1. Overall Description:

TSG-T3 would like to inform TSG-T about the fact that EP SCP and T3 SWG API have worked on the migration of the 3GPP TS 42.019 "Subscriber Identity Module Application Programming Interface" specification, and that EP SCP approved the outcome, during the SCP #10 meeting, as the new SCP specification TS 102 240 "UICC-Application Programming Interface and Loader Requirements" for REL-6.

2. Actions:

To TSG-T:

ACTION: TSG-T3 asks TSG-T to agree on the transfer of the ownership of 3GPP TS 42.019 from REL-6 onwards to ETSI EP SCP in order to avoid duplication of work resulting in possibly diverging platform specifications.
