Title: **Proposed Workplan**

In this paper, work areas are identified, and priorities are assigned according to the following scheme:

1: First version to be available April '99
2: First version to be available end '99
3: First version to be available mid '2000

Subject	Priority
UIM version management	1
Support of Multiple Applications:	
Application selection	1
Logical channels	2
Possibility to have shared applications/files	2
Access conditions for multiple mobile applications	1
Variable-length parameter of authentication algorithm (RAND, Kc and SRES)	1
Eliminate 5V SIM	1
1.8V ICC	1
USIM-ME interface speed enhancement	1
T=1 transmission protocol	2
Smaller size ICC	2
Support of Profile exchange	1
Support of secure data downloading and application data transfer:	
SAT Download and 03.48 style security	1
General Download	3
Support of SAT (SIM Application Toolkit)	1
Support of Over the Air Service Provisioning, applet download	2
Enhancement ADN file (Users group, Two names for one number, etc)	1
Store incoming calls:	
CLI, last call time	1
Charge information (t.b.d.)	3
URL List for internet services (e.g. Bookmark , Favorites) *(priority to be adjusted according to priorities in other TSGs)*	3

The issue of plastic roaming and USIM portability was discussed, but considered outside the scope of the workplan because the terminal/USIM interface is not directly concerned. The matter has several aspects:

- USIM portability to other 3G family members
- Roaming with 2G systems, e.g.
    - GSM SIM in 3G systems;
    - USM/UICC in 2G systems.
