Physical

Applications

Specifications

Yes UMTS 31.102

No

No

Yes e.g. CAT

CAT = Card Application Toolkit

3 Terminal architecture and interfaces

Example on a physical configuration (based on SP-99493)

**SIM as described
in GSM 11.11**

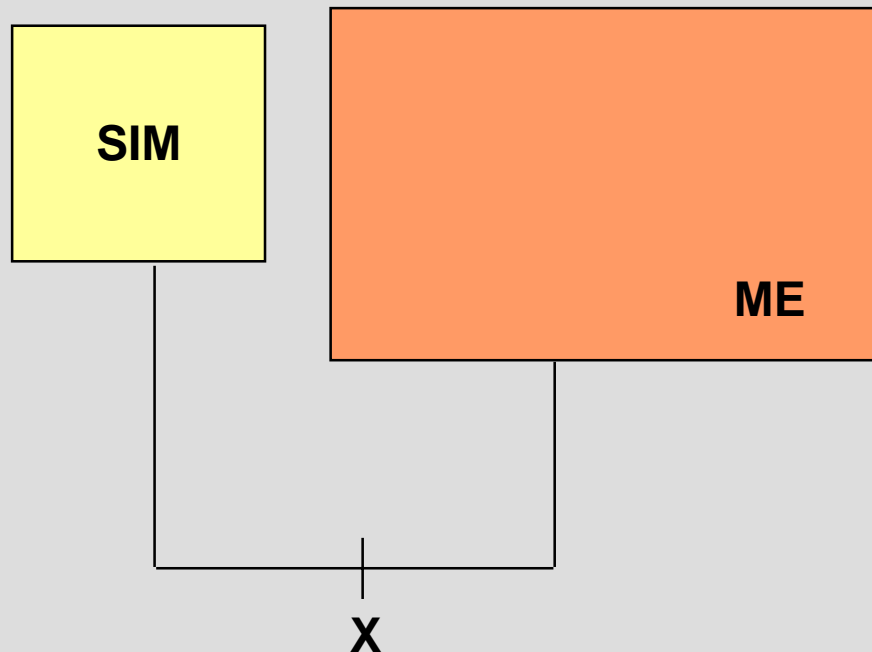

SIM = Subscriber Identity Module

3 Terminal architecture and interfaces

Example on a physical configuration 2G SIM and 3G Terminal

**SIM as described
in GSM 11.11**

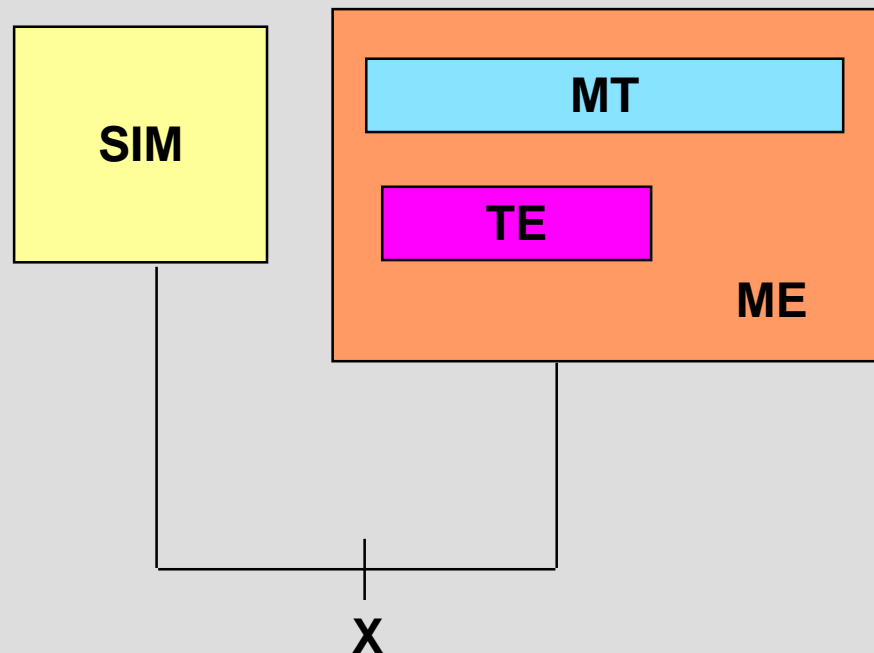

X = SIM/ME interface

ME = Mobile Equipment

3 Terminal architecture and interfaces

Example on a physical configuration 2G SIM and 3G Terminal

SIM as described
in GSM 11.11

ME = MT + TE

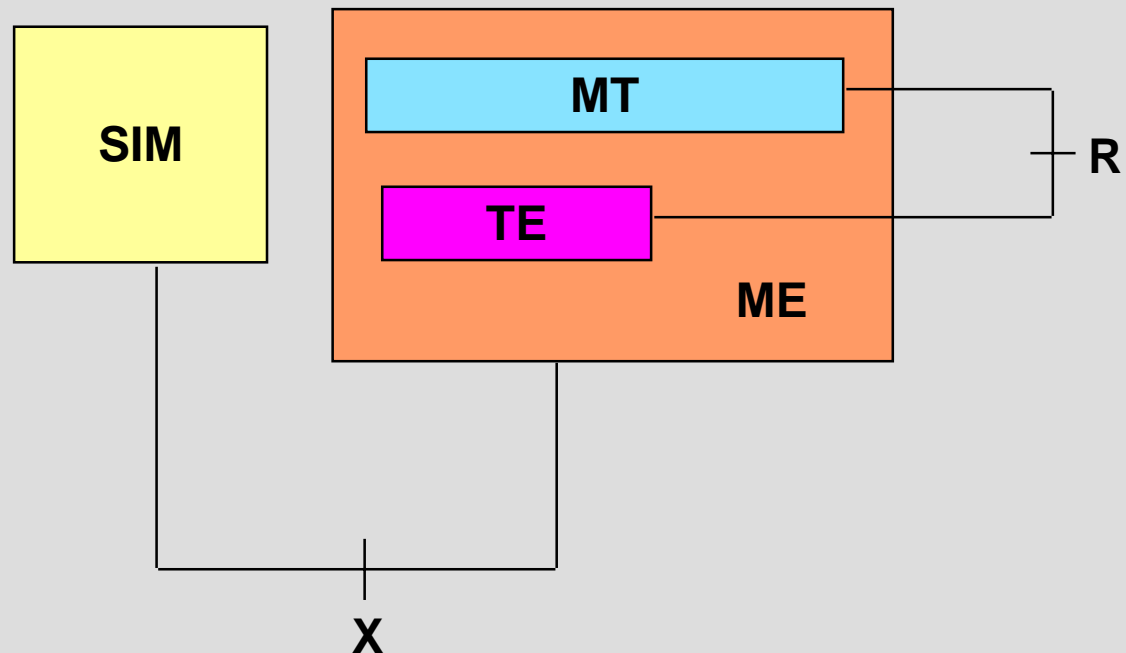

MT = Mobile Termination

TE = Terminal Equipment

3 Terminal architecture and interfaces

Example on a physical configuration 2G SIM and 3G Terminal

SIM as described
in GSM 11.11

R = MT/TE interface

3 Terminal architecture and interfaces

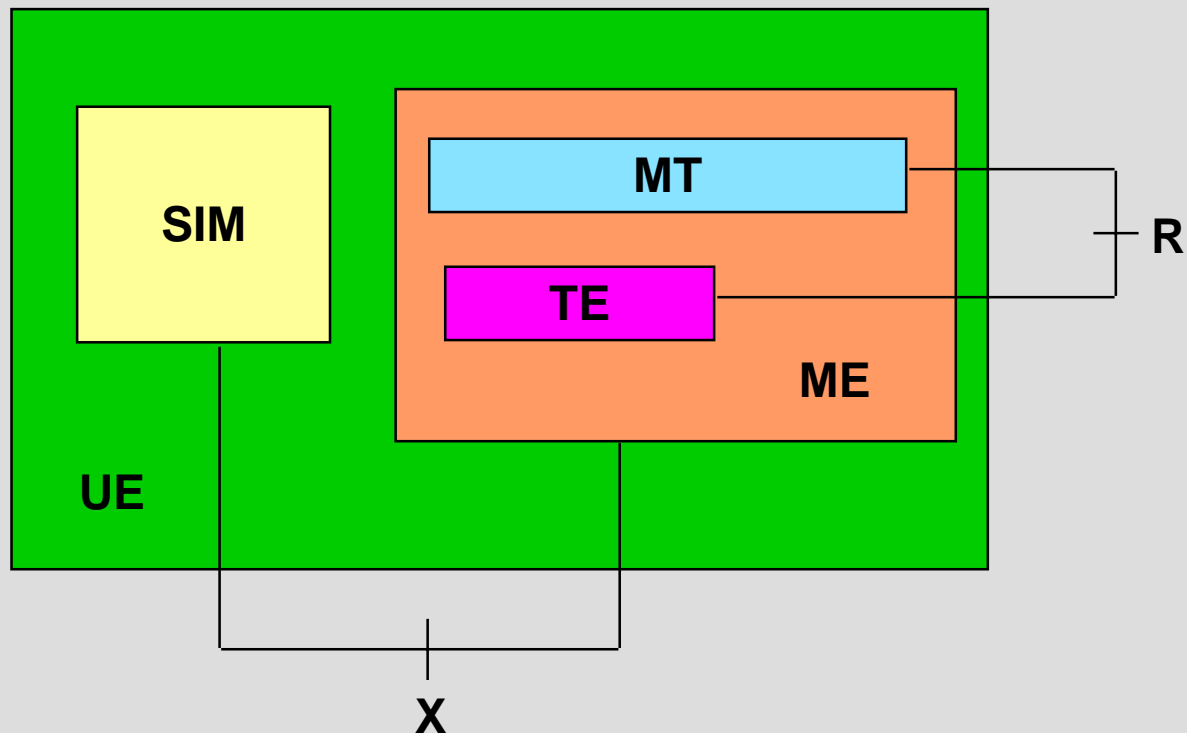

Example on a physical configuration 2G SIM and 3G Terminal

SIM as described
in ETSI GSM 11.11

UE = SIM + ME

UE = SIM + MT + TE

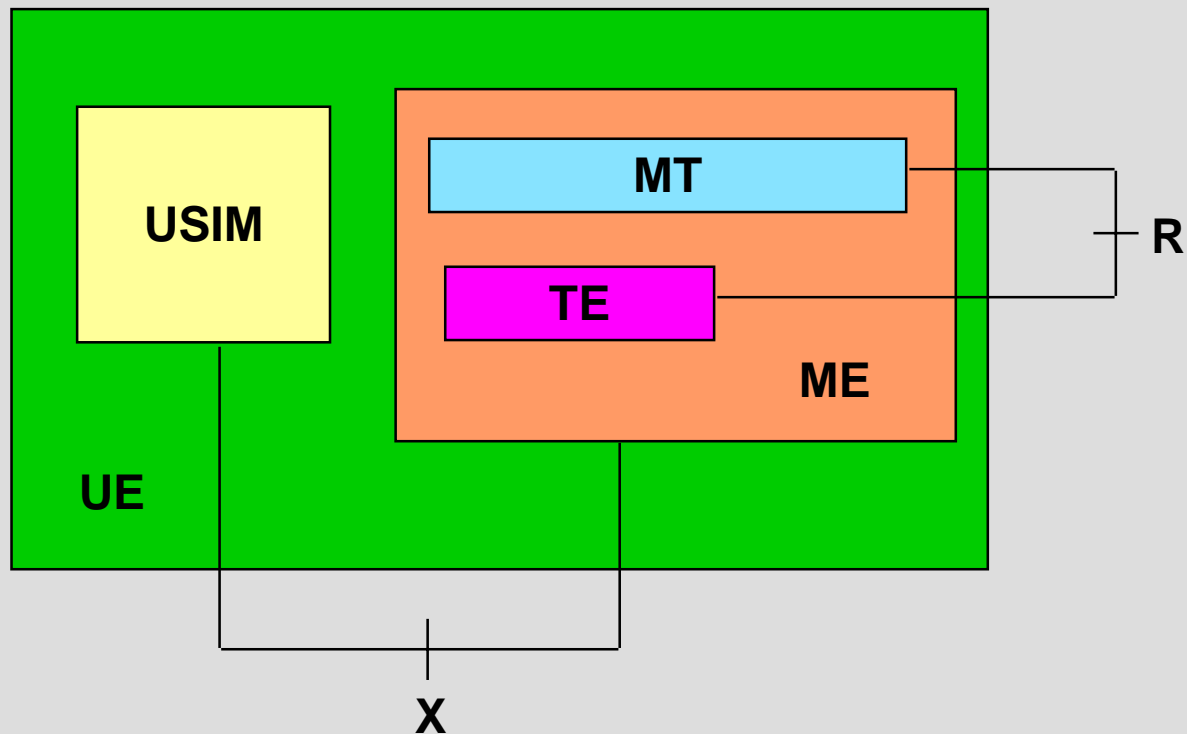

UE = User Equipment

3 Terminal architecture and interfaces

Example on a physical configuration 3G SIM and 3G Terminal

USIM as described
in 3GPP UMTS 31.101

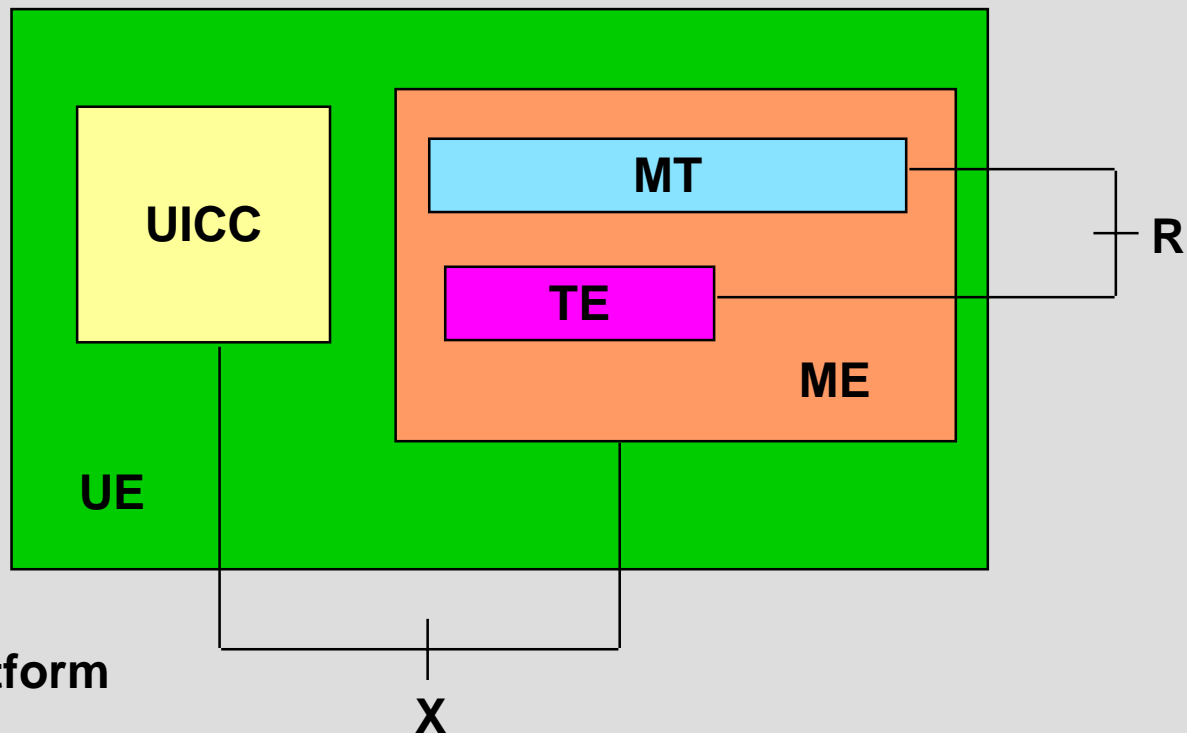

USIM = Universal SIM

3 Terminal architecture and interfaces

Example on a physical configuration UICC and 3G Terminal

UICC as described
in SCP ETS 102.221

SCP = Smart Card Platform

UICC = Universal IC Card

4 Possible Terminal - (U)SIM combinations

What we need is a table for the supported combinations (example):

Platform	Application	GSM R98-	GSM R99+	UMTS R99+
SIM 11.11	SIM 11.11	SIM	SIM	SIM
USIM 31.101	(U)SIM 31.102	?	SIM	USIM
SCP 102.221	(U)SIM 31.102	?	SIM	USIM
USIM 31.101	GSM * (delta)	?	?	?
SCP 102.221	GSM * (delta)	?	?	?
SCP 102.221	Other app	?	?	?
SCP 102.221	Other app's	?	?	?

5 Proposals

- 1) TSG-T tasks TSG-T3 to investigate the items and come back with solutions and detailed proposals for the further work
- 2) TSG-T & T3 widen its scope and also includes the GSM 11.11 transformation from ETSI SMG into a real 3G specification aligned with the USIM 31.102 and SCP spec 102.221
- 3) TSG-T informs TSG-SA plenary about the procedure of developing of new UICC applications based on the SCP platform spec ETS 102.221
- 4) TSG-SA sends liaisons to other technology camps to inform about the new approach and the specifications for information
- 5) TSG-T2 provides a better description about the interfaces and protocols being used e.g. for the terminal architecture, the supported combinations which could be part of the Terminal local model specification
