Title: Change Requests on GPRS Operator Preferences
Document for: Approval

The CRs to TS 31.102 and TS 51.011 were approved at TSG-T #12 in June, but the subsequent TSG-SA #12 meeting requested that they be postponed until the service requirements were clarified. TSG-SA1 did this as their subsequent meeting in July and so the same CRs are presented again for approval.

The two CRs to TS 21.111 and TS 42.017 related to the requirements for the feature and have been endorsed by SA1.

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at: http://www.3gpp.org/3G_Specs/CRs.htm. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be

downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

10.1 USIM information storage requirements

The USIM shall contain information elements for 3G network operations. The USIM may contain information elements related to the subscriber, 3G services and home environment or service provider related information.

The UICC shall provide storage capability for the following:

- UICC related information:
 - IC card identification: a number uniquely identifying the UICC and the card issuer;
 - Preferred language(s);
 - Directory of applications.
- USIM related information:
 - Administrative information: indicates mode of operation of the USIM, e.g. normal, type approval;
 - USIM service table: indicates which optional services are provided by the USIM;
 - IMSI;
 - Language indication;
 - Location information;
 - Cipher key (Kc) and cipher key sequence number;
 - Access control class(es);
 - Forbidden PLMNs;
 - Phase identification;
 - Ciphering Key for GPRS;
 - ~~—~~GPRS location information;
 - [GPRS Operator Preferences](#)
 - Cell Broadcast related information;
 - Emergency call codes;
 - Phone numbers (ADN, FDN, SDN);
 - Short messages and related parameters;
 - Capability and Configuration parameters;
 - HPLMN search period [FFS];
 - BCCH information: list of carrier frequencies to be used for cell selection [FFS].
- Information accessible to the USIM and other applications:
 - ADN.

In addition, the USIM shall manage and provide storage for the following information in accordance with the security requirements of clause 5:

- PIN;
- PIN enabled/disabled indicator;
- PIN error counter;
- Unblock PIN;
- Unblock PIN error counter;
- Data integrity keys;
- Subscriber authentication keys.

6.1 Mandatory storage

The SIM shall provide storage capability for the following:

- Administrative information: indicates mode of operation of the SIM, e.g. normal, type approval.
- IC card identification: a number uniquely identifying the SIM and the card issuer.
- SIM service table: indicates which optional services are provided by the SIM.
- International Mobile Subscriber Identity (IMSI).
- Location information: comprising Temporary Mobile Subscriber Identity (TMSI), Location Area Information (LAI), Current value of Periodic Location Updating Timer (T3212) and the Location update status.
- Cipher key (Kc) and cipher key sequence number.
- ~~BCCH~~ information: list of carrier frequencies to be used for cell selection.
- [GPRS Operator Preferences](#)
- Access control class(es): (see GSM 02.11 [6]).
- Forbidden PLMNs: (see GSM 02.11 [6]).
- HPLMN search period: used to control the time interval between HPLMN searches (see GSM 02.11 [6]).
- Language preference; subscriber preferred language(s) of MMI.
- Phase identification.

Location Information, Cipher Key and Cipher Key Sequence Number shall be updated on the SIM after each call termination and when the MS is correctly deactivated in accordance with the manufacturer's instructions.

In addition the SIM shall manage and provide storage for the following information in accordance with the security requirements of clause 5:

- CHV;
- CHV enabled/disabled indicator;
- CHV error counter;
- Unblock CHV;
- Unblock CHV error counter;
- Subscriber authentication key (Ki).

Reason for change:	⌘ The addition of a GPRS configuration file that defines the default settings for GPRS service when an application does not fully specify the GPRS settings.
Summary of change:	⌘ At present there are no defined settings of key parameters for GPRS connections. Therefore this field being optional has one change in the USIM service table for the addition of the optional feature. Secondly the addition of the GPRS Operator Preferences TLV encoded transparent file, describing the parameters. Finally the addition of the procedure
Consequences if not approved:	⌘ Indeterminate behaviour of GPRS services dependant on the Terminal manufacturer.

The EF shall contain at least one byte. Further bytes may be included, but if the EF includes an optional byte, then it is mandatory for the EF to also contain all bytes before that byte. Other services are possible in the future and will be coded on further bytes in the EF. The coding falls under the responsibility of the 3GPP.

Coding:

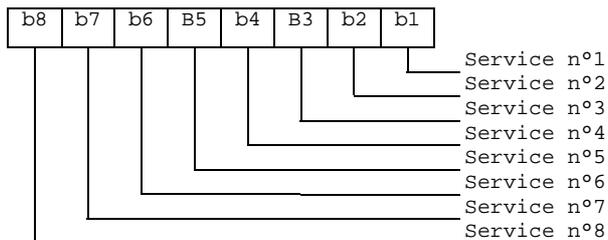

1 bit is used to code each service:

bit = 1: service available;

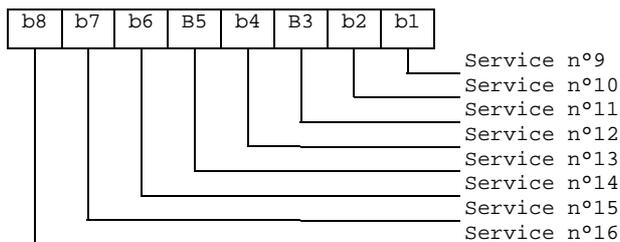

bit = 0: service not available.

- Service available means that the USIM has the capability to support the service and that the service is available for the user of the USIM unless the service is identified as "disabled" in EF_{EST}.
Service not available means that the service shall not be used by the USIM user, even if the USIM has the capability to support the service.

Annex A (informative): EF changes via Data Download or USAT applications

This annex defines if changing the content of an EF by the network (e.g. by sending an SMS), or by a USAT Application, is advisable. Updating of certain EFs "over the air" such as EF_{ACC} could result in unpredictable behaviour of the UE; these are marked "Caution" in the table below. Certain EFs are marked "No"; under no circumstances should "over the air" changes of these EFs be considered.

NOTE 1: The value '000000' means that ACMmax is not valid, i.e. there is no restriction on the ACM. When assigning a value to ACMmax, care should be taken not to use values too close to the maximum possible value 'FFFFFF', because the INCREASE command does not update EF_{ACM} if the units to be added would exceed 'FFFFFF'. This could affect the call termination procedure of the Advice of Charge function.

NOTE 2: xxxxxx stands for any valid MCC and MNC, coded according to 3G TS 24.008 [9].

CHANGE REQUEST
⌘ TS 51.011 CR 001 ⌘ rev - ⌘ Current version: 4.0.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ (U)SIM ME/UE Radio Access Network Core Network

Title:	⌘ Addition of Operators Preferences file for GPRS service usage		
Source:	⌘ T3		
Work item code:	⌘ TEI	Date:	⌘ 10 th May 2001
Category:	⌘ B	Release:	⌘ REL-4
	Use <u>one</u> of the following categories: F (essential correction) A (corresponds to a correction in an earlier release) B (Addition of feature), C (Functional modification of feature) D (Editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900.		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) REL-4 (Release 4) REL-5 (Release 5)

Reason for change:	⌘ The addition of a GPRS configuration file that defines the default settings for GPRS service when an application does not fully specify the GPRS settings.
Summary of change:	⌘ At present there are no defined settings of key parameters for GPRS connections. Therefore this field being optional has one change in the USIM service table for the addition of the optional feature. Secondly the addition of the GPRS Operator Preferences TLV encoded transparent file, describing the parameters. Finally the addition of the procedure
Consequences if not approved:	⌘ Indeterminate behaviour of GPRS services dependant on the Terminal manufacturer.

Clauses affected:	⌘ 10.3.7, 10.3.xx(new), 10.7, 11.5.xx(new), Annex D, Annex I, Annex X(new)		
Other specs Affected:	⌘ <input type="checkbox"/> Other core specifications <input type="checkbox"/> Test specifications <input type="checkbox"/> O&M Specifications	⌘

The operators GPRS Detachment Preferences in home PLMN for GPRS Class A terminal operation

Coding

- bit = 1: activation rule selected;
- bit = 0: activation rule not selected.

If bit b1 is selected then bits b2 to b8 are ignored.

If bit b2 is selected bit b3 is ignored.

If bit b3 is selected bit b2 is ignored.

If bits b1 to b8 are not selected then this specifically means that the ME detachment rules take preference.

- Detachment Timer Value

Contents

The timer value for the Operator Preferences for timed GPRS detachment for Class A operation in home PLMN for use when bit b2 or b3 is set.

Coding

Value in minutes coded on two bytes: 0 to 65535 ('FFFF')

Value of '0000' means timer expires immediately.

Value of 'FFFF' means timer never expires.

- Detachment Timer Value

Contents

The timer value for the Operator preferences for timed GPRS detachment for Class A terminal operation in Roaming PLMN for use when either bit b2 or b3 is set.

Coding

Value in minutes coded on two bytes: 0 to 65535 ('FFFF')

Value of '0000' means timer expires immediately.

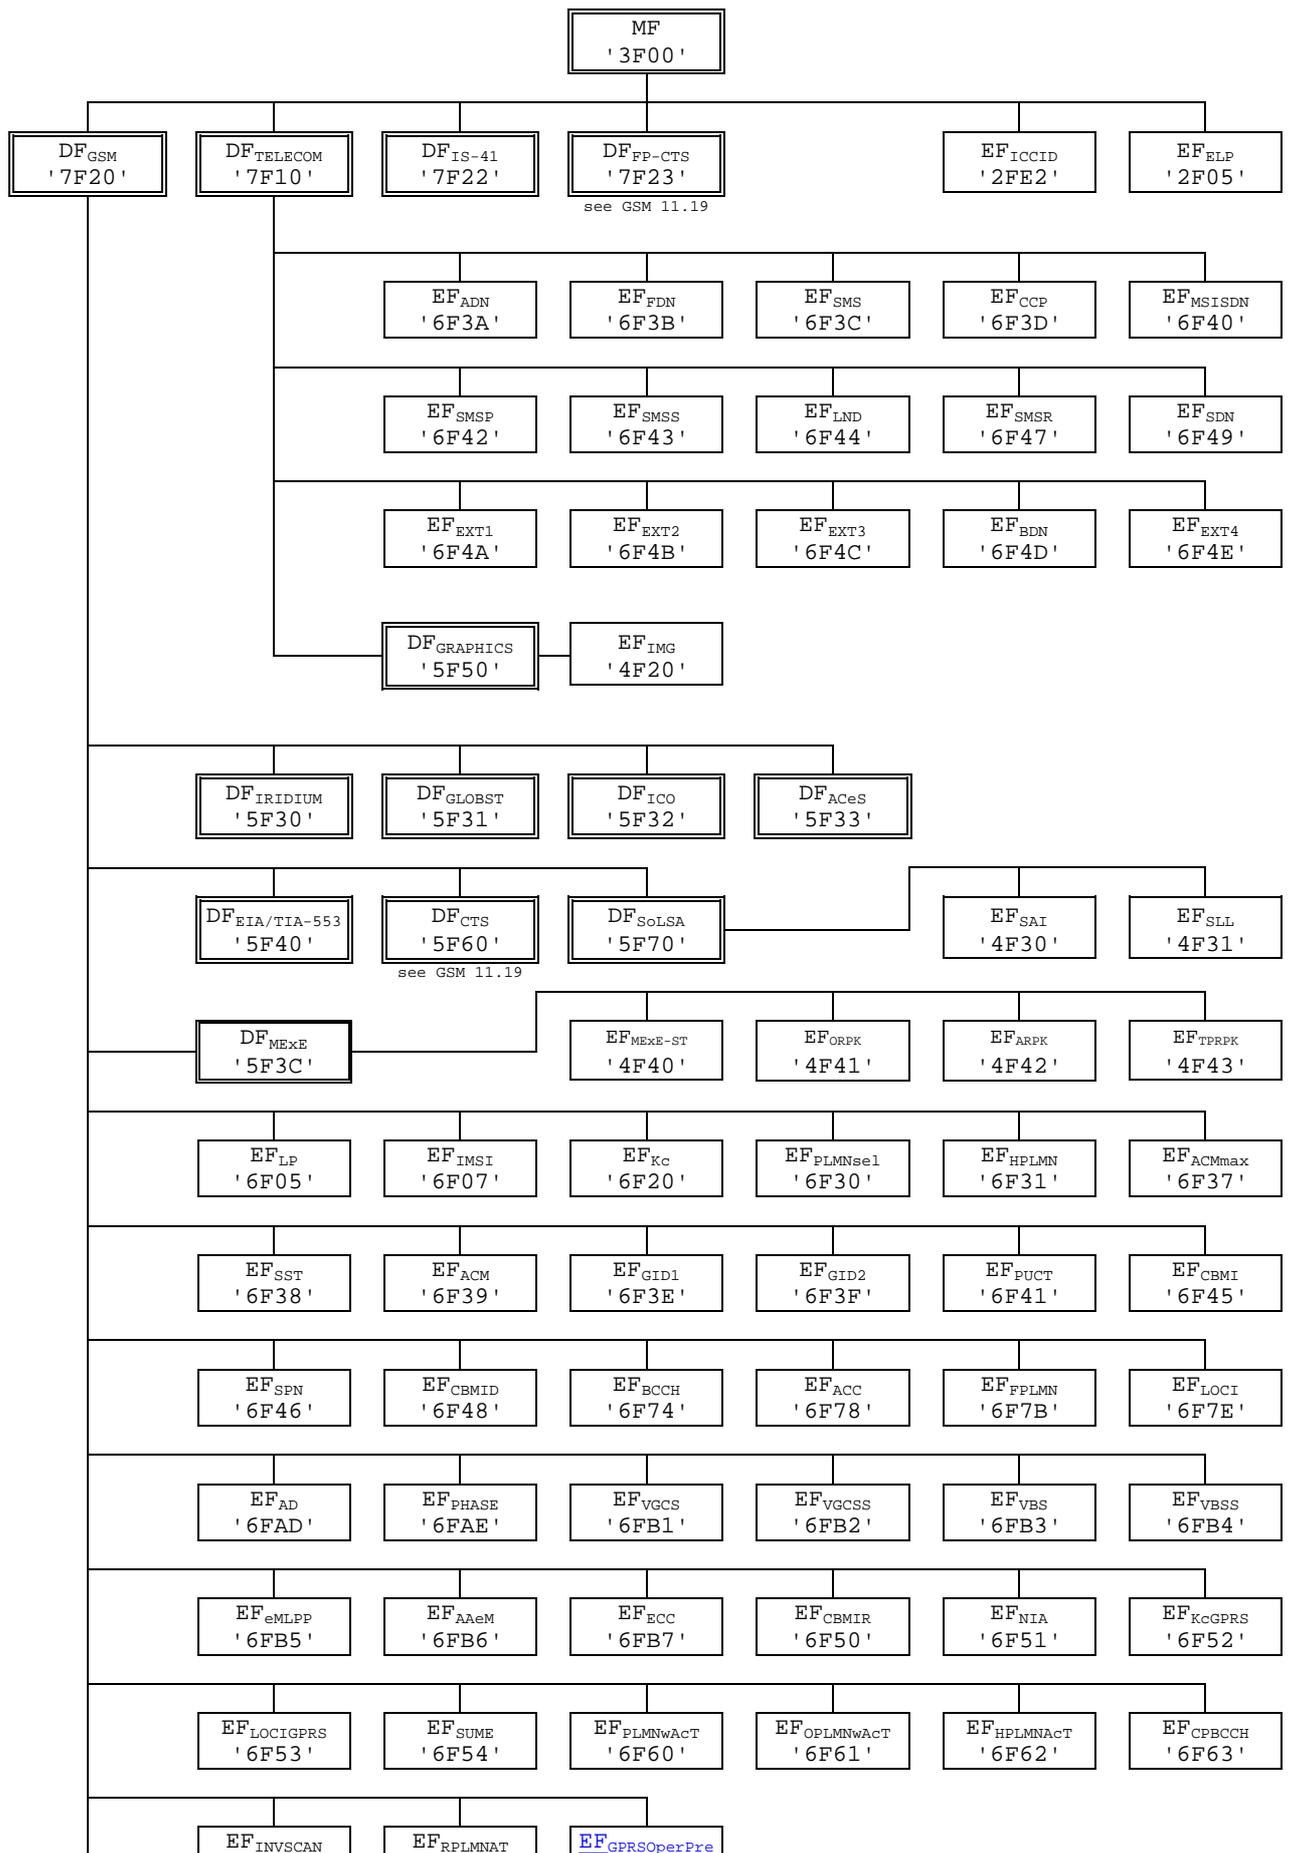

Value of 'FFFF' means timer never expires.

10.7 Files of GSM

This subclause contains a figure depicting the file structure of the SIM. DF_{GSM} shall be selected using the identifier '7F20'. If selection by this means fails, then DCS 1800 MEs shall, and optionally GSM MEs may then select DF_{GSM} with '7F21'.

NOTE 1: The selection of the GSM application using the identifier '7F21', if selection by means of the identifier '7F20' fails, is to ensure backwards compatibility with those Phase 1 SIMs which only support the DCS 1800 application using the Phase 1 directory $DF_{DCS1800}$ coded '7F21'.

NOTE 2: To ensure backwards compatibility with those Phase 1 DCS 1800 MEs which have no means to select DF_{GSM} two options have been specified. These options are given in GSM 09.91 [17].

NOTE 1: The value '000000' means that ACMmax is not valid, i.e. there is no restriction on the ACM. When assigning a value to ACMmax, care should be taken not to use values too close to the maximum possible value 'FFFFFF', because the INCREASE command does not update EF_{ACM} if the units to be added would exceed 'FFFFFF'. This could affect the call termination procedure of the Advice of Charge function.

NOTE 2: xxxxxx stands for any valid MCC and MNC, coded according to TS 04.08 [15].

Annex I (informative): EF changes via Data Download or SIM Toolkit applications

This annex defines if changing the content of an EF by the network (e.g. by sending an SMS), or by SIM Toolkit Application (e.g. by using the SIM API), is advisable. Updating of certain EFs, "over the air" such as EF_{ACC} could result in unpredictable behaviour of the MS; these are marked "Caution" in the table below. Certain EFs are marked "No"; under no circumstances should "over the air" changes of these EFs be considered.
