1. Overall Description:

Although we do not have knowledge of the specifics, the 3GPP T3 group have become generally aware of work going on within OMA in the area of defining standardized application characteristics for MMS, e-mail, and other services. T3 would like to inform the OMA Requirements and Device Management Working Groups of existing 3GPP specifications containing definitions of MMS and IMS (IP Multimedia Subsystem) parameters that may be stored on the 3GPP smart card:

- 3GPP TS 31.102 (Characteristics of the USIM Application)
- 3GPP TS 31.103 (Characteristics of the ISIM Application)

T3 are also considering future additions to these specifications in the areas of WLAN provisioning parameters and generic service connectivity parameters for things like mail and browser settings.

We invite the relevant OMA working groups to consider these specifications in their work. T3 would be delighted to inform OMA of future standardisation work related to service provisioning parameters, and we look forward to close and fruitful cooperation between our groups.

2. Actions:

None.

3. Date of Next TSG-T3 Meetings:

TSG-T3 Meeting #29	18th – 21st November 2003	(TBD), USA
TSG-T3 Meeting #30	10th – 13th February 2004	Sophia Antipolis, France
