

Title: Criteria for T2 to commence detailed discussion on a new classmark
Source: TSG-T

This document gives guidelines which have no formal status and are subject to future change.

All work done in 3GPP is covered by the 3GPP Working Procedures which are available to be downloaded at

<http://www.3gpp.org/About/WP.htm>

Every proposition for a new classmark will be discussed on its own merit.

Proofs of concept or prototypes of the working technology must be demonstrated to T2.

- The technology need not be finished in its development in order to be considered for MExE standardization.

The proposed classmark must clearly offer significant new market value in the form of unique new functionality, and/or state-of-the-art functionality superior to functionality already defined within the MExE specification. Overlap in functionality within other existing Classmarks is acceptable, but not encouraged.

The consequence of an application satisfying the requirements in this document would be the development of a WID which would be subject to the normal 3GPP approval process, which may include groups outside of T2.
