Agenda Item: 6.2.3

Source: SMG1

Title: Services and Service Capabilities (UMTS 22.05 SMG1 proposed draft version 3.3.0).

Document for: Information

_____

Pre-UMTS systems have largely standardised the complete sets of bearer services, teleservices and supplementary services which they provide. One major difference between UMTS and pre-UMTS systems is that service capabilities rather than services are standardised for UMTS, allowing service differentiation. This Technical Specification (TS) describes how and what kind of services the UMTS user has access to.

CRs (4) that have been agreed by SMG1 and not yet approved by SMG#28 have already been applied to this specification in order to provide an accurate view of its status at SMG1. The purpose of these CRs are to:
1. Align this specification with TS22.00,
2. Include appropriate references to GSM specifications,
3. Include agreed views expressed by SMG2 and SMG12,
4. Indicate that Service features are only used to create services (as building blocks) and not to modify and delete services.

These CRs are pending approval by SMG#28.
