**Title:** CR's to TS 34.123-3 v.3.4.0, v.3.5.1 and v.3.5.2, TTCN category F  
for approval  
**Agenda item:** 5.1.3  
**Document for:** Approval

---

This document contains the CR's to TS 34.123-3 v.3.4.0, v.3.5.1 and v.3.5.2, TTCN category F. These CRs have been agreed by T1 and are put forward to TSG T for approval.

doc #	title	cat	version in	version out	CR #
T1s040077	Corrections to RRC Package 1 TC 8.1.2.9 to modify timers and RRC Setup Request Constraints	F	3.4.0	3.6.0	357
T1s040079	Corrections to Package 1 test case tc_8_1_1_1	F	3.4.0	3.6.0	358
T1s040163	Correction to RRC Package 1 TC 8.2.1.8 and 8.2.1.9 for the mismatch between Radio Bearer setup and PDP context Activation Request message (Revision of T1s040071).	F	3.4.0	3.6.0	355
T1s040164	Modification to ATT flag usage in TC 12.3.1.5. (Re-submission of T1-031923 on v3.4.0)	F	3.4.0	3.6.0	356
T1s040185	General correction to approved GCF P1 (Cell FACH) MAC test cases	F	3.4.0	3.6.0	354
T1s040188	Error correction lists to iWD-wk04 and iWD-wk07	F	3.4.0	3.6.0	352
T1s040189	TTCN corrections to Generic Setup Procedures	F	3.4.0	3.6.0	353
T1s040219	Correction to RRC Package 2 TC 8.2.2.7 for radio bearer messages with specified IEs and correction of default PS RAB and SRBs RLC configurations in RRC ATS. (Revision of T1s040165).	F	3.4.0	3.6.0	349
T1s040220	Correction to NAS Package 1 TC 12.5 for selecting UE operation mode C only when mode A not supported and validating RRC connection establishment cause	F	3.4.0	3.6.0	350
T1s040221	Correction to RRC Package 1 TC 8.1.2.1 modification to UE system specific capabilities (Revision of T1s040078).	F	3.4.0	3.6.0	351

T1s040224	Correction to Approved RRC Package 1 TC 8.3.4.1	F	3.5.0	3.6.0	348
T1s040235	Correction to Approved RRC Package 1 TC 8.3.4.2 and 8.3.4.3	F	3.5.0	3.6.0	347
T1s040251	Correction to GFC P3 RAB test cases 14.2.26 and 14.2.27	F	3.5.1	3.6.0	346
T1s040272	Correction to GFC P1 RAB test case 14.2.4	F	3.5.1	3.6.0	345
T1s040273	Correction to Package 2 MM TC 9.4.9 to handle situation when pc_PS is TRUE also.	F	3.5.2	3.6.0	344
T1s040274	Regression error corrections to wk12 and wk15.	F	3.5.1	3.6.0	343
T1s040277	Changes to the test step ts_CC_InitTCV_MO	F	3.5.1	3.6.0	341
T1s040278	Correction to Package 1 GMM test case 12.3.1.2 for P-TMSI signature check at Step 12.	F	3.5.1	3.6.0	342
T1s040279	Correction to Approved RRC Package 1 TC 8.4.1.1	F	3.5.0	3.6.0	340
T1s040282	Correction to package 2 TC 9.1 to handle PS attach and detach.	F	3.5.2	3.6.0	339
T1S040284	Correction to Approved Package 1 TC 11.1.1.1	F	3.5.0	3.6.0	338
T1s040287	Correction to Package 1 SM TC 11.1.1.1, 11.3.1 and 11.3.2 to harmonize the timer handling and to account for T1-040514, T1s040243 and T1s040244 concerning RAB release and detaching.	F	3.5.1	3.6.0	337
T1s040288	Correction to Package 3 NAS CC test case 10.1.2.7.3 for assigning FAIL verdict on receiving unexpected RELEASE message.	F	3.5.1	3.6.0	333
T1s040289	Correction to Package 2 GMM test case 12.2.1.3 for supporting USIM removal without power off	F	3.5.2	3.6.0	322
T1s040291	Correction to RRC TC 8.2.2.10 on contents of radio bearer reconfiguration message.	F	3.5.1	3.6.0	334
T1s040292	Correction to RRC Package 2 TC 8.4.1.16 and 8.4.1.17 for contents of SIB 11 and Measurement reporting Interval.	F	3.5.1	3.6.0	335
T1s040293	Correction to common test step "ts_SS_2_FACH_1_RACH_ModifyDCH_Cfg" of RRC ATS to release unused RLC entity, related to test cases 8.4.1.18 and 8.4.1.19	F	3.5.1	3.6.0	336
T1s040297	Correction to Package 3 NAS CC test cases 10_1_2_5_5, 10_1_2_6_2 and 10_1_2_7_2 to validate the current TI value.	F	3.5.1	3.6.0	323
T1s040298	Correction to Package 3 NAS CC test cases 10.1.2.6.6; introducing PIXIT parameter for UE Call waiting support.	F	3.5.1	3.6.0	324
T1s040299	Correction to Package 1 SM test case 11.1.1.1 in handling Modify PDP Context procedure.	F	3.5.1	3.6.0	325

T1s040300	Correction to Radio Bearer setup message for Package 1 RAB test case 14.2.13.1 and package 2 RAB test case 14.2.15.	F	3.5.1	3.6.0	326
T1s040301	Correction to Package 3 RAB test case 14.2.14.1 Radio Bearer setup in the SS.	F	3.5.1	3.6.0	327
T1s040302	Correction to RRC TC 8.2.2.18 and 8.2.2.17 on contents of radio bearer reconfiguration message and comments in test steps of TC 8.2.2.18.	F	3.5.1	3.6.0	328
T1s040303	Correction to RRC Package 2 TC 8.3.1.3 to delete the Radio Bearer BCCH mapped to FACH(RB_BCCH_FACH) in the old cell before configuring in the new cell.	F	3.5.1	3.6.0	329
T1s040304	Correction to Package 3 NAS MM test case 9.4.2.2.2 to disable cell C ATT flag	F	3.5.1	3.6.0	330
T1s040305	Correction to Package 2 NAS MM test case 9.4.9; introducing postamble to remove PLMN2 from USIM forbidden PLMN list.	F	3.5.2	3.6.0	331
T1s040306	Modification to RLC 7.2.3.33 TTCN to meet Test Procedure 'f' in Prose 34.123-1-571.	F	3.5.1	3.6.0	332
T1s040320	Quality of Service (QoS) initialisation when setting up a PS call	F	3.5.1	3.6.0	317
T1s040321	Correction to RRC Package 1 TC 8.1.1.2 and 8.1.1.3 to add delay before switching to CELL_PCH or URA_PCH	F	3.5.1	3.6.0	321
T1s040322	Correction to RRC Package 2 TC 8.3.1.4 to stop the timer t_WaitS after receiving expected UTRAN MOBILITY INFORMATION CONFIRM message from UE.	F	3.5.1	3.6.0	318
T1s040323	Corrections to RRC package 1 and 2 test cases from sections 8.1.x, 8.2.x and 8.3.x to add a delay before SS reconfigures MAC according to the new C-RNTI or U-RNTI assigned to UE.	F	3.5.1	3.6.0	319
T1s040324	Correction to RRC TC 8.3.1.3 on the contents of CELL UPDATE CONFIRM message	F	3.5.1	3.6.0	320

CR-Form-v7

## CHANGE REQUEST

⌘ **TS 34.123-3 CR 357** ⌘ rev - ⌘ Current version: **3.4.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

**Title:** ⌘ Corrections to RRC Package 1 TC 8.1.2.9 to modify timers and RRC Setup Request Constraints

**Source:** ⌘ Anite Telecoms

**Work item code:** ⌘ N/A

**Date:** ⌘ 17/02/2004

**Category:** ⌘ **F**

**Release:** ⌘ R99

Use one of the following categories:

- F** (correction)
- A** (corresponds to a correction in an earlier release)
- B** (addition of feature),
- C** (functional modification of feature)
- D** (editorial modification)

Detailed explanations of the above categories can be found in 3GPP [TR 21.900](#).

Use one of the following releases:

- 2 (GSM Phase 2)
- R96 (Release 1996)
- R97 (Release 1997)
- R98 (Release 1998)
- R99 (Release 1999)
- Rel-4 (Release 4)
- Rel-5 (Release 5)
- Rel-6 (Release 6)

**Reason for change:** ⌘

1. TS 34.123-1 defines that in SYSTEM INFORMATION TYPE 1, T300 is set to 2000 milliseconds after the system info modification but in the TTCN, T300 is set to 4000.
2. TS 34.123-1 defines the contents of RRC CONNECTION REQUEST in step 2 & Step 3c for K=0 to use the default constraint for the Protocol error indicator (= FALSE), since it is not expected. In the TTCN there is no check for Protocol error indicator.
3. In the TTCN there is an unnecessary timer of 45000ms started after the paging type 1 message to UE which will expire if user takes more than 45000ms for initiating a connection.
4. TS 34.123-1 defines for the contents of RRC CONNECTION REQUEST in step 2 & Step 3c for K>0 with no check of the Protocol error indicator. However, in the TTCN there is a check for Protocol error indicator (= FALSE).

**Summary of change:** ⌘

1. Defined a new ASN.1 Type constraint declaration cb\_SIB1\_DiffT300 with T300 set as 2000 and In the source code Line #16 is modified by replacing cb\_SIB1\_Def(T300 = 4000ms) with cb\_SIB1\_DiffT300 while sending SIB1(ts\_SendSIB1).
2. Line #20 of the test case is modified by replacing cdr\_RRC\_ConnReqUE\_IdNoProtErrCheck with cdr\_RRC\_ConnReqUE\_Id to include a check for Protocol error indicator in message RRC CONNECTION REQUEST.
3. Line #15 is modified removing the START t\_WaitMS(45000) which is unnecessary.
4. Line #36 and Line #40 of the test case are modified by replacing cdr\_RRC\_ConnReqUE\_Id with cdr\_RRC\_ConnReqUE\_IdNoProtErrCheck

		to OMIT a check for Protocol error indicator in message RRC CONNECTION REQUEST.									
<b>Consequences if not approved:</b>	⌘	TTCN is not conformant with TS 34.123-1 and may pass a non compliant UE									
<b>Clauses affected:</b>	⌘										
<b>Other specs affected:</b>	⌘	<table border="1"> <thead> <tr> <th>Y</th> <th>N</th> </tr> </thead> <tbody> <tr> <td></td> <td>X</td> </tr> <tr> <td></td> <td>X</td> </tr> <tr> <td></td> <td>X</td> </tr> </tbody> </table>	Y	N		X		X		X	Other core specifications ⌘ Test specifications O&M Specifications
		Y	N								
			X								
	X										
	X										
<b>Other comments:</b>	⌘										

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/>. For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

<b>Local Tree and Test step</b>	In Local tree It_TestBody of tc_8_1_2_9.
<b>Reason for change</b>	1. TS 34.123-1 defines for SYSTEM INFORMATION TYPE 1 T300 set to 2000 milliseconds after the system info modification. In the TTCN T300 is set to 4000.
<b>Summary of change</b>	1. Defined a new ASN.1 Type constraint declaration cb_SIB1_DiffT300 with T300 set as 2000. 2. In the source code Line #16 is modified by replacing cb_SIB1_Def(T300 = 4000ms) with cb_SIB1_DiffT300(T300 =2000ms) while sending SIB1(ts_SendSIB1).

### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>.

Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

<b>Local Tree and Test step</b>	New test step ts_AT_OrgPS_Call_RAB_DCH_ToFACH.
<b>Reason for change</b>	To set up the maxBitrates for the minimum QoS and requested QoS to 32kbps when the cell configuration is cell_DCH_standAloneSRB_NoConn.
<b>Summary of change</b>	New test step
<b>Source of change</b>	new change

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.

- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

TTCN Change description

Change 1 : ATT Flag initialization

Local Tree and Test step	Tc_12_3_1_5 test case, Step 6
Reason for change	ATT Flag needs to be set to 1.
Summary of change	At line 6, tcv_CellInfoA.attFlag := tsc_AttOn from tcv_CellInfoA.attFlag := tsc_AttOff
Source of change	Anite

Before Change:

6	(tcv_CellInfoA.attFlag := tsc_AttOff)		
7	+ts_SysInfoModifyMM( tsc_CellA, tcv_CellInfoA.mcc, tcv_CellInfoA.mnc, tcv_CellInfoA.lac, tcv_CellInfoA.attFlag, tcv_CellInfoA.t3212, tcv_CellInfoA.rac, tcv_CellInfoA.nmo)		Modify SIB1 to set q

After Change:

6	(tcv_CellInfoA.attFlag = tsc_AttOn) ←		
7	+ts_SysInfoModifyMM( tsc_CellA, tcv_CellInfoA.mcc, tcv_CellInfoA.mnc, tcv_CellInfoA.lac, tcv_CellInfoA.attFlag, tcv_CellInfoA.t3212, tcv_CellInfoA.rac, tcv_CellInfoA.nmo)

## Uplink configuration for RB20 in "c\_TrLogMapping\_Rach1TransRB3"

<b>ASN.1 PDU Constraint name</b>	c_TrLogMapping_Rach1TransRB3
<b>Reason for change</b>	In the Preamble RB's 1,2,3,4 & 20 are configured. However during the CMAC_Reconfig in test step "ts_MAC_GenericSetupProceduresToBGP6_2Or6_4" only Radio Bearers 1, 2, 3 & 4 are configured & Rb20 is left out. This leads the test case to Fail thereafter when RB20 is released in the Postamble.
<b>Summary of change</b>	<p>1. Add Uplink configuration (shown below) for RB20 in constraint "c_TrLogMapping_Rach1TransRB3"</p> <pre> {   logicalChannel_Mapping ul_LogicalChannelMapping : {     macHeaderManipulation normalMacHeader ,     ul_TransportChannelType rach,     logicalChannelIdentity tsc_UL_DTCH1,     logicalChannelType dTCH   },   rB_Identity tsc_RB20 } </pre>

### ASN.1 Type Constraint Declaration

Constraint Name:	c_TrLogMapping_Rach1TransRB3
Group:	
Type Name:	TrCH_LogCHMappingList1
Derivation Path:	
Encoding Variation:	
Comments:	This constraint is identical to c_TrLogMapping_PchRach1, except that the macHeaderManipulation field for RB3 is set to 'OmitMacHeader' for RB3. This allows the MAC header information to be inspected by the TTCN for received PDUs.
	<b>WAFMAC4109</b>

### Constraint Value

```

{
  ulconnectedTrCHList
  {
    {
      trchid tsc_RACH1,
      trCH_LogCHMappingList {
        {
          logicalChannel_Mapping ul_LogicalChannelMapping : {
            macHeaderManipulation normalMacHeader ,
            ul_TransportChannelType rach,
            logicalChannelIdentity tsc_UL_DCCH4,
            logicalChannelType dCCH
          },
          rB_Identity tsc_RB4
        },

            logicalChannelType dTCH
          },
          rB_Identity tsc_RB20
        }
      }
    }
  }
  dlconnectedTrCHList OMIT
}

```

## Downlink configuration for RB20 in "c\_TrLogMapping\_PchFach1TransRB3"

<b>ASN.1 PDU</b>	c_TrLogMapping_PchFach1TransRB3
<b>Constraint name</b>	
<b>Reason for change</b>	In the Preamble RB's 1,2,3,4 & 20 are configured. However during the CMAC_Reconfig in test step "ts_MAC_GenericSetupProceduresToBGP6_2Or6_4" only Radio Bearers 1, 2, 3 & 4 are configured & Rb20 is left out. This leads the test case to Fail thereafter when RB20 is released in the Postamble.
<b>Summary of change</b>	<p>2. Add Downlink configuration (shown below) for RB20 in constraint "c_TrLogMapping_PchFach1TransRB3"</p> <pre> {   trchid tsc_FACH2,   trCH_LogCHMappingList {     {       logicalChannel_Mapping dl_LogicalChannelMapping : {         macHeaderManipulation normalMacHeader,         dl_TransportChannelType fach,         logicalChannelIdentity tsc_DL_DTCH1,         logicalChannelType dTCH,         rlc_SizeList configured : NULL,         mac_LogicalChannelPriority 8       },       rB_Identity tsc_RB20     }   } } </pre>

### ASN.1 Type Constraint Declaration

<b>Constraint Name:</b>	c_TrLogMapping_PchFach1TransRB3
<b>Group:</b>	
<b>Type Name:</b>	TrCH_LogCHMappingList1
<b>Derivation Path:</b>	
<b>Encoding Variation:</b>	
<b>Comments:</b>	<p>This constraint is identical to c_TrLogMapping_PchFach1, except that the macHeaderManipulation field for RB3 is set to 'OmitMacHeader' for RB3. This allows the MAC header information to be specified by the TTCN for transmitted PDUs.</p> <p>For FDD mode only. map PCCH to PCH and DCCH1, DCCH2, DCCH3, DCCH4, CCCH and BCCH(for BCCH_FACH)</p> <p>WA#MAC4110</p>

### Constraint Value

<pre> {   ulconnectedTrCHList OMIT,   dlconnectedTrCHList {     {       trchid tsc_FACH2,       trCH_LogCHMappingList {         {           logicalChannel_Mapping dl_LogicalChannelMapping : {             macHeaderManipulation normalMacHeader,             dl_TransportChannelType fach,             logicalChannelIdentity tsc_DL_DTCH1,             logicalChannelType dTCH,             rlc_SizeList configured : NULL,             mac_LogicalChannelPriority 8           },           rB_Identity tsc_RB20         }       }     }   } } </pre>

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/>. For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

CR-Form-v7

## CHANGE REQUEST

# **TS 34.123-3 CR 353** # rev - # Current version: **3.4.0** #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	# TTCN corrections to Generic Setup Procedures		
<b>Source:</b>	# Racal Instruments Wireless Solutions, an Aeroflex company		
<b>Work item code:</b>	# N/A	<b>Date:</b>	# 04/03/2004
<b>Category:</b>	# <b>F</b>	<b>Release:</b>	# R99
	<i>Use <u>one</u> of the following categories:</i> <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		<i>Use <u>one</u> of the following releases:</i> <b>2</b> (GSM Phase 2) <b>R96</b> (Release 1996) <b>R97</b> (Release 1997) <b>R98</b> (Release 1998) <b>R99</b> (Release 1999) <b>Rel-4</b> (Release 4) <b>Rel-5</b> (Release 5) <b>Rel-6</b> (Release 6)

<b>Reason for change:</b>	# 34.123-3 section 6.5.2 (RLC Test Method) states, “RLC PDUs are specified in the TTCN test suite, and sent to TM PCO. These PDUs shall be carefully designed so that the Tr-Entity will not perform any segmentation”. and that “... Test cases shall be carefully designed to ensure that segmentation is not used in the SS Tr-Entity for RLC Testing” Additionally, 25.331 section 8.6.4.8 (RB Mapping Info) states that the following is an invalid configuration: “if the RB is using TM and the IE “Segmentation Indication” is set to TRUE and, based on the multiplexing configuration resulting from this message, the logical channel corresponding to it is mapped onto the same transport channel as another logical channel”, i.e. segmented TM over multiplexed logical channels is invalid. Therefore, Segmentation Indication should be set to FALSE
<b>Summary of change:</b>	# Change the “segmentationIndication” to FALSE, in constraints ca_RB_TM_Info and ca_RB_UL_TM_Info, which are used in Generic Setup Procedures.
<b>Consequences if not approved:</b>	# TTCN will not be in line with the Prose.

## 1 TTCN Corrections required

### 2 ca\_RB\_TM\_Info

Constraint name ca\_RB\_TM\_Info

Before:

```
{
  cellId p_CellId,
  routingInfo rB_Identity: p_RB_Id,
  ratType fdd,
  configMessage setup : {
    sS_rlc_Info { sS_ul_RLC_Mode dl_TM_RLC_Mode :{
      segmentationIndication TRUE
    },
    sS_dl_RLC_Mode {
      dl_PayloadSize p_PayloadSize,
      dl_RLCModeInfo ul_TM_RLC_Mode :{
        segmentationIndication TRUE
      }
    }
  }
},
  rB_LogCh_Mapping p_LogChMapping
}
}
```

After :

---

```
{
  cellId p_CellId,
  routingInfo rB_Identity: p_RB_Id,
  ratType fdd,
  configMessage setup : {
    sS_rlc_Info { sS_ul_RLC_Mode dl_TM_RLC_Mode :{
      segmentationIndication FALSE
    },
    sS_dl_RLC_Mode {
      dl_PayloadSize p_PayloadSize,
      dl_RLCModeInfo ul_TM_RLC_Mode :{
        segmentationIndication FALSE
      }
    }
  }
},
  rB_LogCh_Mapping p_LogChMapping
}
}
```

## 2.1 ca\_RB\_TM\_UL\_Info

Constraint name ca\_RB\_TM\_UL\_Info

Before:

```
{
  cellId p_CellId,
  routingInfo rB_Identity: p_RB_Id,
  ratType fdd,
  configMessage setup : {
    sS_rlc_Info { sS_ul_RLC_Mode dl_TM_RLC_Mode :{
      segmentationIndication TRUE
    } ,
    sS_dl_RLC_Mode {
      dl_PayloadSize p_PayloadSize,
      dl_RLCModeInfo ul_TM_RLC_Mode :{
        segmentationIndication TRUE
      }
    }
  },
  rB_LogCH_Mapping p_LogChMapping
}
```

After :

```
{

      segmentationIndication FALSE
    } ,
    sS_dl_RLC_Mode {
      dl_PayloadSize p_PayloadSize,
      dl_RLCModeInfo ul_TM_RLC_Mode :{
        segmentationIndication FALSE
      }
    }
  },
  rB_LogCH_Mapping p_LogChMapping
}
```

CR-Form-v7

## CHANGE REQUEST

⌘ **TS 34.123-3 CR 349** ⌘ rev - ⌘ Current version: **3.4.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

**Title:** ⌘ Correction to RRC Package 2 TC 8.2.2.7 for radio bearer messages with specified IEs and correction of default PS RAB and SRBs RLC configurations in RRC ATS. (Revision of T1s040165).

**Source:** ⌘ Anite Telecoms

**Work item code:** ⌘ N/A

**Date:** ⌘ 17/03/2004

**Category:** ⌘ **F**

**Release:** ⌘ R99

Use one of the following categories:

- F** (correction)
- A** (corresponds to a correction in an earlier release)
- B** (addition of feature),
- C** (functional modification of feature)
- D** (editorial modification)

Detailed explanations of the above categories can be found in 3GPP [TR 21.900](#).

Use one of the following releases:

- 2 (GSM Phase 2)
- R96 (Release 1996)
- R97 (Release 1997)
- R98 (Release 1998)
- R99 (Release 1999)
- Rel-4 (Release 4)
- Rel-5 (Release 5)
- Rel-6 (Release 6)

**Reason for change:** ⌘

1. According to 34.108 specification, IE's max-RST should be set as rst4 and timerPoll should be set as tp200 in default 'RADIO BEARER SETUP' message. However, the current implementation does not set the message accordingly.
2. According to 34.108 specification, timerPoll should be set as tp200 in default 'RRC CONNECTION SETUP' message. However, the current implementation does not set the message accordingly due to the modification in the base constraint cb\_UL\_AM\_RLC.
3. According to 34.123-1 specification, test case 8.2.2.7; the 'RADIO BEARER RECONFIGURATION' message should **not** include following IEs:
  - UL Transport Channel information for all transport channels,**
  - Added or Reconfigured UL Trch information,**
  - CHOICE mode,**
  - DL Transport channel information common for all transport channel,**
  - Deleted DL TrCH information,**
  - Added or Reconfigured DL TrCH information,**
  - Frequency info,**
  - CHOICE channel requirement,**
  - CHOICE mode – Downlink PDSCH information (FDD),**

**Downlink information for all radio links**

In addition to default values specified in 34.108. However, the current Implementation does not OMIT all above mentioned IEs.

- Summary of change:** ⌘
1. Modified RADIO BEARER SETUP message contents to set the IE's max-RST and timerPoll correctly according to the default specification of the message in 34.108.
  2. Modified RRC CONNECTION SETUP message contents to set the IE's max-RST and timerPoll correctly according to the default specification of the message in 34.108.
  3. Modified RADIO BEARER RECONFIGURATION message (in Step#1 of the test specification) contents to **OMIT** following IEs,

**UL Transport Channel information for all transport channels**

**Added or Reconfigured UL Trch information,**

**DL Transport channel information common for all transport channel,**

**Added or Reconfigured DL TrCH information,**

**Frequency info,**

**CHOICE channel requirement,**

**Downlink information for all radio links**

as specified in TS 24.123-1 Section 8.2.2.7 *Specific Message Contents*

*RADIO BEARER RECONFIGURATION (Step 1 FDD).*

**Consequences if not approved:** ⌘ Although the CR corrects TC 8.2.2.7 the proposed changes have the general affect on the all approved TCs.

**Clauses affected:** ⌘ N/A

	Y	N		
<b>Other specs affected:</b>	⌘	X	Other core specifications	⌘
		X	Test specifications	
		X	O&M Specifications	

**Other comments:** ⌘

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Change 1.**

<b>ASN.1 Type Constraint Declaration</b>	cb_UL_AM_RLC
<b>Reason for change</b>	According to 34.108 specification, IE's max-RST should be set as rst4 and timerPoll should be set as tp200 in default 'RADIO BEARER SETUP' message. However, the current implementation does not set the message accordingly.
<b>Summary of change</b>	Modified RADIO BEARER SETUP message contents to set the IE's max-RST and timerPoll correctly according to the default specification of the message in 34.108.
<b>Source of change</b>	New change

**Before:**

ASN.1 Type Constraint Declaration

**Title:** # Correction to NAS Package 1 TC 12.5 for selecting UE operation mode C only when mode A not supported and validating RRC connection establishment cause

**Source:** # Anite

**Work item code:** # N/A

**Date:** # 17/03/2004

**Category:** # **F**

**Release:** # R99

Use one of the following categories:

- F** (correction)
- A** (corresponds to a correction in an earlier release)
- B** (addition of feature),
- C** (functional modification of feature)
- D** (editorial modification)

Detailed explanations of the above categories can be found in 3GPP [TR 21.900](#).

Use one of the following releases:

- 2 (GSM Phase 2)
- R96 (Release 1996)
- R97 (Release 1997)
- R98 (Release 1998)
- R99 (Release 1999)
- Rel-4 (Release 4)
- Rel-5 (Release 5)
- Rel-6 (Release 6)

**Reason for change:** # 1. According to 34.123-1 specification, test case 12.5

### Related ICS/IXIT statements

UE operation mode A Yes/No  
 UE operation mode C Yes/No (only if mode A not supported)

But in the TTCN implementation of the test case 'UE operation mode C' is given greater priority than 'UE operation mode A'.

2. According to 34.123-1 12.5 - Expected sequence - Step#15:  
 "SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to 'Terminating interactive call' .

But in TTCN implementation, in step#29 no constraint is assigned for validating the establishment cause.

**Summary of change:** # 1. TTCN implementation for test case 12.5 corrected to selecting UE operation mode C only if mode A is not supported.  
 2. TTCN implementation corrected for checking RRC connection establishment cause from '?' to "terminatingInteractiveCall"

**Consequences if not approved:** # TC 12.5 Test case not compliant with the 34.123-1.

**Clauses affected:** # N/A

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Change 1:**

<b>Test step</b>	tc_12_5, step #9 and step #13
<b>Reason for change</b>	If mode A and C supported, mode C is given preference even when UE supports mode A. But according to test prose mode A should be given preference.  Change made to test case to select UE operation mode C, only when mode A is not supported.
<b>Summary of change</b>	1. Step #9 is changed from <i>[pc_SupportOpModeC]</i> to <i>[px_SupportOpModeC AND (NOT pc_SupportOpModeA)]</i>  2. Step #13 changed from <i>[(NOT pc_SupportOpModeC) AND pc_SupportOpModeA]</i> to <i>[pc_SupportOpModeA]</i>
<b>Source of change</b>	Correction to test case.

**Before:**

8	+ts_GMM_SwitchOff_AfterPSRejection (tsc_CellA, tcr_CellInfoA.atFlag)		
9	[pc_SupportOpModeC]		If operation mode C supported
10	+ts_MMI_SetOpModeC		Set UE in operation mode C
11	+tl_TestBody		
12	+pc_ConnectionAndSS_Rels		
13	A] [(NOT pc_SupportOpModeC) AND pc_SupportOpModeA]		If operation mode C is not supported but operation mode A is supported
14	+ts_MMI_SetOpModeA		Set UE in operation mode A

**After:**

8	+ts_GMM_SwitchOff_AfterPSRejection (tsc_CellA, tcr_CellInfoA.atFlag)		
9	[px_SupportOpModeC AND (NOT pc_SupportOpModeA)]		If operation mode C supported and Mode A not supported
10	+ts_MMI_SetOpModeC		Set UE in operation mode C
11	+tl_TestBody		
12	+pc_ConnectionAndSS_Rels		
13	[pc_SupportOpModeA]		If operation mode A supported
14	+ts_MMI_SetOpModeA		Set UE in operation mode A

**Change 2:**

<b>Test step</b>	tc_12_5, step #29
<b>Reason for change</b>	Test prose specifies RRC connection establishment cause should be 'Terminating interactive call', But the implementation the establishment cause is ignored.
<b>Summary of change</b>	1. Step #29 is changed from <code>ts_RRC_ConnEst( tsc_CellA, est_MT, ?)</code> to <code>+ts_RRC_ConnEst( tsc_CellA, est_MT, terminatingInteractiveCall)</code>
<b>Source of change</b>	Correction to test case.

**Before:**

28	<code>+ts_GMM_PagingType1_PTMSI(tsc_CellA, terminatingInteractiveCall, px_PTMSI_2)</code>			Step 14. Page UE with assigned P-TMSI-2
29	<code>+ts_RRC_ConnEst(tsc_CellA, est_MT, ?)</code>			

**After:**

28	<code>+ts_GMM_PagingType1_PTMSI(tsc_CellA, terminatingInteractiveCall, px_PTMSI_2)</code>			Step 14. Page UE with assigned P-TMSI-2
29	<code>+ts_RRC_ConnEst(tsc_CellA, est_MT, terminatingInteractiveCall)</code>			

## CHANGE REQUEST

# **TS 34.123-3 CR 351** # rev - # Current version: **3.4.0** #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps#  ME  Radio Access Network  Core Network

**Title:** # Correction to RRC Package 1 TC 8.1.2.1 modification to UE system specific capabilities (Revision of T1s040078).

**Source:** # Anite

**Work item code:** # N/A

**Date:** # 17/03/2004

**Category:** # **F**

**Release:** # R99

Use one of the following categories:

Use one of the following releases:

- F** (correction)
- A** (corresponds to a correction in an earlier release)
- B** (addition of feature),
- C** (functional modification of feature)
- D** (editorial modification)

- 2 (GSM Phase 2)
- R96 (Release 1996)
- R97 (Release 1997)
- R98 (Release 1998)
- R99 (Release 1999)

Detailed explanations of the above categories can be found in 3GPP [TR 21.900](#).

- Rel-4 (Release 4)
- Rel-5 (Release 5)
- Rel-6 (Release 6)

**Reason for change:** #

1. TS 34.123-1 specifies to check at step 3a that the IE 'UE Specific Behaviour Information 1 idle' is not included in the received 'RRC CONNECTION REQUEST' message. The SS only listens for this condition until the timer T300 has expired and it should wait until the correct message is received. In the current TTCN implementation SS only checks for the condition till timer t\_Lowerbound is expired.
2. TS 34.123-1 specifies to check at step 3a that IE 'Measured Results on RACH' is included in RRC Connection Request message and is in accordance with SIB 11 but there is no check for this in TTCN.
3. TS 34.123-1 specifies "UE system specific capabilities" needs to be checked at step 6 but there is no check for this in TTCN. The UE shall include IE "UE system specific capabilities" only if the UE supports both UMTS and GSM. In case of UMTS only mobile IE "UE system specific capabilities" shall be OMIT.

**Summary of change:** #

1. Incremented Indentation of Line #3 and removed Line #4 of local tree It\_Local1 since UE has to check for the condition that IE 'UE Specific Behaviour Information 1 idle' is not included in the received 'RRC CONNECTION REQUEST' message till the message is received.
2. Line #2 of local tree It\_Local1 is modified by replacing cdr\_RRC\_ConnReqUE\_Id with cdr\_RRC\_ConnReqRACH\_IntraFrequencyReportingQuantity to check that the IE 'Measured Results on RACH' is included in RRC Connection Request message and is in accordance with SIB 11.
3. Line #20 is replaced with a new local tree It\_Receive\_RRC\_ConnSetupCmpl to check the IE "UE system specific capabilities" is included in the message 'RRC CONNECTION SETUP COMPLETE' if the UE supports both UMTS and

GSM or the IE "UE system specific capabilities" is OMIT in the message 'RRC CONNECTION SETUP COMPLETE' if the UE supports only UMTS.

**Consequences if not approved:** ⌘ Test case may pass in a non compliant UE (affects RRC testcase 8\_1\_2\_1).

## CHANGE REQUEST

⌘ **TS 34.123-3 CR 348** ⌘ rev **-** ⌘ Current version: **3.5.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	⌘ Correction to Approved RRC Package 1 TC 8.3.4.1		
<b>Source:</b>	⌘ Ericsson		
<b>Work item code:</b>	⌘ TEI	<b>Date:</b>	⌘ 22/03/2004
<b>Category:</b>	⌘ <b>F</b>	<b>Release:</b>	⌘ Rel-5
	<i>Use <u>one</u> of the following categories:</i> <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		<i>Use <u>one</u> of the following releases:</i> <b>2</b> (GSM Phase 2) <b>R96</b> (Release 1996) <b>R97</b> (Release 1997) <b>R98</b> (Release 1998) <b>R99</b> (Release 1999) <b>Rel-4</b> (Release 4) <b>Rel-5</b> (Release 5) <b>Rel-6</b> (Release 6)

<b>Reason for change:</b>	⌘	<ol style="list-style-type: none"> <li>TC 8.3.4.1 should according to the prose description under specific message contents use the default SIB 11. But in TTCN a local test step +lt_GotoState6_9_Or6_10_MO ( tsc_CellA ) is called and from there the test step: +ts_SendSysInfoWithSpecialSIB11 is called with the constraint cd_SIB11_Tc_8_3_4. In the constraint cd_SIB11_Tc_8_3_4 the triggering condition for event 1a is changed from the default value "Monitored set cells" to the value "activeSetAndMonitoredSetCells". This value leads to unspecified UE behaviour according to clause 10.3.7.39 in TS 25.331: "In this version of the specification, the UE behaviour is unspecified when using a triggering condition "Active set cells" or "Active set cells and monitored set cells" for the intra-frequency events 1a or 1e".</li> <li>The specific message contents for step 3 states that the IE DPCH frame offset should be "Calculated value from Cell synchronisation information" in step 2. But this is not done in TTCN.</li> </ol>
<b>Summary of change:</b>	⌘	<ol style="list-style-type: none"> <li>Test step: +lt_GotoState6_9_Or6_10_MO ( tsc_CellA ) replaced with test step: +pr_GotoState6_9_Or6_10_MO ( tsc_CellA ) .</li> <li>IE Cell Synchronisation information saved and used in the calculation of DPCH frame offset.</li> </ol>
<b>Consequences if not approved:</b>	⌘	TC will fail a conformant UE.

## CHANGE REQUEST

⌘ **TS 34.123-3 CR 347** ⌘ rev **-** ⌘ Current version: **3.5.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	⌘ Correction to Approved RRC Package 1 TC 8.3.4.2 and 8.3.4.3		
<b>Source:</b>	⌘ Ericsson		
<b>Work item code:</b>	⌘ TEI	<b>Date:</b>	⌘ 02/04/2004
<b>Category:</b>	⌘ <b>F</b>	<b>Release:</b>	⌘ Rel-5
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	<b>F</b> (correction)	2	(GSM Phase 2)
	<b>A</b> (corresponds to a correction in an earlier release)	R96	(Release 1996)
	<b>B</b> (addition of feature),	R97	(Release 1997)
	<b>C</b> (functional modification of feature)	R98	(Release 1998)
	<b>D</b> (editorial modification)	R99	(Release 1999)
	Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		Rel-4 (Release 4)
			Rel-5 (Release 5)
			Rel-6 (Release 6)

<b>Reason for change:</b>	⌘	<ol style="list-style-type: none"> <li>The specific message contents for Active Set Update messages states that the IE DPCH frame offset should be "Calculated value from Cell synchronisation information". But this is not done in TTCN.</li> <li>In the prose for TC 8.3.4.1-8.3.4.3 the test procedure sets at some occasions some cell to "OFF", but the procedure used in TTCN decreases the cell power to -90dBm instead. Therefore the prose for the test cases needs to be aligned with the TTCN implementation as well as the TTCN has to be changed to not remove the DPCH of the cell. With these changes the prose and TTCN will be aligned.</li> </ol>
<b>Summary of change:</b>	⌘	<ol style="list-style-type: none"> <li>IE Cell Synchronisation information saved and used in the calculation of DPCH frame offset.</li> <li>In TC 8.3.4.3: After step 4 in prose DPCH for Cell B shall be removed, but in TTCN at row 28 the DPCH for Cell A is removed. Then at step 37 the DPCH for Cell A is configured, this step can be removed. At step 38 in TTCN the DPCH for Cell C is removed, this is an unnecessary step as the cell power is reduced to -90dBm.</li> </ol>
<b>Consequences if not approved:</b>	⌘	TC will fail a conformant UE.

<b>Clauses affected:</b>	⌘	tc_8_3_4_2, tc_8_3_4_3

X	X									
X	X									

**Other comments:** ☹ Affects R99, Rel4 and Rel5 UEs.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ☹ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Detailed Comments**

New TC variable:

## tcv\_Tm

<b>Variable Name</b>	Tcv_Tm
<b>Type</b>	Tcell
<b>Value</b>	0
<b>Comments</b>	Tm in cellSynchronisationInfo

Before:

## ts\_SHO\_ConfigureAdditionalDL\_DPCH

<b>Test Step Name</b>	ts_SHO_ConfigureAdditionalDL_DPCH ( p_CellId : INTEGER)
<b>Group</b>	RRCM_SHO_Steps/
<b>Objective</b>	To configure an additional radio link (DL DPCH).
<b>Default</b>	SS_Def
<b>Comments</b>	This test step shall be used during Active Set Update test cases (soft handover tests, SHO) in order to add an additional DL radio link to the SS configuration.

In order to release a radio link at the SS side, use test step ts\_SHO\_ReleaseDL\_DPCH. The additional radio link shall be configured according to default settings, and needs to be consistent with the configuration of radio links already established. All DL DPCHs configured shall be referred via the tsc\_DL\_DPCH1 identifier, which will be used by the SS to do the appropriate mappings to the MAC-d entity.

# **TS 34.123-3 CR 346** # rev - # Current version: **3.5.1** #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps#  ME  Radio Access Network  Core Network

<b>Title:</b>	# Correction to GFC P3 RAB test cases 14.2.26 and 14.2.27		
<b>Source:</b>	# Rohde & Schwarz		
<b>Work item code:</b>	# N/A	<b>Date:</b>	# 20/04/2004
<b>Category:</b>	# <b>F</b>	<b>Release:</b>	# <b>R99</b>
	<i>Use one of the following categories:</i> <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		<i>Use one of the following releases:</i> <b>2</b> (GSM Phase 2) <b>R96</b> (Release 1996) <b>R97</b> (Release 1997) <b>R98</b> (Release 1998) <b>R99</b> (Release 1999) <b>Rel-4</b> (Release 4) <b>Rel-5</b> (Release 5) <b>Rel-6</b> (Release 6)

<b>Reason for change:</b>	# In the RAB ATS, the RAB setup procedure "c_RAB_InfoListDCH_PS_64k_No_Pdcp" is used with "rlc_SizeList" IE set to "explicitList : { { rlc_SizeIndex 1 } , { rlc_SizeIndex 2 } }" which is wrong: RB 20 is configured to use TF of 336 bits.  Therefore rlc_SizeIndex 2 must only be specified.  When both { rlc_SizeIndex 1}, { rlc_SizeIndex 2} is used, this will allow RB 20 to use TF of 148 as well.
<b>Summary of change:</b>	# In constraint "c_RAB_InfoListDCH_PS_64k_No_Pdcp" use "rlc_SizeList" IE set to "explicitList : { { rlc_SizeIndex 2 } }" instead of "explicitList : { { rlc_SizeIndex 1 } , { rlc_SizeIndex 2 } }"
<b>Consequences if not approved:</b>	# A conformant UE would fail the affected test cases.

<b>Clauses affected:</b>	# tc_14_2_26 and tc_14_2_27										
<b>Other specs affected:</b>	<table border="1" style="display: inline-table; border-collapse: collapse;"> <tr> <td style="width: 20px; text-align: center;">Y</td> <td style="width: 20px; text-align: center;">N</td> </tr> <tr> <td style="text-align: center;">#</td> <td style="text-align: center;">X</td> </tr> <tr> <td style="text-align: center;">#</td> <td style="text-align: center;">X</td> </tr> <tr> <td style="text-align: center;">#</td> <td style="text-align: center;">X</td> </tr> </table> Other core specifications # Test specifications # O&M Specifications #	Y	N	#	X	#	X	#	X

### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

<b>ASN.1 PDU Constraint name</b>	c_RAB_InfoListDCH_PS_64k_No_Pdcp
<b>Reason for change</b>	<p>In the RAB ATS, the RAB setup procedure “c_RAB_InfoListDCH_PS_64k_No_Pdcp” is used with “rlc_SizeList” IE set to “explicitList : { { rlc_SizeIndex 1} , { rlc_SizeIndex 2} }” which is wrong: RB 20 is configured to use TF of 336 bits.</p> <p>Therefore rlc_SizeIndex 2 must only be specified.</p> <p>When both { rlc_SizeIndex 1}, { rlc_SizeIndex 2} is used, this will allow RB 20 to use TF of 148 as well.</p>
<b>Summary of change</b>	In constraint “c_RAB_InfoListDCH_PS_64k_No_Pdcp” use “rlc_SizeList” IE set to “explicitList : { { rlc_SizeIndex 2} }” instead of “explicitList : { { rlc_SizeIndex 1} , { rlc_SizeIndex 2} }”

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked # contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be

downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## Change 1

<b>Test step name</b>	c_DL_AddReconfTransChInfoListTM3_WA
<b>Reason for change</b>	<p>According to the default values for the “Radio Bearer Set up” message in TS34.108 (6.10.2.4.1.2.2.1.1 Transport channel parameters for DL:3.4 kbps SRBs for DCCH) the value for the rate matching attribute DCH5 in the DL for should be 192.</p> <p>In the original “c_DL_AddReconfTransChInfoListTM3” the values for DL_DCH5 are set as “same as UL”, i.e. the RM attribute used is 170 which is wrong.</p>
<b>Summary of change</b>	Created alternative constraint based in c_DL_AddReconfTransChInfoListTM3 but using an explicit configuration (“c_DCH_148_TFS_UE_DL”) in this constraint.

Before change:

ASN.1 Type Constraint Declaration	
Constraint Name:	c_DL_AddReconfTransChInfoListTM3 (p_DedTranChTFS1,p_DedTranChTFS2,p_DedTranChTFS3 DedicatedTransChTFS)
Group:	
Type Name:	DL_AddReconfTransChInfoList

### Change 3

**Test step name** c\_DCH\_148\_TFS\_DL\_rm192

**Reason for change** According to the default values for the "Radio Bearer Set up" message in TS34.108 (6.10.2.4.1.2.2.1.1 Transport channel parameters for DL:3.4 kbps SRBs for DCCH) the value for the rate matching attribute DCH5 in the DL for should be 192.

In the original "c\_DCH\_148\_TFS\_DL" the RM attribute used is 170 which is wrong.

**Summary of change** Created new constraint "c\_DCH\_148\_TFS\_DL\_rm192" based in "c\_DCH\_148\_TFS\_DL" with RM attribute set to 192.

Before change:

ASN.1 Type Constraint Declaration	
Constraint Name	c_DCH_148_TFS_DL
Group	
Type Name	CommonOrDedicatedTFS
Derivation Path	
Encoding Variation	
Comments	transport format set for signalling bearer on dedicated channel

Constraint Value
<pre>{   #40 ::= { ts_Size 148,     numberOfTbSizeList { zero : NULL, one : NULL },     logicalChannelList allSizes : NULL   }   IF   semiStaticTF_Information {     channelCodingType convolutional third,     rateMatchingAttribute 170,     crc_Size crc16   } }</pre>

After change:

ASN.1 Type Constraint Declaration	
Constraint Name	c_DCH_148_TFS_DL_rm192
Group	
Type Name	CommonOrDedicatedTFS
Derivation Path	
Encoding Variation	
Comments	transport format set for signalling bearer on dedicated channel
	W#RAB4283

Constraint Value
<pre>{   #40 ::= { ts_Size 148,     numberOfTbSizeList { zero : NULL, one : NULL },     logicalChannelList allSizes : NULL   }   IF   semiStaticTF_Information {     channelCodingType convolutional third,     rateMatchingAttribute 192,     crc_Size crc16   } }</pre>

## Change 4

<b>Test step name</b>	ca_4_DCH_0_To23_DL_Info
<b>Reason for change</b>	Wrong RM attribute for the DL in the local configuration (see change 1).
<b>Summary of change</b>	Used new created constraint "c_DCH_148_TFS_DL_rm192" (see change 3) instead of "c_DCH_148_TFS_DL"

Before change:

ASN 1 ASP Constraint Declaration	
Constraint Name:	ca_4_DCH_0_To23_DL_Info (p_CellId: INTEGER, p_PhyChId: INTEGER, p_Type: TrChConfigType, p_ActivationTime: ActivationTime)
Group:	
ASP Name:	CPHY_TrCh_Config_REQ
Derivation Path:	
Comments:	For FDD mode only, used in acknowledged mode RLC testing
Constant Value	
<pre> 1 cellId p_CellId, routingInfo physicalChannelIdentity: p_PhyChId, cellType fdd, trchConfigType p_Type, configMessage {   activationTime activationCFN: p_ActivationTime,   dtkommittedTrchList {     {       trchId tsc_DL_DCH1,       dl_TransportChannelType dch,       transportChannelInfo r_DCH_81_TFS_DL     }     {       trchId tsc_DL_DCH2,       dl_TransportChannelType dch,       transportChannelInfo r_DCH_103_TFS     }     {       trchId tsc_DL_DCH3,       dl_TransportChannelType dch,       transportChannelInfo r_DCH_80_TFS     }     {       trchId tsc_DL_DCH5,       dl_TransportChannelType dch,       transportChannelInfo r_DCH_148_TFS_DL     }   } } dTFCS: r_TFCS_Cmpl0_1_11_12_13_23_Tx (r_PowerOffsetInfoBelow64k) } </pre>

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Change 1.**

**Test step name** *ts\_RegistrationReject*

**Reason for change** Correction to [ pc\_PS = TRUE] branch.

**Summary of change** Step 48 “+lt\_HandleAttachRequest” in “*ts\_RegistrationReject*” should be removed from the [ pc\_PS = TRUE] branch also because in the previous step LOCATION UPDATE is rejected with cause #11 (PLMN not allowed), so after this no Attach is expected to come, instead UE begins PLMN search immediately.

The highlighted row should be removed:

No	Label	Behaviour Description	Constraints Ref	Verdict	Comments
<b>Test Step Name</b> <i>ts_RegistrationReject ( p_Cellid : INTEGER )</i>					
<b>Group</b> L3M_MM_GMM_Steps/					
<b>Objective</b> Generic test step to reject PS or CS registration attempt by the UE. The reject cause for PS domain is given by global variable <i>tcv_PSRegistrationRejectCause</i> (to be set according to TS 24.008 / 10.5.5.14) and for CS domain <i>tcv_CSRegistrationRejectCause</i> (TS 24.008 / 10.5.3.6).  Note-1: This generic test step shall correctly consider the different NMO, ATT flag and UE mode of operation. (This is why the test step is so complex).					
43		+ts_SS_SecurityDownloadStart ( cs_domain, tcv_Start )			
44		+ts_MM_Authentication(p_Cellid)			Authentication

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ☹ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## Change 1.

<b>Local Tree and Test step</b>	In localtree It_Attach2 of 12.3.1.2, at row 42 (step 12)
<b>Reason for change</b>	As per 3GPP TS 34.123-1 section 12.3.1.2.5 attach request should be sent without P-TMSI signature.
<b>Summary of change</b>	Created a new constraint cr_AttachReq_without_ptmsi_sig And the same is used at row 42.

## Before:

It_Attach2				
42		Dc ? RRC_DataInd (tcv_Start = RRC_DataInd.start)	car_PS_InitDirectTransfer(tsc_CellDedicated, tsc_RB3,  cr_AttachReq( c_GMM_AttachTypePS_Only , c_MobileIdPTMSI_iv_Def, c_RAI_Def_v, tcv_PS_KeySeq) )	Step 12. ATTACH REQUEST  - Attach type is 'PS attach'  - MobileId P-TMSI-1 - RAI-1 - PTMSI-1 signature
43		+ ts_SS_SecurityDownloadStart (ps_domain, tcv_Start)		
44		+ ts_RRC_Security (tsc_Cella, tcv_PS_AuthCK, tcv_PS_AuthIK, tcv_AuthKcGSM, FALSE, ps_domain)		Step 12a. The SS starts ciphering and integrity protection
45		Dc ! RRC_DataReq	ca_PS_DataReq(tsc_CellDedicated, tsc_RB3, cs_AttachAcc(c_GMM_AttachResultPS_Only, c_RAI_Def_v, , , ) )	Step 13. ATTACH ACCEPT  - Attach result PS only  - RAI-1 - no new Mobile Id assigned - no new P-TMSI signature

After :

It_Atach2				
42		Dc ? RRC_DataInd (tcr_Start => RRC_DataInd.start)	<pre> ca_Ps_InitDirectTransfer(   tsc_CellDedicated, tsc_RB3,   cr_AttachReq_without_ptms   i_sig,   c_GMM_AttachTypePS_Only,   c_MobileIdPTMSI_tv_Def, c_   RAI_Def_v,   tcr_PS_KeySeq)           </pre>	Step 12. ATTACH REQUE ST - Attach type is 'PS attach' - MobileId P-TMSI-1 - RAI-1
43		+ ts_SS_SecurityDownloadStart (ps domain, tcr_Start)		
44		+ ts_RRC_Security (           tsc_CellA,           tcr_PS_AuthCK,           tcr_PS_AuthK,           tcr_AuthKcOSM,           FALSE, ps_domain)		Step 12a. The SS starts c iphering and integrity pro tection
45		Dc   RRC_DataReq	<pre> ca_Ps_DataReq(tsc_CellD   edicated, tsc_RB3,   cs_AttachAcc(   c_GMM_AttachResultPS_On   ly,   c_RAI_Def_v,   -,   -,   -   )           </pre>	Step 13. ATTACH ACCEP T - Attach result 'PS only' - RAI-1 - no new Mobile Id assign ed - no new P-TMSI signatur e

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be

downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

Before:

## tc\_8\_4\_1\_1

<b>Test Case Name</b>		<a href="#">tc_8_4_1_1</a>
<b>Group</b>		<a href="#">RRC_Measurements/</a>
<b>Purpose</b>		<p>1. To confirm that the UE continues to monitor intra-frequency measurement quantity of the entered CELL_DCH state from idle mode. When the intra-frequency measurement reporting been met, it shall report the measurements using MEASUREMENT REPORT message(s).</p> <p>2. To confirm that the UE terminates monitoring and reporting activities for the cells listed in messages, after it has received a MEASUREMENT CONTROL message that specifies the r measurement identity as in System Information Block Type 11 or 12 messages.</p> <p>To confirm that the UE reconfigures the monitoring and reporting activities based on the last</p>

### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked # contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Change 1.**

**Test step name** *lt\_Body*

**Reason for change** PS detach not handles in Power Off.

**Summary of change** Replace *ts\_MM\_PwrOrUSIM\_Off* with *ts\_GMM\_DetachOnSwitchOff*.

Before change *lt\_Body*:

lt_Body	TBD	(New TestBody := TRUE)	(F)	
1		<pre> +ts_PRC_Connect_PCR_PT_TMR(     tac_CellID,     GetLocationFromWirelessCell,     ps_TMR1_max,     GetLocationFromWirelessCell) </pre>		Step 1: UT Connection Establishment
2		<pre> ts_PRC_Detach(     { tcr_start := PRC_Detach_start } </pre>	<pre> omc_InitDetachTransfer(     tac_CellIDDetached,     tcr_PSI,     c_PagRep(     ),     c_RetIn(10000,1e)) </pre>	Step 2: 1.
3		<pre> + ts_PS_SecurityDownedEvent(     tac_CellID,     tcr_start ) </pre>		
4		<pre> +ts_PS_Authentication( tac_CellID) </pre>		Steps 2a-2b: Authentication
5		<pre> +ts_PRC_Security(     tac_CellID,     tcr_ArchIN,     tcr_ArchIE,     tcr_ArchICR,     TMR,     ts_downIn) </pre>		Steps 3-4
6		<pre> +ts_PRC_PSI_PsiLocation(     tac_CellID,     c_PsiLocationIN,     tcr_CellInfoLoc,     tcr_CellInfoLoc,     tcr_CellInfoLoc) </pre>		Step 5-6 2.
7		<pre> +ts_PRC_ConnRel(     tac_CellID,     call_Pch) </pre>		Steps 7-8: Connection Release
8		<pre> +ts_PRC_PwrOrUSIM_Off( tac_CellID ) </pre>		Step 9: Disconnect the UE
9		<pre> +ts_PRC_Delay (10000) </pre>		Step 9a: Delay of 10 ms
10		<pre> +ts_ActivateUE </pre>		

After the change *lt\_Body*:

lt_Ready	TRX	[TRX_Ready := TRUE]	(F)	
0		+ts_RRC_ConnRel_PCR_MF_TRX1;		Step 2:
1		ts_CellB,		MT Connection
		terminatingConversationalCall,		Establishment
		ps_TRX1_Def,		
		terminatingConversationalCall()		
2		ts_RRC_DataReq	ts_CellBIsEstablished,	Step 2:
		{ tsv_Start := RRC_DataReq_start }	tsv_RRC,	1.
			c_Paging,	
			?,	
			c_MobileIdTRX1_1v}	
3		+ ts_RR_SecurityDomainStart;		
		tsv_CR_Paging,		
		tsv_Start;		
4		+ts_RR_ActivateSession( tsv_CellB);		Steps 14-15:
				Activation
5		+ts_RRC_Deactivate;		Steps 3-4
		tsv_CellB,		
		tsv_Active,		
		tsv_Active,		
		tsv_Activate,		
		TRUE,		
		cs_Access		
6		+ts_RR_TRX1_Reallocate;		Steps 3-4
		tsv_CellB,		2.
		c_MobileIdTRX1_1v,		
		tsv_CellInfoB.access,		
		tsv_CellInfoB.access,		
		tsv_CellInfoB.lan,		
		tsv_CellInfoB.lan)		
7		+ts_RRC_ConnRel;		Steps 3-4:
		tsv_CellB,		Connection Release
		call_Req		
8		+ts_RR_DeactivateDetach( tsv_CellB);		Step 8: Turn off and
		+ts_RR_Deact (10000);		detach
9				Step 9a
				Delay of 10 sec
10		+ts_ActivateUE		

**Change 2.**

Test step name *lt\_ActivateUE*

Reason for change TTCN implementation does not handle PS attach after step 10.

Summary of change Add *lt\_continue*, *lt\_HandleAttachRequest* and *lt\_RRC\_ConnRel* local trees to handle PS attach in case of Automatic Attach at Switch On.

Before the change *lt\_ActivateUE*:

lt_ActivateUE				
0		+ts_RR_Deactivate( tsv_CR_Deact_Req );		Step 10:
				Activate the UE
1		+ts_RR_Deact (tsv_CR_Deact_Req);		Step 11
2		tsv_CellB,		
		tsv_CellInfoB.access,		
		tsv_CellInfoB.access,		
		tsv_CellInfoB.lan,		
		tsv_CellInfoB.lan,		
		tsv_CellInfoB.accessFlag,		
		tsv_CellInfoB.accessFlag,		
		tsv_RRC_Def,		
		tsv_CellInfoB.access		
3		+ts_RR_Deact( tsv_CR_Deact_Req );		
4		+ts_RRC_ConnRel_PCR_MF_TRX1;		Step 12:
		tsv_CellB,		MT Connection
		terminatingConversationalCall,		Establishment
		ps_TRX1_1,		4.
		terminatingConversationalCall()		
5		ts_RRC_DataReq	tsv_CellBIsEstablished,	Step 13:
		{ tsv_Start := RRC_DataReq_start }	tsv_RRC,	5.
			c_Paging,	
			tsv_CR_Deact_Req,	
			c_MobileIdTRX1_1v}	
6		+ ts_RR_SecurityDomainStart;		
		tsv_CR_Deact_Req,		
		tsv_Start;		
7		+ts_RRC_ConnRel;		Steps 14-15:
		tsv_CellB,		Connection Release
		call_Req		
8		+ts_ActivateUE		

## CHANGE REQUEST

⌘ **TS 34.123-3 CR 338** ⌘ rev **-** ⌘ Current version: **3.5.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	⌘ Correction to Approved Package 1 TC 11.1.1.1		
<b>Source:</b>	⌘ Ericsson		
<b>Work item code:</b>	⌘ TEI	<b>Date:</b>	⌘ 30/04/2004
<b>Category:</b>	⌘ <b>F</b>	<b>Release:</b>	⌘ Rel-5
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	<b>F</b> (correction)	<b>2</b>	(GSM Phase 2)
	<b>A</b> (corresponds to a correction in an earlier release)	<b>R96</b>	(Release 1996)
	<b>B</b> (addition of feature),	<b>R97</b>	(Release 1997)

			<b>Rel-5</b> (Release 5)
			<b>Rel-6</b> (Release 6)

<b>Reason for change:</b>	⌘ 1. TC 11.1.1.1 was previously able to run in either NOM_I or NOM_II controlled via a PIXIT called px_NMO. When some of the PIXITS were removed TC 11.1.1.1 was hardcoded to use NOM_I. At step 2 in the expected sequence of the testcase a DETACH is done. After the RRC connection is released (in NOM_I) the UE is not registered to any domain, this leads to that a UE might try to register to the CS domain before the PDP context activation has finished. This registration is not expected by the TTCN. But if the TC is run in NOM_II instead then the UE is still registered to the CS domain after the DETACH and will not try to do a new registration to the CS domain.
<b>Summary of change:</b>	⌘ 2. Test case is changed to run in NOM_II.
<b>Consequences if not approved:</b>	⌘ TC will fail a conformant UE.

## CHANGE REQUEST

# **34.123-3 CR 337** # rev **-** # Current version: **3.5.1** #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	# Correction to Package 1 SM TC 11.1.1.1, 11.3.1 and 11.3.2 to harmonize the timer handling and to account for T1-040514, T1s040243 and T1s040244 concerning RAB release and detaching.		
<b>Source:</b>	# Nokia, Rohde & Schwarz and MCC 160		
<b>Work item code:</b>	# N/A	<b>Date:</b>	# 04/05/2004
<b>Category:</b>	# <b>F</b>	<b>Release:</b>	# R99
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	<b>F</b> (correction)		2 (GSM Phase 2)
	<b>A</b> (corresponds to a correction in an earlier release)		R96 (Release 1996)
	<b>B</b> (addition of feature),		R97 (Release 1997)
	<b>C</b> (functional modification of feature)		R98 (Release 1998)
	<b>D</b> (editorial modification)		R99 (Release 1999)
	Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		Rel-4 (Release 4)
			Rel-5 (Release 5)
			Rel-6 (Release 6)

<b>Reason for change:</b>	# 1. The timer handling in the SM module has been aligned to the proposed handling in 34.123-3 for all test cases except the approved test cases 11.1.1.1, 11.3.1 and 11.3.2 plus associated test step ts_ModifyPDP_Context_MT_Accept. This CR undertakes to present the required changes for the already approved test cases in order to fully align the SM module to the proposed timer handling. 2. RAB release and detach are procedures which are performed at different protocol layers, and which may overlap. Detach is being caught in the default background while the RAB release procedure is handled in the foreground.
<b>Summary of change:</b>	# 1. Timers used replaced by t_LowerBound and t_UpperBound. 2. Constants introduced to represent the SM timer values in msec including tolerances ('min' suffix to indicate a minus 10 % tolerance, 'max' suffix to indicate a plus 10 % tolerance). 3. tcv_GMM_DetachExpect is introduced to indicate that the UE may possibly send a Detach Request. If this is the case while the RAB release procedure is performed, then this is noted by setting tcv_GMM_DetachExpect to FALSE. Once the RAB release procedure has been completed, potential Detach is handled. 4. If Detach were repeated this is as well accounted for in the default background.
<b>Consequences if not approved:</b>	# Test cases will not follow the coding guidelines, and conformant UEs may fail.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## 1. Introduction

There has been discussion in the past on test cases tc\_11\_3\_1 and tc\_11\_3\_2. The starting point of this CR is T1s030353. Its contents was revised later with T1s040243 and T1s040244. The difference between these CRs lies in the handling of the potentially parallel RRC RAB release procedure and the NAS Detach procedure. It was concluded to handle the RAB release procedure in the foreground, and to handle the Detach procedure in the background.

Secondly the timer handling in the SM test cases has been adapted to align with the proceeding proposed by TS 34.123-3. The proposal of this handling for the already approved test cases tc\_11\_1\_1\_1, tc\_11\_3\_1 and tc\_11\_3\_2 was published as TTCN CR T1s040267. This CR triggered comments from Sasken regarding the appropriateness of the used timers, as well as the retransmission of the Detach message by the UE while SM procedures were attempted.

Both aspects were already accounted for in the TTCN. Therefore it was not considered meaningful to continue discussion on these aspects separately, but it was decided to produce a merged CR.

The present document shows the changes which were made to the TTCN with respect to the NAS\_wk15 ATS.

## 2. Changes

**Change 1**

Test case name tc\_11\_1\_1\_1  
 Reason for change Test case should handle timers as per 34.123-3  
 Summary of change t\_UpperBound used and with msec timer

Before change:

It_Tree1			
18	+ts_AT_OrgPS_Call(tsc_CellA)		Step 3 Originate a PDP Context Request using AT commands
19	+ts_RRC_ConnEst ( tsc_CellA, est_MO, registration )		Step 3a Establish RRC Connection
20	+ts_GMM_PS_RegistrationFollowOn(tsc_CellA)		Steps 4-5 Wait for GMM Attach from the UE and perform authentication and ciphering x. Force to standby not indicated.
21	+it_CheckFollowOnReq		
22	+ts_ActivatePDP_AcceptMO(tsc_CellA)		Steps 6-7
23	+ts_SM_SetLLC_SAPI		Set the value of LLC SAPI based on the UE type
24	START t_3380		Step 8
25	TBP1 ?TIMEOUT t_3380		(P)
26	+ts_InitialiseDtyAndTrafficClass

**Change 4**

Test case name           ts\_ModifyPDP\_Context\_MT\_Accept

Reason for change        Test step used by tc\_11\_1\_1\_1 should handle timers as per 34.123-3

Summary of change        t\_UpperBound used with msec timer

Before change:

t_Tree1			
3	START t_3386		Standard defined timer
4	Dc ? RRC_DataInd CANCEL t_3386	car_PS_UplinkDirectTransfer (tsc_CellDedicated, tsc_RB3, cbr_Modify_PD P_ContextAcq_MO)	(P) Receive Modify PDP Context Activation Accept message
5	(tcv_Counter = 4)		
6	? TIMEOUT t_3386		(F) On time out of T_3386 at network end, send Modify PDP Context Request for 4 times.

After change:

t_Tree1			
3	START t_UpperBound(tsc_T3386max)		Standard defined timer
4	Dc ? RRC_DataInd CANCEL t_UpperBound	car_PS_UplinkDirectTransfer (tsc_CellDedicated, tsc_RB3, cbr_Modify_PDP_ContextAcq_MO)	(P) Receive Modify PDP Context Activation Accept message
5	(tcv_Counter = 4)		
6	? TIMEOUT t_UpperBound		(F) On time out of T_3386 at network end, send Modify PDP Context Request for 4 times.

**Change 5**

**Test suite constant names** SM timer tsc\_T3380max, tsc\_T3386max, tsc\_T3390max, tsc\_T3395max

**Reason for change** Test suite constants are needed to express the SM timer requirements in msec including tolerances for T3380, T3386, T3390, T3395

**Summary of change** tsc\_T3380max, tsc\_T3386max, tsc\_T3390max, tsc\_T3395max created

After change:

tsc_T3380max	INTEGER	33800	@SIC_NAPP EW TTCN Review sic@ + 10% tolerance
tsc_T3380min	INTEGER	7200	@SIC_NAPP EW TTCN Review sic@ - 10% tolerance
tsc_T3386max	INTEGER	8800	@SIC_NAPP EW TTCN Review sic@ + 10% tolerance
tsc_T3386min	INTEGER	7200	@SIC_NAPP EW TTCN Review sic@ - 10% tolerance
tsc_T3390max	INTEGER	8800	@SIC_NAPP EW TTCN Review sic@ + 10% tolerance
tsc_T3390min	INTEGER	7200	@SIC_NAPP EW TTCN Review sic@ - 10% tolerance
tsc_T3395max	INTEGER	8800	@SIC_NAPP EW TTCN Review sic@ + 10% tolerance
tsc_T3395min	INTEGER	7200	@SIC_NAPP EW TTCN Review sic@ - 10% tolerance

**Change 6**

**Defaults** RRC\_Def1, NAS\_OtherwiseFail

**Reason for change** Catch potentially expected Detach in the Default background

**Summary of change** Expect Detach and return

After change:

7		Do ? RRC_DataInd [ tcv_GMM_DetachExpect = TRUE ] ( tcv_GMM_DetachExpect := FALSE )	car_PS_UplinkDirectTransfer ( tsc_CellDedicated , tsc_RB3, cr_DetachRequest_MO )	DETACH REQUEST @sic EW T1s040243 and T1s040244 sic@
8		RETURN

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Change 1.**

**Test step name** tc\_10\_1\_2\_7\_3

**Reason for change** when SS receive RELEASE from UE before expiry of T305

- Assigning *Fail* verdict and
- discontinuing test execution

**Summary of change**

- Step#21, *Fail* verdict assigned
- Steps#22, which perform STATUS enquiry, removed
- Step#24, which sending RELEASE COMPLETE, removed

**Source of change**

**Before change:**

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked # contain pop-up help information about the field that they are closest to.

- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Change 1.**

- Test step name** tc\_12\_2\_1\_3
- Reason for change**
  1. It\_SwitchOff local tree does not display USIM remove MMI command prompt.
  2. USIM insert MMI command not displayed.
- Summary of change**
  1. It\_SwitchOff local tree modified by using ts\_MM\_PwrOrUSIM\_Off in place of ts\_MMI\_UE\_SwitchOff for proper USIM removal MMI command prompt.
  2. It\_SwitchOn local tree introduced to perform USIM insert MMI command and possible Attach AT command prompt.
- Source of change** New change

**Before change:**

<u>It_NoAccess30s</u>				
55		START t_WaitS(30)		Start a timer with timeou t 30s
56		TM ? OTHERWISE	(F)	UE shall not access the network
57		? TIMEOUT t_WaitS	(P)	Timer expired, OK
<u>It_SwitchOff</u>				
58		+ts_MMI_UE_SwitchOff		

**After change:**

<u>It_NoAccess30s</u>				
55		START t_WaitS(30)		Start a timer with timeou t 30s
56		TM ? OTHERWISE	(F)	UE shall not access the network
57		? TIMEOUT t_WaitS	(P)	Timer expired, OK
<u>It_SwitchOff</u>				
58		+ ts_MM_PwrOrUSIM_Off (ts_USI M_In)		
<u>It_SwitchOn</u>				
59		+ ts_MM_PwrOrUSIM_On(TRUE)		
60		+ts_GMM_AT_Attach_ifNotAutomat ic		

**Change 2.**

**Test step name** tc\_12\_2\_1\_3 It\_TestBody

**Reason for change** USIM remove and USIM insert MMI command not prompted.

**Summary of change** Step #28 modified to display correct USIM insert MMI command.  
It\_SwitchOn step used in place of ts\_MM\_UE\_SwitchOnTriggerGMM\_Attach test step

**Source of change** New change

**Before change**

26		+It_Steps_6To8		Deactivate cell A, activate cell D, and verify that UE does not access the network

CR-Form-v7

## CHANGE REQUEST

# **34.123-3 CR 334** # rev - # Current version: **3.5.1** #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps#  ME  Radio Access Network  Core Network

**Title:** # Correction to RRC TC 8.2.2.10 on contents of radio bearer reconfiguration message.

**Source:** # Anite

**Work item code:** # N/A

**Date:** # 20/04/04

**Category:** # **F**

**Release:** # R99

Use one of the following categories:

- F** (correction)
- A** (corresponds to a correction in an earlier release)
- B** (addition of feature),
- C** (functional modification of feature)
- D** (editorial modification)

Detailed explanations of the above categories can be found in 3GPP [TR 21.900](#).

Use one of the following releases:

- 2 (GSM Phase 2)
- R96 (Release 1996)
- R97 (Release 1997)
- R98 (Release 1998)
- R99 (Release 1999)
- Rel-4 (Release 4)
- Rel-5 (Release 5)
- Rel-6 (Release 6)

**Reason for change:** # 1. TS 34.123-1 specifies that in step 1 of test cases 8.2.2.10, the following fields of radio bearer reconfiguration message should not be present:

UL Transport channel information for all transport channels	Not Present
Added or Reconfigured UL TrCH information	Not Present
DL Transport channel information common for all transport channels	Not Present
Added or Reconfigured DL TrCH information	Not Present

But TTCN sends radio bearer reconfiguration message with the default value for these fields.

2. TS 34.123-1 specifies that in step 1 of test cases 8.2.2.10, for the radio bearer reconfiguration message, the value of field 'Timer\_RST' which is the part of field 'RB information to reconfigure' for RB identity 20 should be 400. But the TTCN assigns value 100 to this field.

**Summary of change:** # 1. Constraint cds\_RB\_ReconfigFACH\_ToDCH\_RB20\_RST400 is modified so that the following fields are not transmitted in the radio bearer reconfiguration message.

- ul\_CommonTransChInfo
- ul\_AddReconfTransChInfoList

	<ul style="list-style-type: none"> <li>• dl_CommonTransChInfo</li> <li>• dl_AddReconfTransChInfoList</li> </ul> <p>2. Constraint c_RB_InfoReconfigList20_RST400 is modified to make then field 'timerRST' of radio bearer identity tsc_RB20 set as tr400.</p>
<b>Consequences if not approved:</b>	⌘ Test case may PASS in a non-compliant UE.

<b>Clauses affected:</b>	⌘

## CHANGE REQUEST

# **TS 34.123-3 CR 335** # rev - # Current version: **3.5.1** #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps#  ME  Radio Access Network  Core Network

**Title:** # Correction to RRC Package 2 TC 8.4.1.16 and 8.4.1.17 for contents of SIB 11 and Measurement reporting Interval.

**Source:** # Anite

**Work item code:** # N/A

**Date:** # 20/04/04

**Category:** # **F**

**Release:** # R99

Use one of the following categories:

- F** (correction)
- A** (corresponds to a correction in an earlier release)
- B** (addition of feature),
- C** (functional modification of feature)
- D** (editorial modification)

Detailed explanations of the above categories can be found in 3GPP [TR 21.900](#).

Use one of the following releases:

- 2 (GSM Phase 2)
- R96 (Release 1996)
- R97 (Release 1997)
- R98 (Release 1998)
- R99 (Release 1999)
- Rel-4 (Release 4)
- Rel-5 (Release 5)
- Rel-6 (Release 6)

**Reason for change:** # 1. TS 34.123-1 specifies that the SS shall send a SIB 11 at step 1 of test cases 8.4.1.16 and 8.4.1.17 with specified message contents:

- new intra-frequency cells for Intra-frequency cell id = 1 only
- Inter-frequency measurement system information = not present

But TTCN sends a SIB 11 with more than one cell present in intra-frequency Cell list and the cells are also present in inter-frequency Cell list.

2. The MEASUREMENT CONTROL message used in step 7 of tc\_8\_4\_1\_17 should have the IE "Measurement Command" set to "set up" as specified in specific message contents. Currently it is set to "modify" since the wrong constraint is being used.
3. In line#23 of tc\_8\_4\_1\_17, timer t\_WaitMS is started, which only verifies the upper boundary. The lower boundary of 8 sec –10% is not verified. This verification of the lower boundary shall be added to the TTCN.
4. The 8 second timer started in step 11 of of tc\_8\_4\_1\_17 to ensure the UE sends no more measurement reports does not have the required 10% tolerance added.
5. In line#21 of tc\_8\_4\_1\_16, timer t\_WaitMS is started, which only verifies the upper boundary. The lower boundary of 6 sec –10% is not verified. This verification of the lower boundary shall be added to the TTCN.

**Summary of change:** # 1. Constraint c\_SIB11\_ModifiedTrafficVolume is modified to send a SIB 11, which matches with the one given in TS 34.123-1.

2. Line #15 of tc\_8\_4\_1\_17 is modified by using the correct constraint cs\_MeasurementControlTrafficVolumeSetup in place of cs\_MeasurementControlTrafficVolumeModify.
3. Replaced Lines #22, #23, #24, #25 and #27 of the test case tc\_8\_4\_1\_17 with a new local tree It\_ReceiveMeasurementReport to introduce a lower boundary check in addition to the upper boundary check for the Periodical Measurement Report.
4. Line #29 of tc\_8\_4\_1\_17 is modified by increasing the timer value to 8800 ms to consider the 10% tolerance.
5. Replaced Line #20, #21, #22, #23 and #25 of the test case tc\_8\_4\_1\_16 with a new local tree It\_ReceiveMeasurementReport to introduce a lower boundary check in addition to the upper boundary check for the Periodical Measurement Report.

**Consequences if not approved:** ☼ Test case may PASS in a non-compliant UE.

**Clauses affected:** ☼

12		<pre> +ts_SendModifiedSIB11_Sysinfo_DCH (tsc_CellA, c_SIB11_ModifiedTrafficVolume ( 2, OMIT, averageRLC_BufferPayload : tsc_TimeInterval , FALSE, TRUE, { ue_State cell_DCH }, unacknowledgedModeRLC, eventTrigger, trafficVolumeReportingCriteria : c_TrafficVolumeReportingCriteria ( OMIT, e4b , th8k , #5000 , ptat16 , OMIT ), tcv_CellInfoA ) ) </pre>		Step 1 in prose;
13		+ts_ToStateMO_CS_6_9_PS_6_10Or6_11 (tsc_CellA)		Step 2-5 in prose;
14		+it_ReceiveMeasurementReport		

**Change 3:**

<b>Local Tree and Test step</b>	Local tree It_TestBody of tc_8_4_1_17
<b>Reason for change</b>	1. The MEASUREMENT CONTROL message used in step 7 of tc_8_4_1_17 should have the IE "Measurement Command" set to "set up" as specified in specific message contents. Currently it is set to "modify" as the wrong constraint is being used.
<b>Summary of change</b>	1. Line #15 of tc_8_4_1_17 is modified by using the correct constraint cs_MeasurementControlTrafficVolumeSetup in place of cs_MeasurementControlTrafficVolumeModify.
<b>Source of change</b>	New change

**Before:**

It_TestBody				
11	TBS	(tcv_TestBody = TRUE)		
12		+ts_SendModifiedSIB11_SysInfo_DCH ( tsc_CellA, c_SIB11_ModifiedTrafficVolume ( 2 , OMIT, averageRLC_BufferPayload : tsc_TimeInterval, FALSE, TRUE, ( ue_State cell_DCH ), unacknowledgedModeRLC, eventTrigger, trafficVolumeReportingCriteria : c_TrafficVolumeReportingCriteria ( OMIT, e4b , th8k, th5000, ptat16, OMIT ), tcv_CellInfoA, tcv_CellInfoB, tcv_CellInfoC, tcv_CellInfoD, tcv_CellInfoE, tcv_CellInfoF, tcv_CellInfoG, tcv_CellInfoH ) )		Step 1 in prose;

Detailed Comment:

### Change 5:

<b>Local Tree and Test step</b>	Local tree It_TestBody of tc_8_4_1_16
<b>Reason for change</b>	1. Constraint c_SIB11_ModifiedTrafficVolume is modified to send a SIB 11, which matches with the one given in TS 34.123-1.
<b>Summary of change</b>	1. Modified Line #12 of the test case 8.4.1.16 to incorporate the changes made in constraint c_SIB11_ModifiedTrafficVolume.
<b>Source of change</b>	New change

**Before:**

It_TestBody				
11	TBS	(tcv_TestBody = TRUE)		
12		<pre> +ts_SendModifiedSIB11_SysInfo (ts c_CellA, c_SIB11_ModifiedTrafficVolume ( 4,  { rachortpch : NULL }, ric_BufferPayload : NULL, TRUE, FALSE, { ue_State all_But_Cell_DCH }, acknowledgedModeRLC, periodical, periodicalReportingCriteria : c_Perio dicalReportingCriteria (ra_Infinity, ri6 ), tcv_CellInfoA, tcv_CellInfoB , tcv_C ellInfoC, tcv_CellInfoD, tcv_CellInfoE , tcv_CellInfoF, tcv_CellInfoG, tcv_Cell InfoH)) </pre>		Step 1 in prose;
13		<pre> +ts_ToStateMO_CS_6_9_PS_6_10 Or6_11_MeasReport (tsc_CellA) </pre>		Step 2 - 5 in prose;

**After:**

It_TestBody				
11	TBS	(tcv_TestBody = TRUE)		
12		<pre> +ts_SendModifiedSIB11_SysInfo (t sc_CellA, c_SIB11_ModifiedTrafficVolume ( 4,  { rachortpch : NULL }, ric_BufferPayload : NULL, TRUE, FALSE, { ue_State all_But_Cell_DCH }, acknowledgedModeRLC, periodical, periodicalReportingCriteria : c_Perio dicalReportingCriteria (ra_Infinity, ri6 ), tcv_CellInfoA ) ) </pre>		Step 1 in prose;
13		<pre> +ts_ToStateMO_CS_6_9_PS_6_1 0Or6_11_MeasReport (tsc_CellA) </pre>		Step 2 - 5 in prose;

**Change 6:**

<b>Local Tree and Test step</b>	Local tree It_TestBody of tc_8_4_1_16
<b>Reason for change</b>	1. In line#21 of the test case 8.4.1.16, timer t_WaitMS is started, which is only verifying the upper boundary . The lower boundary of 8 sec –10% is not verified. This verification of the lower boundary shall be added to the TTCN.
<b>Summary of change</b>	1. Replaced Line #20, #21, #22, #23 and #25 of the test case tc_8_4_1_16 with a new local tree It_ReceiveMeasurementReport to introduce a lower boundary check in addition to the upper boundary check for the Periodical Measurement Report.
<b>Source of change</b>	New change

**Proposed change affects:** UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	# Correction to common test step "ts_SS_2_FACH_1_RACH_ModifyDCH_Cfg" of RRC ATS to release unused RLC entity, related to test cases 8.4.1.18 and 8.4.1.19		
<b>Source:</b>	# Anite		
<b>Work item code:</b>	# N/A	<b>Date:</b>	# 20/04/2004
<b>Category:</b>	# <b>F</b>	<b>Release:</b>	# R99
	Use <u>one</u> of the following categories: <b>F</b> (correction) <b>A</b> (corresponds to a correction in an earlier release) <b>B</b> (addition of feature), <b>C</b> (functional modification of feature) <b>D</b> (editorial modification) Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)

<b>Reason for change:</b>	# 1. SS tries to configure RLC for RB BCCH_FACH while going from Cell_DCH to Cell_FACH, which is already created in the preamble test step "ts_SS_CreateCellFACH".  2. While transiting from CELL_FACH to CELL_DCH state, SS removes mapping of BCCH (for signalling RB BCCH_FACH) from transport channel FACH, without releasing the unused RLC entity BCCH_FACH. This unused RLC entity BCCH_FACH, has to be released.
<b>Summary of change:</b>	# 1. A new line (#5) to invoke "ts_CRLC_Rel", is added in the test step "ts_SS_2_FACH_1_RACH_ModifyDCH_Cfg" to release RLC entity BCCH_FACH.
<b>Consequences if not approved:</b>	# Test case will fail a compliant UE.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Change 1:**

<b>Local Tree and Test step</b>	Test step ts_SS_2_FACH_1_RACH_ModifyDCH_Cfg
<b>Reason for change</b>	<ol style="list-style-type: none"> <li>1. SS tries to configure RLC for BCCH_FACH while going from Cell_DCH to Cell_FACH, which is already created in the preamble test step "ts_SS_CreateCellFACH".</li> <li>2. While transiting from CELL_FACH to CELL_DCH state, SS removes mapping of BCCH (for signalling RB BCCH_FACH) from transport channel FACH, with out releasing the unused RLC entity BCCH_FACH. This unused RLC entity has to be released.</li> </ol>
<b>Summary of change</b>	A new line (#5) to invoke test step "ts_CRLC_Rel", is added in the test step "ts_SS_2_FACH_1_RACH_ModifyDCH_Cfg" to release RLC entity BCCH_FACH
<b>Source of change</b>	New change

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ☞ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Change 1.**

- Test step name**        ts\_CC\_CheckStateU0\_MO\_CurrentTI
- Reason for change**    Step which overwrites current TI value = 0 (tcv\_Counter) needs to be removed.
- Summary of change**    Step#1, which overwrites tcv\_TI\_S and tcv\_TI\_R deleted.
- Source of change**

**Before change:**

1		<code>&lt; tcv_TI_S.tVal = INT_TO_BIT ( tcv_Counter , 3), tcv_TI_R.tVal = INT_TO_BIT ( tcv_Counter , 3)</code>			
2		<code>Dc1 RRC_DataReq</code>	<code>ca_DataReq ( tsc_CellDedicated, tsc_RB3, cs_StatusEnq ( tcv_TI_S ) )</code>		
3	TSP	<code>Dc ? RRC_DataInd</code>	<code>car_UplinkDirectTransfer ( tsc_CellDedicated, tsc_RB3, cr_RelCmpICau ( tcv_TI_R, 81 ) )</code> (P)		1.

**After change:**

1		<code>Dc1 RRC_DataReq</code>	<code>ca_DataReq ( tsc_CellDedicated, tsc_RB3, cs_StatusEnq ( tcv_TI_S ) )</code>		
2	TSP	<code>Dc ? RRC_DataInd</code>	<code>car_UplinkDirectTransfer ( tsc_CellDedicated, tsc_RB3, cr_RelCmpICau ( tcv_TI_R, 81 ) )</code> (P)		1.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Change 1:** Introducing new NAS PIXIT parameter in TS 34.123-3 Table B.3

**Table B.3: NAS PIXIT**

Parameter name	Description	Type	Default value	Supported value
Px_AuthRAND_2	A second Random Challenge (128 bits)	BITSTRING	'1010101...10'B	
Px_AutocallingBlacklistNumber	Number of B-party numbers that can be stored in the list of blacklisted numbers	INTEGER	20	
Px_AutocallingCause1or2	Cause value of category 1 or 2 to be used in TC_17_1_3	INTEGER	18	
Px_AutocallingNumber	Called number to be used for auto calling	IA5String	"0613454120"	
Px_AutocallingRepeatCat1or2	Number of repeat attempt done for the category 1 or 2 to be used in TC_17_1_3	INTEGER	10	
Px_CC_ServNotSupp	Not supported service selected for Mobile Originated calls and Mobile Terminated calls. The possible values are ("Telephony", "EmergencyCall", "31kHz", "V110", "V120", "PIAFS", "FTM", "X31", "BTM", "MmediaCall")	Services	"BTM"	
px_DTMF_BasicCharSet	TRUE if DTMF Chars 0-9, *, # supported	BOOLEAN	TRUE	
px_DTMF_OtherCharSet	TRUE if DTMF Chars A, B, C, D supported	BOOLEAN	TRUE	
px_DTMF_ToneInd	TRUE if UE support DTMF tone indication	BOOLEAN	TRUE	
px_EmergencyCallNumber	Emergency Number used by UE to initiate an emergency call	EmergencyNumber	"112"	
px_NoNwOrgPDP_ContextSupp	This indicates the number of network originated PDP context supported by the UE	INTEGER (0..7)	7	
Px_SecPDP_Support	This indicates if the UE supports Secondary PDP Context or not.	BOOLEAN	TRUE	
px_TMSI_2	Second TMSI value	OCTETSTRING	'09876543'O	
px_UuInfo	User-user information for TC 10_3	OCTETSTRING	'01020304'O	
px_Uupd	User-user protocol discriminator for TC 10_3	B8	'00000100'B	
px_PTMSI_2	Second PTMSI used for testing.	OCTETSTRING	'09876543'O	
px_PTMSI_Sig2	Second PTMSI signature used for testing.	OCTETSTRING	'AB1234'O	
px_VTS_AT_CommandSupport	TRUE if the AT command +VTS is supported	BOOLEAN	TRUE	
<a href="#">px_CallWaitingSupp</a>	<a href="#">TRUE if UE supports the call waiting supplementary service</a>	<a href="#">BOOLEAN</a>	<a href="#">FALSE</a>	

**Change 2:** New test suite parameter to NAS ATS

**Test step name** Test Suite Parameter Declarations

**Reason for change** New PIXIT parameter *px\_CallWaitingSupp*

**Summary of change** **PIXIT parameter name** : px\_CallWaitingSupp

**Type:** BOOLEAN

**PIXIT/PIXIT Ref** : PIXIT Table B.3

**Comments** : TRUE if UE supports the call waiting supplementary service

Default value: FALSE

**Source of change**

**Change 3:** Changes to tc\_10\_1\_2\_6\_6 test body.

**Test step name** tc\_10\_1\_2\_6\_6 local Tree It\_RelCompOrCallConf

**Reason for change** *px\_CallWaitingSupp* parameter value checked for receiving RELEASE COMPLETE or CALL CONFIRMED from UE.

**Summary of change** Step#18: (NOT *px\_CallWaitingSupp*) and Step#20: *px\_CallWaitingSupp* conditions introduced.

**Source of change**

### How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/>. For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## Change 1.

**Test step name** ts\_SendRB\_SetUpDCH\_64k\_CS\_Segmented

- Reason for change**
1. The Radio Bearer Setup message used in step 9 of TC 14.2.13.1 contains the "RB Information to be affected" information element. As described 3GPP TS 34.108 V3.15.0 clause 9.1.1 Default RRC Message Contents (FDD) the "RB Informaion to be affected" information element shall not be present in this message.
  2. The Radio Bearer Setup message used in step 9 of TC 14.2.13.1 contains "Frequency info" information element. As described 3GPP TS 34.108 V3.15.0 clause 9.1.1 Default RRC Message Contents (FDD) the "Frequency info" information element shall only be present if frequency is different from the current frequency otherwise this Information element shall be set to Not present. In TC 14.2.13.1 the frequency has not changed, thus the "Frequency info" information element shall be set to not present.

- Summary of change**
1. In the test step "ts\_SendRB\_SetUpDCH\_64k\_CS\_Segmented" at line number 2, for the constraint "cs\_RRC\_RB\_SetUp" 5<sup>th</sup> parameter is replaced with OMIT.
  2. In the test step "ts\_SendRB\_SetUpDCH\_64k\_CS\_Segmented" at line number 2, for the constraint "cs\_RRC\_RB\_SetUp" last parameter is replaced with OMIT.

**Source of change** New change

**Change 2.**

**Test step name** ts\_RB\_SendRB\_SetUpStreamUnknown14\_4k

- Reason for change**
1. The Radio Bearer Setup message used in step 9 of TC 14.2.15 contains the “RB Information to be affected” information element. As described 3GPP TS 34.108 V3.15.0 clause 9.1.1 Default RRC Message Contents (FDD) the “RB Informaion to be affected” information element shall not be present in this message.
  2. The Radio Bearer Setup message used in step 9 of TC 14.2.15 contains “Frequency info” information element. As described 3GPP TS 34.108 V3.15.0 clause 9.1.1 Default RRC Message Contents (FDD) the “Frequency info” information element shall only be present if frequency is different from the current frequency otherwise this Information element shall be set to Not present. In TC 14.2.15 the frequency has not changed, thus the “Frequency info” information element shall be set to not present.

- Summary of change**
1. In the test step “ts\_RB\_SendRB\_SetUpStreamUnknown14\_4k” at line number 2, for the constraint “cs\_RRC\_RB\_SetUp” 5<sup>th</sup> parameter is replaced with OMIT.
  2. In the test step “ts\_RB\_SendRB\_SetUpStreamUnknown14\_4k” at line number 2, for the constraint “cs\_RRC\_RB\_SetUp” last parameter is replaced with OMIT.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## Change 1.

**New ASN1 constraint name** c\_DCH\_640\_TFS\_20\_1

**Reason for change** The Radio Bearer Setup message sent to the UE is sent with “numberOfTbSizeList” set to a value of 1 but the SS RLC entity is configured with “numberOfTbSizeList” set to a value of 2.

In test step “ts\_SendRB\_SetUpConvUnknown\_32k\_20TTI” at line 4, while calling test step “ts\_2DCH\_ModifyConvUnknown” the 6<sup>th</sup> parameter has to be in accordance with constraint “c\_DCH\_640\_TFS\_20\_1\_UE”, which is used while sending Radio bearer setup message to UE at line 2.

**Summary of change** Add new ASN1 constraint “c\_DCH\_640\_TFS\_20\_1” with “numberOfTbSizeList” 1 and other parameters according to “c\_DCH\_640\_TFS\_20\_1\_UE”.

**Source of change** New change

### New Constraint:

ASN.1 Type Constraint Declaration	
Constraint Name:	c_DCH_640_TFS_20_1_UE
Group:	
Type Name:	DedicatedTransChTFS
Derivation Path:	
Encoding Variation:	
Comments:	transport format set for RAB subflow#1 on dedicated channel
Constraint Value	
<pre>{ tti tti20 : { { rlc_Size octetModeType1 : sizeType2 : {part1 11, part2 2},   numberOfTbSizeList { zero : NULL, one : NULL },   logicalChannelList allSizes : NULL }}, semistaticTF_Information {   channelCodingType turbo : NULL,   rateMatchingAttribute 187,   crc_Size crc16 } }</pre>	

## Change 2.

**Test step name** ts\_SendRB\_SetUpConvUnknown\_32k\_20TTI

**Reason for change** The Radio Bearer Setup message sent to the UE is sent with “numberOfTbSizeList” set to a value of 1 but the SS RLC entity is configured with “numberOfTbSizeList” set to a value of 2.

In test step “ts\_SendRB\_SetUpConvUnknown\_32k\_20TTI” at line 4, while calling test step “ts\_2DCH\_ModifyConvUnknown” the 6<sup>th</sup> parameter has to be in accordance with constraint “c\_DCH\_640\_TFS\_20\_1\_UE”, which is used while sending Radio bearer setup message to UE at line 2.

**Summary of change** In test step “ts\_SendRB\_SetUpConvUnknown\_32k\_20TTI” at line 4, while calling test step “ts\_2DCH\_ModifyConvUnknown” 6<sup>th</sup> parameter is replaced with new constraint “c\_DCH\_640\_TFS\_20\_1”.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

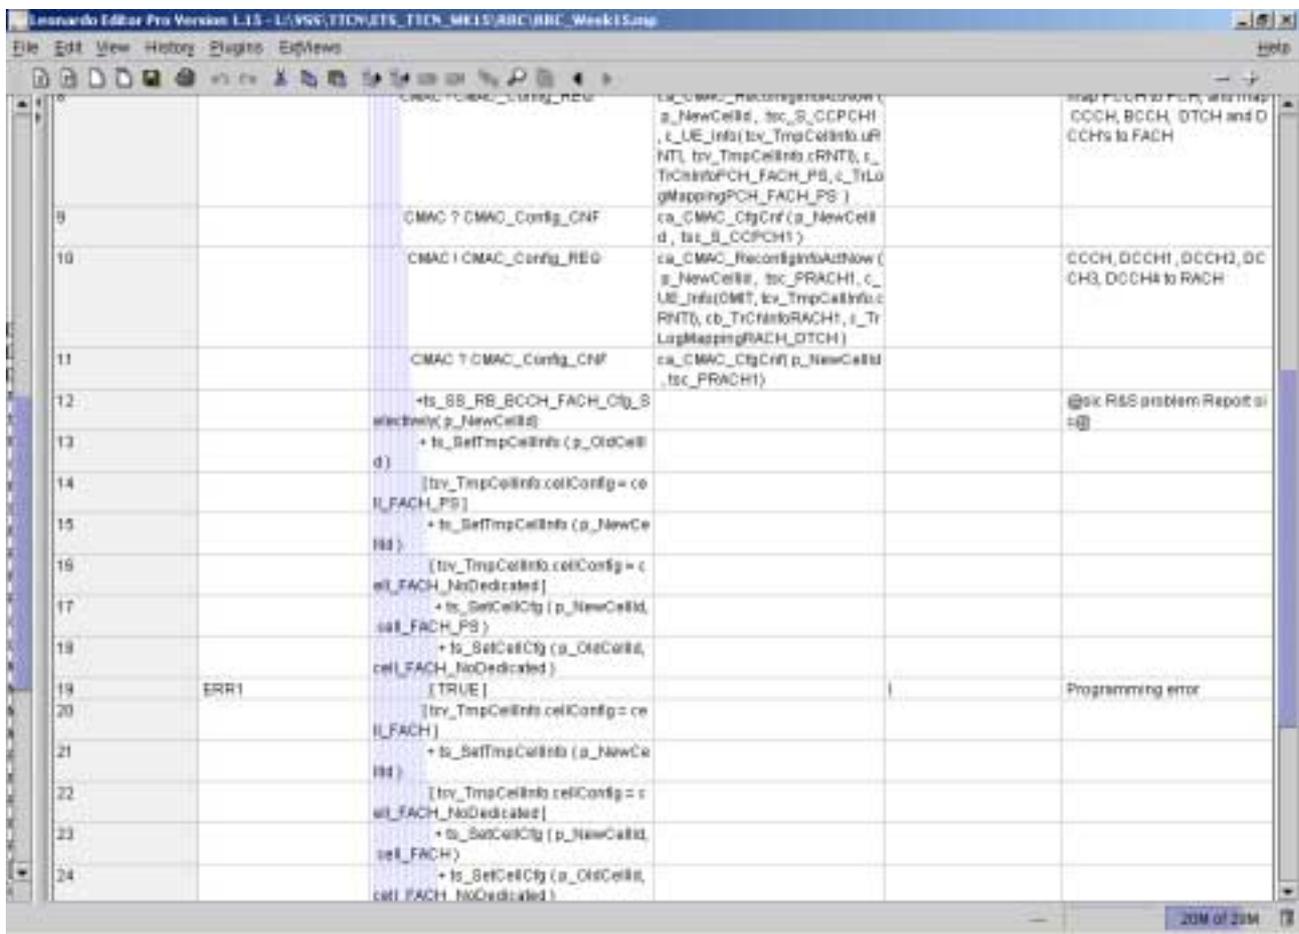

- 1) Fill out the above form. The symbols above marked № contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Change 1:**

<b>Local Tree and Test step</b>	Test Step: ts_HO_ReconfFACH_ToFACH
<b>Reason for change</b>	RB_BCCH_FACH in the old cell should be deleted before the same is configured in the new cell.
<b>Summary of change</b>	Test Step 'ts_CRLC_Rel ' is called(#12) to delete the RB in the old cell
<b>Source of change</b>	New Change

34		+ts_MMI_PLMN_SelectModeAuto			

**Change 2:** Postamble called after test body to remove PLMN2 from USIM forbidden list

**Test step name** tc\_9\_4\_9

**Reason for change** Postamble used after test body to remove PLMN2 from forbidden PLMN list.

**Summary of change** Stel#12 introduced to call It\_Remove\_FPLMN2

**Source of change**

**Before change:**

10		(tcv_MM_TestExecution = TRUE)		MM test execution starting @SIC EWER 1520 SIC @
11		+It_Body		@SIC EWT1S040014 SIC @
12		+po_ConnectionAndSS_Rels		Release all resources

**After Change:**

10		(tcv_MM_TestExecution = TRUE)		MM test execution starting @SIC EWER 1520 SIC @
11		+It_Body		@SIC EWT1S040014 SIC @
12		+It_Remove_FPLMN2		Postamble to remove FPLMN from USIM.
13		+po_ConnectionAndSS_Rels		Release all resources

**Change 3:** Increasing guard timer value

**Test step name**        tc\_9\_4\_9

**Reason for change**    Guard timer value needs to be increased to perform manual PLMN selection procedure due to addition postamble manual PLMN selection procedure.

**Summary of change**    Step#1 START t\_Guard(15\*60) -- increase guard timer

**Source of change**

CR-Form-v7

## CHANGE REQUEST

# **TS 34.123-3 CR 332** # rev - # Current version: **3.5.1** #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps#  ME  Radio Access Network  Core Network

**Title:** # Modification to RLC 7.2.3.33 TTCN to meet Test Procedure 'f' in Prose 34.123-1-571.

**Source:** # Anite

**Work item code:** # N/A

**Date:** # 7/5/04

**Category:** # **F**

**Release:** # R99

Use one of the following categories:

- F** (correction)
- A** (corresponds to a correction in an earlier release)
- B** (addition of feature),
- C** (functional modification of feature)
- D** (editorial modification)

Detailed explanations of the above categories can be found in 3GPP [TR 21.900](#).

Use one of the following releases:

- 2 (GSM Phase 2)
- R96 (Release 1996)
- R97 (Release 1997)
- R98 (Release 1998)
- R99 (Release 1999)
- Rel-4 (Release 4)
- Rel-5 (Release 5)
- Rel-6 (Release 6)

**Reason for change:** # Ref: T1-040262

CR T1-040262 added the following test procedure information to TS 34.123-1: -  
Test Procedure

- f) The SS sends an RLC SDU of size (2 \* AM\_7\_PayloadSize) – 1bytes. [The data contents of this RLC SDU shall be different from the contents of the RLC SDUs sent in procedure step a\) above.](#)

In IWD Week 10 RLC ATS, the TTCN for CR T1-040262 was implemented. Although checking of the full SDU has been implemented the contents has not been modified. The payload contents are generated by a pseudo random bit sequence which takes variables tcv\_TxPRBS\_Pos and tcv\_RxPRBS\_Pos which are currently being reset before procedure 'a' and 'f' thus giving the same payload contents.

**Summary of change:** # The contents of variables tcv\_TxPRBS\_Pos and tcv\_RxPRBS\_Pos are not reset producing different payload data.

1. A new preamble test step is introduced "pr\_InitialiseAM\_RLC\_StateVariables2", which only resets the state variables, not variables tcv\_TxPRBS\_Pos and tcv\_RxPRBS\_Pos.
2. New Preamble test step is called from the test body

**Consequences if not approved:** # The TTCN will not be conformant to the prose (34.123-1-571).

**Clauses affected:** #

## CHANGE REQUEST

# **34.123-3 CR 317** # rev **-** # Current version: **3.5.1** #

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the # symbols.

**Proposed change affects:** UICC apps#  ME  Radio Access Network  Core Network

<b>Title:</b>	# Quality of Service (QoS) initialisation when setting up a PS call		
<b>Source:</b>	# ETSI MCC160, Nokia, Motorola, Ericsson		
<b>Work item code:</b>	# N/A	<b>Date:</b>	# 10/05/2004
<b>Category:</b>	# <b>F</b>	<b>Release:</b>	# R99
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	<b>F</b> (correction)		2 (GSM Phase 2)
	<b>A</b> (corresponds to a correction in an earlier release)		R96 (Release 1996)
	<b>B</b> (addition of feature),		R97 (Release 1997)
	<b>C</b> (functional modification of feature)		R98 (Release 1998)
	<b>D</b> (editorial modification)		R99 (Release 1999)
	Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		Rel-4 (Release 4)
			Rel-5 (Release 5)
			Rel-6 (Release 6)

<b>Reason for change:</b>	<p># The current implementation of the QoS initialisation in the ETSI TTCN depends on the RRC state the UE is going to when setting up a PS call.</p> <ul style="list-style-type: none"> <li>• If the final state is Cell_DCH: minimumQoS = requestedQoS, maxBitRates = 64kbps maxBitRates in PDP Context Activation Accept = 64kbps</li> <li>• If the final state is Cell_FACH: minQoS = reqQoS, maxBitRates = 32kbps maxBitRates in PDP Context Activation Accept = 32kbps</li> </ul> <p>In addition there are some specific test cases (eg. 8.2.1.8, 8.2.1.9) where the RRC state changes during Radio Bearer Setup. These test cases require specific QoS set up.</p> <p>Such a restrictive configuration (minQoS=reqQoS) is necessary to suit different UE implementations of QoS handling. The definition in TS27.007 section 10.1.7 of the minimum acceptable QoS is unclear as to how to interpret its parameters. This has led to different implementations by different UE vendors. If minQoS &lt;&gt; reqQoS, we end up in a situation where one UE rejects the negotiated QoS.</p> <p>In addition the current implementation is unrealistic because in a real situation the application cannot know the bit rate the network will allocate in advance. A more realistic scenario would be to propose the same QoS independently of the final RRC state.</p>
---------------------------	---

<b>Summary of change:</b>	⌘ The setup of the minimum QoS is left out of the QoS initialization (to get rid of implementation specific issues). The requested QoS is set up with the maximum bit rates UL/DL set to 64kbps, whatever the final RRC state.  Then: <ul style="list-style-type: none"> <li>• If the final RRC state is Cell_DCH: maxBitRates in PDP Context Activation Accept = 64kbps</li> <li>• If the final RRC state is Cell_FACH: maxBitRates in PDP Context Activation Accept = 32kbps</li> </ul>
<b>Consequences if not approved:</b>	⌘ The PS test cases may fail a conformant UE.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>.

Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

## Change 1:

<b>Local Tree and Test step</b>	Test step ts_AT_OrgPS_Call
<b>Reason for change</b>	Remove initialisation of minimum QoS.
<b>Summary of change</b>	Remove lines 2, 3, 4 and the local tree It_PrepareAT_CmdCGEQMIN.
<b>Source of change</b>	New change

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked # contain pop-up help information about the field that they are closest to.

- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

<b>Local Tree and Test step</b>	ts_TransitToCellPCH_P15_P16 ( p_CellId :INTEGER )
<b>Reason for change</b>	1. When the UE swiches to CELL_PCH, all the RLC entities any status PDUs causing the SS side AM RLC entities to be RESET.
<b>Summary of change</b>	1. A delay of 500 ms is added before sending the PhysicalChannelReconfigurationRequest.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

**Change 1:**

**Local Tree and Test step** It\_TestBody of tc\_8\_1\_1\_2

**Reason for change** Sufficient delay is required to ensure that Cell Update Confirm Message reaches UE before SS reconfigures MAC according to the new C-RNTI or U-RNTI assigned to UE.

**Summary of change** At Line #30 of tc\_8\_1\_1\_2 , added a line to introduce a delay of 30ms to ensure that Cell Update Confirm Message reaches UE before SS reconfigures MAC according to the new C-RNTI or U-RNTI assigned to UE.

**Change 7:**

**Local Tree and Test step**

It\_TestBody of tc\_8\_2\_2\_18

**Reason for change**

Sufficient delay is required to ensure that Cell Update Confirm Message reaches UE before SS reconfigures MAC according to the new C-RNTI or U-RNTI assigned to UE.

**Summary of change**

At Line #24 of tc\_8\_2\_2\_18, added a line to introduce a delay of 30ms to ensure that Cell Update Confirm Message reaches UE before SS reconfigures MAC according to the new C-RNTI or U-RNTI assigned to UE.

**Source of change**

### Change 11:

**Local Tree and Test step**

It\_TestBody and It\_Check\_Periodic of tc\_8\_3\_1\_4

**Reason for change**

Sufficient delay is required to ensure that Cell Update Confirm Message reaches UE before SS reconfigures MAC according to the new C-RNTI or U-RNTI assigned to UE.

**Summary of change**

At Line #18 and #37 of tc\_8\_3\_1\_4, added a line to introduce a delay of 30ms to ensure that Cell Update Confirm Message reaches UE before SS reconfigures MAC according to the new C-RNTI or U-RNTI assigned to UE.

**How to create CRs using this form:**

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked # contain pop-up help information about the field that they are closest to.

- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

<b>Localtree</b>	It_TestBody of tc_8_3_1_3
<b>Reason for change</b>	TS 34.123-1 specifies contents of CELL UPDATE CONFIRM message at step 12 of TC 8.3.1.3, the IE S-RNTI shall be set to an arbitrary string different from '0000 0000 0000 0000 0000 0001' and the IE new C-RNTI shall be set to '1010 1010 1010 1010'. The current TTCN implementation contains incorrect values for those IEs.
<b>Summary of change</b>	1. Inserted a line # 28 to assign a different value for the S-RNTI and C-RNTI of CellB so that IEs S-RNTI and New C-RNTI will be set properly in CELL UPDATE CONFIRM message at step #12.

## CHANGE REQUEST

TS34.123-3 CR 358 rev Current version: 3.4.0

For [HELP](#) on using this form, see bottom of this page or look at the pop-up text over the symbols.

Proposed change affects: UICC apps  ME  Radio Access Network  Core Network

<b>Title:</b>	Corrections to Package 1 test case tc_8_1_1_1		
<b>Source:</b>	Anritsu Ltd		
<b>Work item code:</b>		<b>Date:</b>	20 February 2004
<b>Category:</b>	F	<b>Release:</b>	R99
	Use <u>one</u> of the following categories:		Use <u>one</u> of the following releases:
	F (correction)		2 (GSM Phase 2)
	A (corresponds to a correction in an earlier release)		R96 (Release 1996)
	B (addition of feature),		R97 (Release 1997)
	C (functional modification of feature)		R98 (Release 1998)
	D (editorial modification)		R99 (Release 1999)
	Detailed explanations of the above categories can be found in 3GPP <a href="#">TR 21.900</a> .		Rel-4 (Release 4)
			Rel-5 (Release 5)
			Rel-6 (Release 6)

<b>Reason for change:</b>	This CR corrects problems found in tc_8_1_1_1 during the iWD-TVB2003-03_D04wk04 regression testing. (1) The preamble did not bring the UE to the correct initial conditions (see T1-040063) in certain circumstances. (2) The UE identity in the RRC Connection Request at step 4 was not checked although it is specified in the prose.		
<b>Summary of change:</b>	Apply the changes described below to RRC_wk04 in iWD-TVB2003-03_D04wk04.		
<b>Consequences if not approved:</b>	(1) The test case can give a fail or inconclusive verdict for some conformant UEs. (2) The test case can give a pass verdict for some non-conformant UEs.

- 1) Fill out the above form. The symbols above marked contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be

downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.

- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

# 1 Modifications to iWD-TVB2003-03\_D04wk04

## 1.1 Explanation of changes

Note: Line numbers in these explanations refer to the deltas in this document. They do not necessarily apply to either the original or modified TTCN.

1. In `ts_GMM_AttachReject_NMO_I_NoTMSI` the combined attach is rejected with cause 07 (GPRS not allowed), this provokes the UE to initiate a location update which is only allowed for in the auto-attach path. This location update is unnecessary as the UE is about to be switched off. The cause has therefore been changed to 08 (GPRS and non-GPRS not allowed) and the location update removed from the auto-attach path

This test step is used to remove the P-TMSI and TMSI in the preamble for the CS path of 8.1.1.1 for a UE supporting both CS and PS

`ts_GMM_AttachReject_NMO_I_NoTMSI` lines 7-12 and 29.

Note: `ts_GMM_AttachReject_NMO_I_NoTMSI` is also used in 12.4.2.1 and the changes here do not apply to that test case. Different test steps should be used in the RRC and NAS suites.

2. The branch in `ts_GMM_IdleUpdatedSpecial` for operation mode A, NMO-I, non-auto-attach was incomplete and has been completed by the addition of MMI commands to switch the UE on and the GMM attach procedure.

`ts_GMM_IdleUpdatedSpecial` lines 9 and 11-14.

3. The existing preamble used for the PS path for a UE with both PS and CS supported is unsuitable because it assigns a TMSI which is incorrect for this path. This has been replaced by a new test step.

`tc_8_1_1_8` lines 42-43 and `ts_GMM_IdleUpdated_NMO_I_NoTMSI`.

4. `ts_RRC_ConnEst_DCH_MT_IMSI_P_TMSI` has been modified to check that the correct UE identity is used in the RRC Connection Setup messages as specified in the prose.

`ts_RRC_ConnEst_DCH_MT_IMSI_P_TMSI` lines 7 and 13.

## 1.2 Detail of changes to tables

### 1.2.1 Modified Tables

Test Case	
<b>Test Case Id:</b>	tc_8_1_1_1
<b>Test Group Reference:</b>	RRC/RRC_Paging/
<b>Purpose:</b>	To confirm that the UE establishes an RRC connection after it receives a PAGING TYPE 1 message which includes IE "Paging Record" (UE identity) set to the IMSI of the UE.
<b>Configuration:</b>	
<b>Defaults:</b>	RRC_Def1

Test Step	
<b>Test Step Id:</b>	ts_GMM_IdleUpdatedSpecial ( p_CellId : INTEGER; p_Caseld : INTEGER )

- Cell referenced by p\_CellId is configured and sending SysInfos on BCCH  
 - UE is switched off with a USIM inserted

Input paramters:

- p\_CellId referencing the Cell
- p\_Caseld the special case to be executed

[p\_Caseld = tsc\_StartRej] : execute location update reject / attach reject procedures with cause LA not allowed, resulting in a deletion of stored USIM paramters (LAI, RAI, TMSI, P-TMSI, CKSN etc) except that LAI and RAI are stored in the list of forbidden LAs and RAs.

[p\_Caseld = tsc\_StartIMSI] :execute IMSI attach (but do not assign TMIS, P-TMSI, etc)

[p\_Caseld = tsc\_StartPLMN\_No]: execute location update reject / attach reject procedures with cause 'PLMN not allowed'
