1.   Overall Description

Background

At T1#23 a T WG3 LS (T3-040295) was reviewed and the request to T WG1 to await feedback from SA WG1 and CN WG1 before applying any related CRs was considered. T WG1 also reviewed a CN1 LS (N1-040441) that provided the relevant feedback. This LS provides the rationale behind the subsequent actions taken by T WG1.

During T1#23 T1-040971 [1] was approved as a result of the CN1 #33 decision to make the use of HPLMNwACT field, optional (N1-040242). CN1 also stated that there was no technical reason why this change could not apply to earlier versions of the protocol, starting from R99 onwards.

From a T1 perspective this means that two more signalling test cases in GCF Package 2 (6.2.1.1 and 6.2.1.6) are now available to verify and subsequently have validated in the GCF, which had not been the case previously. Work is currently underway to amend the relevant TTCN test suite to include these tests. This, in turn, helps the test industry to work towards reaching GCF Certification Criteria within GCF's target date.

2.   Actions

ACTION: **NIL**

3. Date of Next T1 Meetings:

3GPP TSG-T WG1 meeting #24	26-30 July	Toronto, Canada
3GPP TSG-T WG1 meeting #25	1-5 November	Malta
