

Draft Work Item Description

Title

Test Specification for the SIM API for REL-5.

1 3GPP Work Area

Terminals WG3 (USIM)

2 Linked work items

None

3 Justification

The 43.019 API goal is to provide interoperable applications support on SAT.
A test specification would ensure this interoperability.

4 Objective

This work item would deliver a test specification (including a test cases serie that would form a test suite). This would ensure interoperability in two areas:

- Bytecode
- Application Loading

The current test specification covers the TS 11.13 R98. The objective is to provide a REL-5 version of the test specification. The new document would be an evolution of TS 11.13.

5 Service Aspects

None.

6 MMI-Aspects

None.

7 Charging Aspects

None.

8 Security Aspects

None.

9 Impacts

Affects:	USIM	ME	AN	CN	Others
Yes	X				

No		X	X	X	X
Don't know					

10 Expected Output and Time scale (to be updated at each plenary)

New specifications						
Spec No.	Title	Prime rsp. WG	2ndary rsp. WG(s)	Presented for information at plenary#	Approved at plenary#	Comments
51.013	Test specification for SIM API for Java Card™	T3		T#20	T#21	
Affected existing specifications
