1. Overall Description:

SA1 thanks T3 for the clarification required and is pleased to inform that the result of the discussion in SA1 is that all legacy SIM files shall to be supported in the USIM as a general principle, to provide full service and feature support for GSM services in UMTS.

Obviously the features/files which are not really representing a legacy, because they are not used today or because they are not candidate by operators to be ported in the UMTS context should not be supported. This is especially true in case the support presents technical difficulties.

The selection shall be evaluated feature by feature, and SA1 is therefore inviting T3 to identify the list of files/feature that are potential candidate for being discontinued for technical reasons, so S1 will be capable to clarify if operators have explicit requirement for their support.

2. Actions:

T3:   Identify the list of files/feature which support could be potential discontinued due to technical reasons, so S1 could verify the existence of specific need and confirm/not confirm the requirements for the specific features.

3. Date of Next TSG-SA WG1 Meetings:

SA1#22   27th – 31st October 2003   TBD
