell of the UE if the UE wants to transmit UL data when the UE is in CELL_PCH state.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.6.3 Test purpose

To confirm that the UE executes a cell update procedure when the UE transmits UL data if the UE is in CELL_PCH state. To confirm that the UE sends the correct response to CELL UPDATE CONFIRM message, after it has taken into consideration the current TFS and/or TFCS settings.

8.3.1.6.4 Method of test

Initial Condition

System Simulator: 1cell

UE: CELL_PCH (state 6-15) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_PCH state. SS asks the test operator to send some packet data. The UE moves to CELL_FACH state and transmits a CELL UPDATE message to the SS on the uplink CCCH, which shall indicate “UL data transmission” in IE_”-Cell update cause”. After receiving such a message, SS transmits default CELL UPDATE CONFIRM message. The UE shall stay in CELL_FACH state and transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH. SS waits until uplink data transmission is completed and sends a RNTI REALLOCATION message. The UE shall reply with RNTI REALLOCATION COMPLETE message. Since the IE_”DRX Indicator” is set to “DRX with cell updating” in the downlink message, the UE shall move to CELL_PCH state. Next SS modifies the contents of SYSTEM INFORMATION BLOCK TYPE 5 and 6 messages. See specific message contents for further details. SS then prompts the test operator to transmit packet data. The UE shall send CELL UPDATE message and specifies the cause to be “UL data transmission”. SS replies with a CELL UPDATE CONFIRM message which assigns a new C-RNTI to the UE. After receiving this message, the UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message and remains in CELL_FACH state. SS again waits for the transmission of user packet data to complete and then sends RNTI REALLOCATION message on the downlink DCCH. The IE_”DRX Indicator” is set to “DRX with cell updating”. The UE shall move to CELL_PCH state and acknowledges that it starts using the new RNTI identity provided. Finally, SS prompts the test operator to transmit packet data. The UE shall send CELL UPDATE message once more. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message which includes the IEs” PRACH info” and set IE_”DRX Indicator” to “No DRX”. Then the UE shall enter to the CELL_FACH state after sending PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_PCH state. SS prompts the test operator to initiate a packet data call.
2	→		CELL UPDATE	The UE moves to CELL FACH state and transmit this message which is set to "UL data transmission" in IE "Cell update cause".
3	←		CELL UPDATE CONFIRM	Use default message content.
4	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	
5				SS waits until transmission of uplink data has been completed.
6	←		RNTI REALLOCATION	IE "DRX Indicator" set to "DRX with cell update"
7	→		RNTI REALLOCATION COMPLETE	UE moves to CELL_PCH state.
8				SS modifies MASTER INFORMATION BLOCK, SYSTEM INFORMATION BLOCK TYPE 5 and 6 messages. SS prompts test operator to initiate a packet data transmission.
9	→		CELL UPDATE	Should be same as in step 2
10	←		CELL UPDATE CONFIRM	Use default message content.
11	→		TRANSPORT CHANNEL RECONFIGURATION COMPLETE	
12				SS waits until transmission of uplink data has been completed.
13	←		RNTI REALLOCATION	IE "DRX Indicator" set to "DRX with cell update"
14	→		RNTI REALLOCATION COMPLETE	UE moves to CELL_PCH state.
15				SS prompts test operator to initiate a packet data transmission.
16	→		CELL UPDATE	Should be same as in step 2
17	←		CELL UPDATE CONFIRM	Including the IE "PRACH info" and set IE "DRX Indicator" to "No DRX".
18	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	SS verifies that this message is received from PRACH physical channel using the configurations set in IE "PRACH Info" in CELL UPDATE CONFIRM message.

Specific Message Contents

CELL UPDATE (Step 2, 9 and 16)

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'

8.3.1.6.5 Test requirement

After step 1 the UE shall move to CELL_FACH state, initiate a cell update procedure for the UL data transmission, and transmit a CELL UPDATE message which is set to “UL data transmission” in IE ”-Cell update cause”.

After step 3 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

After step 8 the UE shall initiate cell update procedure and transmit CELL UPDATE message on the uplink CCCH. The IE ”Cell update cause” shall be set to “UL data transmission”.

After step 10 the UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

After step 15 the UE shall initiate cell update procedure and transmit CELL UPDATE message on the uplink CCCH. The IE ”Cell update cause” shall be set to “UL data transmission”.

After step 17 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using the PRACH resources assigned in CELL UPDATE CONFIRM, which is sent in step 17.

8.3.1.7 Cell Update: paging response in URA_PCH

8.3.1.7.1 ——————Definition

8.3.1.7.2 Conformance requirement

This procedure is to update UTRAN with the current cell of the UE after it receives a PAGING TYPE 1 message addressed to itself while it is in URA_PCH state.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.7.3 Test purpose

To confirm that the UE executes a cell update procedure when it receives a PAGING ~~TYPE1~~TYPE 1 message while operating in URA_PCH state. To confirm that the UE responds with an appropriate uplink message after receiving a CELL UPDATE CONFIRM message during cell updating procedure triggered by paging.

8.3.1.7.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: URA_PCH (state 6-16) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to URA_PCH state. SS transmits a PAGING TYPE 1 message to page for the UE, setting IE "paging originator" to "UTRAN Originator". The UE shall move to CELL_FACH state and transmits a CELL UPDATE message to the SS on the uplink CCCH. This message shall set IE "Cell update cause" to "Paging Response". After the SS receives this message, it transmits the default CELL UPDATE CONFIRM message. The UE shall stay in CELL_FACH state and transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH. SS then sends a RNTI REALLOCATION message. The UE shall reply with RNTI REALLOCATION COMPLETE message. In this message, the IE "DRX Indicator" is set to "DRX with URA updating". As a result, the UE shall move to URA_PCH state. Next SS modifies the contents of SYSTEM INFORMATION BLOCK TYPE 5 and 6 messages. See specific message contents for further details. SS pages the UE again using the U-RNTI identity. The UE shall send CELL UPDATE message and specify the cause to be "Paging Response". SS replies with the default CELL UPDATE CONFIRM message again. After receiving this message, the UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message and remains in CELL_FACH state. SS sends another RNTI REALLOCATION message on the downlink DCCH, with the IE"DRX Indicator" set to "DRX with URA updating". The UE shall move to URA_PCH state and acknowledges that it starts using the new C-RNTI identity provided by transmitting RNTI REALLOCATION COMPLETE message. SS pages the UE again using PAGING TYPE 1 message. The UE shall send CELL UPDATE message once more. SS transmits a CELL UPDATE CONFIRM message which includes the IE~~e~~s "new C-RNTI", "new U-RNTI" on the downlink DCCH. The UE shall send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message. In the next sequence, SS transmits RNTI REALLOCATION message and assigns a new C-RNTI identity to the UE. The UE shall reply with RNTI REALLOCATION COMPLETE message and move to URA_PCH state. SS then pages the UE once more using PAGING TYPE 1 message. The UE shall initial the cell update procedure by dispatching a CELL UPDATE message on the uplink CCCH. SS replies with a CELL UPDATE CONFIRM message which includes information of the PRACH channel to be used. The UE shall respond with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE, sent on the DCCH supported by the PRACH indicated in CELL UPDATE CONFIRM message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is first brought to URA_PCH state.
2		←	PAGING TYPE 1	SS transmits a PAGING ~~TYPE1~~TYPE 1 message to the UE which includes the UE's assigned U-RNTI with ~~the IE~~the IE "~~-~~paging originator" set to "UTRAN originator".
3		→	CELL UPDATE	The UE shall move to CELL_FACH state and transmits this message with the IE "~~-~~Cell update cause" set to "paging response".
4		←	CELL UPDATE CONFIRM	Use the default message from TS 34.108 Clause 8.
5		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	The UE shall move to CELL_FACH state and transmits this message.
~~6~~				~~SS modifies MASTER INFORMATION BLOCK, SYSTEM INFORMATION BLOCK TYPE 5 and 6 message. The TFS of the PRACH is changed.~~
6~~7~~		←	RNTI REALLOCATION	Allocates a new C~~U~~-RNTI and set IE "DRX Indicator" to "DRX with URA updating".
7~~8~~		→	RNTI REALLOCATION COMPLETE	UE moves to URA_PCH state.
8				SS modifies MASTER INFORMATION BLOCK, SYSTEM INFORMATION BLOCK TYPE 5 and 6 messages. The TFS of the PRACH is changed.
9		←	PAGING TYPE 1	SS pages the UE again
10		→	CELL UPDATE	IE "~~-~~Cell update cause" shall be set to "paging response".
11		←	CELL UPDATE CONFIRM	Use the default message from TS 34.108 Clause 8.
12		→	TRANSPORT CHANNEL RECONFIGURATION COMPLETE	The UE shall move to CELL_FACH state and transmits this message.
13		←	RNTI REALLOCATION	Allocates a new C~~U~~-RNTI and set IE "DRX Indicator" to "DRX with URA updating".
14		→	RNTI REALLOCATION COMPLETE	UE moves to URA_PCH state.
15		←	PAGING TYPE 1	SS pages the UE again
16		→	CELL UPDATE	IE "~~-~~Cell update cause" shall be set to "paging response".
17		←	CELL UPDATE CONFIRM	IE "new C-RNTI" is included in this message
18		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	
19		←	RNTI REALLOCATION	Allocates a new C-RNTI and set IE "DRX Indicator" to "DRX
20		→	RNTI REALLOCATION COMPLETE	UE moves to URA_PCH state.
21		←	PAGING TYPE 1	UE paged using U-RNTI identity.
22		→	CELL UPDATE	IE "Cell Update Cause" shall be set to "Paging Response"
23		←	CELL UPDATE CONFIRM	IE "PRACH Info" is included.

24	→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	This message shall be sent on the PRACH resource

- Fixed or Flexible Position	Flexible
- Timing Offset	0 chips

8.3.1.7.5 Test requirement

After step 2 the UE shall answer to the paging message then moves to CELL_FACH state and transmit a CELL UPDATE message. This message shall ~~set the~~set the value "paging response" into IE "Cell update cause".

After step 4 the UE shall transmit PHYSICAL CHANNEL RECONFIGURTION COMPLETE message on the uplink DCCH and enters CELL_FACH state.

After step 9 the UE shall respond the paging by replying with a CELL UPDATE message. IE "Cell Update Cause" shall be set to "Paging Response" in this message.

After step 11 the UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

After step 15 the UE shall answer the PAGING TYPE 1 message by sending a CELL UPDATE message. The IE "Cell Update Cause" shall have a value equals to "Paging Response".

After step 17 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH.

After step 21 the UE shall respond to the PAGING TYPE 1 message addressed to itself and initiate a cell update procedure. It shall transmit CELL UPDATE message with the IE "Cell Update Cause" set to "Paging Response" in this message.

After step 23 the UE shall send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using the PRACH channel indicated in CELL UPDATE CONFIRM message sent in step 23.

8.3.1.8 Cell Update: paging response in CELL_PCH

8.3.1.8.1 ~~Definition~~

8.3.1.8.2 Conformance requirement

This procedure is to update UTRAN with the current cell when the UE receives a PAGING TYPE 1 message addressed to it while in CELL_PCH state.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.8.3 Test purpose

To confirm that the UE- executes a cell update procedure when the UE receives a PAGING ~~TYPE1~~TYPE 1 message while in CELL_PCH state. To confirm that the UE sends an appropriate uplink message after receiving a CELL UPDATE CONFIRM message during cell updating procedure due to paging.

8.3.1.8.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_PCH (state 6-15) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the CELL_PCH state. The SS transmits a PAGING TYPE 1 message to the UE on the downlink PCCH which includes the connected mode identity of the UE and set value "UTRAN originator" into IE " paging originator". The UE shall respond to this message. Then the UE shall move to CELL_FACH state and transmits a CELL UPDATE message to the SS on the uplink CCCH which and set the value "Paging Response" into IE "-Cell update cause". After the SS receives this message, it transmits the default CELL UPDATE CONFIRM message. The UE shall stay in CELL_FACH state and transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH. ~~SS then sends a RNTI REALLOCATION message. The UE shall reply with RNTI REALLOCATION COMPLETE message. In this message, the IE"DRX Indicator" is set to "DRX with cell updating". As a result, the UE shall move to CELL_PCH state. SS pages the UE again using the U-RNTI identity. The UE shall send CELL UPDATE message and specify the cause to be "Paging Response". SS replies with a CELL UPDATE CONFIRM message which comprises a new C-RNTI identity for the UE. After receiving this message, the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and remains in CELL_FACH state.~~ Next SS modifies the contents of SYSTEM INFORMATION BLOCK TYPE 5 and 6 messages. See specific message contents for further details. SS then sends ~~another~~ a RNTI REALLOCATION message on the downlink DCCH, with the IE "DRX Indicator" set to "DRX with cell updating". The UE shall move to CELL_PCH state and acknowledges that it starts using the new C-RNTI identity provided by transmitting RNTI REALLOCATION COMPLETE message. SS pages the UE again using PAGING TYPE 1 message. The UE shall send CELL UPDATE message once more. SS replies with a CELL UPDATE CONFIRM message which includes the IE "new C-RNTI" to the UE on the downlink DCCH. Then the UE shall transmit an TRANSPORT CHANNEL RECONFIGURTION COMPLETE message on the uplink DCCH and enters the CELL_FACH state. In the final sequence, SS transmits RNTI REALLOCATION message and assigns a new C-RNTI identity to the UE. The UE shall reply with RNTI REALLOCATION COMPLETE message and move to CELL_PCH state. SS then pages the UE once more using PAGING TYPE 1 message. The UE shall initial the cell update

procedure by dispatching a CELL UPDATE message on the uplink CCCH. SS replies with a CELL UPDATE CONFIRM message which includes the IE "PRACH Info". The UE shall respond with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE, sent on the DCCH supported by the PRACH indicated in CELL UPDATE CONFIRM message. Next, SS sends RNTI REALLOCATION message to UE with the "DRX Indicator" IE set to "DRX with cell updating". The UE shall respond by transmitting RNTI REALLOCATION COMPLETE message on the uplink DCCH and then move to CELL_PCH state. SS pages the UE again using connected mode identity at the paging occasions assigned to the UE. The UE shall answer to the page and sent CELL UPDATE message on the uplink CCCH. SS responds to the reception of this message by transmitting a CELL UPDATE CONFIRM message on the downlink DCCH. In this message, a set of new PRACH resources is assigned. The UE shall acknowledge the receipt of this message and send PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH supported by the new PRACH channel.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_PCH state.
2		←	PAGING TYPE 1	The SS transmits a PAGING ~~TYPE1~~TYPE 1 message addressing the UE with its connected mode identity and ~~set IE~~set IE "-paging originator" to "UTRAN originator".
3		→	CELL UPDATE	The UE shall move to CELL_FACH state and transmits this message with the IE "-Cell update cause" set to "paging ~~respose~~response".
4		←	CELL UPDATE CONFIRM	Use the default message from TS 34.108 Clause 8.
5		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	The UE shall move to CELL_FACH state and transmits this message.
6				SS modifies the contents of MASTER INFORMATION BLOCK, SYSTEM INFORMATION BLOCK TYPE 5 and 6 messages.
7		←	RNTI REALLOCATION	Allocates a new C-RNTI and set IE "DRX Indicator" to "DRX with cell updating"
8		→	RNTI REALLOCATION COMPLETE	UE moves to CELL_PCH state
9		←	PAGING TYPE 1	SS pages the UE again
10		→	CELL UPDATE	IE "-Cell update cause" shall be set to "paging response"
11		←	CELL UPDATE CONFIRM	Contains the IE "new C-RNTI"
12		→	TRANSPORT CHANNEL RECONFIGURATION COMPLETE	The UE shall move to CELL_FACH state and transmit this message.
13		←	RNTI REALLOCATION	Allocates a new C-RNTI and set IE "DRX Indicator" to "DRX with cell updating".
14		→	RNTI REALLOCATION COMPLETE	UE moves to CELL_PCH state.
15		←	PAGING TYPE 1	SS pages the UE again
16		→	CELL UPDATE	IE "-Cell update cause" shall be set to "paging response".
17		←	CELL UPDATE CONFIRM	Including IE "PRACH Info" in this message.
18		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	To be sent on the new PRACH channel.
19		←	RNTI REALLOCATION	Allocates a new C-RNTI and set IE "DRX Indicator" to "DRX

20	→	RNTI REALLOCATION COMPLETE	UE moves to CELL_PCH state.
21	←	PAGING TYPE 1	UE paged using U-RNTI identity.
22	→	CELL UPDATE	IE "Cell Update Cause" shall be set to "Paging Response"
23	←	CELL UPDATE CONFIRM	IE "PRACH Info" is included.
24	→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	This message shall be sent on the PRACH resource

8.3.1.8.5 Test requirement

After step 2 the UE shall answer to the paging message, moves to CELL_FACH state, and then transmits a CELL UPDATE message setting "paging response" into IE "Cell update cause".

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH and then enter CELL_FACH state.

After step 9 the UE shall respond to the paging again by sending CELL UPDATE message, with the IE "Cell update cause" set to "Paging response".

After step 11 the UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message to end the cell updating procedure.

After step 15 the UE shall answers the paging message by sending a CELL UPDATE message, with the IE "Cell update cause" set to "Paging response".

After step 17 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH carried by the PRACH indicated in the CELL UPDATE CONFIRM message sent in step 17.

After step 21 the UE shall respond to the paging and initiate a cell update procedure. It shall transmit CELL UPDATE message with the IE "Cell Update Cause" set to "Paging Response" in this message.

After step 23 the UE shall send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using the PRACH channel indicated in CELL UPDATE CONFIRM message sent in step 23.

8.3.1.9 Cell Update: re-entering of service area after T305 expiry and being out of service area

8.3.1.9.1 Definition

8.3.1.9.2 Conformance requirement

When a UE detects that it's out of service area after experiencing a T305 timer expiry, it shall try to search for a suitable cell to camp on. At the same time, it shall start timer T307. If the UE subsequently re-enters the service area of a cell before T307 expires, it shall perform a cell update procedure.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.9.3 Test purpose

To confirm that the UE performs a cell search after experiencing an “out of service area” condition following the expiry of timer T305. To confirm that the UE initiates cell updating procedure if it manages to re-enter the service area.

8.3.1.9.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active with the CPICH Ec/No set to –80dB and the $Q_{qualmin}$ value is at –90dBm. Cell 2 is inactive.

UE: CS-CELL_FACH_Initial (state 6-2) or PS-CELL_FACH_Initial (state 6-4) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_FACH in cell 1~~

Test Procedure

The UE is in the CELL_FACH state. SS decreases the transmission power of cell 1 until the cell selection parameter S<0 (decrease transmission power of cell 1’s CPICH by 15 dBm). Following the expiry of periodic cell updating timer T305 according to the system information, the UE shall detect that it is out of service area. Within the time interval equivalent to T307 timer value, the SS restores the transmission power of cell 1. The UE shall find that it is back in service area, and transmits a CELL UPDATE message to the SS on the uplink CCCH. In this message, the IE_”Cell update cause” shall be set to “periodic cell update”. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message with the IE_”DRX Indicator” set “No DRX” on the downlink DCCH. The UE shall enter CELL_FACH state. Next, cell 1 is switched off. SS waits until T305 timer has expired and then turns on cell 2. The transmission level for cell 2 is such that the CPICH Ec/No value is estimated at –70dB. $Q_{qualmin}$ of cell 2 is identical to the value used previously by cell 1. The UE shall discover that cell 1 is no longer suitable for camping and initiate a cell search. It shall detect the presence of cell 2 and reselects to this cell. Following this, it shall transmit CELL UPDATE message with the cause set to “Cell Reselection”. SS ends this test by sending a CELL UPDATE CONFIRM message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_FACH state of cell 1.
2				SS decreases the transmission power of cell 1 so that its S value falls below 0.
3				The UE shall detect a “out of service” condition upon expiry of timer T305 and it shall search for other cells to camp on.(T307 timer starts)
4				SS restores cell 1’s original power level before T307 timer expires.
5	→		CELL UPDATE	The value “periodic cell update” should be found in IE ”-Cell update cause” in this message
6	←		CELL UPDATE CONFIRM	”DRX Indicator” is set to “No DRX”
7				SS switches off cell 1 and wait until T305 has expired.
8				SS turns on cell 2 and set the transmission strength of such
9			CELL UPDATE	UE shall detect the presence of cell 2 and re-select to it. It shall transmit this message with cause set to “Cell
10			CELL UPDATE CONFIRM

Protocol error information	Check to see if it is absent

8.3.1.9.5 Test requirement

After step 4 the UE shall transmit a CELL UPDATE message in which the IE "Cell update cause" is set to the value "periodic cell update".

After step 8 the UE shall reselect to cell 2 and then transmit a CELL UPDATE message, with the IE "Cell Update Cause" set to "Cell Reselection".

8.3.1.10 Cell Update: expiry of T307 after T305 expiry and being out of service area

8.3.1.10.1 Definition

8.3.1.10.2 Conformance requirement

This procedure is required to cater for the case of a failure to update UTRAN with the current cell, after the expiry of T307. In this case, the UE shall return to idle mode and perform cell reselection if possible.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.10.3 Test purpose

To confirm that the UE moves to idle mode after the expiry of T307, indicating that it is out of service area when attempting to perform a periodic cell updating procedure.

8.3.1.10.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_PCH (state 6-15) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in CELL_PCH state at the start of the test. Before the expiry of periodic cell updating timer T305, SS starts to decrease the downlink transmission power such that the UE discovers that the cell is no longer suitable for camping and this results in a "out of service area" condition. The SS continues to listen to the uplink channel to detect possible attempts to perform a cell updating procedure. The UE shall not send CELL UPDATE message on the uplink DCCH, instead it triggers timer T307. After the expiry of timer T307 the UE shall enter idle state. This is confirmed by the SS, when it sends a PAGING TYPE 1 message to the UE using its U-RNTI identity, and the UE does not respond to the page. SS then attempts to page for the UE again, this time using PAGING TYPE 2 message sent on downlink DCCH. Likewise, the UE shall not respond to this page.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_PCH state.
2				SS starts to decrease the transmission power until the cell is no longer suitable for camping. The UE shall detect that it is out of service area and refrains from transmitting CELL UPDATE message due to periodic cell updating.
3				The UE detects the expiry of timer T305 and it searches for other cells to camp on. After the expiry of timer T307, the UE shall enter idle mode.
4	←		PAGING TYPE 1	SS pages the UE at its assigned paging occasion using the allocated U-RNTI value. The UE shall not respond to this page as it has already entered the idle mode.
5	←		PAGING TYPE 2	SS pages the UE on the downlink DCCH. The UE shall not respond to this page.

Specific Message Contents

Paging Type 1 (Step 4)

8.3.1.10.5 Test requirement

After step 4 the UE shall remain in the idle mode and not respond to the paging message sent on PCCH.

After step 5 the UE shall remain in the idle mode and not respond to the paging message addressed to it on the DCCH.

8.3.1.11 Cell Update: Success after T302 time-out

8.3.1.11.1 Definition

8.3.1.11.2 Conformance requirement

The UE transmits a CELL UPDATE message to the UTRAN when it needs to update the UTRAN with the current cell of the UE. When the UE does not receive a CELL UPDATE CONFIRM message upon expiry of timer T302, the UE transmits a CELL UPDATE message repeatedly until its internal counter V302 counter is greater than N302.

3GPP TS 25.331 clause 8.3.1

8.3.1.11.3 Test purpose

To confirm that the UE repeats the transmission of CELL UPDATE message upon the expiry of timer T302, after failing to receive any response from the SS during T302 timer period.

8.3.1.11.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-CELL_FACH_Initial (state 6-2) or PS-CELL_FACH_Initial (state 6-4) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_FACH~~

Test Procedure

At the start of the test, the UE is brought to CELL_FACH state. When the UE detects the expiry of periodic cell updating timer T305 according to the system information, the UE transmits a CELL UPDATE message to the SS on the uplink CCCH. The IE_"-Cell update cause" in this message shall be set to "periodic cell update". SS ignores this message, and the UE shall then re-transmit a CELL UPDATE message after the expiry of timer T302. When the SS has received (N302+1) such messages, it transmits a CELL UPDATE CONFIRM message with new values for "C-RNTI" to the UE. Finally, the UE shall transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE starts from CELL_FACH state. SS initializes its internal counter K to 0 and wait until the expiry of T302 timer.
2	→		CELL UPDATE	The value "periodic cell update" shall be set in IE_" Cell update cause" after the expiry of timer T305.
3				If K is equal to N302 then proceeds to step 5.
4				SS increments counter K, transmits no response to the UE and waits for an additional period equals to the value of timer T302. The next step is step 2.
5	←		CELL UPDATE CONFIRM	The message includes IEs" new C-RNTI". The IE_"DRX Indicator" is set to "No DRX".
6	→		RNTI REALLOCATION COMPLETE	

Specific Message Contents

CELL UPDATE (Step 2)

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
Integrity check info	Not checked
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'FALSE'
Hyper frame number	Check to see if it is present
Cell Update Cause	Check to see if set to 'Periodic cell updating'
Protocol error indicator	Check to see if it is absent or set to 'FALSE'
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM (Step 5)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A, with the following exception:

Information Element	Value/remark
New C-RNTI	Set to an arbitrary string different from '0000 0000 0000 0001'

8.3.1.11.5 Test requirement

After step 1 the UE shall detect the expiry of timer T305 then transmit a CELL UPDATE message on the uplink CCCH, setting "periodic cell update" into IE "Cell update cause".

After step 2 the UE shall re-transmits a CELL UPDATE message after the expiry of timer T302. A total of (N302+1) transmissions shall be detected in SS.

After step 5 the UE shall transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH and stays at CELL_FACH state.

8.3.1.12 Cell Update: Failure (After Maximum Re-transmissions)

8.3.1.12.1 ~~————————~~Definition

8.3.1.12.2 Conformance requirement

The UE transmits a CELL UPDATE message to the UTRAN when it needs to update UTRAN with information on the current cell of the UE. If the UE fails to receive a CELL UPDATE CONFIRM message, it re-transmits a CELL UPDATE message repeatedly upon the expiry of timer T302 until the value of V302 counter is greater than N302. If V302 is greater than N302, the UE stop the re-transmission and enters idle state.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.12.3 Test purpose

To confirm that the UE repeats the cell update procedure at the expiry of timer T302 and moves to idle state when its internal counter V302 is greater than N302.

8.3.1.12.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-CELL_FACH_Initial (state 6-2) or PS-CELL_FACH_Initial (state 6-4) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_FACH~~

Test Procedure

The UE is initially in CELL_FACH state. When the UE detects the expiry of periodic cell updating timer T305, the UE transmits a CELL UPDATE message to the SS on the uplink CCCH to perform a periodic cell updating procedure. The SS ignores this message, and the UE shall attempt to re-transmit a CELL UPDATE message up to a maximum of (N302+1) times after the expiry of timer T302. After (N302+1) attempts, the UE shall return to idle state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_FACH state. SS sets its internal counter K=1 and waits for a period equals to timer value T302. If CELL UPDATE message is received upon timer expiry, proceeds to step 2. Else goes to step 4~~5~~.
2		→	CELL UPDATE	The value "periodic cell update" should be set in IE " Cell update cause" and this message should be sent for each expiry of timer T302.
3				SS transmits no response to the UE and increments counter K.
4				SS waits for an additional period equals to T302 timer. If CELL UPDATE message is received, proceed to step 2. Otherwise, terminates the test. If K is not equal to N302, the test should be considered as a failure.

Specific Message Contents

CELL UPDATE (Step 2)

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
Integrity check info	Not checked
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'FALSE'
Hyper frame number	Check to see if it is present
Cell Update Cause	Check to see if set to 'Periodic cell updating'
Protocol error indicator	Check to see if it is absent or set to 'FALSE'
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

8.3.1.12.5 Test requirement

After step 1 the UE shall transmit a CELL UPDATE message on the uplink CCCH and set value "periodic cell update" into IE "-Cell update cause".

After step 4 the counter K in SS shall be equal to N302.

8.3.1.13 Cell Update: Reception of Invalid CELL UPDATE CONFIRM Message

8.3.1.13.1 ————————Definition

8.3.1.13.2 Conformance Requirement

If the UE encounters an invalid CELL UPDATE CONFIRM message while executing a cell update procedure, it shall check the current value of its internal counter V302. If V302 is not greater than N302, the UE shall set contexts pertaining to protocol error, re-transmits CELL UPDATE message on uplink CCCH, restart T302 timer and increments V302. It shall use the same "Cell Update Cause" as before receiving the invalid downlink message. On the other hand, if V302 is greater than N302, the UE shall abandon cell update procedure and enters idle mode.

8.3.1.13.3 Test Purpose

To confirm that the UE retransmits CELL UPDATE message when it receives an erroneous CELL UPDATE CONFIRM message, if the number of retransmissions is not the maximum allowed value. To confirm that the UE returns to idle mode after sending maximum allowed number of CELL UPDATE messages without receiving a valid CELL UPDATE CONFIRM message.

8.3.1.13.4 Method of Test

Initial Condition

System Simulator: 1 cell

UE: CELL_PCH (state 6-15) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is brought to CELL_PCH state at the beginning of the test. SS pages the UE by sending PAGING TYPE 1 message using the U-RNTI identity assigned during RRC connection establishment procedure. The UE shall start to transmit CELL UPDATE message on the uplink CCCH. Upon receiving such a message, the SS replies with a CELL UPDATE CONFIRM message containing a protocol error in IE "DRX Indicator". The UE shall detect the protocol error and re-transmit CELL UPDATE message up to a maximum of N302 times. The time interval between the transmissions shall be approximately equal to T302. SS verifies that it receives a total of (N302+1) identical CELL UPDATE messages. The UE shall return to idle mode after all uplink transmissions have finished. SS verifies this by paging the UE using the U-RNTI identity. The UE shall not respond to this page.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PAGING TYPE 1	The UE is in the CELL_PCH state. SS sets its internal counter K=0 and waits for a period equals to timer value T302. SS pages for the UE using the allocated connected mode identity (U-RNTI). If CELL UPDATE message is received upon timer expiry, proceeds to step 2. Else goes to step 5.
2		→	CELL UPDATE	The value "paging response" should be set in IE "Cell update cause".
3		←	CELL UPDATE CONFIRM	SS transmits an invalid message. SS increments K.
4		→	CELL UPDATE	SS waits for T302 timer to expire. The UE shall send CELL UPDATE message.
5				If a CELL UPDATE message is received in step 4, SS increments K, restart T302 timer and returns to execute step 4. Else, SS proceeds to step 6.
6				SS verifies that K = (N302+1) and proceeds to the next step. Else, the test fails.
7		←	PAGING TYPE 1	SS pages the UE.
8				UE shall not respond.

BCCH Modification info	Not Present.

8.3.1.13.5 Test Requirement

After step 3 the UE shall continue to transmit CELL UPDATE message for N302 times.

At step 6 the counter K should be equal to (N302+1).

After step 7 the UE shall return to idle mode and not respond the PAGING TYPE 1 message sent by the SS.

8.3.1.14 Cell Update: Radio Bearer Control for Transition from CELL_DCH to CELL_FACH

8.3.1.14.1 Definition

8.3.1.14.2 Conformance Requirement

During a transition from CELL_DCH state to CELL_FACH state arising from the execution of radio bearer control procedure, the UE might be requested to re-select to an unknown cell. The UE shall select a cell and perform cell updating procedure. In order to distinguish the 2 cases of cell updating: (i) due to UE mobility and (ii) due to radio bearer control procedure, the update cause in CELL UPDATE message shall be different for these 2 cases. When the UTRAN receives this message, it is then able to decide whether to initiate RNC reallocation and the establishment of new configuration in the target RNC.

8.3.1.14.3 Test Purpose

To confirm that the UE perform a cell update procedure after being instructed to move from CELL_DCH to CELL_FACH state as a result of radio bearer control procedure. To confirm that the UE indicates cause "RB Control" when transmitting a CELL UPDATE message to the selected cell. To confirm that the UE transmit a compatible response to conclude the radio bearer control procedure.

8.3.1.14.4 Method of Test

Initial Condition

System Simulator: 2 cells – both cell 1 and cell 2 are active and suitable for camping, but with cell 1 having a stronger transmission power.

UE: CS-CELL_DCH_Initial (state 6-1) or PS-CELL_DCH_Initial (state 6-3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_DCH in cell 1~~

Test Procedure

The UE is brought to CELL_DCH state in cell 1, after the UE has successfully performed the RRC connection establishment procedure and was allocated dedicated physical resources. Next SS sends RADIO BEARER SETUP message to the UE on downlink DCCH. In this message, a DTCH channel is assigned to the UE. The UE shall reconfigure its channel resources and then return a RADIO BEARER SETUP COMPLETE message. Following this sequence, the ~~UE~~ SS sends RADIO BEARER RELEASE message to request that all radio bearers carried on dedicated physical channel to be released. However, this message does not contain information about the target cell to select when UE transits to CELL_FACH state. The UE shall perform cell reselection and it shall detect the presence of cell 2. The UE shall send a CELL UPDATE message with cause set to "RB Control" on the uplink CCCH carried by PRACH physical channel, specified in cell 2's system information message. SS replies with CELL UPDATE CONFIRM message, specifying the IE "PRACH Info" and "Secondary CCPCH Info". To complete this procedure, the UE shall transmit RADIO BEARER RELEASE COMPLETE message on the DCCH, which is carried on the PRACH physical channel specified in system information messages broadcasted in cell 2.

Expected Test Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state after completing a successful RRC connection establishment procedure.
2	←		RADIO BEARER SETUP	Establishes DTCH logical channel.
3	→		RADIO BEARER SETUP COMPLETE	
4	←		RADIO BEARER RELEASE	Information on target cell is not specified.
5	→		CELL UPDATE	UE shall send this message on the uplink CCCH of cell 2. IE "Cell update cause" shall be set to "RB Control".
6	←		CELL UPDATE CONFIRM	IEs "PRACH Info" and IE "Secondary CCPCH Info" are included in this message. IE "DRX Indicator" set to "No DRX".
7	→		RADIO BEARER RELEASE COMPLETE	Sent on the PRACH given in system information messages.

Specific Message Contents

RADIO BEARER SETUP (Step 2)

CELL UPDATE CONFIRM (Step 6)

Use the same message sub-type found in Annex A.

RADIO BEARER RELEASE COMPLETE (Step 7)

Only the message type is checked in this message.

8.3.1.14.5 Test Requirement

After step 4 the UE shall reselect to cell 2, perform a cell update procedure by transmitting CELL UPDATE message. In this message, the IE "Cell Update Cause" shall be set to "RB Control".

After step 6 the UE shall send RADIO BEARER RELEASE COMPLETE message on the DCCH carried by the PRACH channel. The applicable parameters of the PRACH resources are broadcasted on the system information messages of cell 2.

8.3.1.15 Cell Update: Acknowledged Mode RLC Reset

8.3.1.15.1 Definition

8.3.1.15.2 ~~———————~~Conformance Requirement

In CELL_FACH, the UE shall ensure that all AM RLC entities (both signalling and u-plane links) are operational. In the event that an unrecoverable error has occurred, the UE shall trigger cell update procedure to report this event. The UE shall send CELL UPDATE message on the uplink CCCH and set the appropriate AM_RLC error indicator IE(s) to TRUE. After receiving the CELL UPDATE CONFIRM message, the UE shall reset the affected AM RLC entities and then resume transmission and reception activities.

8.3.1.15.3 Test Purpose

To confirm that the UE reports the occurrence of an unrecoverable error in a C-plane AM RLC entity by initiating cell update procedure. To confirm that the UE is able to resume normal C-plane data transmission and reception after the completion of cell update procedure.

8.3.1.15.4 Method of Test

Initial Condition

System Simulator: 1 cell

UE: CS-CELL_FACH_Initial (state 6-2) or PS-CELL_FACH_Initial (state 6-4) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~Idle Mode~~

Test Procedure

The UE is initially in ~~idle mode and camped onto cell 1~~CELL_FACH state. ~~SS pages the UE using the IMSI identity stored in the test USIM card, stating the cause as a terminating call with one of the traffic classes supported by the UE. The UE shall respond by transmitting the RRC CONNECTION REQUEST message on the uplink CCCH, triggering the start of RRC connection establishment procedure. SS assigns common physical resources to the UE by sending RRC CONNECTION SETUP message. The UE shall reply with RRC CONNECTION SETUP COMPLETE on the DCCH before transiting to CELL_FACH state. Next,~~ SS sends RADIO BEARER SETUP message on the DCCH using AM mode to establish a DTCH logical channel for u-plane packet data transfer. The UE shall reply with a RADIO BEARER SETUP COMPLETE message, sent using AM RLC on the DCCH. Then it activates the associated DTCH logical channel for user data transmission and reception. SS does not acknowledge the RADIO BEARER SETUP COMPLETE message. The UE shall continue to transmit the AM PDU carrying RADIO BEARER COMPLETE message until the maximum re-transmission count is reached. Thereafter, the UE shall start sending RESET PDUs to request that the AM RLC entity for RRC signalling be re-initialized. SS ignores the requests and wait for a duration equivalent to (MAX_RST+1) times expiry of Timer_RST. This figure is specified in IE "RLC info" of RADIO BEARER SETUP message in step 6. At this point, the UE shall initiate a cell update procedure by transmitting CELL UPDATE message on the uplink CCCH. The CELL UPDATE message shall specify the value "TRUE" in IE "AM_RLC error indicator (for C-plane)". SS replies with CELL UPDATE CONFIRM message using the default message content. SS then attempts to perform a local authentication by transmitting a COUNTER CHECK message using AM RLC on DCCH. The UE shall respond by sending a COUNTER CHECK RESPONSE message on the uplink DCCH, verifying that the AM RLC entity for RRC signalling was successfully reset.

Expected ~~Test~~ Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is initially in ~~idle mode~~CELL_FACH state.
~~2~~	~~←~~		~~PAGING TYPE 1~~	~~SS pages the UE, citing the cause as a terminating call with one of the supported traffic classes in the PAGING TYPE 1 message.~~
~~3~~	~~→~~		~~RRC CONNECTION REQUEST~~	~~Sent on CCCH using transparent mode.~~
~~4~~	~~←~~		~~RRC CONNECTION SETUP~~	~~Allocate common physical resources for signalling RBs.~~
~~5~~	~~→~~		~~RRC CONNECTION SETUP COMPLETE~~	~~Sent on CCCH using transparent mode.~~
~~6~~2	←		RADIO BEARER SETUP	Establishes a DTCH logical channel operating in AM mode.
~~7~~3	→		RADIO BEARER SETUP COMPLETE	UE shall stay in CELL_FACH state. SS does not acknowledge this AM PDU. The UE shall re-transmit this AM PDU until the maximum number has been reached.
~~8~~4				UE shall start to transmit RESET PDU using AM RLC on the DCCH. SS does not respond to any PDU frames originating from the UE, and it waits for a period equivalent to (MAX_RST+1) times expiry of Timer_RST. This figure is specified in IE "RLC info" of RADIO BEARER SETUP message in step 6.
~~9~~5	→		CELL UPDATE	UE shall send this message on CCCH. IE "AM_RLC Error Indication (for C-plane)" shall be set to 'TRUE'
~~10~~6	←		CELL UPDATE CONFIRM	"DRX Indicator" set to "No DRX". UE shall transit to CELL_FACH state.
~~11~~7	←		COUNTER CHECK	SS requests for a local authentication of the amount of data sent/received during the lifetime of the RRC connection.
~~12~~8	→		COUNTER CHECK RESPONSE	This message shall be transmitted using AM RLC for RRC signalling on the uplink DCCH.

Specific Message Contents

~~PAGING TYPE 1 (Step 2)~~

~~Use the same message sub-type entitled "TM (Packet in PS)" found in Clause 9 of TS34.108.~~

~~RRC CONNECTION REQUEST (Step 3)~~

~~Information Element~~	~~Value/remark~~
~~Initial UE Identity~~	~~Check to sse if set to same value as the IMSI identity stored in the test USIM card.~~
~~Initial UE Capability~~	
~~- Maximum number of AM entities~~	~~Check to see if set to '4 to 8' or '16 to 32'.~~
~~Establishment Cause~~	~~Check to see if set to Terminating Call of a supported traffic class.~~
~~Protocol Error Indicator~~	~~Check to see if set to 'FALSE'.~~
~~Measured Results on RACH~~	~~Not checked.~~

~~RRC CONNECTION SETUP (Step 4)~~

~~Use the same message sub-type entitled "Transition to CELL_FACH" found in Clause 9 of TS34.108.~~

~~RRC CONNECTION SETUP COMPLETE (Step 5)~~

~~Only the message type IE is checked in this message.~~

RADIO BEARER SETUP (Step ~~6~~2)

Use the same message sub-type entitled "Packet to CELL_FACH from CELL_FACH in PS" found in ~~Clause 9 of TS34.108~~Annex A.

RADIO BEARER SETUP COMPLETE (Step ~~7~~3)

Only the message type IE is checked for this message.

CELL UPDATE (Step ~~9~~5)

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
Integrity check info	Not checked
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'TRUE'
Hyper frame number	Check to see if it is present
Cell Update Cause	Not checked
Protocol error indicator	Check to see if it is absent or set to 'FALSE'
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM (Step ~~10~~6)

Use the same message sub-type found in ~~Clause 9 of TS34.108~~Annex A.

COUNTER CHECK (Step ~~11~~7)

Integrity check info	Not present
RB COUNT-C MSB Information	
- RB Identity	5
- COUNT-C-MSB-uplink	Set to an arbitrary integer equals to the 25 MSBs from COUNT-C for RB#5
- COUNT-C-MSB-downlink	Set to an arbitrary integer equals to the 25 MSBs from COUNT-C for RB#5

COUNTER CHECK RESPONSE (Step ~~12~~8)

Information Element	Values/Remarks
Integrity check info	Not checked
RB COUNT-C Information	Not checked
- RB Identity	
- COUNT-C-uplink	
- COUNT-C-downlink	

8.3.1.15.5 Test Requirement

After step ~~8~~ 4 the UE shall transmit a CELL UPDATE message on the uplink CCCH to report the occurrence of an unrecoverable error in AM RLC entity for C-plane data.

After step ~~11~~ 7 the UE shall send a COUNTER CHECK RESPONSE message on the uplink DCCH. This message shall be sent using the AM RLC entity for RRC signalling.

8.3.2 URA Update

8.3.2.1 URA Update: URA reselection

8.3.2.1.1 ~~———————~~Definition

8.3.2.1.2 Conformance requirement

This procedure is to update UTRAN with the current URA of the UE after a URA reselection has occurred in URA_PCH state. It may also be used for supervision of the RRC connection, even if- no URA reselection takes place.

Reference

3GPP TS 25.331 clause 8.3.2

8.3.2.1.3 Test purpose

To confirm that the UE executes ~~a~~an URA update procedure after the successful URA reselection.

8.3.2.1.4 Method of test

Initial Condition

System Simulator: 2 cells - Cell 1 is active with URA-ID 1,Cell 2 is inactive with URA-ID 2

UE: URA_PCH (state 6-16) as specified in clause 7.4 of TS 34.108, with URA-ID 1 ~~in~~ from the list of URA-ID ~~from~~ in cell 1

Test Procedure

The UE is in the URA_PCH state and assigned with only 1 URA identity in cell 1: URA-ID 1. The SS starts to broadcast BCCH in cell 2 with URA-ID 2 and stop transmitting BCCH in cell 1. This is expected to cause the UE to perform a cell reselection to cell 2. When the UE finds that ~~URA-ID 2~~its current URA-ID 1 is not in ~~its current~~the new broadcasted list of URA-IDs, it moves to CELL_FACH state and transmits a URA UPDATE message on the uplink CCCH. After the SS receives this message, it transmits URA UPDATE CONFIRM message which includes the IEs “DRX Indicator” and “URA-ID” to the UE on the downlink DCCH. The “DRX Indicator” is set to “DRX with URA updating”. Finally, the UE returns to URA_PCH state in cell 2 without sending a uplink response message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is updated with only 1 URA identity carried currently by cell 1. The starting state of the UE is URA_PCH
2	←		BCCH	SS starts sending BCCH for cell 2 with URA-ID 2 and ceases to transmit BCCH with URA-ID 1 carried by cell 1.
3	→		URA UPDATE	The UE shall perform a cell reselection first and ~~then~~ when it finds that ~~a new URA-ID 2~~its current URA-ID 1 is not in the new broadcasted list of ~~its~~ URA-IDs~~ stored. ~~, ~~I~~it shall then transmit this message and set value "URA reselection" into IE "URA update cause".
4	←		URA UPDATE CONFIRM	Message comprises IE "DRX Indicator" set "DRX with URA updating", and also IE "URA Identity" equals to "URA-ID 2".

Specific Message Contents

URA UPDATE (Step 3)

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0001'
Integrity check info	Not checked
AM_RLC error indicator	Check to see if set to 'FALSE'
URA Update Cause	Check to see if set to 'Change of URA'
Protocol error indicator	Check to see if it is absent or set to 'FALSE'
Protocol error information	Check to see if it is absent

URA UPDATE CONFIRM (Step 4)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A, with the following exceptions:

Information Element	Value/remark
DRX Indicator	DRX with URA updating

8.3.2.1.5 Test requirement

After step 2 the UE shall find that URA-ID 2 is not in its maintained list of URA-IDs. After cell reselection, the UE shall move to CELL_FACH state and transmit URA UPDATE message setting value "Change of URA" into IE "URA update cause".

8.3.2.2 URA Update: periodical URA update

8.3.2.2.1 ~~————————~~Definition

8.3.2.2.2 Conformance requirement

This procedure is to update UTRAN with the current URA of the UE when the UE detects that it is still within the service area after the expiry of periodic URA updating timer T306.

Reference

3GPP TS 25.331 clause 8.3.2

8.3.2.2.3 Test purpose

To confirm that the UE executes a URA update procedure after the expiry of timer T306. To verify that the UE handles an invalid URA UPDATE CONFIRM message correctly when executing the URA update procedure.

8.3.2.2.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: URA_PCH ~~with URA-ID 1~~(state 6-16) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the URA_PCH state ~~with URA-ID 1~~. When the UE detects the expiry of timer T306, set according to the value specified in system information, the UE moves to CELL_FACH state and transmits a URA UPDATE message to the SS on the uplink CCCH. The message shall indicate the cause to be "periodic URA update" in IE "-URA update cause". SS replies with an illegal URA UPDATE CONFIRM message sent on downlink CCCH, and check to see if the UE handles this event properly. The UE shall attempt to retransmit the identical URA UPDATE message. After the SS receives the second URA UPDATE message, it transmits a correct URA UPDATE CONFIRM message, which includes the IE " new U-RNTI", to the UE on the downlink DCCH. Then the UE shall then transmits an RNTI REALLOCATION COMPLETE message on the uplink DCCH. The UE returns to CELL_FACH state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the URA_PCH state. SS wait until T306 timer has expired.
2	→		URA UPDATE	UE shall transmit this message and set value "periodic URA update" into IE "-URA update cause".
3	←		URA UPDATE CONFIRM	SS sends an illegal message.
4	→		URA UPDATE	UE shall not return to idle mode immediately, but attempts to re-transmit this message.
5	←		URA UPDATE CONFIRM	Including IEs" new C-RNTI" , and "new U-RNTI"
6	→		RNTI REALLOCATION COMPLETE	

Specific Message Contents

URA UPDATE (Step 2 and 4)

Information Element	Value/remark

URA UPDATE CONFIRM (Step 3)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A, with the following exceptions:

Information Element	Value/remark
U-RNTI	Not Present

URA UPDATE CONFIRM (Step 5)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A, with the following exceptions:

Information Element	Value/remark
New U-RNTI SRNC Identity S-RNTI	 '0000 0000 0001' '0000 0000 0000 0000 1111'

RNTI REALLOCATION COMPLETE (Step 6)

Only the message type IE of this message is checked.

8.3.2.2.5 Test requirement

After step 2 the UE shall detect the expiry of timer T306, move to CELL_FACH state, and transmit a URA UPDATE message which is set the value "periodic cell update" into IE "URA update cause".

After step 3 the UE shall re-transmit URA UPDATE message.

After step 5 the UE shall transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH and returns to the CELL_FACH state.

8.3.2.3 URA Update: re-entering of service area after T306 expiry

8.3.2.3.1 ~~Definition~~

8.3.2.3.2 Conformance requirement

This procedure is to update UTRAN with the current URA of the UE if the UE detects that it is out of service area after the expiry of timer T306, and then subsequently re-enters the service area before the expiry of T307.

Reference

3GPP TS 25.331 clause 8.3.2

8.3.2.3.3 Test purpose

To confirm that the UE executes a URA update procedure when the UE re-enters the service area before the expiry of timer T307, after being out of service area at the expiry of timer T306.

8.3.2.3.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: URA_PCH (state 6-16) as specified in clause 7.4 of TS 34.108~~updated with URA-ID 1~~

Test Procedure

The UE is initially in URA_PCH state~~, updated with URA-ID 1~~. SS decrease the transmission power of cell such that cell selection figure of merit S<0. When the UE detects the expiry of timer T306 according to the system information, the UE moves to CELL_FACH state and finds that it is out of service area. The UE is expected to search for cell to camp. Then SS increases the transmission power so that the UE detects that it returns to normal service within T307. The UE shall move to CELL_FACH state and starts transmitting a URA UPDATE message which contains the value “periodic URA update” in IE ”-URA update cause” to the SS on the uplink CCCH. After the SS receives this message, it transmits a URA UPDATE CONFIRM message which includes the IE ”new C-RNTI”, and “ new U-RNTI” to the UE on the downlink DCCH. Then the UE shall transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE starts operating from URA_PCH state.
2				SS decreases the transmission power such that the cell is no longer suitable for camping i.e. S<0.
3				The UE shall attempt to perform a URA update upon the expiry of timer T306. It shall discover that it is out of service and starts searching for cell to camp.(T307 timer starts)
4				SS increases the transmission power to the original level before T307 expires.
5		→	URA UPDATE	Value “periodic URA update” shall be set in IE ”-URA update cause”
6		←	URA UPDATE CONFIRM	The message includes IEs” new C-RNTI” , and “new U-RNTI”
7		→	RNTI REALLOCATION COMPLETE	

Specific Message Contents

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A, with the following exceptions:

URA UPDATE CONFIRM (Step 6)

Information Element	Value/remark
New U-RNTI - SRNC Identity - S-RNTI	'0000 0000 0001' '0000 0000 1111 1111'
New C-RNTI	Arbitrary 16-bit string which is different the assigned C-RNTI in RRC CONNECTION SETUP message.

8.3.2.3.5 Test requirement

After step 2 the UE shall detect that it is out of service area and shall not send a URA UPDATE on the uplink CCCH channel.

After step 4 the UE shall transmit a URA UPDATE message which sets value "periodic URA update" into IE " URA update cause", before the expiry of timer T307.

After step 6 the UE shall transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH.

8.3.2.4 URA Update: loss of service after expiry of timers T307 and T306

8.3.2.4.1 ~~———————~~Definition

8.3.2.4.2 Conformance requirement

This procedure is required to handle the case when the UE fails to update UTRAN with the current URA of after expiry of timers T307 and T306 consecutively. The UE shall move to idle mode subsequently.

Reference

3GPP TS 25.331 clause 8.3.2

8.3.2.4.3 Test purpose

To confirm that the UE moves to idle mode after the expiry of timer T307, following an expiry of timer T306 when it discovers that it is out of service area.

8.3.2.4.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: URA_PCH ~~updated with URA-ID 1~~(state 6-16) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in URA_PCH state~~ with URA-ID 1~~. SS stops the downlink transmissions of cell 1. When the UE detects the expiry of periodic URA updating timer T306 according to the system information, the UE moves to CELL_FACH state and detects that it is out of service area. After the expiry of timer T307, the UE moves to the idle state and start to perform cell reselection.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				Initially, the UE is in the URA_PCH state.
2				SS switched off the downlink transmission of cell 1 so that the UE detects that it is out of service area.
3				Upon the expiry of timer T306, the UE shall search for cell to camp and triggers T307 timer. SS listens to the uplink CCCH to verify that ~~CELL~~ URA UPDATE message is not transmitted.
4				After the expiry of timer T307, the UE enters idle state.

Specific Message Contents

None

8.3.2.4.5 Test requirement

After step 2 the UE shall detect the expiry of timer T306, not transmit URA UPDATE message on the uplink CCCH, move to CELL_FACH state, and start timer T307.

8.3.2.5 URA Update: Success after Confirmation error of URA-ID list

8.3.2.5.1 ~~———————~~Definition

8.3.2.5.2 Conformance requirement

While in connected mode, the UE keeps a temporary list of URA-IDs broadcasted in a cell. The UE transmits a URA UPDATE message to the UTRAN when it needs to update UTRAN with the current URA of the UE. UTRAN should respond to the URA UPDATE message by sending a URA UPDATE CONFIRM message. When the indicated URA-ID in the received URA UPDATE CONFIRM message is not found in the temporary list of URA-IDs, the UE transmits a URA UPDATE message repeatedly until its internal counter V303 is greater than N303.

Reference

3GPP TS 25.331 clause 8.3.2

8.3.2.5.3 Test purpose

To confirm that the UE retries to perform the URA update procedure following a confirmation error of URA-ID list.

8.3.2.5.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: URA_PCH (state 6-16) as specified in clause 7.4 of TS 34.108~~updated with URA-ID 1~~

Test Procedure

At the start of this test, the UE is brought to URA_PCH state and assigned a URA with URA-ID 1. When the UE detects the expiry of timer T306 according to the system information, the UE moves to CELL_FACH state and transmits a URA UPDATE message to the SS on the uplink CCCH. The reason for performing URA updating shall be set to "periodic URA update" in IE "-URA update cause". After the SS receives this message, it transmits a URA UPDATE CONFIRM message which includes the IE "new C-RNTI"," new U-RNTI" and "URA-ID 2" to the UE on the downlink DCCH. The UE finds that the indicated URA-ID is not included in the temporary list of URA-IDs stored, then the UE shall retry to transmit a URA UPDATE message for a confirmation error of URA-ID list. SS continue to send the same URA UPDATE CONFIRM message until N303 URA UPDATE messages have been received. Then SS transmits a URA UPDATE CONFIRM message to the UE which includes IE "URA Identity" set to " URA-ID 1". The UE shall find this URA-ID in its URA-ID list and transmits an RNTI REALLOCATION COMPLETE message on the uplink DCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is URA_PCH state. SS initializes counter K to 0
2		→	URA UPDATE	This message shall contain value "periodic URA update" set in IE "-URA update cause" after expiry of timer T306.
3				SS increments K by 1.
4		←	URA UPDATE CONFIRM	SS transmits this message, setting the value "URA-ID 2" to IE "URA Identity". If K is not greater than N303, SS waits for T303 to expires and then returns to step 2. If K is greater than N303, SS proceeds to step 5.
5		←	URA UPDATE CONFIRM	SS transmits this message, setting IE "URA Identity" to "URA-ID 1". This message also comprises IE "New U-RNTI".
6		→	RNTI REALLOCATION COMPLETE	

Specific Message Contents

DRX Indicator	DRX with ~~Cell~~ URA updating
URA Identity	2

URA UPDATE CONFIRM (Step 5)

Use the same message sub-type as specified in ~~TS 34.108 Clause 8~~Annex A, with the following exceptions:

Information Element	Value/remark
New U-RNTI	
SRNC Identity	'0000 0000 0001' '0000 0000 0000 0101 0101'
S-RNTI	
URA Identity	1

RNTI REALLOCATION COMPLETE (Step 6)

Only the message type IE in this message is checked.

8.3.2.5.5 Test requirement

After step 1 the UE shall detect the expiry of timer T306, move to CELL_FACH state, transmit a URA UPDATE message on the uplink CCCH and set value "periodic URA update" into IE "URA update cause".

After step 2 the UE shall repeatedly re-transmit a URA UPDATE message after it detects a confirmation error of URA-ID list for the URA-ID indicated in the URA UPDATE CONFIRM message. A total of (N303+1) URA UPDATE messages shall be received by the SS.

After step 5 the UE shall transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH.

8.3.2.6 URA Update: Failure (V303 is greater than N303: Confirmation error of URA-ID list)

8.3.2.6.1 Definition

8.3.2.6.2 Conformance requirement

While in connected mode, the UE keeps a temporary list of all URA-IDs broadcasted in a cell. It transmits a URA UPDATE message to the UTRAN when it needs to update UTRAN with the current URA of the UE. When the indicated URA-ID in the received URA UPDATE CONFIRM message is not in the list of URA-IDs, the UE transmits URA UPDATE messages repeatedly until its internal counter V303 is greater than N303. If V303 is greater than N303 then the UE enters idle state.

Reference

3GPP TS 25.331 clause 8.3.2

8.3.2.6.3 Test purpose

To confirm that the UE make repeated attempts to perform the URA update procedure following a detection of a confirmation error of URA-ID list. It then moves to idle state when internal counter V303 is greater than N303.

8.3.2.6.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: URA_PCH (state 6-16) as specified in clause 7.4 of TS 34.108~~updated with URA-ID 1~~

Test Procedure

The UE is originally in the URA_PCH state updated with URA-ID 1. When the UE detects the expiry of timer T306 according to the system information, the UE shall move to CELL_FACH state and transmit a URA UPDATE message to the SS on the uplink CCCH. In this message, the value “periodic URA update” shall be set in IE_”-URA update cause”. After the SS receives this message, it transmits a URA UPDATE CONFIRM message which includes the IE_”new C-RNTI”,“ new U-RNTI” and indicating the IE_”URA Identity” to be “URA-ID 2” to the UE on the downlink DCCH. The UE finds that the indicated URA-ID is not included in the list of URA-IDs broadcasted, the UE shall retry to transmit a URA UPDATE message for N303 times. After that, the UE shall enter idle state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in URA_PCH state at the start of the test. SS sets internal counter K to 1.
2	→		URA UPDATE	The message shall indicate “periodic URA update” in IE_” URA update cause”. This message is sent following the expiry of timer T306. SS increments counter K by 1.
3	←		URA UPDATE CONFIRM	The SS transmit this message and set IE_”URA Identity” to “URA-ID 2” . When K greater than N303 proceeds to step 4, else SS waits for T303 to expires and executes step 2.
4				SS waits for a T306 to verify that no further URA UPDATE messages are transmitted by UE. The counter K shall be equal to (N303+1). The UE shall enter idle state.

Specific Message Contents

URA UPDATE CONFIRM (Step 4)

Use the same message sub-type defined in ~~TS 34.108 Clause 8~~Annex A, with the following exceptions:

Information Element	Value/remark
URA Identity	2

8.3.2.6.5 Test requirement

After step 1 the UE shall detect the expiry of timer T306, then it shall move to CELL_FACH state and transmit a URA UPDATE message on the uplink CCCH, setting value “periodic URA update” into IE_”-URA update cause”.

After step 2 -the UE shall retry to transmit a URA UPDATE message after it detects the confirmation error of URA-ID list for the URA-ID included in the URA UPDATE CONFIRM message.

After step 3 the UE shall stop transmitting URA UPDATE message and then enters idle state. The counter K shall be equal to (N303+1).

8.3.2.7 URA Update: Success after T303 timeout

8.3.2.7.1 ~~———————~~Definition

8.3.2.7.2 Conformance requirement

The UE transmits ~~a~~an URA UPDATE message to the UTRAN when it needs to update UTRAN with the current URA identity stored the UE. When the UE fails to receive any URA UPDATE CONFIRM message after T303 timer expiry, it transmits a URA UPDATE message repeatedly at an interval of T303 timer value until its internal counter V303 is greater than N303.

Reference

3GPP TS 25.331 clause 8.3.2

8.3.2.7.3 Test purpose

To confirm that the UE attempts to repeat the URA update procedure upon the expiry of timer T303. To confirm that a maximum of N303 re-transmission is performed.

8.3.2.7.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: URA_PCH (state 6-16) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the URA_PCH. When the UE detects the expiry of timer T306 according to the system information, the UE moves to CELL_FACH state and transmits a URA UPDATE message to the SS on the uplink CCCH, setting value “periodic URA update” into IE ”-URA update cause”. The SS ignores this message, the UE shall then retry to transmit a URA UPDATE message after the expiry of timer T303. SS continues to ignore further URA UPDATE message until it receives (N303+1) such message. Then it transmits a URA UPDATE CONFIRM message to the UE which includes ~~Ies~~IEs ”new C-RNTI”,” new U-RNTI”. The UE shall then transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in URA_PCH state at the beginning of test. SS sets counter K to 1. SS waits for T306 to expire.
2	→		URA UPDATE	This message shall contain value “periodic URA update” in IE ”-URA update cause” sent upon the expiry of timer T306.
3				SS increments K by 1.
4				If K is not greater than N303, SS transmits no response to the UE, waits for an additional period equals to T303 timer and returns to step 2. Else, SS executes step 5.
5	←		URA UPDATE CONFIRM	This message includes IEs” new C-RNTI” , “new U-RNTI”
6	→		RNTI REALLOCATION COMPLETE	

Specific Message Contents

URA UPDATE CONFIRM (Step 5)

Use the same message sub-type as in ~~TS 34.108 Clause 8~~Annex A, with the following exceptions:

Information Element	Value/remark
New U-RNTI	
SRNC Identity	'0000 0000 0001'
S-RNTI	Arbitrary 20-bit string which is different from S-RNTI field in IE "U-RNTI"
New C-RNTI	Arbitrary 16-bit string which is different the assigned C-RNTI in RRC CONNECTION SETUP message.

8.3.2.7.5 Test requirement

After step 1 the UE shall detect the expiry of timer T306, then it shall move to CELL_FACH state and transmit a URA UPDATE message on the uplink CCCH. The updating cause shall be set to "periodic URA update" in IE "-URA update cause".

After step 2 the UE shall retry to transmit a URA UPDATE message at each expiry of timer T303. UE shall attempt to re-transmit N303 URA UPDATE messages.

After step 5 the UE shall transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH.

8.3.2.8 URA Update: Failure (V303 is greater than N303:T303 timeout)

8.3.2.8.1 ~~——————~~Definition

8.3.2.8.2 Conformance requirement

The UE transmits ~~a URA~~a URA UPDATE message to the UTRAN when it needs to update the UTRAN with the current URA of the UE. When the UE fails to receive the URA UPDATE CONFIRM message~~.~~, the UE transmits a URA UPDATE message repeatedly after every expiry of T303 until its internal counter V303 is greater than N303. If V303 is greater than N303, UE stops sending URA UPDATE message and then enters idle state.

Reference

3GPP TS 25.331 clause 8.3.2

8.3.2.8.3 Test purpose

To confirm that the UE retries to perform the URA update procedure upon expiry of timer T303 and moves to idle state after retrying for N303 times.

8.3.2.8.4 Method of test

Initial Condition

System Simulator~~-~~: 1 cell

UE~~-~~: URA_PCH (state 6-16) as specified in clause 7.4 of TS 34.108

Test Procedure

The UE is in the URA_PCH state. When the UE detects the expiry of timer T306 according to the system information, the UE moves to CELL_FACH state and transmits a URA UPDATE message to the SS on the uplink CCCH. This message shall contain value "periodic URA update" in IE "-URA update cause". SS

ignores this message, the UE shall continue to transmit URA UPDATE messages for N303 times after the expiry of timer T303. After N303 re-transmissions, the UE shall enter idle state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in URA_PCH state and SS sets counter K=0. SS wait until T303 expires.
2	→		URA UPDATE	The value "periodic URA update" shall be set in IE " URA update cause".
3				SS ignores the message, waits for T303 timer to expire and increments K by 1. If a message is received after T303 expiry, return to step 2. Else, go to step 4.
4				SS checks that K is equal to (N303+1).
5				The UE shall enter idle state.

Specific Message Contents

None

8.3.2.8.5 Test requirement

After step 1 the UE shall detect the expiry of timer T306, then it shall move to CELL_FACH state and transmit a URA UPDATE message on the uplink CCCH, setting "periodic URA update" into IE "-URA update cause".

After step 2 the UE shall retry to transmit a URA UPDATE message after the expiry of timer T303. SS shall receive (N303+1) CELL UPDATE message. After this, the UE shall enter idle state.

8.3.3. RNTI reallocation

8.3.3.1 RNTI reallocation: Success

8.3.3.1.1 ~~Definition~~

8.3.3.1.2 Conformance requirement

This procedure is used by the network to assign a new RNTI identity to the UE. It is initiated by the UTRAN when it sends an RNTI REALLOCATION message, which includes a new C-RNTI and/or U-RNTI on the downlink DCCH. The UE starts to use the new identities and transmits an RNTI REALLOCATION COMPLETE message to the UTRAN on the uplink DCCH.

Reference

3GPP TS 25.331 clause 8.3.3

8.3.3.1.3 Test purpose

To confirm that the UE starts to use the new identities after it receives an RNTI REALLOCATION message from the SS. To confirm that the UE use the new U-RNTI identity to calculate the applicable paging occasions.

[Editor's note] In this test case, it is assumed that the paging occasion during connected states is determined using U-RNTI. From TS 25.304 Clause 8, this assumption cannot be confirmed. Further clarification is required regarding this issue.

8.3.3.1.4 Method of test

Initial Condition

System Simulator~~-~~: 1cell

UE~~-~~: CS-CELL_FACH_Initial (state 6-2) or PS-CELL_FACH_Initial (state 6-4) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_FACH~~

Test Procedure

Initially, the UE is in the CELL_FACH state and it has been assigned a C-RNTI and U-RNTI. The SS transmits an RNTI REALLOCATION message which includes new C-RNTI and U-RNTI to the UE. Then the UE shall transmit an RNTI REALLOCATION COMPLETE message as confirmation and transits to CELL_PCH state. SS pages the UE by sending a PAGING TYPE 1 message and specifying the newly assigned U-RNTI identity in this message. The UE shall transmit a CELL UPDATE message to the SS on the uplink CCCH which includes the U-RNTI identical to that found in RNTI REALLOCATION message received in step 2. The CELL UPDATE message shall also contain IE "Cell update cause" with this IE set to "paging response". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message which includes IE "DRX Indicator" set to value "No DRX" to the UE on the downlink DCCH. The UE shall return to CELL_FACH state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The initial state of the UE is CELL_FACH state. UE has been allocated both C-RNTI and U-RNTI during RRC connection establishment phase.
2		←	RNTI REALLOCATION	Contains new C-RNTI and U-RNTI identities.
3		→	RNTI REALLOCATION COMPLETE	
4		←	PAGING TYPE 1	SS pages the UE using the new U-RNTI allocated in step 2.
5		→	CELL UPDATE	UE shall trigger cell updating. The message shall indicate the same U-RNTI assigned in the RNTI REALLOCATION message in step 2.
6		←	CELL UPDATE CONFIRM	IE "DRX indicator" is set to "No DRX".

Specific Message Content

RNTI REALLOCATION (Step 2)

Use the same message sub-type as in ~~TS 34.108 Clause 8~~Annex A, with the following exceptions:

Information Element	Value/remark
New U-RNTI	
- SRNC Identity	'0000 0000 0001'
- S-RNTI	'0101 0101 0101 0101 0101'
New C-RNTI	'1010 1010 1010 1010'
DRX Indicator	DRX with cell updating

RNTI REALLOCATION COMPLETE (Step 3)

Only the message type IE is checked in this message.

PAGING TYPE 1 (Step 4)

Use the same message sub-type as in TS 34.108 Clause ~~8~~9, with the following exceptions:

Information Element	Value/remark
Page Record List	
- Paging record	
- CHOICE Paging ~~orginator~~originator	UTRAN originator
- U-RNTI	
- SRNC Identity	'0000 0000 0001'
- S-RNTI	'0101 0101 0101 0101 0101'
BCCH modification info	Not Present

CELL UPDATE (Step 5)

Information Element	Value/remark
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0001'
- S-RNTI	Check to see if set to '0101 0101 0101 0101 0101'
Integrity check info	Not checked
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'FALSE'
Hyper frame number	Check to see if it is present
Cell Update Cause	Check to see if set to 'Paging Response'
Protocol error indicator	Check to see if it is absent or set to 'FALSE'
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM (Step 6)

Use the same message sub-type as in ~~TS 34.108 Clause 8~~Annex A.

8.3.3.1.5 Test requirement

After step 2 the UE shall transmit an RNTI REALLOCATION COMPLETE message on the uplink DCCH. The MAC PDU carrying this message shall comprise either the new C-RNTI or U-RNTI allocated in the "UE-id" field of the MAC header.

After step 4 the UE shall transmit a CELL UPDATE message on the uplink CCCH with IE "Cell update cause" set to "paging response". The IE "U-RNTI" shall be identical to the IE "New RNTI" found in RNTI REALLOCATION message sent by the SS in step 2.

8.3.3.2 RNTI reallocation: Failure (Invalid message reception)

8.3.3.2.1 ~~Definition~~

8.3.3.2.2 Conformance Requirements

When the UE receives an RNTI REALLOCATION message, which contains an error in one of the mandatory IE, it shall transmit a RNTI REALLOCATION FAILURE message on the DCCH using AM RLC and set the value "protocol error" in the IE "failure cause". The IE "protocol error information" in this message shall also be set to an appropriate value. The UE shall not utilize any identities relayed in the erroneous message, and it shall resume normal operations.

8.3.3.2.3 Test Purpose

To confirm that the UE ignore the new connected mode identities conveyed in an erroneous RNTI REALLOCATION message. To confirm that the UE report this event to the UTRAN by sending RNTI REALLOCATION FAILURE message, stating the appropriate failure cause and information.

8.3.3.2.4 Method of test

Initial Conditions

System Simulator~~-~~: 1 cell

UE~~-~~: CS-CELL_FACH_Initial (state 6-2) or PS-CELL_FACH_Initial (state 6-4) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_FACH~~

Test Procedure

The UE is brought to CELL_FACH state. SS transmits a RNTI REALLOCATION message to the UE on the DCCH using UM-RLC mode. In this message, the IE "DRx Indicator" is set to one of the spare values. A new U-RNTI identity is also present in this message. The UE shall respond by transmitting the RNTI REALLOCATION FAILURE message, indicating "protocol error" in IE "failure cause" and also "Information element not comprehended" in IE "Protocol error information". After receiving the RNTI REALLOCATION

FAILURE message, SS waits for a duration to allow T305 to expire. The UE shall transmit CELL UDPATE message with the original U-RNTI identity assigned. SS complete this test by sending CELL UPDATE CONFIRM message to the UE on the downlink DCCH.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The initial state of the UE is CELL_FACH state.
2	←		RNTI REALLOCATION	Contains a new U-RNTI identity, but a spare value is used in the IE "DRx indicator"
3	→		RNTI REALLOCATION FAILURE	UE shall transmit this message to report the error in RNTI REALLOCATION message. It shall include the appropriate cause in the message.
4				SS waits for a period up to timer T305 to allow the UE to start performing a cell updating procedure.
5	→		CELL UPDATE	UE shall trigger periodic cell updating. The message shall not contain the U-RNTI given in the RNTI REALLOCATION message in step 2.
6	←		CELL UPDATE CONFIRM	

Specific Message Content

RNTI REALLOCATION (Step 2)

Use the same message sub-type as in ~~TS 34.108 Clause 8~~Annex A, with the following exceptions:

Information Element	Value/remark
New U-RNTI - SRNC Identity - S-RNTI DRX Indicator	 0000 0000 0001B 0000 0000 0000 0000 00011B Set to one of the spare value

RNTI REALLOCATION FAILURE (Step 3)

Information Element	Value/remark
Failure Cause Protocol Error Information	Check to see if set to 'Protocol error' Check to see if set to 'Information Element not comprehended'

CELL UPDATE (Step 5)

Information Element	Value/remark
U-RNTI - SRNC Identity - S-RNTI Integrity check info AM_RLC error indicator (for C-plane) AM_RLC error indicator (for U-plane) Hyper frame number Cell update cause Protocol error indicator Measured results on RACH Protocol error information	Shall be the same as the original U-RNTI allocated Check to see if set to '~~0000~~ 0000 0000 0001'B Check to see if set to '~~0000~~ 0000 0000 0000 0000 0001'B Not checked Check to see if set to 'FALSE' Check to see if set to 'FALSE' Check to see if it is present Check to see if set to 'Periodic Cell Updating' Check to see if it is absent or set to 'FALSE' Check to see if it is absent Check to see if it is absent

CELL UPDATE CONFIRM (Step 6)

Use the same message sub-type as in ~~TS 34.108 Clause 8~~Annex A

8.3.3.2.5 Test Requirement

After step 2 the UE shall transmit RNTI REALLOCATION FAILURE message, indicating the value “protocol error” in IE ”failure cause” and also “information element not comprehended” in IE ”protocol error information”.

After step 4 the UE shall initiate a periodic cell updating procedure by transmitting CELL UPDATE message on the CCCH. In this message, the U-RNTI identity shall be set to the same value as assigned during the RRC connection establishment procedure.

8.3.4 Active set update in soft handover

8.3.4.1 Active set update in soft handover: Radio Link addition

8.3.4.1.1 ~~———————~~Definition

8.3.4.1.2 Conformance requirement

Radio link addition is triggered in the network’s RRC layer. The RRC entity in the network first configures the new radio link. Transmission and reception then begin immediately. This procedure is to update the active set of the connection between the UE and UTRAN. The UTRAN then transmits an ACTIVE SET UPDATE message to the UE. The UE configures layer 1 to begin reception for the additional radio link. After the UE receives confirmation from the physical layer in the UE, an ACTIVE SET UPDATE COMPLETE message is sent to the UTRAN.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.1.3 Test purpose

To confirm that the UE continues to communicate with the SS on both the additional radio link and an already existing radio link after the radio link addition.

8.3.4.1.4 Method of test

Initial Condition

System Simulator~~-~~: 2cells - Cell 1 is active~~-~~, Cell 2 is active

UE~~-~~: CS-CELL_DCH_Initial (state 6-1) or PS-CELL_DCH_Initial (state 6-3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_DCH in cell 1~~

Test Procedure

Initially, the UE establishes a radio access bearer in the CELL_DCH state in cell 1. The SS begins to configure the new radio link to be added from cell 2. Then the SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC which includes the IE ” Radio Link Addition Information”~~.~~ (e.g. Downlink DPCH information and other optional parameters relevant for the additional radio links with Primary CPICH info used for the reference ID). When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links. After the UE confirms the synchronization with the new radio link from cell 2, the UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC. The UE continues to communicate with the SS on the both radio links. To test this condition, SS ceases the operations of all uplink and downlink DPCH from cell 1. SS shall observe that the data communication for both DCCH and DTCH channels continue as per normal using cell 2, as if cell 1 is still operational.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state in cell 1, after the successful establishment of a radio access bearer service.
2				The SS configures an additional radio link in the downlink direction from cell 2.
3	←		ACTIVE SET UPDATE	SS transmits this ~~massage~~message in cell 1 ~~-~~on downlink DCCH using AM RLC. The message includes IE "~~-~~Radio Link Addition Information". (e.g. Downlink DPCH information and other optional parameters relevant for the additional radio links with Primary CPICH info used for the reference ID in cell 2)
4	→		ACTIVE SET UPDATE COMPLETE	The UE shall configure a new radio link to cell 2, without interfering with existing connections on the radio link in cell 1. SS ceases all Tx and Rx activities in cell 1. But it shall be able to communicate with UE through cell 2.

Specific Message Content

ACTIVE SET UPDATE

The message to be used in this test is defined in the default message content clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code as assigned for cell 2
- Downlink DPCH info for each RL	
- Primary CPICH usage for channel estimation	P-CPICH can be used.
- DPCH frame offset	0 chips
- Secondary CPICH info	Not Present
- DL channelisation code	This IE is repeated for all existing downlink DPCHs allocated to the UE
- Secondary scrambling code	Not Present
- CHOICE Spreading factor	512
- Code Number	For each DPCH, assign the same code number in the current code given in cell 1.
- Scrambling code change	Not Present
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH Information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	Not Present

8.3.4.1.5 Test requirement

After step 3 the UE shall configures a new radio link to cell.2, with the connection on the old radio link in cell 1 remaining operational and unaffected. It shall transmit an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH using AM RLC to acknowledge the completion of the active set additional procedure.

After step 4 the SS shall continue to communicate with the UE using the radio links added to the UE from cell 2.

8.3.4.2 Active set update in soft handover-: Radio Link removal

8.3.4.2.1 Definition

8.3.4.2.2 Conformance requirement

This procedure is to update the active set of the connection between the UE and the UTRAN after the UTRAN has commanded a removal of a radio link from the current active set. The UTRAN RRC transmits an ACTIVE SET UPDATE message to the UE RRC. The UE RRC requests UE L1 to terminate transmission and reception of the radio link to be removed. The UE shall continue to communicate normally with the UTRAN using the new active set, without losing the connection link. After this the UE acknowledges the radio link removal by sending an ACTIVE SET UPDATE COMPLETE message to the UTRAN on DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.2.3 Test purpose

To confirm that the UE continues to communicate with the SS on the remaining radio link after radio link removal on the active set.

8.3.4.2.4 Method of test

Initial Condition

System Simulator-: 2cells - both Cell 1 and Cell 2 are active

UE-: CS-CELL_DCH_Initial (state 6-1) or PS-CELL_DCH_Initial (state 6-3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_DCH in cell 1~~

Test Procedure

At the start of the test, the UE establishes a radio access bearer service in the CELL_DCH state in cell 1. This is followed by a radio link addition procedure in cell 2. SS then transmits an ACTIVE SET UPDATE message, which includes IE "Radio Link Removal Information" and specifying the P-CPICH information of the cell to be removed. When the UE receives this message, the UE RRC entity shall request UE L1 entity to terminate transmission and reception of the radio link from cell 1. Then the UE transmits an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC. The UE shall continue to communicate with the SS on the remained radio link in cell 2.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL DCH state in cell 1. SS executes test 8. 3.4.1, and the UE shall update the active set to contain cell 1 and cell 2 after the radio link addition procedure.
2	←		ACTIVE SET UPDATE	The SS transmits this ~~massage~~message on downlink DCCH using AM RLC which includes IE "Radio Link Removal Information".
3	→		ACTIVE SET UPDATE COMPLETE	The UE shall remove the radio link associated with cell 1.
4				The SS stops transmission on

Specific Message Contents

ACTIVE SET UPDATE

The message to be used in this test is the same as the message sub-type found in ~~TS 34.108 clause 8~~Annex A, with the following exceptions:

Information Element	Value/remark
Radio link addition information Radio link removal information - Primary CPICH info - Primary scrambling code	Not Present 1 radio link to be removed Set to the same P-CPICH scrambling code assigned for cell 1

8.3.4.2.5 Test requirement

After step 2 the UE shall remove the radio link from cell 1 and it shall transmit an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH using AM RLC.

After step 3 the UE shall continue to communicate on the remaining radio link from cell 2.

8.3.4.3 Active set update in soft handover: Combined radio link addition and removal (active set is not full)

8.3.4.3.1 Definition

8.3.4.3.2 Conformance requirement

When radio links are to be replaced, the UTRAN RRC first configures the UTRAN L1 to activate the radio link(s) that are being added. The UTRAN RRC then transmits an ACTIVE SET UPDATE message to the UE RRC, which shall configure the UE L1 to terminate transmission and reception on the removed radio link(s) and begin transmission and reception on the added radio link(s). At the completion of the reconfiguration of radio links, the UE shall acknowledge the replacement with an ACTIVE SET UPDATE COMPLETE message.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.3.3 Test purpose

To confirm that the UE continues to communicate with the SS on the added radio link and removes radio link which exists prior to the execution of active set update procedure.

8.3.4.3.4 Method of test

Initial Condition

System Simulator-: 2cells- Both Cell 1 and Cell 2 are active

UE-: CS-CELL_DCH_Initial (state 6-1) or PS-CELL_DCH_Initial (state 6-3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE ~~CELL_DCH in cell 1~~ [Active set is not full.]

Test Procedure

The UE establishes a radio access bearer in the CELL_DCH state in cell 1. SS begin to configure the new radio link in cell 2. Then the SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC. The message includes IE "Radio Link Addition Information", and IE "Radio Link Removal Information", indicating the removal of cell 1 and addition of cell 2 into the active set. When the UE receives this message, the UE RRC shall terminate the transmission and reception of the removed radio link in cell 1 and then configures layer 1 to begin transmission and reception in cell 2. After the UE received confirmations from the physical layer regarding the update of active set, it transmits an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH to the SS. The UE shall continue to communicate with the SS on the added radio link in cell 2. When SS receives ACTIVE SET UPDATE COMPLETE message, it verifies that the UE has ceased any uplink transmission in cell 1.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state in cell 1
2				The SS configures an additional radio link in cell 2, starting the transmission and reception of data in cell 2. Clause
3	←		ACTIVE SET UPDATE	The SS transmit this message on downlink DCCH using AM RLC which includes IE "-Radio Link Addition Information" for cell 2 and IE "-Radio Link Removal Information" for cell 1.
4	→		ACTIVE SET UPDATE COMPLETE	The UE shall configure a new radio link in cell 2 and removes the old radio link in cell 1.
5				The SS removes the radio link from cell 1 and the UE shall continue to communicate on the added radio link in cell 2, and not transmit any data in cell 1.

Specific Message Content

ACTIVE SET UPDATE

The message to be used in this test is defined in the default message content clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code as assigned for cell 2
- Downlink DPCH info for each RL	
- Primary CPICH usage for channel estimation	P-CPICH can be used.
- DPCH frame offset	0 chips
- Secondary CPICH info	Not Present
- DL channelisation code	This IE is repeated for all existing downlink DPCHs allocated to the UE
- Secondary scrambling code	Not Present
- CHOICE Spreading factor	512
- Code Number	For each DPCH, assign the same code number in the current code given in cell 2.
- Scrambling code change	Not Present
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH Information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code assigned as for cell 1

8.3.4.3.5 Test requirement

After step 3 the UE shall remove the radio link in cell 1 and add the radio link in cell 2. Then the UE shall transmit an ACTIVE SET UPDATE COMPLETE message the uplink DCCH.

After step 4 the UE shall continue to communicate on the added radio link in cell 2. SS monitors the uplink direction to confirm that no data are designated for reception in cell 1.

8.3.4.4 Active set update in soft handover: Unsupported Configuration in the UE

8.3.4.4.1 ~~———————~~Definition

8.3.4.4.2 Conformance requirement

If the UTRAN attempts to remove a radio link ~~-~~that is not currently present in the UE's active set, the UE transmits an ACTIVE SET UPDATE FAILURE message on the DCCH using AM RLC and maintain its current communication status with the radio links.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.4.3 Test purpose

To confirm that the UE transmits an ACTIVE SET UPDATE FAILURE message on the DCCH using AM RLC, following the reception of a message specifying the removal of a radio link unknown to the UE.

8.3.4.4.4 Method of test

Initial Condition

System Simulator~~-~~: 2cells - Cell 1 is active, Cell 2 is active.

UE~~-~~: CS-CELL_DCH_Initial (state 6-1) or PS-CELL_DCH_Initial (state 6-3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_DCH in cell 1~~.

Test Procedure

The UE establishes a radio access bearer in the CELL_DCH state in cell 1. SS requests for a radio link addition by executing the steps described in test case 8.3.4.1. The UE shall then include cell 2 into its active set and establish the transmission and reception capabilities related to cell 2. SS then transmits an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC which includes IE_"-Radio Link -Removal Information" This IE indicates that a cell with unknown P-CPICH scrambling code be removed from the active set. When the UE receives this message, it transmits an ACTIVE SET UPDATE FAILURE message which is set to "configuration unacceptable" in IE_"-failure cause" on the uplink DCCH using AM RLC to the SS, and continues to communicate on the existing radio links in cell 1 and cell 2.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state in cell 1.
2				SS commands the UE to perform a radio link addition procedure by executing the steps in test case 8.3.4.1. The UE shall respond accordingly. Both cell 1 and cell 2 should be found in the active set maintained by the UE.
3	←		ACTIVE SET UPDATE	The SS transmits this message on downlink DCCH using AM RLC which includes IE_"-Radio Link Removal Information". This content of this IE indicates an unknown cell.
4	→		ACTIVE SET UPDATE FAILURE	The message shall state "configuration unacceptable" in IE_"failure cause". UE shall continue to communicate normally with both cells

Specific Message Contents

ACTIVE SET UPDATE (Step 3)

The message to be used in this test is defined in the default message content clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information Radio link removal information - Primary CPICH info - Primary scrambling code	Not Present 1 radio link to be removed Set to an unknown scrambling code not assigned to any cells.

ACTIVE SET UPDATE FAILURE (Step 4)

Information Element	Value/remark
Integrity check info Failure cause	Not Checked Check to see if it's set to 'configuration unacceptable'

8.3.4.4.5 Test requirement

After step 3 the UE shall transmit an ACTIVE SET UPDATE FAILURE message, setting "configuration unacceptable" in IE "failure cause" and sent on the uplink DCCH using AM RLC.

After step 4 the UE shall continue to communicate on the radio links for both cell 1 and cell 2.

8.3.4.5 Active set update in soft handover: Combined radio link addition and removal (active set is full)

8.3.4.5.1 ~~Definition~~

8.3.4.5.2 Conformance requirement

When the UE active set is full, the UE shall first remove the old radio link and then add the new radio link, after it receives an ACTIVE SET UPDATE message for the combined radio link addition and removal.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.5.3 Test purpose

To confirm that the UE removes one of existing radio links, which is indicated in an ACTIVE SET UPDATE message and continues to communicate on the added radio link.

8.3.4.5.4 Method of test

Initial Condition

System Simulator: 3 cells - Cell 1, Cell 2, and Cell 3 are all active

UE: CS-CELL_DCH_Initial (state 6-1) or PS-CELL_DCH_Initial (state 6-3) in cell 1 and cell 2 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_DCH in cell 1, cell 2~~ (The assumed maximum number for active set is 2.)

[Editor's Note] The maximum number of radio link (i.e. MaxRL) specified in CR328 of TS 25.331 is 8. However, if the UE capability is more inferior in this aspect, can the assumption above still stands?

Test Procedure

The UE establishes a radio access bearer in the CELL_DCH state in cell 1 and cell 2. The SS configures the new radio link in cell 3 and sends an ACTIVE SET UPDATE message on DCCH using AM. This message includes IE "Radio Link Addition Information" indicating cell 3 to be added into the active set, and IE " Radio Link Removal Information" indicating the removal of cell 1 from the active set. When the UE receives this message, it shall not report a failure but firstly removes the indicated radio link and then adds the new radio link. Then the UE transmits an ACTIVE SET UPDATE COMPLETE message on the DCCH using AM RLC to the SS and continues to communicate with the SS on the added radio link and the remaining old radio link.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state in cell 1 and cell 2.
2				The SS configures an additional radio link in for cell 3, and starts reception and transmission using cell 3.
3	←		ACTIVE SET UPDATE	The SS transmit this ~~massage~~message on downlink DCCH using AM RLC which includes IE "-Radio Link Addition Information" and IE "-Radio Link Removal Information". The contents of the IE dictate the addition of cell 3 into the active set and removal of cell 1 from it.
4	→		ACTIVE SET UPDATE COMPLETE	The UE shall configure a new radio link in cell 3 and removes the old radio link in cell 1.
5				The SS removes the radio link in cell 1. The UE shall continue to communicate on the added radio link in cell 3 and also the existing radio link in cell 2.

Specific Message Content

ACTIVE SET UPDATE

The message to be used in this test case is identical to the same message sub-type found in ~~TS 34.108 Clause 8clause~~Annex A, with the following exceptions:

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code as assigned for cell 3
- Downlink DPCH info for each RL	
- Primary CPICH usage for channel estimation	P-CPICH can be used.
- DPCH frame offset	0 chips
- Secondary CPICH info	Not Present
- DL channelisation code	This IE is repeated for all existing downlink DPCHs allocated to the UE
- Secondary scrambling code	Not Present
- CHOICE Spreading factor	512
- Code Number	For each DPCH, assign the same code number in the current code given in cell3.
- Scrambling code change	Not Present
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH Information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code assigned as for cell 1

8.3.4.5.5 Test requirement

After step 3 the UE shall remove the radio link in cell 1 and add the radio link in cell 3. Then the UE shall transmit an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH.

After step 4 the UE shall continue to communicate on the added radio link in cell 3 and on the existing old radio link in cell 2. It shall cease all transmission to cell 1.

8.3.4.6 Active set update in soft handover: Subsequent reception of ACTIVE SET UPDATE message / Incompatible simultaneous reconfiguration

8.3.4.6.1 Definition

8.3.4.6.2 Conformance Requirements

The UE shall ignore a subsequent ACTIVE SET UPDATE message, while it is still processing an existing active set update procedure. It shall continue to configure itself in accordance to the first ACTIVE SET UPDATE message received. When encountering a “simultaneous reconfiguration” situation, the UE shall transmit a ACTIVE SET FAILURE message on the DCCH using AM RLC with value “incompatible simultaneous reconfiguration” set in IE_”failure cause”. Then the UE shall continue to execute the ordered reconfiguration (for example due to a radio bearer reconfiguration) as if the ACTIVE SET UPDATE message has not been received.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.6.3 Test Purpose

To confirm that the UE continues to execute the prior active set update request, when it receives a subsequent ACTIVE SET UPDATE messages before it has completely executed the first update procedure. To confirm that the UE transmits an ACTIVE SET UPDATE FAILURE message to report the detection of a “incompatible simultaneous reconfiguration” condition, when an ACTIVE SET UPDATE message was received before the UE can complete an on-going radio bearer reconfiguration procedure.

8.3.4.6.4 Method of test

Initial Condition

System Simulator-: 2 cells – both cell 1 and cell 2 are active

UE-: CS-CELL_DCH_Initial (state 6-1) or PS-CELL_DCH_Initial (state 6-3) in cell 1 and cell 2 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE~~CELL_DCH in cell 1 and cell 2~~

~~8.3.4.6.4 Test Procedure~~

The UE establishes a radio access bearer in CELL_DCH state in cell 1 and cell 2. SS transmits an ACTIVE SET UPDATE message to request for the removal of cell 1 from the active list. When the UE sends an acknowledgement for this message from its RLC entity, SS immediately transmits a second ACTIVE SET UPDATE message, which specifies cell 1 to be added into the active list. SS verifies that the UE ceases transmission on the radio link associated with cell 1 when the activation time indicated in the first ACTIVE SET UPDATE message is reached. Next, SS sends a RADIO BEARER RELEASE message using AM-RLC on the DCCH. In this message, SS requests the release of the radio access bearer. When RLC acknowledgement has been received from the UE, SS immediately sends an ACTIVE SET UPDATE message. In this message, SS commands the UE to add cell 1 into its active list with the activation time set to “now”. The UE shall react by transmitting ACTIVE SET UPDATE FAILURE message on the DCCH using AM-RLC mode. In this message, the IE ”failure cause” shall be set to “incompatible simultaneous reconfiguration”. When the activation time stated in RADIO BEARER RELEASE message has elapsed, the UE shall transmit the RADIO BEARER RELEASE COMPLETE message to inform that the assigned radio access bearer is release. When SS receives this message, it verifies that UE continues to communicate with the SS on the radio link associated with cell 2 only, and that no user data are exchanged on the previously available radio access bearer.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is CELL_DCH state in both cell 1 and cell 2.
2		←	ACTIVE SET UPDATE	The SS transmits this message on downlink DCCH using AM RLC, requesting for cell 1 to be removed from the active set.
3		←	ACTIVE SET UPDATE	Immediately after UE acknowledges the message in step 2, SS transmits this message. This message specifies that cell 1 be added into the active set.
4				SS waits until the activation time stated in step 2 has elapsed, and verifies that the UE stops transmitting on the radio link of cell 1.
5		→	ACTIVE SET UPDATE COMPLETE	UE shall transmit this message to signal the

6	←	RADIO BEARER RELEASE	SS checks that UE stops all uplink activities on the radio link associated with cell 1. SS requests that the radio access bearer allocated to the UE be
8	→	ACTIVE SET UPDATE FAILURE	In IE “failure cause”, the reason “incompatible simultaneous reconfiguration” shall be stated.
9	→	RADIO BEARER RELEASE COMPLETE	The UE shall send this message when the activation time specified in step 6 is reached. Upon reception of this message, SS verifies that there is no more uplink user traffic on the radio access bearer.

Specific Message Contents

ACTIVE SET UPDATE (Step 2)

Use the default message for this type found in Annex A, with the following exceptions:

Information Element	Value/remark
Radio link addition information Radio link removal information - Primary CPICH info - Primary scrambling code	Not Present. Set to the P-CPICH scrambling code assigned to cell 1.

ACTIVE SET UPDATE (Step 3)

Use the default message for this type found in Annex A, with the following exceptions

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code as assigned for cell 1
- Downlink DPCH info for each RL	
- Primary CPICH usage for channel estimation	P-CPICH can be used.
- DPCH frame offset	0 chips
- Secondary CPICH info	Not Present
- DL channelisation code	This IE is repeated for all existing downlink DPCHs allocated to the UE
- Secondary scrambling code	Not Present
- CHOICE Spreading Factor	512
- Code Number	For each DPCH, assign the same code number in the current code given in cell 1.
- Scrambling code change	Not Present
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	Not Present

ACTIVE SET UPDATE COMPLETE (Step 5)

Only the message type for this message is checked.

RADIO BEARER RELEASE (Step 6)

Use the same message sub-type titled “AM or UM (Non-speech in CS)“ found in Annex A.

ACTIVE SET UPDATE (Step 7)

Use the same message as in that for step 3, with the following exception:

Information Element	Value/remark
Activation Time	Not Present – use default

ACTIVE SET UPDATE FAILURE (Step 8)

Information Element	Value/remark
Failure Cause	Check to see if set to “Incompatible simultaneous reconfiguration”

RADIO BEARER RELEASE COMPLETE (Step 9)

Information Element	Value/remark
Integrity check Info	Not checked
Uplink integrity protection activation info	Not checked
Radio bearer uplink ciphering activation time info	Not checked

8.3.4.6.5 Test Requirement

After step 5 the UE shall ignore the second ACTIVE SET UPDATE message received, terminate the radio link in relation to cell 1, and transmit ACTIVE SET UPDATE COMPLETE using AM-RLC on the uplink DCCH of cell 2.

After step 7 the UE shall report the “incompatible simultaneous reconfiguration” error by transmitting ACTIVE SET UPDATE FAILURE message on the DCCH.

After step 8 the UE shall send RADIO BEARER RELEASE COMPLETE message to cell 2 on the uplink DCCH, using AM-RLC mode. The UE shall stop all transmissions of user traffic on the radio access bearer assigned.

8.3.4.7 Active set update in soft handover: Invalid Message Reception

8.3.4.7.1 ~~———————~~Definition

8.3.4.7.2 Conformance Requirement

The UE shall keep its old configuration when the UE receives an ACTIVE SET UPDATE message, which omits a conditional IE. It shall transmit a ACTIVE SET UPDATE FAILURE message which set value "protocol error" in IE_"~~-~~failure cause" and also value "Conditional information element error" in IE_"~~-~~Protocol error cause".

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.7.3 Test Purpose

To confirm that the UE retains its active set list when it receives an ACTIVE SET UPDATE message, with a conditional IE missing in the message.

8.3.4.7.4 Method of test

Initial Condition

System Simulator~~-~~: 2 cells – both cell 1 and cell 2 are ~~actiive~~active.

UE~~-~~: CS-CELL_DCH_Initial (state 6-1) or PS-CELL_DCH_Initial (state 6-3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE ~~CELL_DCH in cell 1~~ (Integrity protection algorithm is not applied at the start of test)

Test Procedure

The UE establishes a radio access bearer in CELL_DCH in cell 1. SS requests that cell 2 be added into the active set by performing the steps described in test cases 8.3.4.1. The UE shall react accordingly and incorporate cell 2 into its active set. SS transmits an ACTIVE SET UPDATE message~~-~~, with both IE "Integrity check info" and IE_"Integrity protection mode info" present in the message. This message also commands the starting of integrity mode protection. However, the IE_"integrity protection initialisation number" is omitted. The UE shall detect that it has received an invalid message. It shall then send ~~a~~an ACTIVE SET UPDATE FAILURE message, stating the reason "Conditional information element error" in the IE_"Protocol error information". The UE shall not remove cell 1 from its current active set.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is CELL_DCH state in cell 1.
2				SS executes the steps in test case 8.3.4.1. The UE shall add cell 2 into its active set.
3	←		ACTIVE SET UPDATE	The SS transmits this message on downlink DCCH using AM RLC which includes IE "Integrity check info" and IE "Integrity protection mode info". This message indicates that integrity mode protection be started but omit the IE "integrity protection initialisation number". The message also specifies that cell 1 be removed from the active set.
4	→		ACTIVE SET UPDATE FAILURE	The message shall state "conditional information element error" in IE "protocol error information". UE shall

Specific Message Contents

ACTIVE SET UPDATE (Step 3)

The message to be used in this test is defined in the default message content clause, with the following exceptions:

Information Element	Value/remark
Integrity Check Info	
- Message authentication code	Set to an arbitrary 32-bits string
- RRC Message sequence number	Set to an arbitrary integer between 0 and 15
Integrity Protection Mode Info	
- Integrity protection mode command	Start
- Downlink integration protection activation info	Not Present
- Integrity protection algorithm	Standard UMTS Integrity Algorithm UIA1
- Integrity protection initialisation number	Not Present
Radio link addition information	Not Present
Radio link removal information	
- Primary CPICH info	
- Primary scrambling code	Set to the P-CPICH scrambling code assigned to cell 1.

ACTIVE SET UPDATE FAILURE (Step 4)

Information Element	Value/remark
Protocol Error Information	
- Protocol Error Cause	Check to see if it's set to 'Conditional information element error'

8.3.4.7.5 Test Requirement

After step 3 the UE shall report a protocol error by transmitting the ACTIVE SET UPDATE FAILURE message on the DCCH. In this message, the value "Conditional information element error" shall be set in IE "Protocol Error Information". The UE shall continue to communicate normally with the SS using cell 1 and cell 2.

8.3.5 Hard Handover

8.4 Measurement procedure

8.4.1 Measurement Control and Report

8.4.1.1 Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_DCH state

8.4.1.1.1 Definition

8.4.1.1.2 Conformance requirement

After a state transition from idle mode to CELL_DCH state, the UE shall continue to monitor the list of neighbouring cells which is specified in the SYSTEM INFORMATION BLOCK TYPE 11 (or 12) messages on BCCH. The UE shall send a MEASUREMENT REPORT message when reporting criteria are satisfied. During CELL_DCH state, if the UE receives a MEASUREMENT CONTROL message, it shall terminate existing monitoring activities for the neighbouring cells previously known from SYSTEM INFORMATION BLOCK TYPE 11 (or 12) messages. It shall perform the measurement and reporting tasks based on the latest MEASUREMENT CONTROL message received.

Reference

3GPP TS 25.331 clause 8.4.1.9

8.4.1.1.3 Test Purpose

To confirm that the UE continue to monitor CPICH RSCP measurement quantity of the neighbour cells after it has entered the CELL_DCH state from idle mode. When the reporting criteria specified ~~in BCCH~~in SYSTEM INFORMATION BLOCK TYPE 11 (or 12) have been met, it shall report the measurements to the SS using MEASUREMENT REPORT messages. To confirm that in CELL_DCH state, the UE respond to a modification of measurement criteria and adjust its measurement and reporting mechanism accordingly. To confirm that the UE terminates monitoring and measurement activities for the neighbour cells found in SYSTEM INFORMATION BLOCK TYPE 11 (or 12) message, after it has received a MEASUREMENT CONTROL message which specifies the measurement type to be “intra-frequency measurement”. To confirm that the UE ~~restart~~ reconfigures the monitoring and reporting activities based on the last MEASUREMENT CONTROL message received.

8.4.1.1.4 Method of test

Initial Condition

System Simulator~~-~~: 2 cells – Cell 1 is active and the downlink P-CPICH has a transmission level (RSCP) of –40 dBm, cell 2 is also active but with a P-CPICH transmission power 10dB below cell 1.

UE~~-~~: ~~idle state after having successfully camped onto cell 1.~~CS-registered idle mode (state 2) or PS-registered idle mode (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM INFORMATION BLOCK TYPE 11 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list. The key measurement parameters are as follow: measurement type = “intra-frequency measurement”, measurement quantity = “CPICH RSCP”, report criteria = “periodic reporting criteria”, reporting interval = “12 seconds”.

SS ~~pages the UE with the cause set to terminating~~prompts the operator to make an outgoing call of a supported traffic class. The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates uplink and downlink DP~~D~~CH physical resources to the UE. UE shall then transmit RRC CONNECTION SETUP COMPLETE message and move~~s~~ to CELL_DCH state. After approximately 12 seconds, the UE shall transmit a MEASUREMENT REPORT message with measurement readings from cell 2. SS waits for 25 seconds after the sending of RRC CONNECTION SETUP message to verify that 2 consecutive MEASUREMENT REPORT messages are received.

~~Then SS modifies the contents of MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK TYPE 12 messages. The measurement parameters for cell 2 are changed in the following manner: report criteria = "event-trigger", event identity = "1f", reporting threshold = "-65 dBm". SS then begins to decrease the transmission power of P-CPICH in cell 2 progressively at the rate of 0.5dB/sec. SS checks to see that no MEASUREMENT REPORT messages are sent within the next 12 seconds (which is due to periodic reporting). The UE shall detect this change and discontinue the periodic reporting of RSCP value estimation from cell 2. After approximately 35 seconds later, the UE shall transmit MEASUREMENT REPORT message to indicate that the RSCP of cell 2 has reached the threshold specified. In this message, the correct measurement identity shall be stated. Finally, SS sends a MEASUREMENT CONTROL message to request a periodic reporting of measurement quantity P-CPICH Ec/No from cell 2. The reporting interval is set to 32 seconds. Within the MEASUREMENT CONTROL message, a new measurement identity is assigned. After receiving this message, the UE shall stop reporting quantity P-CPICH RSCP of cell 2. Moreover, the UE shall start to transmit MEASUREMENT REPORT messages with the contents pertaining to new measurement identity on cell 2's P-CPICH Ec/No.~~

SS sends a MEASUREMENT CONTROL message on the downlink DCCH. In this message, SS assigns an intra-frequency measurement type with the measurement quantity based on cell 2's CPICH RSCP value. Parameters used in this message are: measurement identity = "2", report criteria = "event-trigger", event identity = "1f", reporting threshold = "-65 dBm". After receiving this message, the UE shall delete the existing measurement and reporting context. SS checks to see that no MEASUREMENT REPORT messages are sent within the next 12 seconds (which is due to periodic reporting). SS gradually reduces the transmission power of P-CPICH in cell 2 until its RSCP value reaches –70dBm. The UE shall transmit MEASUREMENT REPORT messages when it detects that the CPICH RSCP of cell 2 has reached the threshold value specified.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 11	The UE is idle mode and camped onto cell 1. Cell 2 is also active but the P-CPICH has a RSCP 10dB below that of cell 1. SYSTEM INFORMATION TYPE 12 to be transmitted is different from the default settings (see specific message contents)
2		~~←~~	~~PAGING TYPE 1~~	~~SS sends this message to page for the UE.~~SS prompts the operator to make an outgoing call.
3		→	RRC CONNECTION REQUEST	
4		←	RRC CONNECTION SETUP	SS allocates DPCH physical channels to UE
5		→	RRC CONNECTION COMPLETE	UE transmits this message to acknowledge the SETUP message and moves to CELL_DCH state.

6	→	MEASUREMENT REPORT	SS waits for 25 seconds. It shall receive 2 consecutive MEASUREMENT REPORT messages
~~7~~	~~←~~	~~MASTER INFORMATION BLOCK~~ ~~SYSTEM INFORMATION BLOCK TYPE 12~~	~~SS modifies the contents of system information, so that measurement for cell 2 is changed to "event trigger" with "event identity" set to 1f. SS then reduces the transmission power of cell 2's P-CPICH progressively by 0.5dB/sec.~~
~~8~~			~~SS monitors the DCCH for the next 12 seconds to make sure that no further MEASUREMENT REPORT messages are transmitted.~~
~~9~~	~~→~~	~~MEASUREMENT REPORT~~	~~UE shall transmit this message approximately 35 seconds after step 7, as its internal estimation of the RSCP of cell 2 has dropped below the threshold.~~
~~10~~7	←	MEASUREMENT CONTROL	~~-~~A new measurement identity is assigned, with the reporting quantity changed to cell 2's P-CPICH ~~Ec/No~~RSCP. See specific message content for the rest of the message.
8			SS waits for approximately 15 seconds and verifies that no further MEASUREMENT REPORT messages are detected on the uplink DCCH.
9			SS gradually reduces the transmission power of cell 2 until its CPICH RSCP value drops to –70dBm.
~~11~~10	→	MEASUREMENT REPORT	SS verifies that UE transmits 2 MEASUREMENT REPORT messages at 500 msec interval ~~periodically~~ to report the P-CPICH ~~Ec/No~~RSCP value of cell 2.

Specific Message Contents

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

8.4.1.1.5 Test Requirement

After step 5 the UE shall start to transmit MEASUREMENT REPORT message. The measurement quantity "CPICH RSCP" shall be reported to the SS at 12 seconds interval.

After step 7 UE shall not transmit any MEASUREMENT REPORT messages within ~~12~~ 15 seconds after SS has ~~modified the MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK TYPE 12~~ transmitted the MEASUREMENT CONTROL message~~s~~.

After step 9 ~~The~~ the UE shall transmit ~~a~~ 2 MEASUREMENT REPORT message~~s~~ ~~roughly 35 seconds after step 7~~on the uplink DCCH, to report that the RSCP value for cell 2 has dropped below the specified threshold.

~~After step 10 the UE shall transmit MEASUREMENT REPORT messages at 32 seconds interval, with the IE"Measurement Identity" set to 3. The message shall also include an estimation of cell 2's P-CPICH Ec/No value.~~

8.4.1.2 Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_DCH state

8.4.1.2.1 ~~————————~~Definition

8.4.1.2.2 Conformance requirement

After entering CELL_DCH state from idle mode, the UE shall discontinue the monitoring of the list of neighbouring cells assigned in the SYSTEM INFORMATION BLOCK TYPE 11 messages on BCCH.

Reference

3GPP TS 25.331 clause 8.4.1.9

8.4.1.2.3 Test Purpose

To confirm that the UE terminates the monitoring activities of the list of neighbouring cell assigned in the IE "inter-frequency cell info" in SYSTEM INFORMATION BLOCK TYPE 11 messages, after it enters CELL_DCH state from idle mode.

8.4.1.2.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1 is active and has a transmission level (CPICH RSCP) of –50 dBm for P-CPICH, cell ~~2~~ 4 is also active but with a transmission power 20dB below cell 1. ~~The carrier frequency of cell 1 in the uplink direction is 1 UARFCN above that of cell 2, and in the downlink direction cell 1 carrier is 1 UARFCN above that of cell 2.~~

UE-: ~~idle state and after it has camped onto cell 1.~~CS-registered idle mode (state 2) or PS-registered idle mode (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK INFORMATION TYPE ~~12~~ 11 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference, and also to include cell ~~2~~ 4 into the monitored neighbour cells list. The key measurement parameters are as follow: measurement type = "inter-frequency measurement", measurement quantity = "CPICH RSCP".

SS ~~pages the UE , stating the paging cause as terminating call for~~prompts the operator to make an outgoing call for one of the traffic classes supported by the UE. The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates uplink and downlink dedicated physical resources to the UE. UE sends RRC CONNECTION SETUP COMPLETE on the uplink DCCH and then moves to CELL_DCH. The UE shall not transmit any MEASUREMENT REPORT messages, which pertain to measurement readings from cells belonging to the monitored set.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 11	The UE is idle mode and camped onto cell 1. Cell 2 is also active but has transmission power 20dB below that of cell 1. SYSTEM INFORMATION BLOCK TYPE 11 to be transmitted is different from the default settings (see specific message contents)
2		~~←~~	~~PAGING TYPE 1~~	~~SS sends this message to page for the UE.~~SS prompts the operator to make an outgoing call.
3		→	RRC CONNECTION REQUEST	
4			RRC CONNECTION SETUP	SS allocates dedicated physical channels to UE, specifying the use~~ing~~ of compressed mode format
5		→	RRC CONNECTION SETUP COMPLETE	UE transmits this message to acknowledge the RRC CONNECTION SETUP
6				SS raises the ~~transmission power~~CPICH RSCP of cell 2 by 10dB. SS checks to see that no MEASUREMENT REPORT messages are sent from UE to cell 1.

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

8.4.1.2.5 Test Requirement

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages pertaining to the measurement of CPICH ~~Ec/No~~RSCP quantity of cell ~~2~~4.

8.4.1.3 Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_FACH state

8.4.1.3.1 Definition

8.4.1.3.2 Conformance requirement

During a transition from idle mode to CELL_FACH state, the UE shall start to monitor neighbouring cells listed in the IE ”Intra-frequency cell info” received in SYSTEM INFORMATION BLOCK TYPE 11 or TYPE 12. If a measurement report criteria is also specified, the UE shall store this information and apply these rules when deciding to transmit MEASUREMENT REPORT messages ~~during~~ after a subsequent transition to CELL_DCH state. If reporting during RACH transmissions is dictated by the UTRAN, the UE shall append the relevant measurement information when sending messages on RACH (e.g. RRC CONNECTION REQUEST and CELL UPDATE).

Reference

3GPP TS 25.331, clause 8.4.1.~~9~~10

8.4.1.3.3 Test Purpose

To confirm that the UE begins to monitor the neighbouring cells in the monitored list after it has entered the CELL_FACH state. The list of neighbouring cell can be known from SYSTEM INFORMATION BLOCK TYPE 11 or TYPE 12 messages. If information regarding the intra-frequency measurement reporting criteria is also broadcasted, the UE shall save this information and apply the criteria ~~during~~ after a subsequent transition to CELL_DCH state. If RACH measurement reporting is dictated in SYSTEM INFORMATION BLOCK TYPE 11 or TYPE 12 messages, the UE shall include these measurements when transmitting on the RACH channel.

8.4.1.3.4 Method of test

Initial Condition

System Simulator~~-~~: 2 cells – both cell 1 and cell 2 are active. Cell 2 is transmitting at 15 dB below cell 1.

UE~~-~~: ~~idle state and camped onto cell 1.~~CS-registered idle mode (state 2) or PS-registered idle mode (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE ~~12~~ 11 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list. The key measurement parameters are as follow: measurement type = “intra-frequency measurement”, measurement quantity = “CPICH Ec/No”, report criteria = “periodic reporting criteria”, reporting interval = “12 seconds”. In the system information message, reporting of CPICH Ec/No is also required for intra-frequency reporting when transmitting RACH messages to cell 1.

SS ~~pages the UE with the cause specified as terminating~~prompts the operator to make an outgoing call of one of the traffic classes supported by the UE. The UE shall transmit a RRC CONNECTION REQUEST message on the uplink CCCH, SS replies with RRC CONNECTION SETUP message and allocates PRACH and S-CCPCH ~~(FACH)~~ physical channels for uplink and downlink use. UE shall then enter CELL_FACH state. SS waits until timer T305 expires, the UE shall send a CELL UPDATE message including the measurement reading of cell 2’s CPICH Ec/No values. SS then reply with CELL UPDATE CONFIRM message without changing the physical channel resources.

In the next sequence, SS transmits PHYSICAL CHANNEL RECONFIGURATION message, and allocates DP~~D~~CH channels to the UE. The UE shall transit to CELL_DCH state and send a MEASUREMENT REPORT message, correctly stating the measurement identity. The measurement identity indicated shall match the value that was previously broadcasted on SYSTEM INFORMATION BLOCK TYPE 11 when the UE was still in idle mode.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 2, SYSTEM INFORMATION BLOCK TYPE 11	The UE is idle mode and camped onto cell 1. Cell 2 is also active but has transmission power 15dB below that of cell 1. SYSTEM INFORMATION TYPE 2 and 11 to be transmitted are different from the default settings (see specific message contents)
2		~~←~~	~~PAGING TYPE 1~~	~~SS sends this message to page for the UE.~~SS prompts the test operator to make an outgoing call.
3		→	RRC CONNECTION REQUEST	The Ec/No value of P-CPICH
4		←	RRC CONNECTION SETUP	SS allocates common physical channels to UE.
5		→	RRC CONNECTION COMPLETE	UE shall enter CELL_FACH state, and transmit this message to acknowledge the RRC CONNECTION SETUP message.
6				SS monitors the uplink DCCH to confirm that no MEASURENENT REPORT messages are detected. SS waits for 5 minutes (for the expiry of T305 timer), so that UE will initiate a periodic cell updating procedure.
7		→	CELL UPDATE	This message shall contain measurement readings of CPICH Ec/No for cell 1.
8		←	CELL UPDATE CONFIRM	SS does not change the
9		←	PHYSICAL CHANNEL RECONFIGURATION	SS assigns DPCH physical resources to the UE, but keeps the parameters for transport channels and RBs unchanged.
10		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall transit to CELL_DCH state after sending this
11		→	MEASUREMENT REPORT	UE shall begin to report cell 2's CPICH Ec/No value periodically at 12 seconds interval. The measurement identity shall match that broadcasted in step 1

8.4.1.3.5 Test Requirement

After step 3 the UE shall send RRC CONNECTION REQUEST message in response to the paging message sent by the SS, which includes reading of the ~~current~~ cell 1's CPICH Ec/No value.

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages on the uplink DCCH.

After step 6 the UE shall initiate cell update procedure by transmitting CELL UPDATE message. In this message, the cause shall be set to "periodic cell updating". It shall include measurement readings for ~~the current cell (~~cell 1's~~)~~ CPICH Ec/No measurement quantity.

After step 10 the UE shall move to CELL_DCH state and transmit MEASUREMENT REPORT messages at 12 seconds interval. In these messages, neighbouring cell 2's CPICH Ec/No value shall be reported. The IE "measurement identity" in this message shall match the IE "Intra-frequency measurement identity" found in SYSTEM INFORMATION BLCOK TYPE 11 messages transmitted in step 1.

8.4.1.4 Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_FACH state

8.4.1.4.1 ~~Definition~~

8.4.1.4.2 Conformance requirement

After entering CELL_FACH state from idle mode, the UE shall start to monitor the list of "inter-frequency" neighbouring cells assigned in the SYSTEM INFORMATION BLOCK TYPE 11 or 12 messages on BCCH/FACH.

Reference

3GPP TS 25.331, clause 8.4.1.10

8.4.1.4.3 Test Purpose

To confirm that the UE begins to monitor the list of neighbouring cell assigned in the IE "inter-frequency cell info" in SYSTEM INFORMATION BLOCK TYPE 11 or 12 messages, after it enters CELL_FACH state from idle mode. However, it shall not transmit any MEASUREMENT REPORT messages to report measured results for inter-frequency cells.

8.4.1.4.3 Method of test

Initial Condition

System Simulator~~-~~: 2 cells – Cell 1 is active and has a downlink transmission level for CPICH RSCP at -40 dBm, cell ~~2~~ 4 is also active but with a transmission power 10dB below cell 1. ~~The carrier frequency of cell 2~~

~~in the uplink direction is 1 UARFCN above that of cell 2, and the downlink carrier is 1 UARFCN below that of cell 1.~~

UE-: ~~idle state and has successfully camped onto cell 1.~~CS-registered idle mode (state 2) or PS-registered idle mode (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 12 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell ~~2~~ 4 into the monitored neighbour cell list for inter-frequency measurement type. The key measurement parameters are as follow: measurement type = "inter-frequency measurement", measurement quantity = "CPICH Ec/No".

SS ~~pages the UE with the cause set to terminating~~prompts the operator to make an outgoing call of a supported traffic class. The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates PRACH channel in the uplink and S-CCPCH~~(FACH)~~ channel on the downlink to the UE. UE then moves to CELL_FACH. The UE shall not transmit any MEASUREMENT REPORT messages, which pertain to measurement readings from inter-frequency cells belonging to the monitored set. SS decreases the transmission power of CPICH in cell 1 by 10dB. At the same time, it raises the corresponding downlink transmission power of cell ~~2~~ 4 by 10dB. This is expected to trigger a cell reselection in the UE. The UE shall send CELL UPDATE message to report this event. Upon receiving this message, SS replies with the default CELL UPDATE CONFIRM message.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 11	The UE is idle mode and camped onto cell 1. Cell ~~2~~4 is also active but has transmission power 10dB below that of cell 1. SYSTEM INFORMATION TYPE 11 to be transmitted is different from the default settings (see specific message contents)
2		~~←~~	~~PAGING TYPE 1~~	~~SS sends this message to page for the UE.~~SS prompts the test operator to make an outgoing call.
3		→	RRC CONNECTION REQUEST	
4		←	RRC CONNECTION SETUP	SS allocates PRACH and S-CCPCH resources to UE
5		→	RRC CONNECTION COMPLETE	UE transmits this message to acknowledge the SETUP message and moves to CELL_FACH state.
6				SS checks to see that no MEASUREMENT REPORT messages are sent from UE to cell 1.
7				SS decreases the transmission power of cell 1 by 10dB and increases cell ~~2~~4's downlink power by 10dB.

8	→	CELL UPDATE	UE shall detect that cell ~~2~~4 has become stronger than cell 1. It sends this message after reselecting to cell ~~2~~4
9	←	CELL UPDATE CONFIRM	Use default message.

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages pertaining to the measurement of CPICH Ec/No quantity for cell ~~2~~4.

After step 7 the UE shall reselect to cell ~~2~~4 and transmit a CELL UPDATE message on the uplink CCCH of cell 2.

8.4.1.5 Measurement Control and Report: Intra-frequency measurement for transition from CELL_DCH to CELL_FACH state

8.4.1.5.1 ~~————————~~Definition

8.4.1.5.2 Conformance requirement

After entering CELL_FACH state from CELL_DCH state, the UE shall terminate intra-frequency type measurement reporting originating from a previous MEASUREMENT CONTROL message. ~~If indicated in the system information messages~~After transition to CELL_FACH state, the UE shall start to monitor neighbouring cells listed in the “intra-frequency cell info” received in SYSTEM INFORMATION TYPE 11 or 12. The UE shall apply the reporting criteria specified in system information messages, ~~during~~ after a subsequent return to CELL_DCH state. If requested to perform measurement reporting on RACH channels, the UE shall append the measured results when transmitting uplink RACH messages.

Reference

3GPP TS 25.331, clause 8.4.1.7

8.4.1.5.3 Test Purpose

To confirm that the UE ceases to perform intra-frequency measurement specified in a previously received MEASUREMENT CONTROL message, when it moves from CELL_DCH state to CELL_FACH state. To confirm that the UE read the system information when in CELL_FACH state and starts to monitor the neighbouring cells as indicated in system information messages. To confirm that the UE performs measurements on uplink RACH channel and append the measured results in RACH messages, when requested in the system information messages.

8.4.1.5.4 Method of test

Initial Condition

System Simulator: 3 cells – Cell 1 and cell 2 are active, but the transmitter of cell 3 is switched off. Cell 1 is transmitting its CPICH (RSCP) at 20 dB above cell 2. ~~The downlink UTRA carriers transmission strength for cell 1 is identical to that of cell 2.~~

UE: ~~idle state and camped onto cell 1.~~CS-registered idle mode (state 2) or PS-registered idle mode (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is initially in idle mode and has selected cell 1 as the current cell. SYSTEM INFORMATION BLOCK TYPE ~~12~~ 11 message is modified from its default message contents, in order to prevent the reporting of CFN-SFN difference. No measurement requirements are specified for the UE in system information block (type 11 and 12) messages.

SS then prompts the test operator to initiate an outgoing call of a supported traffic class. When UE transmits a RRC CONNECTION REQUEST message on RACH, SS replies with RRC CONNECTION SETUP message. Uplink and downlink DP~~D~~CH physical channels are allocated. Upon receiving RRC CONNECTION SETUP message, the UE shall transmit RRC CONNECTION SETUP COMPLETE message on DCCH and then moves to CELL_DCH state. SS then sends a MEASUREMENT CONTROL message to UE. In this message, the SS requests the establishment of ~~a~~an intra-frequency measurement, based on an estimation of cell 2's CPICH Ec/No. At the same time, reporting of cell 2's CPICH is commanded with the reporting criteria set to "periodic reporting" and reporting interval set to 16 seconds. The UE shall start transmitting MEASUREMENT REPORT messages at 16 seconds interval corresponding to the requested reporting event.

SS transmits PHYSICAL CHANNEL RECONFIGURATION message, triggering a switch of transport channels from DCH/DCH to RACH/FACH. After receiving this message, the UE shall reconfigure itself and replies with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on RACH. SS acknowledges this message and the UE shall move to CELL_FACH state and read the system information messages. SS monitors the uplink to verify that no MEASUREMENT REPORT messages are received. In SYSTEM INFORMATION BLOCK TYPE 12 message, SS includes cell 3 into the neighbour cells monitoring list. IE "Intra-frequency reporting quantity for RACH Reporting" and IE "Maximum number of Reported cells on RACH" are also specified in this message. An event-triggered (event type 1a) reporting criterion is specified for intra-frequency measurements. Cell 3 is turned on and its ~~The~~ transmission strength ~~of CPICH for cell 3 is increased until it~~ is set to exceed~~s~~ the lower bound of the reporting range specified. SS then pages for the UE using PAGING TYPE 1 message. The UE shall respond with a CELL UPDATE message, which comprises CPICH Ec/No measurements for cell 1 and 3. Upon the receipt of CELL UPDATE message, SS replies with CELL UPDATE CONFIRM message. This message does not change the physical resource nor allocate any new RNTI identities. The UE shall remain in CELL_FACH state. SS transmits PHYSICAL CHANNEL RECONFIGURATION message again, this time specifying dedicated physical resources for both uplink and downlink direction. The UE shall then send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and return to CELL_DCH state. SS listens to the uplink DCCH for MEASUREMENT REPORT messages. SS verifies that all messages received pertain to the periodic measured value of cell 2's CPICH Ec/No value. UE shall not send any reports containing the measured values of cell 3.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 11	UE is initially in idle mode and test operator is asked to make an outgoing call.
2		→	RRC CONNECTION REQUEST	
3		←	RRC CONNECTION SETUP	Uplink and downlink DPCH resources are allocated.
4		→	RRC CONNECTION SETUP COMPLETE	UE shall move to CELL_DCH state.
5		←	MEASUREMENT CONTROL	SS requests for measurement and reporting of cell 2's CPICH Ec/No value.
6		→	MEASUREMENT REPORT	UE shall send periodic report at 16 seconds interval. SS waits for 2 consecutive reports before proceeding to step 7.
7		←	PHYSICAL CHANNEL RECONFIGURATION	SS switches the physical resources to common physical channels.
8		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall reconfigure its uplink and downlink channels before transiting to CELL_FACH state.
9		←	SYSTEM INFORMATION BLOCK TYPE 12	SS includes cell 3 into the monitored neighbour cell list. SS waits for 1 minutes and verifies that no MEASURE-MENT REPORT messages are received. Cell 3 is switched on, and SS adjusts the transmission power for CPICH such that its Ec/No falls into the report range specified.
10		←	PAGING TYPE 1	SS pages for UE using the assigned U-RNTI identity.
11		→	CELL UPDATE	UE shall transmit this message with measured results on RACH channels for cell 1 and 3 appended.
12		←	CELL UPDATE CONFIRM	No change in physical resource allocation and RNTI identities.
13		←	PHYSICAL CHANNEL RECONFIGURATION	Allocates dedicated physical channels.
14		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall transit to CELL_DCH state.
15		←	MEASUREMENT REPORT	UE shall continue to report cell 2's CPICH Ec/No value on a periodic basis.

PHYSICAL CHANNEL RECONFIGURATION (Step 13)

Use the same message sub-type found in ~~Clause 8.1 of TS34.108~~Annex A, which is entitled “~~(~~Packet to CELL_DCH from CELL_FACH in PS~~-~~)”

MEASUREMENT REPORT (Step 15)

The contents of this message should be the same as in step 6.

8.4.1.5.5 Test Requirement

After step 5, the UE shall start to transmit MEASUREMENT REPORT messages at 16 seconds interval. The message shall contain the measured result of cell 2’s CPICH Ec/No value.

After step 8, the UE shall not send any MEASUREMENT REPORT messages which report quantities requested in MEASUREMENT CONTROL messages in step 5.

After step 10, the UE shall respond to the paging and transmit a CELL UPDATE message. In this message, the measured values CPICH Ec/No for cell 1 and cell 3 shall be included.

After step 14, the UE shall revert to the original measurement reporting mechanism and send MEASUREMENT REPORT messages containing estimates for cell 2’s CPICH Ec/No value. The UE shall not transmit any MEASUREMENT REPORT messages, which indicate measurement quantities of cell 3.

8.4.1.6 Measurement Control and Report: Inter-frequency measurement for transition from CELL_DCH to CELL_FACH state

8.4.1.6.1 ~~———————~~Definition

8.4.1.6.2 Conformance requirement

When transiting from CELL_DCH state to CELL_FACH state, the UE shall terminate all reporting activities related to inter-frequency measurements. After reaching CELL_FACH state, the UE shall begin to monitor neighbouring cells listed in the IE "inter-frequency cell info" of the system information type 12 message.

Reference

3GPP TS 25.331, clause 8.4.1.7

8.4.1.6.3 Test Purpose

To verify that UE ceases to transmit MEASUREMENT REPORT messages when moving from CELL_DCH state to CELL_FACH, even if it has detected that reporting criteria have been satisfied in CELL_FACH state. To verify that the UE extracts information for inter-frequency measurement from system information messages after reaching CELL_FACH state.

8.4.1.6.4 Method of test

Initial Condition

SS: 2 cells – Both cell 1 and cell ~~2~~ 4 are active. ~~Cell 2 is allocated a frequency which is 1 UARFCN away from cell 1 in both uplink and downlink directions.~~ The applicable radio conditions for cell 1 and cell ~~2~~ 4 are as follow:

	Cell 1	Cell ~~2~~4
UARFCN (N_u and N_d)	Channel 1	Channel 2
CPICH RSCP	-75 dBm	-85 dBm
$Q_{rxlevmin}$	-90 dBm	-90 dBm
S	15	5

UE: ~~idle state and camped onto cell 1.~~CS-registered idle mode (state 2) or PS-registered idle mode (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is initially in idle mode. SS ~~pages the UE with the cause set to terminating~~prompts the test operator to initial an outgoing call for one of the supported traffic classes. The SYSTEM INFORMATION TYPE ~~12~~ 11 message is modified so that no measurement tasks are to be performed by the UE. The UE shall respond to the paging by sending a RRC CONNECTION REQUEST message on the uplink CCCH carried by RACH. Upon receiving this message, SS allocates dedicated DPCH physical channels to the UE by transmitting RRC CONNECTION SETUP message. The UE shall reply by transmitting a RRC CONNECTION SETUP COMPLETE message. SS then checks the IE "Measurement Capability" of this message and verifies that the UE is capable of performing inter-frequency measurements under FDD mode. After the confirmation of the UE inter-frequency measurement ability, SS transmits PHYSICAL CHANNEL RECONFIGURATION message. In this message, information related to the radio bearers and uplink/downlink radio resources remain unchanged as compared to the equivalent IEs found in RRC CONNECTION SETUP message. The only difference concerns IE "DPCH compressed mode info", which indicates that the UE shall apply the given parameters for compressed mode operations. The UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to acknowledge that compressed mode mechanism can be exercised.

SS then sends a MEASUREMENT CONTROL message to the UE, specifying that cell ~~2~~4 be the measurement object for inter-frequency type measurement. The periodic reporting criterion is selected for this measurement. SS waits for 8 seconds to allow the periodic timer to expire. The UE shall send a MEASUREMENT REPORT message containing measured result of cell ~~2~~4's reporting quantity (CPICH Ec/No). SS transmits PHYSICAL CHANNEL RECONFIGURATION message again, requesting the UE to switch from uplink and downlink DPCH to common physical channels. The UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then move to CELL_FACH state. SS waits for another 8 seconds to detect any possible uplink MEASUREMENT REPORT messages as a result of inter-frequency measurements. SS then increases the transmission power of cell ~~2~~4 by 20 dB. SS waits for [x]

seconds to allow the UE to perform cell re-selection. The UE shall transmit a CELL UPDATE message on the uplink CCCH of cell ~~2~~4, specifying the cause as "cell re-selection". SS replies with CELL UPDATE CONFIRM message.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in idle mode and camped onto cell 1. SYSTEM INFORMATION BLOCK TYPE ~~12~~ 11 is redefined, disabling all measurement and reporting activities.
2	~~←~~		~~PAGING TYPE 1~~	SS ~~pages UE with cause set terminating~~ prompts the test operator to trigger an outgoing call for a supported traffic class
3	→		RRC CONNECTION REQUEST	
4	←		RRC CONNECTION SETUP	Uplink and downlink DPCH resources are allocated.
5	→		RRC CONNECTION SETUP COMPLETE	UE shall indicate that it's capable of performing inter-frequency measurement for FDD mode.
6	←		PHYSICAL CHANNEL RECONFIGURATION	SS instructs UE to begin compressed mode operation.
7	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall ~~enter~~ remain in CELL_DCH state.
8	←		MEASUREMENT CONTROL	SS indicates that cell ~~2~~4 be monitored. SS waits for 8 seconds.
9	→		MEASUREMENT REPORT	UE shall transmit this message to report cell ~~2~~4's CPICH Ec/No value.
10	←		PHYSICAL CHANNEL RECONFIGURATION	SS changes the physical channel allocation to common channel configuration.
11	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall moves to CELL_FACH state.
12				SS waits for 8 seconds to verify that no MEASUREMENT REPORT messages are detected.
13				SS changes SYSTEM INFORMATION BLOCK TYPE 12 message to request cell ~~2~~4 to be included into neighbour cell list for inter-frequency measurements.
14				SS increases the transmission power of cell ~~2~~4 by 20 dB, and then waits for [x] seconds to allow the UE to re-select to a new cell.
15	→		CELL UPDATE	UE shall detect that cell ~~2~~4 has become the best cell and then perform cell re-selection procedure.
16	←		CELL UPDATE CONFIRM	

Notes:

The value [x] seconds is TBD, after the cell re-selection duration is determined from TS 25.304.

AM_RLC error indication (for C-plane)	Check to see if it is set to FALSE
AM_RLC error indication (for U-plane)	Check to see if it is set to FALSE
Hyper frame number	Check to see if it is present
Cell update cause	Check to see if it is set to "Cell Reselection"
Protocol error info	Check to see if it is absent or set to FALSE
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM

Use the same message sub-type found in ~~Clause 9 of TS34.108~~Annex A.

8.4.1.6.5 Test Requirement

After step 4 the UE shall transmit RRC CONNECTION SETUP COMPLETE message with the IE "Measurement capability", indicating that both uplink and downlink inter-frequency measurements for FDD mode are supported.

After step 8 the UE shall transmit MEASUREMENT REPORT message to report cell ~~2~~4's CPICH Ec/No value.

After step 11 the UE shall stop sending MEASUREMENT REPORT messages, which contain inter-frequency measured results for cell ~~2~~4's CPICH Ec/No value.

After step 14 the UE shall transmit CELL UPDATE message to inform that a cell reselection to cell ~~2~~4 has occurred.

8.4.1.7 ~~–~~Measurement Control and Report: Intra-frequency measurement for transition from CELL_FACH to CELL_DCH state

8.4.1.7.1 ~~————————~~Definition

8.4.1.7.2 Conformance requirement

When transiting from CELL_FACH state to CELL_DCH state, the UE shall resume intra-frequency measurement if it has previously stored such a measurement context in CELL_DCH state. If the measurement context indicates reporting in CELL_DCH state, the UE shall re-start the associated reporting activities. In the case when the UE is not assigned any measurement tasks, it shall monitor the list of neighbouring cells stated in system information messages. It shall transmit MEASUREMENT REPORT messages when the reporting criteria (if specified in system information messages) are met. When in CELL_DCH state, the UE shall override existing measurement and reporting contexts extracted from system information messages, if a MEASUREMENT CONTROL message is received. The UE shall then apply the new measurement and reporting parameters accordingly. If the UE has performed a cell reselection whilst out of CELL_DCH state, the UE shall not re-start intra-frequency measurement previously designated to be resumed in CELL_DCH state.

Reference

3GPP TS 25.331, clause 8.4.1.8

8.4.1.7.3 Test Purpose

To confirm that UE resumes intra-frequency measurement and reporting when it enters CELL_DCH state from CELL_FACH state, if such a ~~condition exists~~measurement context (and optionally, the reporting context) has been stored before entering CELL_DCH state. To confirm that the UE continues to monitor the neighbour cells intra-frequency measurement list found in system information messages, if no previous assigned measurement is present. To confirm that the UE transmits MEASUREMENT REPORT messages if reporting conditions stated in system information messages have been satisfied. To confirm that a ~~subsequent~~ MEASUREMENT CONTROL message received in CELL_DCH state results in the overriding of current measurement and reporting contexts maintained by the UE.

8.4.1.7.4 Method of test

Initial Condition

System Simulator: 3 cells –All 3 are all active. The transmission power (RSCP) for CPICH of the 3 cells are as follow: cell 1 (-40dBm), cell 2 (-55dBm) and cell 3 (-70dBm).

UE: ~~CELL_FACH in cell 1.~~CS-CELL_FACH_Initial (state 6-2) or PS-CELL_FACH_Initial (state 6-4) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is brought to CELL_FACH state, after ~~the test operator has successfully initiated a packet-switched data call~~ it has successfully executed procedure P4 or P6 (depending on the CN domain supported by the UE) as specified in clause 7.4 of TS 34.108. The SYSTEM INFORMATION BLOCK TYPE 12 message is changed with respect to the default message contents, specifying that cell 2 is to be included in the neighbouring cell list for intra-frequency measurement. Event 1e is selected in IE "Intra-frequency measurement reporting criteria".

SS send a PHYSICAL CHANNEL RECONFIGURATION message to UE, allocating dedicated physical channels on both uplink and downlink direction. Upon receiving such a message, the UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to CELL_DCH state. The UE shall send MEASUREMENT REPORT messages to indicate that the measured result of cell 2, as the measurement quantity has exceeded the threshold value in system information message. After receiving this message, SS transmits MEASUREMENT CONTROL message in which it specifies that intra-frequency measurement for cell 3 shall be performed. The reporting criteria are the same as in SYSTEM INFORMATION BLOCK TYPE 12 message, except that the reporting threshold is lowered. After receiving such a message, the UE shall transmit another MEASUREMENT REPORT message. SS verifies that only measurement reading for cell 3 is included and no IEs shall be present, which pertain to measurement quantity in cell 2. After receiving the MEASUREMENT REPORT message reporting readings for cell 3, SS transmits another MEASUREMENT CONTROL message. The key parameters specified in this message are: measurement command = 'setup', measurement type = 'intra-frequency measurement', measurement object = 'cell 2', reporting criteria = 'periodic reporting', measurement validity = 'resume', UE state for reporting = 'CELL_DCH'. SS verifies that the UE continue to send MEASUREMENT REPORT messages at 16 seconds interval, and that the contents of these messages are similar to those received prior to the transmission of the second downlink MEASUREMENT CONTROL messages.

Next, SS sends PHYSICAL CHANNEL RECONFIGURATION message to UE. In this message, the physical channel resources are switched to common physical channels – PRACH ~~(RACH)~~ for the uplink and S-CCPCH ~~(FACH)~~ for the downlink. UE shall reply with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE and transits to CELL_FACH. SS checks the uplink RACH to confirm that no MEASUREMENT REPORT messages are received. ~~SS then transmits another MEASUREMENT CONTROL message. The key parameters employed are: measurement type = 'intra-frequency measurement', measurement object = 'cell 2', reporting criteria = 'periodic reporting', measurement validity = 'resume', UE state for reporting = 'CELL_DCH'.~~ SS waits for 10 seconds before sending a PHYSICAL CHANNEL RECONFIGURATION message, comprising DP~~D~~CH physical channels. UE shall then return to CELL_DCH state, start to monitor the neighbour cell specified by the SS in the second MEASUREMENT CONTROL message while the UE was previously in CELL_~~FACH~~ DCH state. The UE shall resume periodic reporting of cell 2's CPICH RSCP measured results by sending MEASUREMENT REPORT messages. Following the reception of the MEASUREMENT REPORT message, SS commands the UE to stop performing measurements and generation of reports for cell 2. SS then verifies that no MEASUREMENT REPORT messages are detected. After this requirement is satisfied, SS sends MEASUREMENT CONTROL on the downlink DCCH once more. This message is identical to the one sent in step 7 (see specific message content).

In the next sequence, SS dispatches a PHYSICAL CHANNEL RECONFIGURATION message on the downlink DCCH. In this message, common physical channel resources are assigned to the UE. The UE shall respond with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then transit to CELL_FACH state. ~~Then SS sends a MEASUREMENT CONTROL message, with the content identical to the previous message of the type transmitted in step 10. This effectively signifies that the UE shall re-start the intra-frequency measurement and reporting activities related to cell 2, when it subsequently manages to return to CELL_DCH state.~~ SS monitor the uplink DCCH once more to verify that no MEASUREMENT REPORT messages are detected. Following this step, SS increases the P-CPICH RSCP of cell 3 to –45dBm and ~~shortly after this,~~then stops the transmission of all downlink physical channels of cell 1. SS then waits for timer T305 to expire. The UE shall discover an "out-of-service" condition and initiate a cell re-selection procedure. This ~~can be~~is verified ~~by~~ in the SS when ~~receiving~~ a CELL UPDATE message is received on the uplink CCCH~~,~~ with the "cell update cause" IE set to "cell reselection". SS sends a PHYSICAL CHANNEL RECONFIGURATION message on the downlink DCCH, assigning DPCH channel in both uplink and downlink directions. The UE shall respond with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then return to CELL_FACH state. SS checks that the UE does not generate any MEASUREMENT REPORT messages on the uplink DCCH.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 12	UE is initially in CELL_FACH after having successfully ~~connected a packet-switched data call~~executed procedure P4 or P6, depending on the supported CN domain. Refer to clause 7.4 of TS 34.108 for details. SYSTEM INFORMATION TYPE BLOCK TYPE 12 message is changed according to the descriptions in Specific Message Contents.
2		←	PHYSICAL CHANNEL RECONFIGURATION	Allocates DP~~D~~CH physical channels.
3		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall move to CELL_DCH state.
4		→	MEASUREMENT REPORT	Reports cell 2's RSCP value.
5		←	MEASUREMENT CONTROL	Specifies cell 3 as the measurement object for intra-frequency measurement. The reporting criteria is the same as defined in SYSTEM INFORMATION BLOCK TYPE 12 message, with the exception that threshold for event 1e is lowered.
6		→	MEASUREMENT REPORT	UE shall report the estimated value for cell 3's CPICH RSCP reading only.
7		←	MEASUREMENT CONTROL	SS instructs the UE to perform intra-frequency measurement and reporting for cell 2. These activities should be resumed if the UE subsequently transits to CELL_DCH state again.
8		→	MEASUREMENT REPORT	SS checks that the content of this message is the same as that received in step 6.
~~7~~9		←	PHYSICAL CHANNEL RECONFIGURATION	Allocates PRACH and S-CCPCH physical channels.
~~8~~10		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall move to CELL_FACH state.
~~9~~11				SS checks that no MEASUREMENT REPORT messages are sent by UE.
~~10~~		~~←~~	~~MEASUREMENT CONTROL~~	~~SS indicates that intra-frequency measurement and reporting for cell 2 be resumed if the UE subsequently transits to CELL_DCH state.~~
~~11~~12		←	PHYSICAL CHANNEL RECONFIGURATION	SS waits for 10 seconds before sending this message. DPCH physical channels are assigned to the UE in this message.
~~12~~13		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall return to CELL_DCH state.
~~13~~14		→	MEASUREMENT REPORT	UE begins to report cell 2's measured results again.
~~14~~15		←	MEASUREMENT CONTROL	Terminate all the intra-frequency measurement activity related to cell 2. SS checks that no more MEASUREMENT REPORT messages are sent by the UE.

16			SS waits for 16 seconds and verifies that UE stop transmitting MEASUREMENT REPORT messages.
17	~~←~~	MEASUREMENT CONTROL	Message is the same as in step 7
~~15~~187	←	PHYSICAL CHANNEL RECONFIGURATION	Allocates PRACH and S-CCPCH physical channels.
~~16~~198	→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall move to CELL_FACH state.
~~17~~2019	~~←~~	~~MEASUREMENT CONTROL~~	SS checks that no MEASUREMENT REPORT messages are received. ~~Message is the same as in step 10~~
~~18~~210			SS increases the transmission power of cell 3 (P-CPICH RSCP is raised to –45dBm) and switches off all downlink transmissions for cell 1. SS then waits until T305 expires.
~~19~~221	→	CELL UPDATE	UE shall re-selects to cell 2 and then perform a cell update procedure.
23~~2~~0	←	CELL UPDATE CONFIRM	UE shall stay in CELL_FACH state.
24~~3~~1	→	PHYSICAL CHANNEL RECONFIGURATION	DPCH physical channels are assigned to the UE in this message.
25~~4~~2	←	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall return to CELL_DCH state.
26~~5~~3			SS checks that no MEASUREMENT REPORT messages are received on uplink DCCH.

DPCH compressed mode status info	Not Present

PHYSICAL CHANNEL RECONFIGURATION (Step ~~11~~12 and ~~21~~23~~4~~)

Same as in step 2

MEASUREMENT REPORT (Step ~~13~~14)

Information Element	Value/Remarks
Measurement identity number	Check to see if set to 12
Measurement Results	
- CHOICE measurement	Check to see if set to "Intra-frequency measured results list"
- Intra-frequency measured results	
- Cell measured results	
- Cell Identity	Check to see if set to the id of cell 2
- SFN-SFN observed time difference	Check to see if this IE is absent
- CFN-SFN observed time difference	Check to see if this IE is absent
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if it's the same code for cell 2
- CPICH Ec/No	Check to see if this IE is absent
- CPICH RSCP	Check to see if this IE is present
- Pathloss	Check to see if this IE is absent
Event Results	
- CHOICE event result	Check to see if it's set to 'Intra-frequency measurement event results'
- Intra-frequency event identity	Check to see if this IE is set to '1e'
- Cell measured event results	
- Primary CPICH info	
- Primary scrambling code	Check to see if it's the same code for cell 2

MEASUREMENT CONTROL (Step ~~14~~15)

Information Element	Value/Remarks
Measurement Identity Number	12
Measurement Command	Release
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE Measurement type	Not Present
DPCH compressed mode status info	Not Present

CELL UPDATE (Step 2~~1~~2)

Information Element	Value/Remarks
U-RNTI	
- SRNC Identity	Check to see if set to '0000 0000 0000 0001'
- S-RNTI	Check to see if set to '0000 0000 0000 0000 0000 0001'
Integrity check info	Not checked
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'FALSE'
Cell Update Cause	Check to see if set to 'Cell Re-selection'
Protocol error indicator	Check to see if it is absent or set to 'FALSE'
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM (Step ~~21~~232)

Use the default message content of the same message type in Annex A.

8.4.1.7.5 Test Requirement

After step 3 the UE shall report cell 2's CPICH RSCP value by transmitting a MEASUREMENT REPORT message.

After step 5 the UE shall delete all measurement and reporting contexts obtained from system information messages. However, it shall transmit a MEASUREMENT REPORT message containing measured results of cell 3's CPICH RSCP value only.

After step 7 the UE shall continue to transmit MEASUREMENT REPORT messages, which contain identical contents to that sent in step 6.

After step ~~8~~ 11 the UE shall stop intra-frequency measurement reporting. ~~assigned previously in the MEASUREMENT CONTROL message received in step 5.~~

After step ~~12~~ 13 the UE shall resume the measurement and reporting activities as specified in MEASUREMENT CONTROL message received in step ~~10~~7. The UE shall transmit MEASUREMENT REPORT message, containing measured results of cell 2's CPICH RSCP value.

After step ~~14~~15 the UE shall stop all measurement activities pertaining to cell 2, no MEASUREMENT REPORT messages shall be detectable by the SS in the uplink DCCH.

After step ~~19~~210 the UE shall re-select to cell 3 and initiate a cell update procedure. SS shall receive a CELL UPDATE message on the uplink CCCH of cell 3, with the "cell update cause" IE stated as "cell re-selection".

After step ~~22~~254 the UE shall not start to perform measurement for cell 2, no MEASUREMENT REPORT messages shall be detectable by the SS in the uplink DCCH.

8.4.1.8 ~~–~~Measurement Control and Report: Inter-frequency measurement for transition from CELL_FACH to CELL_DCH state

8.4.1.8.1 ~~————————~~Definition

8.4.1.8.2 Conformance requirement

When transiting from CELL_FACH state to CELL_DCH state, the UE shall stop monitoring the list of inter-frequency neighbour cells indicated in system information messages. If the UE has a previously stored inter-frequency measurement context marked as 'resume', it shall reinstate the suspended measurement and associated reporting activities after it has re-entered CELL_DCH state. The UE shall be able to start/terminate inter-frequency measurement by decoding the "DPCH compressed mode status info" IE in MEASUREMENT CONTROL messages.

Reference

3GPP TS 25.331 clause 8.4.1.8, 8.5.7.6.13

8.4.1.8.3 Test Purpose

To confirm that the UE erases all inter-frequency measurement contexts used in CELL_FACH state, when it moves to CELL_DCH. To confirm that the UE resumes inter-frequency measurements and reporting, which was ~~assigned prior to CELL_FACH state~~ previously stored in the UE, after it moves to CELL_DCH state. To confirm that the UE resumes inter-frequency measurement and reporting activities after it has received a MEASUREMENT CONTROL message specifying that a stored compressed mode pattern sequence be re-activated.

8.4.1.8.4 Method of test

Initial Condition

SS: 3 cells – All 3 cells are active and the applicable radio conditions are stated in the table below:

	Cell 1	Cell ~~2~~4	Cell ~~3~~5
UARFCN (N_u and N_d)	Channel 1	Channel 2	Channel 2
CPICH RSCP	-60 dBm	-65 dBm	-75 dBm
$Q_{rxlevmin}$	-90 dBm	-90 dBm	-90 dBm
S	30	25	15

UE: ~~CELL_FACH in cell 1 after an incoming packet-switched data call is successfully established.~~CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is in CELL_~~FACH~~ DCH state after ~~a~~ successfully executing procedures P11 or P13 as specified in clause 7.4 of TS 34.108.~~ connection, triggered by an incoming packet-switched data call. SS modifies the~~

~~content of SYSTEM INFORMATION BLOCK TYPE 12 message, which indicates that cell 2 shall be included in the list of neighbouring cells to be monitored for inter-frequency measurements.~~ Next, SS transmits MEASUREMENT CONTROL message to request the UE to execute an inter-frequency measurement for cell ~~3~~5. The parameters of the reporting criteria are as follow: event-triggered with event identity ='2c', threshold for non-used frequency = '-80 dBm', hysteresis = '1.0dB', time to trigger = '10 seconds', amount of reporting = '1' and reporting interval = '0'. In the same message, IE "Measurement validity" is set to 'resume' and "UE state for reporting" is assigned the value 'CELL_DCH'. SS checks that no MEASUREMENT REPORT messages are detected on the uplink DCCH after it has transmitted the MEASUREMENT CONTROL message.

SS modifies the content of SYSTEM INFORMATION BLOCK TYPE 12 message, which indicates that cell 4 shall be included in the list of neighbouring cells to be monitored for inter-frequency measurements. Following this action, SS sends a PHYSICAL CHANNEL RECONFIGURATION message on the downlink DCCH and commands the UE to change its physical channel to PRACH and S-CCPCH. Once again, SS verifies that the UE does not transmit MEASUREMENT REPORT messages in the uplink direction.

SS sends PHYSICAL CHANNEL RECONFIGURATION message to allocate dedicated physical channels to the UE. Simultaneously, SS uses this message to command UE to start applying compressed mode mechanism for DPCH. The UE shall reply with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then move to CELL_DCH state. SS waits for 10 seconds. The UE shall transmit MEASUREMENT REPORT message, containing the selected frequency quality estimate (in ~~the~~ this case CPICH Ec/No) of cell ~~3~~5. SS verifies that this message does not contain measured results for cell ~~2~~4. After sending this message, the UE shall not transmit any more MEASUREMENT REPORT messages.

SS modifies the reporting criteria by transmitting a MEASUREMENT CONTROL message on the downlink DCCH using AM-RLC. In this message, SS commands the UE to perform inter-frequency measurement and reporting for cell ~~3~~5 using periodic reporting mechanism. Upon receiving this message, the UE shall transmit MEASUREMENT REPORT message at 2 seconds interval. In the next sequence, SS transmits a PHYSICAL CHANNEL RECONFIGURATION message and deactivates the compressed mode pattern sequence with "TGPSI" IE set to 1. The UE shall respond by sending PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and also stop the periodic reporting activities. Following this, SS sends a MEASUREMENT CONTROL message and re-activates the compressed mode pattern sequence by using the "DPCH compressed mode status" IE. SS confirms that the UE has reconfigured itself to start measurement reporting again. The SS shall be able to receive MEASUREMENT REPORT messages continuously at 2 seconds interval.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The initial state of UE is in CELL_DCH state of cell 1, after executing procedure P11 or P13, depending on the supported CN domain. Refer to clause 7.4 of TS 34.108.
2		←	MEASUREMENT CONTROL	SS specifies inter-frequency measurement and reporting parameters for cell 5.
3				SS checks that no MEASUREMENT REPORT messages are detected on the uplink DCCH.
~~1~~4				~~UE is initially in CELL_FACH state after establishing an incoming packet-switched data call.~~ SS modifies SYSTEM INFORMATION BLOCK TYPE 12 to include cell ~~2~~4 into the neighbour cell list for inter-frequency measurements.
~~2~~		~~←~~	~~MEASUREMENT CONTROL~~	~~SS specifies inter-frequency measurement and reporting parameters for cell 3.~~
5		←	PHYSICAL CHANNEL RECONFIGURATION	SS allocates PRACH and S-CCPCH physical resources.
6		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall moves to CELL_FACH state.
7				SS confirms that there are no transmissions of MEASUREMENT REPORT message in the uplink direction.
~~3~~8		←	PHYSICAL CHANNEL RECONFIGURATION	SS allocates DPCH physical channels and specifies compressed mode parameters
~~4~~9		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE moves to CELL_DCH state.
~~5~~10		→	MEASUREMENT REPORT	UE shall resume inter-frequency measurement task for cell 5~~3~~ and transmit this message to report the measured CPICH Ec/No value
~~6~~11		←	MEASUREMENT CONTROL	SS changes the reporting criteria for cell ~~3~~5 to 'periodic reporting'
~~7~~12		→	MEASUREMENT REPORT	UE shall begin to transmit this message at 2 seconds interval.
~~8~~13		←	PHYSICAL CHANNEL RECONFIGURATION	SS deactivates the currently used pattern sequence for compressed mode operation.
~~9~~14		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE stays in CELL_DCH state. SS waits for 5 seconds and verifies that no MEASUREMENT REPORT messages are received.
~~10~~15		←	MEASUREMENT CONTROL	SS activates the pattern sequence stored by the UE.
~~11~~16		→	MEASUREMENT REPORT	SS checks that MEASURE-MENT REPORT messages are received at 2 seconds interval.

- Threshold non-used frequency	-80dBm
- W non-used frequency	0.0
- Inter-system measurement system information	Not Present
- Traffic volume measurement system information	Not Present
- UE internal measurement system information	Not Present

MEASUREMENT CONTROL (Step 2)

Information Element	Value/Remark
Measurement Identity Number	14
Measurement Command	Setup
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE measurement type	Inter-frequency measurement
- Inter-frequency cell info list	
- Removed inter-frequency info list	Not Present
- New inter-frequency info list	
- Inter-frequency cell id	Set to id of cell ~~3~~5
- Frequency info	
- UARFCN uplink (Nu)	UARFCN of the uplink frequency for cell ~~3~~5
- UARFCN downlink (Nd)	UARFCN of the downlink frequency for cell ~~3~~5
- Cell info	
- Cell individual offset	0 dB
- Reference time difference to cell	0 chips
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code as used for cell ~~3~~5
- Primary CPICH TX power	Not Present
- Read SFN Indicator	FALSE
- TX Diversity Indicator	FALSE
- Inter-frequency measurement quantity	
- CHOICE reporting criteria	Inter-frequency reporting criteria
- Filter Coefficient	0
- Measurement quantity for frequency quality estimate	CPICH Ec/No
- Inter-frequency reporting quantity	
- UTRA Carrier RSSI	FALSE
- Frequency quality estimate	TRUE
- Non frequency related cell reporting quantities	
- SFN-SFN observed time difference	No report
- Cell Identity	TRUE
- CPICH Ec/No	FALSE
- CPICH RSCP	TRUE
- Pathloss	FALSE
- CFN-SFN observed time difference	FALSE
- Reporting cell status	Not present
- Measurement validity	
- Resume/Release	Resume
- UE State	CELL_DCH
- Inter-frequency set update	Not Present
- CHOICE report criteria	Inter-frequency measurement reporting criteria
- Parameters required for each event	
- Inter-frequency event identity	2c
- Threshold used frequency	Not Present
- W used frequency	Not Present
- Hysteresis	0
- Time to trigger	10 seconds
- Amount of reporting	1
- Reporting Interval	0
- Reporting cell status	Not Present
- Parameters required for each non-used frequency	
- Threshold non used frequency	-80 dBm
- W non-used frequency	0.0
DPCH compressed mode status info	Not Present

PHYSICAL CHANNEL RECONFIGURATION (Step 5)

Use the same message sub-type found in Annex A~~,~~ titled “(Packet to CELL_FACH from CELL_DCH in PS)”.

PHYSICAL CHANNEL RECONFIGURATION (Step ~~3~~8)

Use the same message sub-type found in ~~Clause 9 of TS34.108~~Annex A, which is entitled “(~~-~~Packet to CELL_DCH from CELL_FACH in PS)”, with the following exceptions in the IE(s) concerned:

Information Element	Value/Remarks
Downlink information common for all radio links	
- Downlink DPCH info common for all RL	
- Downlink DPCH power control information	
- DPC mode	0 (Single)
- Spreading factor	Refer to the parameter set in TS 34.108
- Fixed or flexible position	Flexible
- TFCI existence	FALSE
- Number of bits for Pilot bits (SF=128, 256)	Not Present
- Downlink DPCH Offset Value	0
- DPCH compressed mode info	
- TGPSI	1
- TGPS Status Flag	Active
- Transmission gap pattern sequence configuration parameters	
- TGMP	FDD Measurement
- TGPRC	62
- TGCFN	(Current CFN + (256 – TTI/10msec)) mod 256
- TGSN	8
- TGL1	10
- TGL2	5
- TGD	15
- TGPL1	35
- TGPL2	35
- RPP	Mode 1
- ITP	Mode 1
- UL/DL Mode	DL
- Downlink compressed mode method	SF/2
- Uplink compressed mode method	Not Present
- Downlink frame type	A
- DeltaSIR1	2.0
- DeltaSIRAfter1	1.0
- DeltaSIR2	Not Present
- DeltaSIRAfter2	Not Present
- TX Diversity Mode	None
- SSDT information	Not Present
- S field	
- Code Word Set	

MEASUREMENT REPORT (Step 10~~5~~)

Information Element	Value/Remarks
Measurement identity number	Check to see if set to 14
Measurement Results	
- CHOICE measurement	Check to see if set to "Inter-frequency measured results list"
- Inter-frequency measurement results	
- Frequency info	
- UARFCN (uplink)	Check to see if set to the UARFCN of the uplink frequency for cell ~~3~~5
- UARFCN (downlink)	Check to see if set to the UARFCN of the downlink frequency for cell ~~3~~5
- UTRA carrier RSSI	Check to see if it is absent
- Inter-frequency cell measurement results	
- Cell measured results	
- Cell Identity	Check to see if set to the id of cell ~~3~~5
- SFN-SFN observed time difference	Check to see if it is absent
- CFN-SFN observed time difference	Check to see if it is absent
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if set to the same code for cell ~~3~~5
- CPICH Ec/No	Check to see if it is present
- CPICH RSCP	Check to see if it is absent
- Pathloss	Check to see if it is absent
Event Results	Inter-frequency event results
- CHOICE event result	Check to see if it's set to '2c'
- Inter-frequency event identity	
- Inter-frequency cells	
- Frequency Info	
- UARFCN (uplink)	Check to see if set to the UARFCN of the uplink frequency for cell ~~3~~5
- UARFCN (downlink)	Check to see if set to the UARFCN of the downlink frequency for cell ~~3~~5
- Non frequency related measurement event results	
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if set to the same code for cell ~~3~~5

MEASUREMENT CONTROL (Step ~~6~~11)

Information Element	Value/Remark
Measurement Identity Number	14
Measurement Command	Modify
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE measurement type	Inter-frequency measurement
- Inter-frequency cell info list	
- Removed inter-frequency info list	Not Present
- New inter-frequency info list	
- Inter-frequency cell id	Set to id of cell ~~3~~5
- Frequency info	
- UARFCN uplink (Nu)	UARFCN of the uplink frequency for cell ~~3~~5
- UARFCN downlink (Nd)	UARFCN of the downlink frequency for cell ~~3~~5
- Cell info	
- Cell individual offset	0 dB
- Reference time difference to cell	0 chips
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code as used for cell ~~3~~5
- Primary CPICH TX power	Not Present
- Read SFN Indicator	FALSE
- TX Diversity Indicator	FALSE
- Inter-frequency measurement quantity	
- CHOICE reporting criteria	Inter-frequency reporting criteria
- Filter Coefficient	1
- Measurement quantity for frequency quality estimate	CPICH Ec/No
- Inter-frequency reporting quantity	
- UTRA Carrier RSSI	FALSE
- Frequency quality estimate	TRUE
- Non frequency related cell reporting quantities	
- SFN-SFN observed time difference	No report
- Cell Identity	TRUE
- CPICH Ec/No	FALSE
- CPICH RSCP	TRUE
- Pathloss	FALSE
- CFN-SFN observed time difference	FALSE
- Reporting cell status	Not present
- Measurement validity	Not present
- Inter-frequency set update	Not Present
- CHOICE report criteria	Periodic reporting criteria
- Amount of reporting	Infinity
- Reporting interval	2000 milliseconds
DPCH compressed mode status info	Not Present

MEASUREMENT REPORT (Step ~~7~~12, ~~11~~16)

Information Element	Value/Remarks
Measurement identity number	Check to see if set to 14
Measured Results	
- CHOICE measurement	Check to see if set to "Inter-frequency measured results list"
- Inter-frequency measurement results	
- Frequency info	
- UARFCN (uplink)	Check to see if set to the UARFCN of the uplink frequency for cell ~~3~~5
- UARFCN (downlink)	Check to see if set to the UARFCN of the downlink frequency for cell ~~3~~5
- UTRA carrier RSSI	Check to see if it is absent
- Inter-frequency cell measurement results	
- Cell measured results	
- Cell Identity	Check to see if set to the id of cell ~~3~~5
- SFN-SFN observed time difference	Check to see if it is absent
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if set to the same code for cell ~~3~~5
- CPICH Ec/No	Check to see if it is present
- CPICH RSCP	Check to see if it is absent
- Pathloss	Check to see if it is absent
- CFN-SFN observed time difference	Check to see if it is absent
Event Results	Check to see if it is absent

PHYSICAL CHANNEL RECONFIGURATION (Step ~~8~~13)

Use the same message transmitted in step ~~3~~8 with the following modifications:

Information Element	Value/Remarks
Downlink information common for all radio links - DPCH compressed mode info - TGPSI - TGPS Status Flag	 1 Inactive

MEASUREMENT CONTROL (Step ~~10~~15)

Information Element	Value/Remark
Measurement Identity Number	Any number except 14
Measurement Command	Release
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE measurement type	Not Present
DPCH compressed mode status info - Transmission gap pattern sequence - TGPSI - TGPS Flag	 1 Active

8.4.1.8.5 Test Requirement

After step 2 the UE shall not send any MEASUREMENT REPORT messages on the uplink DCCH of cell 1.

After step ~~4~~9 the UE shall transmit a MEASUREMENT REPORT message, containing the measured results for cell ~~3~~5's CPICH Ec/No value. The UE shall not transmit any messages pertaining to cell ~~2~~4's measurements.

After step ~~6~~11 the UE shall send MEASUREMENT REPORT messages, which comprises cell ~~3~~5's CPICH Ec/No measured value at 2 seconds interval. The "Event results" IE shall be omitted in these messages.

After step ~~8~~14 the UE shall not transmit any MEASUREMENT REPORT messages.

After step ~~10~~ 15 the UE shall resume the transmission of MEASUREMENT REPORT messages with identical contents as in those received after step 6.

8.4.1.9 Measurement Control and Report: Unsupported measurement in the UE

8.4.1.9.1 ~~———————~~Definition

8.4.1.9.2 Conformance requirement

If the UTRAN indicates the UE to perform a measurement that is not supported in the UE, the UE shall keep the measurement configuration. Then the UE shall transmit a MEASUREMENT CONTROL FAILURE message on the DCCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.4.1~~.~~

8.4.1.9.3 Test purpose

To confirm that the UE transmits a MEASUREMENT CONTROL FAILURE message, with the value "unsupported measurement" specified in IE "~~-~~failure cause" when the SS commanded the UE to perform an unsupported measurement by sending a MEASUREMENT CONTROL message.

8.4.1.9.4 Method of test

Initial Condition

System Simulator~~-~~: 1cell

UE-: ~~CELL_DCH~~CS-DCCH_DCH (State 6-5) or PS-DCCH_DCH (State 6-7) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

[-Editor's note-: It is assumed in this test that the UE under test does not possess any inter-system measurement capability. The mandatory type(s) of measurement capability that should be implemented by the UE is to be discussed-]

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a MEASUREMEN CONTROL message which includes parameters (e.g. Measurement identity number-: 2-, measurement command-: Setup-, measurement type: inter-system measurements, measurement reporting mode: unacknowledged and periodical reporting, measurement object: inter-system cell information, measurement quantity: Signal strength, reporting quantity: RSSI on BCCH carrier). As the UE under test does not support inter-system measurement, it shall transmit a MEASUREMENT CONTROL FAILURE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state.
2	←		MEASUREMENT CONTROL	Including the parameters (e.g. Measurement identity number : 2-, measurement command-: Setup-, measurement type: inter-system measurements, measurement reporting mode: unacknowledged and periodical reporting, measurement object: inter-system cell information, measurement quantity: Signal strength, reporting quantity: RSSI on BCCH carrier).
3	→		MEASUREMENT CONTROL FAILURE	Which is set to "unsupported measurement" in IE "-failure cause".

Specific Message Content

MEASUREMENT CONTROL

Information Element	Value/Remark
Measurement Identity Number	2
Measurement Command	Setup
Measurement Reporting Mode	Unacknowledged mode
Additional measurements list	Not Present
CHOICE measurement type	Inter-system measurement
- Inter-system cell info list	
- Removed inter-system cells	Not Present
- New inter-system cells	1
- Inter-system cell id	
- CHOICE *Radio Access Technology*	GSM
- $Qoffset_{s,n}$	Not Present
- HCS Neighbouring Cell Information	Not Present
- Qqualmin, Qrxlevmin	-20dB, -90dBm
- Maximum allowed UL TX power	Set to the maximum allowed by UE RF power class
- BSIC	Set to the BSIC code of cell 2
- BSIC ARFCN	Set to the ARFCN assigned to cell 2
- Output power	Not Present
- Inter-system measurement quantity	
- CHOICE *reporting criteria*	Inter-frequency reporting criteria
- Filter Coefficient	0
- Measurement quantity for frequency quality estimate	CPICH Ec/No
- Inter-system reporting quantity	
- UTRA Carrier RSSI	TRUE
- Frequency quality estimate	FALSE
- Non frequency related cell reporting quantities	
- SFN-SFN observed time difference	FALSE
- CPICH Ec/N0	FALSE
- CPICH RSCP	FALSE
- Pathloss	FALSE
- CFN-SFN observed time difference	FALSE
- Reporting Cell Status	Not Present
- CHOICE Report Criteria	Periodical reporting criteria
- Amount of reporting	Infinity
- Reporting Interval	32 seconds
DPCH compressed mode status info	Not Present

MEASUREMENT CONTROL FAILURE

Information Element	Value/Remarks
Failure cause	To check if it is set to “Unsupported measurement”

8.4.1.9.4 Test requirement

After step 2 the UE shall identify the unsupported measurement element in the MEASUREMENT CONTROL message and transmit a MEASUREMENT CONTROL FAILURE. In this message, the value “unsupported measurement” shall be specified in IE_”-failure cause”.

8.4.1.10 Measurement Control and Report: Failure (Invalid Message Reception)

8.4.1.10.1 ——————Definition

8.4.1.10.2 Conformance requirement

When the UE received a MEASUREMENT CONTROL message containing an unexpected conditional IE, it shall reply with a MEASUREMENT CONTROL FAILURE message stating the appropriate protocol error information. It shall maintain the monitoring and measurement reporting mechanism as in before the MEASUREMENT CONTROL message has been received.

Reference

3GPP TS 25.331 clause 8.4.1.9

8.4.1.10.3 Test Purpose

To confirm that the UE does not change its current monitoring and measurement settings after it has received an illegal MEASUREMENT CONTROL message, which contains an unexpected IE error. To confirm that the UE resume its normal measurement reporting operations after transmitting MEASUREMENT CONTROL FAILURE message to the SS.

8.4.1.10.4 Method of test

Initial Condition

System Simulator-: 1 cell.

UE-: ~~CELL_DCH~~CS-DCCH_DCH (State 6-5) or PS-DCCH_DCH (State 6-7) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is initially brought to CELL_DCH. SS transmits a MEASUREMENT CONTROL message to the UE, commanding it to start transmitting report messages for the reporting quantity “UE Transmitted Power”. SS then waits for the MEASUREMENT RERORT message with the allocated measurement identity to arrive. Then it transmits the MEASUREMENT CONTROL message again. In this message, SS requests that the reporting activities for “UE Transmitted Power” be stopped. At the end of this message, SS appends an unknown information element. When the UE receives this message, it shall reply with MEASURMENT CONTROL FAILURE message as it has detected a protocol error. It shall not cease to report its own transmission power level using MEASUREMENT REPORT messages.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is CELL_DCH state in cell 1.
2		←	MEASUREMENT CONTROL	SS transmits this message on downlink DCCH to instruct UE to start reporting the quantity “UE transmit power”.
3		→	MEASUREMENT REPORT	UE shall send this message periodically at 32 seconds interval
4		←	MEASURMENT CONTROL	SS sends a MEASUREMENT CONTROL message to request that UE stop the reporting activity.
5		→	MEASUREMENT CONTROL FAILURE	UE shall maintain its current measurement context and send this message.
6		→	MEASUREMENT REPORT	32 seconds after step 3, UE shall continue to transmit this message to the SS.

Specific Message Content

MEASUREMENT CONTROL (Step 2)

Information Element	Value/Remark
Measurement Identity Number	3
Measurement Command	Setup
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE measurement type	UE internal measurement
- UE internal measurement quantity	
- Measurement quantity	UE Transmitted Power
- Filter coefficient	0
- UE internal reporting quantity	
- UE Transmitted Power	TRUE
- UE Rx-Tx time difference	FALSE
CHOICE report criteria	Periodical reporting criteria
- Amount of reporting	Infinity
- Reporting interval	32 seconds
DPCH compressed mode status info	Not Present

MEASUREMENT REPORT (Step 3)

Information Element	Value/Remarks
Measurement identity number	Check to see if set to 3
Measurement Results	
CHOICE measurement	Check to see if set to "UE internal measurement"
- UE Transmitted Power	Check to see if the reported power is compatible with RF class
- UE Rx-Tx report entries	Check to see if this IE is absent
Event Results	Check to see if this IE is absent

MEASUREMENT CONTROL (Step 4)

Information Element	Value/Remark
Measurement Identity Number	3
Measurement Command	Stop
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE measurement type	Contains an arbitrary value
DPCH compressed mode status info	Not Present

MEASUREMENT CONTROL FAILURE (Step 5)

Information Element	Value/Remark
Failure cause	Check to see if set to "protocol error"
Protocol error information	Check to see if set to "Message extension not comprehended"

MEASUREMENT REPORT (Step 6)

Same as in the requirement for step 3

8.4.1.10.5 Test Requirement

After step 4 the UE shall transmit MEASUREMENT FAILURE message, stating the IE "failure cause" as "protocol error" and IE "protocol error information" as "message extension not comprehended". It shall continue to send MEASUREMENT REPORT with the correct identity number and measurement result entries at approximately 32 seconds interval.

Annex A. Default RRC Message Contents

This clause contains the default values of RRC messages, other than those specified in TS 34.108 clauses 6 and 9. Unless indicated otherwise in specific test cases, they shall be transmitted by the system simulator in RRC messages, and which are required to be received from the UE under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type “GSM-MAP”), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.
