Key issues at T2#17

- 66 delegates attending, 275 tdocs processed by TSG T2#17
- SWG3 processed approximately half of the total number of T2 documents (approximately 102 MMS, 5 EMS, 21 SMS, 2 CBS)
- MExE Class-marks: Proposal for handling of future class-mark applications
- MExE WID: New WID proposed (Binary Execution feasibility study)
- MExE WID: Security Analysis WID - proposal for its closure
- MExE 23.057: CR to make the MExE specification more readable
- GUP: T2 GUP Ad Hoc group abandoned. T2 GUP work now under SWG2
- MMS REL-5: Complete (outstanding work on MM7 VASP reference point stage 3 finalised)
- MMS REL-6 WID: Initial draft produced
- Codecs: Some T2 delegates have expressed concern that SA5 may change a codec type / revision without realising that T2 may be affected (e.g. commercial reasons for MMS). Debate ongoing
- IMS Messaging: T2 has expressed the wish to SA1 that T2's expertise in messaging should contribute towards the preparation work for IMS Messaging

SWG1 (MExE) Summary

- 1 CR (REL-5), 3 LS's and 1 WID agreed
- WID matters:
 - New WID produced (Binary Execution feasibility study)
 - Security Analysis WID - Recommendation to close it
 - Discussion on new WID proposal (Network Execution) concluded that this was not a matter for T2. Sponsors to take WID to SA1
- MExE Class-marks: LS to TSG T outlining a proposal for assessing future class-mark applications. Concern expressed by some T2 delegates that this does not address controlling numbers of class-marks that may be issued
- MExE 23.057: CR produced to make the MExE specification more readable. Concern expressed by several mobile manufacturers that this does not necessarily make MExE easier to implement which was their earlier criticism of 23.057
- MExE Security: Liaison sent to SDR forum concerning Security for software download
- MExE CLI: Liaison sent to WAP forum UAPProf group concerning adding CLI platform tag to UAPProf Schema
