---

### **1. Overall Description:**

At TSG-T#17, TSG-T3 presented document TP-020221 (TS 11.10-4 R99 SIM Application Toolkit test specification) for provisional approval. As GERAN is aware, T3 sought GERAN's permission to develop and maintain this document, based on GSM 11.10-4, which currently is Rel-96. GERAN implied that they would be happy with this in principle, but would like a presentation of the new document before agreeing to this proposal.

During discussion at T#17, it was acknowledged that the test specifications for SIM Toolkit rightly are in the domain of GERAN, specifically GERAN5. It was also discussed why there were no versions of this existing GSM 11.10-4 for releases later than Rel-96: again, it was not clear to the T meeting why this is the case. Further, there might be some interaction issues with TS 51.010-2.

A representative from T3, the rapporteur of the attached document, is willing to attend the next GERAN5 meeting in order to present the document to the meeting.

### **2. Actions:**

#### **To GERAN**

**ACTION:** TSG-T ask TSG-GERAN to propose a way forward for the future development of this document, in terms of responsibility for the development and maintenance of it.

### **3. Date of Next TSG Meetings:**

TSG-T Meeting #18	4th-6th December 2002	New Orleans, USA
TSG-T Meeting #19	12th-14th March 2003	Jersey Island
