Title : Liaison statement on power control

RAN WG1 would like to thank RAN WG3 for their Liaison Statement **R1-99g60**, **R3-99d10**, Reply to LS from WG1 on power control. RAN WG1 noted the answers from WG3 on the downlink power control limits. As far as the outer loop power control is concerned, RAN WG1 identified that there are discrepancies between the RAN WG1, RAN WG2 and RAN WG3 specifications. Indeed RAN WG1 is using the SIR whereas RAN WG2 and RAN WG3 are using the Eb/No. RAN WG1 could not conclude as to which was the appropriate measure. RAN WG1 will be working during its next meeting to resolve the issue. As far as the power control in compressed mode is concerned, RAN WG1 would like to invite RAN WG3 to refer to WG2, who specified how the Eb/No in compressed mode is adjusted.
