---

TS 11.10-4 R96 "Test specification for the SIM Application Toolkit" is currently under the responsibility of TSG-GERAN WG5. Over the course of several meetings, an ad hoc group within T3 has been working to upgrade TS 11.10-4 so as to be based on the R99 version of the core specification. As mentioned in the recent LS from T3 to GERAN5 #1 (T3-010594/G5-010106), the structure of the test specification has been substantially altered as well as enhanced with new tests to cover the many new SIM toolkit requirements added after R96.

This new version has been developed in such a way as to minimise the further work that will be required to produce an equivalent test specification for the 3G USIM Application Toolkit core specification, TS 31.111.

As it is part of the mandate of T3 to produce test specifications for the 3G USIM specifications, and since the new SIM toolkit test specification will be very similar to the one required for TS 31.111, T3 believe that they would be the best group to have primary responsibility for both specifications. This would also increase the efficiency as the experts working on the document normally attend only the T3 meetings.

GERAN5 are therefore requested to consider transferring responsibility for TS 11.10-4 to T3.
