## **Terms of Reference of TSG Terminals WG3 : Universal Subscriber Identity Module (USIM)**

### **1 Responsibilities**

Development and maintenance of specifications and associated test specifications for the 3GPP smart card applications (including USIM and ISIM), and the interface with the Mobile Terminal.

### **2 Tasks**

The main tasks of TSG-T WG3 are:

- to design 3GPP Applications (including USIM and ISIM) to support 3GPP security requirements;
- to provide capabilities for service creation (e.g. evolution of (U)SIM Application Toolkit, APIs);
- to specify download mechanisms for applications;
- to specify the USIM application as part of a multi-application card in a single/multi-card reader terminal environment;
- to evolve current service capabilities based on the SIM into a form suitable for 3G (e.g. user groups for ADN, storage of call records), maintaining backwards compatibility;
- to provide plastic roaming from GSM to 3G systems and to study plastic roaming from other 2G systems to 3G systems;
- to study plastic roaming from 3G to 2G systems.

### **3 Liaisons**

- with generic ETSI IC Cards;
- with ETSI Project SCP for the interface with the standard smart card platform
- with other groups as required (e.g. ARIB 27, working group for compatibility with PDC).
